

Appendix

Small Business Wants To Know When
the Federal Trade Commission Will
Enforce the Antitrust Laws

EXTENSION OF REMARKS

OF

HON. FRANK THOMPSON, JR.

OF NEW JERSEY

IN THE HOUSE OF REPRESENTATIVES

Wednesday, February 17, 1960

Mr. THOMPSON of New Jersey. Mr. Speaker, the Federal Trade Commission recently ordered three oil companies to stop coercing their dealers to handle certain brands of tires, batteries and other automobile accessories.

Testimony presented to the FTC showed that the major oil companies involved in the action used very vigorous methods in forcing their dealers, or service station operators leasing their stations, to handle only items approved by the major oil firms.

Although the oil companies were ordered to stop coercing the service station operators, the FTC found nothing wrong with the conduct of the major rubber companies in giving special discounts and paying special commissions ranging from 7 percent to 10 percent.

Mr. C. Wilson Harder, president of the National Federation of Independent Business, commenting on the FTC decision writes:

If the major oil companies are to continue to receive these huge commissions from the rubber companies, they will have to continue to send out their salesmen, to talk to station operators on behalf of the rubber firms paying commissions to the company.

Thus, the anticompetition phrase of the order is most likely to fall by the wayside.

For who, but FTC, can be so naive to believe an oil company salesman, charged with getting certain tires and batteries into service stations handling his oil and gas, will confine his activities to gentle persuasive argument, especially when he has a quota to meet?

I include herewith for the information of my colleagues the following items dealing with this subject:

NATIONAL FEDERATION OF
INDEPENDENT BUSINESS,

Burlingame, Calif., February 24, 1960.
Hon. FRANK THOMPSON, JR.,
House Office Building
Washington, D.C.

DEAR CONGRESSMAN THOMPSON: In view of the vital interest all independent factors in the automotive servicing field have as to the ties existing between big factors in both the oil and rubber tire industry, and the "gravy train" these big factors are enjoying at the expense of the independents, we believe that the insertion in the Appendix of the CONGRESSIONAL RECORD of the statement I made before the subcommittee of the House Small Business Committee on December 9, 1959, and also the current small business column "Washington and Small Business"

sponsored by the National Federation of Independent Business, and appearing in weekly newspapers throughout the Nation would all furnish to your colleagues basic facts in this major economic problem.

I know that your action in this will be welcome information and will be noted by independent factors in your congressional district, a goodly number of whom the writer is personally acquainted with due to his experience in that industry for half a century.

The truth of the matter is, by the Federal Trade Commission's own report furnished to the Temporary National Economic Committee, that report led us to believe that this arrangement between big oil and big rubber was outlawed as a violation of Federal statute. Our hopes and expectations were dashed when we noted the examiner's report of November 18, 1959 approving the override commission paid by big rubber companies to major oil companies on the indirect sale of tires, batteries and accessories.

Thanking you for your continued cooperation in help to small business, and with high regards,

Sincerely yours,

GEORGE J. BURGER,
Vice President.

WASHINGTON AND SMALL BUSINESS

(By C. Wilson Harder)

Probably one of the weirdest decisions in its history was handed by Federal Trade Commission in case against Shell, Texaco and Atlantic Refining Co. and Goodyear, Goodrich, and Firestone.

The three oil companies were ordered to stop coercing their dealers to handle only certain brands of tires, batteries and other accessories.

The testimony was quite strong that these major oil companies used very vigorous methods in forcing their dealers, or service station operators leasing their stations, to handle only items approved by the major oil firms.

In addition, the testimony further developed that in a typical year of 1955, the major oil companies were paid commissions ranging from 7 to 10 percent. For example Shell received \$3.4 million from two tire firms, Texaco \$4.8 million.

Now comes the strange part of the FTC findings. Although the oil companies were ordered to stop coercing the service station operators, the FTC could find nothing wrong with the conduct of the major rubber companies in giving these special discounts to the oil firms.

The FTC position was that the major oil firms earned these commissions by performing certain services. These great services were such things as recommending to the service station operator that he handle tires and other accessory items as a means of getting more revenue into the station. Another great and valuable promotion aid was extended by the major oil companies in suggesting to station operators methods of displaying these items.

Another service performed was that of the oil company salesmen calling on the service stations with the favored rubber company salesmen.

Other testimony developed that the oil company salesmen often told the service

station operators what tires and accessories they could handle, or else.

But for these "promotional" services, FTC found oil companies earned millions paid them by big rubber.

This decision is bound to cause some bitter debate in Congress when it convenes shortly.

It will perhaps be called FTC's great Pollyanna decision.

After all, if the major oil companies are to continue to receive these huge commissions from the rubber companies, they will have to continue to send out their salesmen, to talk to station operators on behalf of the rubber firms paying commissions to the company.

Thus, the anticompetition phrase of the order is most likely to fall by the wayside.

For who, but FTC, can be so naive to believe an oil company salesman, charged with getting certain tires and batteries into service stations handling his oil and gas, will confine his activities to gentle persuasive argument—especially when he has a quota to meet?

STATEMENT OF GEORGE J. BURGER, VICE PRESIDENT, NATIONAL FEDERATION OF INDEPENDENT BUSINESS, WASHINGTON D.C., BEFORE SUBCOMMITTEE NO. 5, SELECT COMMITTEE ON SMALL BUSINESS, HOUSE OF REPRESENTATIVES

DECEMBER 9, 1959.

Subject: Petroleum, relating to marketing of TBA items.

Mr. CHAIRMAN: I am more than pleased to have the opportunity to appear before your committee which, after all, follows up your committee's splendid action in the hearings on distribution problems in the petroleum filling station field as it relates to the sale of tires, batteries, and accessories.

I am referring to the splendid action of your committee of March 28, 1955, that continued on in the closing days of March, April, May, and June 1955. I had the privilege to give testimony on April 28, 1955, and our interest continues up to this time on this major problem.

Since my last appearance before your committee—as a matter of record—I am more than pleased to advise the committee that our membership, comprised exclusively of independent business and professional men nationwide has shown a considerable, healthy increase in its total membership, and the record may disclose that the membership now totals approximately 150,000.

On direct nationwide mandate of our members we are committed to take every action possible (1) for a vigorous enforcement of the antitrust laws, and (2) where the laws are weak, to bring about the necessary amendments.

We deem the problem before your committee, in the way the TBA items are being handled is a clear violation of the law and for that reason, and that reason alone we are urging a complete, drastic investigation of the overall problem.

This problem that is before your committee has been before congressional committees and the antitrust agencies, to my knowledge as an independent member of the rubber tire industry, for the last 19 years.

In this, it is interesting to note that on page 563 of the hearings of April 28, 1955, Mr.

Sheehy, of the Federal Trade Commission, advised the committee:

"The United States case came up prior to World War II, and that arose out of complaints received at that time, and they have been coming along more or less since then. During the war period, naturally, the situation was completely changed, and then following the war they continued to come along until the Commission set this whole thing down for investigation."

Well do I recall, Mr. Chairman, that in my private capacity (1941) I personally filed a brief on this subject matter, including others, with the Federal Trade Commission, alleging violation of the antitrust laws.

Furthermore, in the Senate Small Business Committee this subject matter was amply exposed due to a nationwide investigation that committee made of the problem (1942).

It is interesting to note, from the same testimony given by Mr. Sheehy on April 26, 1955, on page 554 of the printed hearings, he said:

"For example, approximately 90 percent of the leased stations of one oil company purchased sponsored TBA products. The degree of exclusivity varies with the product. It is highest on the tire lines (perhaps from 75 to 90 percent), substantially lower on the battery lines (perhaps from 45 to 50 percent) and almost negligible on the accessory line (perhaps as low as 3 percent)."

I particularly call to your attention in the quoted statement where he said: "It is highest in the tire lines (perhaps 75 to 90 percent), substantially lower on the battery lines." This is very important to keep in mind when one reviews the release of the Federal Trade Commission, Examiner's Report, of November 18, 1959, as it relates to the relationship between the Texas Co., Atlantic Refining, Shell Oil, Goodrich, Goodyear, and Firestone Tire & Rubber Cos.

Again from the statement of Mr. Sheehy appearing on page 552 and 553 of the printed hearings where he said:

"An oil company, having the commission arrangement with a tire company, keeps the tire company informed as to the identity of its leased and contract stations so that they may be approached as potential customers of the tire company for TBA products. Thereafter, the filling station, when approved by the tire company, is contacted by salesmen of the tire company and the oil company. If the station decides to buy the tire company's TBA products, it is assigned a supply point where it must purchase them. The supply point may be a tire company store, district office, wholesaler, or an oil company dealer operating as a tire company wholesaler. The designated supply point accepts orders secured by its salesmen or those of the tire or oil companies, delivers the goods, and bills and collects from the filling station. Periodically the tire company reports to the oil company, setting forth the names of the filling stations and their net purchases of TBA products from the tire company as reported by its various supply points. The total sales as shown by these reports are the basis for computing the commission paid the oil company."

"In addition to identifying filling stations as potential TBA customers, the oil companies are paid the override commission for encouraging the filling station operators to continue handling the sponsored TBA products, soliciting orders therefor, and engaging in various other activities to promote the sponsored lines."

It is very interesting to note this operation as to the permission mutually agreeable to both parties as it applies to that important segment, tires and tubes. It must be understood for the record, that from my knowledge of the petroleum industry, and it is to their credit, they don't handle anything unless it is profitable to the petroleum companies.

We believe, and the witness should know from a half a century as an independent member of the rubber tire industry, that the same relationship will continue, the coercion will continue one way or another, until the law is vigorously enforced.

It is to be noted in the examiner's report of November 18, 1959, that it in substance, exonerates these three rubber companies from the granting of override commissions where we in independent business have been under the impression or delusion that this has been a violation of Federal statute, and further, my opinion is more or less confirmed by the expressions time and time again of other factors in the rubber tire industry. In fact they wondered: "When will the laws be enforced"? and why should they sit on the sidelines and refuse to make similar contracts?

When the November 18, 1959, examiner's report came down exonerating the three major "rubber companies on the override commission subject, it is important to note that the vice president of the Texaco Co. stated:

"There is no violation of the FTC Act, in our recommending that dealers purchase tires, batteries, and accessories from companies whose brands are nationally known and have widespread distribution and good customer acceptance."

It is self-evident that what was at stake with these major petroleum companies was more than merely urging the dealer to handle nationally known brands of TBA items.

Independent business of all descriptions in the automotive servicing field has a tremendous stake in vigorous enforcement of the antitrust laws, particularly as it applies to their industry. I say this because of the power exercised by these major petroleum companies to control and dictate to the independent filling station operator as to the overall policies.

There was recently reported by Look magazine the results from the 23d annual national automobile and tire survey, which disclosed service stations sold 33.4 percent of all new tires and 29.5 percent of all retreads bought in the last 12 months.

Mr. Chairman, our principal interest in the overall proposition before your committee is that 300,000 or more independents in the automotive servicing field, which includes the smaller producers, will under our free enterprise system have the privilege to operate in fair competition with all other suppliers to that industry.

It is interesting to note that on this override commission—which is the gravy train for the petroleum companies, that a similar arrangement is now being instituted by the Phillips Petroleum entering into the tire recapping field, the arrangements to be handled, I believe, by two or three major rubber companies and one of the smaller rubber manufacturers.

Upon getting notice of this action we immediately contacted the antitrust agencies, and we particularly call to your attention the letter we received under date of October 29, 1959, from Mr. Frank C. Hale, the FTC's chief project attorney, in his answer as to the opposition, and you will particularly note in the quoted statement of the unfair method of competition on the override commission:

"Under the arrangement, oil companies are paid a commission by rubber companies on sales of [TBA], made direct to retail dealers handling the gasoline of the oil companies. The complaints which have been issued by the Commission allege that such [arrangements] constitute an unfair method of competition in violation of section 5 of the FTC Act in that [independents] are foreclosed from a substantial share of the market by virtue of [oil company coercion] urging their dealers to handle the products of the particular rubber company with which override agreements have been made."

Without being unduly critical of the action of the FTC, it is necessary to quote the opinion that was expressed by the FTC, that appeared in the Senate Small Business Committee Report of 1943, where the committee reported the FTC's statement as given to the Temporary National Economic Committee: They told that Committee:

"The Federal Trade Commission in report prepared by the Temporary National Economic Committee, stated that 'Investigation and complaints brought by the Federal Trade Commission have gone a long way toward eliminating the practice of tire companies granting an override commission to the oil companies for permission to sell their station tires and tubes.'"

So in view of this, your committee is to be complimented at this time for further checking into the situation, and our plea to you and your committee is that unless this arrangement that is now existing between major oil and major rubber companies as it relates to the override commission is corrected it will result in: (1) Major petroleum industry dominating and controlling the rubber tire industry, and (2), placing the exclusive sale of this important commodity, tires, tubes, batteries, in the hands of giant rubber producers and giant petroleum companies, and the final result will be a definite captive group in the independent servicing field, and reducing the smaller producers in the respective lines to next to nothing.

Before closing, Mr. Chairman, it is interesting to note—very interesting—that a day prior to the opening of your hearings the TBA group, made up of the petroleum interests, and probably well attended by the big rubber industry, will hold its annual meeting December 7 and 8, at the Chase Park Plaza Hotel in St. Louis. This is very significant, and the urge may be to increase their position.

Let me repeat that if the present statute is weak on this point, and protects monopoly in one form or another, than it will be in order for Congress to immediately enact corrective legislation to protect the free enterprise system.

President's Conference on Occupational Safety

EXTENSION OF REMARKS

OF

HON. ALEXANDER WILEY

OF WISCONSIN

IN THE SENATE OF THE UNITED STATES

Tuesday, March 1, 1960

Mr. WILEY. Mr. President, today the President's Conference on Occupational Safety begins its meetings to promote greater occupational safety in this country.

The objectives of the conference include reassessment of safety practices and review of equipment, work practices and training methods to build safety more firmly into the pattern of American work.

Despite efforts to promote greater job safety, the 1958 toll was 1,820,000 occupational accident victims, of whom 13,300 were killed, and another 76,700 suffered some degree of permanent disability.

We recognize that, today, work patterns are being revolutionized by technological advances. To meet the challenge of promoting safety in a changing world, more than 40 leaders of labor, business, science, education and government, will take part in panel discussions.

during the 3-day conference on nine phases of the safety challenge, ranging from safety education to the establishment of improved safety standards.

During the conference, delegates will seek to find new ways and means for safeguarding the American worker in a rapidly changing environment.

Attending on a voluntary basis, the delegates are to be highly commended for their constructive efforts to lessen vocational hazards for the American worker.

Recognizing the significance of this conference, I request unanimous consent to have an available list of delegates—which, although regrettably not complete, is most impressive—printed in the Appendix of the RECORD.

There being no objection, the list of delegates was ordered to be printed in the RECORD, as follows:

WISCONSIN

L. G. Arnold, Eau Claire.
Otis G. Berger, manager, Barron County Electric Cooperative, Barron.
M. F. Biancardi, manager, Safety Services, Allis-Chalmers Manufacturing Co., Milwaukee.
S. J. Boehringer, President Boehringer Engineering Products, Inc., Milwaukee.
Edward M. Brabant, Blackhawk Manufacturing Co., Milwaukee.
F. W. Braun, vice president, Accident Prevention, Employers Mutual Liability Insurance Co., of Wisconsin, Wausau.
Mr. and Mrs. E. C. Brenner, Milwaukee.
J. L. Cantrell, Miller Brewing Co., U.S.A. Division, Milwaukee.
F. S. Christiansen, Personnel Director, Twin Disc Clutch Co., Racine.
R. W. Christensen, Safety Supervisor, West Bend Aluminum Co., West Bend.
William E. Breese, associate chairman, department of commerce, Milwaukee.
Clark J. Fischer, safety engineer, safety commission, Milwaukee.
Warren E. Fuhrman, safety director, Milwaukee Gas Light Co., Milwaukee.
Bernhard, Gettelman, Collector of Customs, Treasury Department, Bureau of Customs, Milwaukee.
Frank A. Hausheer, executive vice president, Wisconsin State Chamber of Commerce, Madison.
Mrs. Ted Hoyer, president, Ted Hoyer and Co., Inc., Oshkosh.
Miss Anne Klotz, R.N., supervising nurse, Pabst Brewing Co., Milwaukee.
Raymond J. Koltes, Red Arrow Sales Corp., Madison.
Raymond A. Langmack, Langmack's, Beaver Dam.
Gregg R. Meyers, director of safety and security, Pabst Brewing Co., Milwaukee.
G. M. Nequette, vice president, safety and personnel, Central Wisconsin Motor Transport Co., Wisconsin Rapids.
M. A. Nugent, superintendent of safety, Southern Pacific Co., San Francisco.
V. E. Nylin, chairman, Department of Agriculture, Wisconsin State College and Institute of Technology, Platteville.
Professor H. C. Olson, Wisconsin State College and Institute of Technology Department of Drivers Education, Platteville.
Donald F. Possell, Nordberg Manufacturing Co., Milwaukee.
Murdoch G. Pryor, safety manager, Allen-Bradley Co., Milwaukee.
John H. Rouse, Commissioner, Industrial Commission, Madison.
Brother Leo V. Ryan, Director, Continuing Education, Marquette University, Division of Adult Education, Milwaukee.
Frank Tuttle, Baltimore Operations Manager, Ansul Chemical Company, Marinette.

Peter P. Weidenbruch, President, Damrow Brothers, Co., Fond du Lac.
C. F. Young, Safety Director, Eaton Manufacturing Co., Kenosha.

Address by G. Mennen Williams

EXTENSION OF REMARKS

OF

HON. JOHN D. DINGELL

OF MICHIGAN

IN THE HOUSE OF REPRESENTATIVES

Monday, February 29, 1960

Mr. DINGELL. Mr. Speaker, pursuant to permission granted I am inserting into the Appendix of the CONGRESSIONAL RECORD a speech delivered by the Honorable G. Mennen Williams to the United Northwestern Realty Association on February 18, 1960:

Next week is Brotherhood Week. But I would like to jump the gun a little and talk about brotherhood today. Actually, brotherhood is an everyday occupation. We set aside a special week only to remind ourselves that such a week should not be needed.

Let me tell you of my ideas on brotherhood. Many people often talk as though brotherhood were an invention of the U.S. Supreme Court. Others discuss brotherhood as our least expensive way of buying good public relations in a world that is one-third nonwhite. But neither of these factors are central to my belief in brotherhood. To me brotherhood is a biblical command. If we are to be true to our religion, we must live brotherhood.

In the very first chapter of Moses, it is said: "God created man in his own image, in the image of God created he him."

In Acts we find: "Then Peter opened his mouth, and said, of a truth I perceive that God is no respecter of persons" (Acts 10: 34). St. James said: "If ye fulfill the royal law according to the Scripture thou shalt love thy neighbor as thyself, ye do well. But if ye have respect of persons, ye commit sin" (2 James 8).

In other words, discrimination is bad, evil, sin.

Realtors, more than any other profession north of the Mason-Dixon line, are in a special position to help American fulfill its promise of equal opportunity for all. Incidentally, I am going to use the word "realtor" in a generic sense rather than the term of art that it is—it is so convenient.

When it comes to fulfilling the promise of equal opportunity, housing is to the North what voting and education are to the South.

As long ago as 1866, the U.S. Congress passed a law which reads: "All citizens of the United States shall have the same right in every State and territory, as is enjoyed by white citizens to inherit, purchase, lease, sell, hold and convey real and personal property."

Obviously, the ideal of this old law is still far from fact. But the challenge of this ideal is more pressing than ever.

We in the North like to sit in our armchairs and condemn Little Rock, the closing of Southern schools, and the refusal of Southern registrars to sign up Negro voters. We like to discuss and decry the horrors of the South from the security of our own living rooms, which in the majority of cases are located in 100 percent white neighborhoods.

This is sheer hypocrisy. It is also costly hypocrisy. For as long as we crowd minority groups into already overcrowded areas, we breed slums, juvenile delinquency, health and fire hazards, and a host of similar social blights. The sorry state of the slum dweller himself is well summed up in

the name of a Mexican-American slum in a west coast city. It is called Sal si Pudes—Get out if you can.

It seems to me that we have to get out of our dual standard of morality, one for the North and a different one for the South. We have to clean up our own backyard, and our front yard, and the rest of the neighborhood, too. The promise of a free, open society cannot be indefinitely postponed.

Therefore there has again been introduced into the Michigan State Legislature a measure which will have as its supreme purpose to do away with all discrimination and to include housing just as one of many subjects. The main feature of the new law will be the conciliation technique which has proven so successful in our fair employment practices law.

When we first introduced the FEP law, it was said that it could not be done. For 7 years, it was bitterly fought. But it has been done. And, what is more, with passage of the law, resistance seemed to vanish and employers gave full cooperation. In fact, many employers who previously were afraid to hire minority group members for fear of losing customers welcomed the new law. It gave them a legal framework for their conscience.

Today I call upon you for the same cooperation and spirit of conciliation which has made our FEP law a success. I know that cracking the color line in housing is much tougher than in employment. Housing, after all, is the only commodity left which the Negro cannot buy on the open market. He can buy oranges, cars, even dinner and lodging, but not housing. When he goes to purchase a house, as often as not he finds the door is slammed in his face.

Today I appeal to your sense of religion, to your sense of humanity, to your sense of American destiny. I call upon you for help and sympathetic cooperation. You can help make a historical contribution to America.

We cannot keep slamming doors in a man's face indefinitely. The practical advantage of setting up conciliation machinery now is that Michigan can provide for the peaceful opening of its doors. The real advantage is that no man will have to avoid looking his neighbor straight in the eye for fear of something he has on his conscience.

Because of the rigid residential segregation which now exists, many myths surround the question of racial integration in housing. Chief among these is the myth that property values go down in direct ratio to the color spectrum—the darker the hue of the tenant, the lower the value of the property.

The whole thing is somewhat personal to me for a couple of reasons. In Georgetown in the city of Washington, I was part of the white migration into a Negro area. As a matter of fact, we had Negro families next to us, and on one side of the house we had a Negro church with a marvelous choir and our friends enjoyed joining us to hear the singing.

The other reason involves newsmen George Stark, a well-known Detroit, who is a vestryman at St. Paul's Cathedral. One evening he was riding homeward with me in this very area. We got to talking and he told me a story I have never forgotten.

He said one night when he got home a neighbor and fellow member of the Homeowners Improvement Association rushed in, terribly agitated and visibly excited. The neighbor said, "George, what in the world shall we do? A colored family has moved in next door to you; what will happen to our neighborhood?" George said he waited just half a minute and then said to his friend, "Why there is just one thing we can do, and that is to invite them to become members of our Homeowners Improvement Association."

They did just that, and the new family proved to be very careful housekeepers, tended their property carefully, and were the very best of neighbors. They borrowed salt and eggs back and forth and George said that, when his wife was ill, the neighbor wife took a genuine personal interest that was much appreciated.

Study after study has been made of this problem. Some show property values fall because people panic and "sell scared." Others show property values rise because demand for segregated housing is overwhelming. Others show that, in the long run, property values remain the same.

The Upjohn Institute Research Report on Integrated Housing in Kalamazoo came to this conclusion: "Actually the sales records indicate that mixed neighborhoods have no effect on real estate values."

Taken together, the studies show one thing only—that minority group occupancy, in and of itself, will not affect property values one way or the other.

That is why the realtor is so important. The realtor can be the conduit of myths; or he can be the killer of this false folklore. The unscrupulous realtor can pile up handsome profits by trying to stampede the "sell now before it's too late" psychology and spreading rumors that Mrs. Smith sold yesterday, Mrs. Jones will sell tomorrow.

Or the realtor can be the conscience of the community. He can be the one to correct false impressions. He can assuage the occasional panic-stricken client. He can, in other words, make a fair housing law work. He can lead us into Christian living, into the life of brotherhood blessed by all religions.

Many realtors I have spoken to have told me that they would like nothing better than to sell to Negro families wherever they wish to buy, but that this would lose them their white clients. That is the great advantage of writing a no-discrimination clause into Michigan's law. Realtors then would all be in the same position, and those of good will, the overwhelming majority I am sure, will get State backing for their personal principles.

What is more, I think the claims clients make are often exaggerated. That people do not always do what they say they will do is dramatically demonstrated by the sociologist who, in 1937, traveled the country with a Chinese couple, asked for services at 67 hotels, auto camps, and tourist homes, and was refused at only one. Six months later he sent out a mail questionnaire asking if "members of the Chinese race" could be accommodated. Over 90 percent said, "No."

Thank you for the opportunity of talking with you this morning.

Editorial Support for a Department of Urbiculture

EXTENSION OF REMARKS OF

HON. KENNETH B. KEATING

OF NEW YORK

IN THE SENATE OF THE UNITED STATES

Tuesday, March 1, 1960

Mr. KEATING. Mr. President, I have been very gratified by the strong support manifested all over the country for my proposal to establish a Department of Urbiculture. This Department would draw together under one roof the scattered programs and agencies in the Federal Government which are concerned primarily with the problems of our cities.

It is my firm conviction that the better coordination and cooperation of these programs which would be made possible by a centralization of operations will pay off in more efficient and effective Federal assistance to our urban centers. At the same time, the establishment of a Department of Urbiculture need not mean that the Federal Government would assume additional programs of municipal help.

A recent editorial in the Elmira Telegram, an outstanding newspaper in my State, points up some of the strong arguments for this addition to our governmental machinery. I am delighted to have this editorial support for this proposal and I ask unanimous consent that it be printed in the Appendix of the RECORD.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

[From the Elmira Telegram, Jan. 31, 1960]

NEED FOR URBICULTURE

One of these days enough Congressmen will notice the solid commonsense in Senator KENNETH B. KEATING's proposed Department of Urbiculture to get such a department set up.

Urbiculture is a \$4 word having to do with the care and feeding of our sickly cities. We have a Department of Agriculture because most American used to live on farms and have their problems there. KEATING says that logically we now should have a Department of Urbiculture because most Americans long since have moved to the cities and created whopping new problems there.

We are spending money on uncoordinated Federal programs to help cities now. It is KEATING's belief that in close cooperation with State and local governments, the new department could develop national programs to combat smog, slums, and traffic snarls.

It seems obvious that someday this will be done. New York State has pioneered by setting up an office of local government, but many urban problems cross State boundaries. If the Constitution were being written now, it is a good bet that a Department of Urbiculture would be in it.

U.S. Citizens Day

EXTENSION OF REMARKS OF

HON. JAMES G. FULTON

OF PENNSYLVANIA

IN THE HOUSE OF REPRESENTATIVES

Monday, February 29, 1960

Mr. FULTON. Mr. Speaker, a good suggestion has come to me from John and Jean Edwards, owners and publishers of the West Side News of Kingston in western Pennsylvania, whom I have known for a long time.

I am calling to the attention of my colleagues in the Congress, and the people of America, this excellent idea which certainly merits serious consideration.

The suggestion follows:

WEST SIDE NEWS,

Kingston, Pa., February 25, 1960.

DEAR JIM: I am writing to you as the result of thoughts that have come to me in connection with the census that is being taken this year. Briefly, my thoughts are these: When you are born in United States

you are given a birth certificate. When you take your first communion or join the church or have a Bar Mitzvah, there is mild celebration. When you become an Eagle Scout there is a ceremony and you get a badge. When you are graduated from high school or college, you are dressed up in cap and gown, speeches are made at you and about you, you receive gifts and are presented with a diploma. If you join a lodge, there is some to-do, "welcome to our select little circle," and so forth. However, when a youngster becomes a citizen—that is, attains his majority and becomes an active working citizen, through the right to vote—there is no ceremony, no presentation of a certificate, no nothing. A parent may take a young person to the polls to show him how to vote for the first time, as my father took me. But that's about all there is to it. Now a naturalized citizen must stand before a judge in a court room while an oath is administered to him, and he is presented with a certificate of his citizenship. But not so with us native-born citizens. We have sworn no oaths, we have received no certificates, we have not had our names inscribed, except on the voting lists.

Now, I believe that U.S. citizenship is deserving of more than that. I believe that becoming a U.S. citizen is vastly more important than any other status one can attain; certainly, is a basic. You have to be a citizen first. Besides that, U.S. citizenship carries with it great responsibility and obligation. So, when a youngster becomes 21 years of age, he should be subject to a ceremony, an oath should be administered to him that he will strive all his years to be a good citizen, and he should be presented with a certificate of citizenship; then, his name should be inscribed in a Great Book of Citizens in Washington. This should be an occasion for the youngster to be presented with gifts and to be the honored guest at dinner. A great fuss and to-do should be made of him, for on this day he has attained citizenship in the United States, a truly impressive station in this world and in his life.

For one thing, this formal entry into citizenship would make the youngster more cognizant of the privileges and obligations of citizenship—it should be included in the oath that if physically possible he will participate in every election. Also, it could be a deterrent to crime. Of course, to some, the ceremony and oath would mean nothing; but to many it would mean brighter, happier citizenship. Social security records are an authentic record of our citizens, but it still isn't a record of citizens as such. Many of us have sworn allegiance to the Government through association with the armed services or governmental service, but these were not oaths of citizenship necessarily.

To carry the idea a little farther, if we need a new holiday, say along about the middle of October, there could be a holiday established when all the new citizens would be honored.

Obviously, this is not a matter about which the editor of a weekly newspaper can get much done. I haven't even mentioned it to anyone else. By rights, it is a matter that could be handled only by a legislator. So, I must remind you that I was once your constituent, when we lived in Dormont.

If there is any merit in the idea, I would like to see something happen, because the way it is now my four children will sort of glide into citizenship, taking it more or less for granted, except for what I am able to do personally to impress them with the importance of their obligations as citizens. They should be the subjects of celebration, they should be required to make an oath, their names should be inscribed in the Great Book in Washington, and they should receive a certificate of citizenship to remind them always—particularly at each election—of their obligations to be good citizens.

I wouldn't want any sort of credit nor recognition in connection with this idea. Maybe it has been suggested before. But if you can do anything about it, you will be aiding a former constituent with four future citizens on his hands, who is in need of help to impress them with the fact that U.S. citizenship is the honor and privilege of their lives.

Again, I wish you well, Congressman. And I hope to hear from you soon.

Warmest personal regards,
JOHN and JEAN EDWARDS,
Owners and Publishers, West Side News.

Dillon Proposals for Free World Economic Cooperation

EXTENSION OF REMARKS OF

HON. JACOB K. JAVITS

OF NEW YORK

IN THE SENATE OF THE UNITED STATES

Tuesday, March 1, 1960

Mr. JAVITS. Mr. President, a vitally important economic program directed at mobilizing the energies and resources of the free world in the current struggle for freedom is being developed by most of the leading industrial nations of the world, being dealt with for the United States by the Honorable Douglas Dillon, Under Secretary of State. His recent address in Cincinnati brilliantly summed up the outlook for the economic integration of the free world in the sixties. Under Secretary Dillon's remarks foreshadow the capability of a breakthrough in our efforts at finally developing the free world's potential for the development of its own economies and the development of the less developed areas, and a counter-thrust to the Soviet economic offensive which has been mounted against the democracies of the West. I ask unanimous consent that Under Secretary Dillon's address be printed in the Appendix of the RECORD.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

A NEW ERA IN FREE WORLD ECONOMIC GROWTH
(Address by the Honorable Douglas Dillon, Under Secretary of State, at sixth annual conference on international affairs, sponsored by the Cincinnati Council of World Affairs, Cincinnati, Ohio, February 19, 1960)

I am pleased and honored to be here with you tonight as you conclude your thoughtful examination of our country's role in international economic affairs. Your panel moderators have reported well on your discussions of the United States and its relationship to the European Common Market, the newly-developing countries, and the Communist economic offensive. It is against this background that I wish to discuss the prospect for free world economic growth as we enter the sixties.

The outlook for the sixties has been shaped by forces which gathered momentum during the postwar period and the fifties, by the remarkable recovery of Western Europe and Japan from the ravages of war—by the accelerated expansion of our own economy—by the substantial growth in economic power of the Soviet Union—and by the mounting insistence of hundreds of millions of newly-independent peoples on sharing in the material blessings of the modern world.

These developments have set the stage for a whole new era in the sixties. One of its predominant features will be the great socioeconomic revolution which is sweeping the newly developing areas of the free world. This force represents the legitimate aspirations of the free world's underprivileged peoples for a better life. These peoples, numbering more than a billion, hold in their hands the future balance of world power. They wish to live in freedom. But to them, freedom from want is of overriding importance. They are learning that they cannot enjoy their newly won political freedoms without an adequate measure of economic progress. They are exerting tremendous pressure on their leaders to achieve progress through one means or another.

Herein lies a great challenge for us in the sixties—and a great danger as well. The stakes are high—possibly no less than the continued existence of individual liberty on this planet. In cooperation with other free world industrialized nations, we must assist the newly developing countries in their struggle to improve their people's lot in order that they can maintain their confidence in progress under free institutions. This will require both capital and know-how in substantial amounts throughout the sixties. The alternative is terrible to contemplate. For if these peoples cannot see hope of progress in freedom, they will surely collapse in chaos and disorder and in their desperation they will try the totalitarian route which is being offered them day and night by international communism.

The Soviet leaders are fully aware of the challenge to our system and to theirs, which is posed by the aspirations of the newly emerging areas. They have accepted this challenge and are proclaiming their confidence of success in economic competition with our system of free institutions. The present economic strength of the Soviet Union and its continued rapid progress make it clear that this is a most serious challenge. To meet it, we of the industrialized free world must see to it that our own economies continue to grow and strengthen at the same time that we provide a helping hand to our less privileged friends in the newly developing lands.

The industrialized free world enters the sixties in a position of great economic strength. Postwar economic recovery is complete in Western Europe and Japan. Prosperity has reached new, all-time highs in the United States and Canada. The industrialized countries of the free world have the means and the ability to surmount the challenge of the sixties. What is needed is the will and determination to succeed. The prize of success is well worth the effort. For, as the newly developing countries grow in freedom and as it becomes clearer that the way of freedom has been irrevocably chosen by the great majority of the peoples of the earth, the power of their example will prove irresistible—even within the ramparts of the Communist empire. This is the surest way to a secure and lasting world peace, the supreme goal of all mankind.

Although the prospects for a concerted effort to speed the free world's progress are bright, the task is truly formidable. It is one to which we shall have to continue to bring leadership in the sixties, just as we did in the late forties and the fifties.

Now, let me explain what I mean by leadership: I most assuredly do not imply superiority or domination. For reasons not of our own making, we have a dominant position in the postwar economy of the free world. But that clearly abnormal period has now passed, with the resurging economic strength of our industrialized allies. What we seek today, as in the past, is partnership with our fellow members of the interdependent community of free nations, in which no

one nation has a monopoly on human skills, energies, or inspiration. Within the framework of that partnership, however, there is a continuing need for leadership. As the most materially favored member of the free world community, we must accept this responsibility in meeting the challenge of the sixties.

Let us recall that even before the Second World War ended the United States had taken a leading role in planning for a more effective international economic system than the one that had broken down so disastrously in the thirties. The International Bank for Reconstruction and Development had been agreed upon by 1944. So had the International Monetary Fund. And much preliminary work had been done along lines which shortly thereafter evolved into the General Agreement on Tariffs and Trade.

Although wartime planners for economic peace had done their work well, they underestimated by a wide margin the magnitude of the immediate postwar economic crisis in Europe and Asia, which developed with frightening speed and intensity in 1946 and 1947.

Germany and Japan were occupied and we had to find and develop policies that would enable the German and Japanese peoples to put their productive genius back to work. Great Britain and our continental allies were also in difficult circumstances. Despite its tremendous productive potential, the European economy was nearing a catastrophic collapse. There seemed to be no prospect that ordinary methods could bring about a recovery in time to avoid chaos.

Bold action was called for. We responded with the Marshall plan, which made a historic contribution to the restoration of economic health and vigor in Western Europe. Our policies in Germany and Japan were remarkably effective in helping to reestablish an economic base that could support democratic institutions. Success came rapidly. By the early fifties, nearly all of the industrialized states of the free world were beginning to push ahead on their own power.

As the need for American aid to Western Europe tapered off we turned our attention increasingly to the less developed countries, which now receive the great bulk of our assistance. We took an active role in the technical assistance efforts of the United Nations. We created a new lending institution of our own, the Development Loan Fund, to supplement the work of our long-established Export-Import Bank. We participated earlier this month in launching the new Inter-American Development Bank. And we are now taking part, with like-minded countries, in establishing another new institution to be called the International Development Association, which will operate as an affiliate of the World Bank, and which is designed to make capital available to the less developed countries on flexible terms.

Throughout the period of postwar reconstruction, we vigorously put forward our firm belief that liberal international trade policies are essential to free world economic progress. We have endeavored to demonstrate that belief in our own trade arrangements. Despite some setbacks, our overall record is one of which we can justly be proud. Until fairly recently, however, ours has been a rather lonely position. The industrial nations, with few exceptions, clung to exchange controls and severe quantitative import restrictions to protect their meager foreign exchange reserves. Many of the less-developed countries also maintained import restrictions for balance-of-payment reasons. In addition, most of them felt that a measure of protectionism would foster much needed industrial growth.

We were tolerant of the trade restrictions applied by our friends and partners during the era of the so-called dollar shortage.

But today the situation is very different. Most of the industrial nations have built their gold and foreign exchange reserves to quite satisfactory levels and have made their currencies convertible in international trade. Their manufacturing industries are now generally competitive with ours. Meanwhile, their gains in reserves have come largely from U.S. stocks, with U.S. balance-of-payments deficits running at far larger rates than can be long sustained. Throughout the past year, therefore, we have been making it clear that we believe recovery has proceeded to a point where restrictions on trade imposed to meet the financial problems of a decade ago can no longer be justified.

Fortunately, the need to do away with discriminations against imports from the dollar area has been recognized by the other industrialized nations and in some of the newly developing areas as well. Action to eliminate discriminations recently taken by Australia, New Zealand, the United Kingdom, Denmark, Sweden, Norway, the Federation of Rhodesia and Nyasaland, the Netherlands, and India, has left only a few remaining discriminations against dollar goods in these countries. During the last 6 months, steps to substantially lessen discriminatory restrictions were also taken by France, Germany, Japan, Finland, Turkey, Spain, Singapore, Malaya, Ghana, and British East Africa. This progress continued last month, when Portugal, Kenya, and the United Kingdom, Japan, and Italy, announced that discriminatory restrictions on many products from the dollar area would be eliminated.

The drive to remove quantitative import restrictions on dollar goods has received so constructive a response and has developed such momentum that we can look forward confidently to further advances in the coming months. We can reasonably hope that by the end of the year, discrimination against our exports will be almost a thing of the past.

As a result of these moves, potential markets for many important American products—covering a wide range of our industrial, consumer, and agricultural output—have greatly increased. This is true not only in the industrialized countries, but also in the newly developing lands, whose present need is for capital goods, but whose peoples will eventually offer a tremendous market for consumer goods.

But the opening of long-closed markets does not in itself guarantee a rise in our exports. It does provide the needed opportunity—but it is up to private American business to capitalize on this opportunity. A substantial export surplus has become a vital necessity if we are to continue to carry our free world responsibilities. We in Government are determined to do everything in our power to help in this export drive.

Accordingly, the Department of State is working with the Department of Commerce and other agencies in giving urgent attention to this vital matter. We are studying means of stimulating a greater interest in foreign trade in American business circles and of providing better U.S. Government facilities, both at home and abroad, to assist American firms in selling their goods and services to foreign countries.

The Department of State has, of course, a very strong interest in this program, and we are seeking ways of improving the operations of our commercial staffs abroad. We also intend to make full use of all the members of our diplomatic missions and consular offices in expanding U.S. exports. We are giving greater attention to increased U.S. participation in trade fairs. And we are intensifying our efforts to promote travel to the United States.

Other problems related to trade have recently been emerging in connection with the European Economic Community, or Common

Market, and the European Free Trade Association.

The Common Market will bring together the six countries of France, Germany, Italy, Belgium, the Netherlands, and Luxembourg, in a full customs union, with free trade inside the market and a common external tariff. The community will also develop other common financial and administrative institutions. The European Free Trade Association, on the other hand, provides for free trade, without a common external tariff, among the seven countries of the United Kingdom, Sweden, Norway, Denmark, Switzerland, Portugal, and Austria.

It is our purpose to work with the countries of both the Common Market and the Free Trade Association to reduce trade difficulties between them and with other countries, to avoid new discriminations against our own exports, and to encourage them to reduce tariffs in accordance with the basic principles of the GATT. In this way we hope also to ease frictions between the members of the two groups.

The problem of world trade goes hand-in-hand with the complex and difficult problem of stimulating growth in the newly developing countries. This task will require the combined energies and talents of the entire free world for many years to come. The United States cannot provide the needed capital alone. We do not propose to diminish our own role. But Western Europe and Japan, because of the great improvement in their monetary reserves, are now financially capable of mounting a sizable effort which could powerfully assist our own, thereby greatly adding to the overall strength and cohesion of the free world.

There is also the problem of how the great energies of private enterprise—American, European, Canadian, and Japanese—can be mobilized for the development task. Ways must be found to increase the flow of private capital and initiative to the developing countries if the basic free-world resource we call private enterprise is to make its fullest contribution to growth. If we are to have the resources to do these things, our own growth in North America and in Western Europe must be accelerated.

There is still another long-range problem which the industrialized free nations will have to face with growing urgency in the years ahead. It is the acceptance into their own markets of raw commodities produced by the newly developing nations today, and of the manufactured goods they will produce tomorrow. None of these nations will be satisfied to remain a one-commodity area forever. They all insist on diversifying their economies and on raising their standards of living by industrialization and by world trade in a variety of goods.

These, then, are the major economic problems facing us as we enter the sixties. We in Government have asked ourselves three questions:

First, how can we help to redirect the emerging trade rivalries within Western Europe into constructive channels which will reinforce, rather than weaken, world-wide trade, and will avoid the risk of serious harm to our exports and those of other friendly countries?

Second, how can we help mobilize the energies and resources of the other industrialized free nations to assist the development-hungry areas of the world?

Third, how can we work together to maintain a rapid rate of sustained growth in the economies of the industrialized free nations themselves?

In considering these questions, it is readily apparent that bold action is called for in the sixties, just as it was in the forties. We have responded with a new approach to the task of stimulating free world economic growth—an approach designed to meet the problems of the future.

This approach, which I had the privilege of outlining last month in Paris before a special meeting of the 20 governments which are members or associates of the OEEC, has three basic elements:

First, the linking of North America with our friends in Europe in terms of broad coordinated economic policies which would provide for close cooperation in a wide range of matters. This involves reorganizing or reinvigorating the OEEC, which was originally established to assist in the most effective use of Marshall plan funds and which has continued to serve as a forum for cooperation in trade and other economic fields. A special committee of four, nominated by the United States, the United Kingdom, France, and Greece, and roughly representatives of the different economic interests in the OEEC, has been asked to determine how the work of the 18-member OEEC can best be revitalized and broadened through a successor organization in which the United States and Canada would also become full members. OEEC has succeeded outstandingly in its major tasks, but many of the functions for which it was originally created have now been largely accomplished. It can, however, serve as the foundation for a reconstituted organization geared to the challenges of the sixties. The special committee is now consulting interested governments and organizations, and is expected to report its preliminary findings to the 20 governments early in April.

The second element of our proposal is the establishment of an interim group where the Nation's best able to provide bilateral capital assistance to the developing countries can discuss common problems in this field. Such discussions are needed because the urgent task of increasing the overall level of assistance to the developing countries cannot await the formation of the new permanent organization. This Interim Development Assistance Group will include the United States, Belgium, Canada, France, Great Britain, the Federal Republic of Germany, Italy, Portugal and a representative of the Commission of the European Economic Community. We also hope that Japan will join in its activities. The first meeting of the group, which is to be held in Washington next month, will launch a series of consultations in which we will exchange ideas and experiences with a view to increasing the total amount of assistance available for development purposes.

The third and final element of our proposal is an examination of the problems of commercial policy to which I have referred in connection with the six and the seven. The 20 governments and representatives of the Commission of the EEC which attended the meetings in Paris last month are participating in a committee on trade to look into these questions. In establishing the committee, it was agreed that it should also keep very much in mind the commercial interests of countries not included in the six or the seven. In line with this objective, the executive secretary of the GATT is to participate in the committee's discussions, which will begin some weeks hence.

I am pleased to be able to report that our initiative has been well received by our friends and allies. The Paris meetings at which agreement was reached on these three proposals took place only a month ago. Yet officials of the participating governments had scarcely returned to their desks before work began in earnest preparation for carrying out the tasks we have set for ourselves. Although we are embarked on long-range projects, we are approaching them with a sense of urgency which the problems of stimulating free world economic growth in the sixties manifestly requires.

We are looking forward with considerable anticipation to the results of these meetings, which have been launched in a genuine

spirit of cooperation. We hope and expect that they will result in progress in coping with some of the free world's trade problems. Perhaps most important is the fact that there is now a great awareness in Western Europe of the increasing role which Europe is bound to play in providing assistance to the developing countries, and that there exists a very genuine desire on the part of the other capital-exporting nations to cooperate in this common endeavor which is so vital to the preservation of freedom.

We are indeed coming into a whole new era in free world economic growth. We are on the threshold of a major breakthrough. If the response of our friends and allies to our initiative of last month is as constructive and as generous as I have reason to believe it will be, then we need have little fear for the future. The great steps we are about to take toward freer trade and accelerated economic progress can carry us forward to new heights of prosperity and well-being as members of a peaceful and secure community of free nations which offers maximum opportunity for every human being to know a better life.

Thank you.

The Lee Group of Papers—A Tribute

EXTENSION OF REMARKS

OF

HON. FRED SCHWENGEL

OF IOWA

IN THE HOUSE OF REPRESENTATIVES

Tuesday, March 1, 1960

Mr. SCHWENGEL. Mr. Speaker, the recent publication of a handsome volume on the newspaper-radio-TV family of the Lee group in a communications domain which extends from mid-America to the mountains, made for exciting reading in that it emphasizes the American dream and what can be accomplished by dedicated men working toward a goal.

Under leave to extend my remarks, I ask unanimous consent to pay tribute to this family and to have these remarks appear in the Appendix of the Record so that others may become aware of this wonderful achievement.

There are many great newspapers in the United States; great, not in the sense of physical bigness, but in qualities of character, intellect, and leadership. The Lee group of newspapers which extends from our great Midwest to the Rocky Mountains, since the 1880's has operated and grown on those qualities of character, intellect, and leadership.

Increases in a newspaper's circulation and advertising cannot be ascribed to luck. Often a newspaper may have unbound financial resources, a superb editorial and executive staff, a completely equipped modern plant and a potential circulation and advertising field ripe for development—and yet drift pathetically into failure. The history of American journalism illustrates these comments.

What then is the open sesame to newspaper success? May I offer the assumption that the success of the Lee group of newspapers rests on belief in and a dedication to our system of free enterprise and complete loyalty to freedom of the press.

The character and purpose of the founder of the Lee group, Alfred W. Lee, should be especially noted now. The story of the Lee papers is a record of the growth of an idea, born in the mind of the founder. He believed that a newspaper should be a community institution—a shining example of free enterprise—operated to be independent of all influences other than the good will of the people who support it.

Employed in the bookkeeping department of the Muscatine Journal, Mr. Lee observed the business methods of John Mahin of the Journal.

Lee purchased the Ottumwa Courier on April 1, 1890. Then came the acquisition of the Times at Davenport, the Muscatine Journal, the Courier Post at Hannibal, Mo., and the La Crosse (Wis.) Tribune.

The ingredients contained in the principles of free enterprise and freedom of the press are given expression in the following words which appeared in the Davenport Times in 1899 when A. W. Lee acquired that newspaper:

The Times will be subservient to no faction or clique, nor will it depend upon political favor or influence.

We believe that a newspaper is a commercial enterprise and should be conducted on strictly business principles, seeking patronage solely on its merits. We pledge the best newspaper that can be published at a profit.

Mr. Lee died suddenly in 1907 and his widow put her trust in the Davenport Times publisher, E. P. Adler. He became what we might term "a builder" of the Lee group. He purchased the Davenport Democrat, one of Iowa's oldest dailies.

The Lee group went outside the State of Iowa to embrace the Wisconsin State Journal—Madison—the La Crosse (Wis.) Tribune, in Illinois the Kewanee Star-Courier, in Nebraska the Lincoln Star.

The third president of the Lee group, in its 70 years of service to American journalism, is Lee P. Loomis, the present chieftain. Today he presides skillfully over the newspapers and radio and television stations in five Midwestern States and one Western State. He also is the publisher of the Mason City, Iowa, Globe-Gazette, a member of the Lee group.

An account of the Lee group, which would include the complex and astonishing process which brings to many thousands the record of events from the four corners of the world, would of necessity pay tribute to countless men and women whose talents and time have been and are dedicated to this organization. They, too, are exponents of our American way of life—exponents of free enterprise and the priceless heritage of freedom of the press.

Opponents of free enterprise, who would seek to destroy it, could be greatly perturbed by the activities of the Lee group. Each paper is editorially independent. This is a distinguishing attribute by which Lee group journalism can be accorded a position of influence and leadership. Neither can free enterprise exist without vision and foresight

nor without high ideals and strong convictions nor without the courage to defend them. Such factors exist in the Lee group's activities in the Midwest and in Montana.

Typical of the great strides in the publishing field achieved by this family are the success stories of the papers in the First Congressional District of Iowa—the Muscatine (Iowa) Journal and the two Davenport (Iowa) dailies, the Morning Democrat and the Daily Times.

It is fitting that we pay special tribute to these papers because they are the core of the family's success.

The Muscatine Journal dates back to 1840 and is actually the ancestor of today's sprawling Lee group. In its early days, the publisher was John Mahin, brother-in-law of the Lee founder, A. W. Lee.

A far cry from the primitive but positive beginnings, the Journal today operates in a modern plant. It offers photography and engraving services, four-color printing, and Associated Press Photofax.

H. L. Nelson, the Journal publisher, and Walter Russell, the managing editor, have developed an organization which has been responsible for a 1959 circulation figure of 10,000.

In Davenport, the round-the-clock journalism provided by the Daily Times, the Morning Democrat and the Sunday Times-Democrat, serves eastern Iowa and western Illinois with some of the most comprehensive coverage in the United States.

The struggling Davenport Times was added to the Lee group in 1899, and under E. P. Adler, the builder of the Lee chain, the Davenport Democrat was purchased in 1915.

The Morning Democrat observed its centennial on October 15, 1955, with the publication of 10 sections over a period of 10 days. Today's circulation is at the 23,000 mark, growing at the rate of nearly 1,000 a year since moving into the morning field 8 years ago. The Democrat circulates in the 14 counties of the rich farm and industrial area around the Quad Cities.

The publisher of the Morning Democrat, Henry B. Hook, and his managing editor, Forrest Kilmer, have reason to be proud of the first place award which the Morning Democrat received this year for outstanding topography in competition with 227 other papers in the Inland Daily Press Association.

The Daily Times, the second paper in the Lee organization, traces its ancestry back to 1878. It is the survivor of nine struggling dailies on the Davenport scene. With a circulation well over 30,000, it has always been a potent force for progress.

The Times publisher is Philip D. Adler, son of E. P. Adler. At 23 he was publisher of another Lee family paper, the Kewanee (Ill.) Star-Courier. Philip Adler is carrying on in the fine tradition of his father who helped bring A. W. Lee's vision of a group of Midwest dailies into focus.

The brilliant managing editor of the Daily Times is M. A. Fulton whose jour-

nalistic leadership continues to be a pace setter in the Midwest.

From the days of Benjamin Franklin down to the present, no other American institution has served the public welfare with more courage or with more effectiveness with more perseverance or more unselfishness, than has the American press. Factually the pen has indeed been mightier than the sword. It has followed the flag in peace as well as in war. It has been the right hand of progress; the forerunner of law and order in the cities and villages of our Nation.

The Lee group has not only maintained its own rights—the freedom of the press—but with courage and consistency, throughout its existence, has been the effective defender of freedom of speech and freedom of enterprise.

My salute to the Lee group is not for the promotion of these newspapers, but rather it is to give special thought, grateful thanks, and sincere congratulations to the importance of the purpose and the people involved.

Mergers of Power and Authority Serious Problem in United States

EXTENSION OF REMARKS OF

HON. JOHN SPARKMAN

OF ALABAMA

IN THE SENATE OF THE UNITED STATES

Tuesday, March 1, 1960

Mr. SPARKMAN. Mr. President, I call attention to the address which the distinguished Senator from Missouri [Mr. SYMINGTON], delivered to a convention of the National Association of Retail Druggists entitled "Mergers of Power and Authority Serious Problem in United States." The address is reprinted in the November 16, 1959, edition of the N.A.R.D. Journal.

As chairman of the Senate Small Business Committee, I have read the distinguished Senator's comments carefully and with great interest. He displays a keen insight into the grave problems confronting the American small businessmen. I hope that Senators and everyone interested in the welfare and the problems of small businesses will read the Senator's comments. Surely the 4 million American small and independent businesses are the foundation of our free enterprise system, and all of us need to redouble our efforts in behalf of this important segment of our economy.

I ask unanimous consent that Senator SYMINGTON's comments be printed in the Appendix of the Record.

Mr. SYMINGTON. Mr. President, will the Senator from Alabama yield?

Mr. SPARKMAN. I yield.

Mr. SYMINGTON. I express my deep appreciation for what the distinguished Senator from Alabama has just said. As we know, he is an authority in the Senate in the field of small business.

Mr. SPARKMAN. I thank the Senator from Missouri.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

MERGERS OF POWER AND AUTHORITY SERIOUS PROBLEM IN THE UNITED STATES—CONVENTION ADDRESS BY SENATOR STUART SYMINGTON

I want to welcome you to my hometown and to tell you what a great privilege it was to accept the invitation that was given to me by one of my beloved colleagues, the Honorable WRIGHT PATMAN of Texarkana, Tex.

Our economic system is a healthy and vigorous one. It has room for free enterprise of all sizes. We don't need cartels or a corporate state to assure the full production of goods and services in America. And the short-run advantages of a big operation are often overcome by the long-run disadvantages of monopoly.

CONCERNED ABOUT "GIANTISM"

As perhaps some of you know, I came out of business, small and medium-sized business, to go into government. I speak from the standpoint of my own experience. And that is why so many of us have become increasingly concerned about the growth of what may be best called "giantism" in the manufacture and distribution of commodities.

Three years ago, the vice president in charge of finance for a great corporation here in St. Louis said to me: "STUART, you know you hear a lot about small business and big business, but I don't think that those terms are quite applicable."

At the time I left business 15 years ago, small business was a maximum of 500 people or a company that did not dominate its industry. Today in my opinion small business can be 10 or 15 thousand people. And at that time this man gave me a word for what is going on in this country today, not only in business but in every segment of this economy: giantism. I have never heard a better word to describe the problem that so many people are running into steadily—this consolidation in all segments of the economy of power and authority. In the case of business it is done through the concentration of wealth.

Independent operators are trying to check this trend by more flexible and imaginative sales practices, but they are beginning to realize the growing danger to their future involved in this concentration and consolidation of economic strength. Smaller enterprises, for example, find it much harder to help themselves when the Government fosters and approves the steadily rising interest rates.

Federal Reserve Board studies have shown that in periods of tight money smaller businesses receive less money in bank loans while the giant businesses get more. The figures on that are very interesting.

It is true, and of course as we all know, one of the most important costs of business today is the price of money. And in that connection, Congressman WRIGHT PATMAN has been a Horatio at the bridge with respect to this particular problem, articulate and intelligent in warning about the danger of high interest rates.

In Missouri today, every good farmer, every successful farmer I have met whose operations are below the giantism concept of agriculture, when asked, "What has been the greatest addition in your costs in the last 10 years," has said, "The additional price that I have to pay for money to carry me over until I make my profit." So it is not just in industry that this problem of interest rates is getting more and more serious.

Today we are in another credit squeeze. Unless we are careful it may be the most severe in recent years. I am an industrialist by training, not a banker, but I remember many things. There have been three depressions in my lifetime. The one in 1907 I

don't remember since I was only 5. I recall 1921 because my father was a judge on the bench when real estate went bankrupt, and 1932 I remember best of all, for the reason that I went broke myself.

SENSE SAME OLD TRENDS

And as we see these things that are going on today in the handling of money, we sense the same old trends. I believe it was George Santayana who said, "Those who will not recognize the lessons of history are condemned to repeat them."

In August 1957, the President of the United States said the way to lick this growing inflation is to look before you buy. Six months later, in February 1958, he and his administration said the way to lick this recession is to buy. These things change very, very fast.

Today this administration wants to raise all interest rates on all Government bonds and as soon as that is done the interest rates to all business will increase. And to me it is hard to understand why we now want to prolong interest rates well above 4½ percent, when only a few months ago we offered 12-year, 4 percent Government bonds, got subscription offers for a billion and a half, but sold 600 million. Last year we offered 8½-year, 3 percent long-term Government bonds and had a subscription of 6 billion and only sold a billion and a half. In other words, the Government could have borrowed the money it needs at lower rates, but it didn't, so now it is forced to pay higher rates.

Now when you juggled the economy through manipulation of the price of money, in my opinion, you are doing a very, very dangerous thing to everybody.

And now I would like to speak briefly about a subject you as druggists are especially concerned with.

FRUITS OF MEDICAL SCIENCE

Here in America we have widespread distribution of the fruits of medical science and this has given our people a very high level of health. However, in many other countries, unfortunately almost the reverse is true. Smallpox, malaria and many other diseases which we in the West have conquered, take a heavy toll in Africa and Asia. Despite the great progress made in reducing infant mortality, we should remember in Asia one child in six never lives more than 1 year. Our faith and our educators teach us one life is as good as another regardless of nation or creed.

The great challenge we face, therefore, is to make the discoveries of our medical science available to all the peoples of the world.

I believe we should lead the way in an international attack on disease so as to give everybody a longer and more prosperous, happy life, to increase happiness and productivity over the years. If there is anything I have learned in the years I have served in Government, it is that poverty, disease, and hunger breed communism a great deal more than Marxist teachings themselves.

The symbol of communism today may well be considered by many people in underdeveloped countries to be a pennant on the moon. Don't misunderstand me. I am very sorry about this. I think it is significant that we weren't the first to orbit a satellite 2 years ago.

But on the other hand, America's symbol from the standpoint of the future in this country that we all love the most, could well be village dispensaries stocked with the modern drugs which bring a better and a longer life. In this connection, I would hope that all of us would support the Health for Peace Resolution which passed the Senate and is now pending in the House of Representatives. It is a resolution that authorizes \$50 million a year for an international program to be administered alongside

of American foreign policy. It is a good first step on the Federal level and should help us to develop our drug business abroad. Private groups can work effectively in this field. They can follow the lead of the Medico Organization and its heroic jungle doctor, a native of our town of St. Louis, Dr. Tom Dooley, of whom we are mighty proud.

Around the world many other diseases go unchecked. Trachoma and related illnesses attack 420 million people per year; 400 million people have hookworm. Each year the less fortunate countries of the world report 200 million cases of malaria which result in 2 million annual deaths. In a peaceful world these enemies of humanity must be countered there as they are here.

Now we have a justifiable pride in increasing our life expectancy. But let us remember that in India today, a child when born has a life expectancy of 32 years. In Burma and Pakistan, it is a little better, 35. Over here, it is 69.

The world today is a totally different place than it ever was before. It is almost hard to put it in words. I have one little illustration. Not too long ago I had to make a talk on George Washington and I found that it took him from 4 to 8 days to go from Philadelphia to Washington, D.C., 148 miles, depending on the condition of the roads. You fly it today in a commercial airliner in 40 minutes. I flew in a plane last summer at a speed that would cover those 148 miles in 8 minutes. We have another plane under construction, the X-15, which will do it in 3 minutes, and I have seen the design for a plane that will make the trip in 30 seconds. So when you go in 150 years from 4 to 8 days to 30 seconds, I think it is fair to say you are moving right along. And I think we have to understand our economy a great deal more than most of our citizens do.

THEORY ABOUT PAST AND FUTURE

There has been a lot of theory about the past as applied to the practicability of the future. I am afraid that, as a Nation, we may be thinking too much about what we are against and not recognizing those things we are for. Perhaps we are a little too much against communism instead of being for a free and prosperous and secure life.

The other day I got a letter and I really had to laugh. It came from one of the biggest business executives in this town. He wrote to me and said: "Why don't you go to work and get the help and get the money necessary for urban redevelopment? Why are you lagging behind?"

It was a nice letter, well written, with kind regards at the end. "Why are you lagging in flood control? Why don't we get a Federal housing building program? What is the matter with the Jefferson Memorial? We are 20 years overdue. Please see that a bill is passed to maintain our highway system."

So I wrote a letter saying "Acknowledging your letter of" such-and-such. "I am very anxious, as all of our congressional delegation is, to see everything happen to our community that happens to other communities. That makes us competitive in this country and with the rest of the world."

And all of a sudden, out of a clear sky, I get a letter from the same man saying, "Dear Senator, I want you to know I have had enough of this Federal spending" . . . and so forth and so on.

You know, having been a little businessman and marrying the daughter of a farmer (which didn't help me much in getting along with my business), I sometimes wonder what we really stand for as we think about our country. Several times, when in business, I went to my board of directors and said, "Look, I want to dig a hole and put some-

thing on top of it and put machinery in there, and if we do that, we will make a better product and it will be better for the stockholders."

Everytime the proposal was presented properly and was right, they said, "Go ahead." We dug the hole and expended the money and we made investments in the future of our company and we were very proud. We put it on the balance sheet as an asset, and presented it as such, and everybody seemed pleased that it had been done.

Now, that was for a certain group of stockholders and it was fine. But unfortunately the reverse is true for some reason, when we talk about all of the stockholders—the 177 or 180 million people in the United States that have a stake in our Government.

TAKE STOCK IN THIS WORLD TODAY

We all have to take stock in this world today. We have to take a good hard look at this visitor from Russia, Khrushchev. I am glad he came over here, because it gives him a chance to feel the things that we have in this country, the great basic economic strength, the great basic technological strength, and above all the great moral and spiritual strength that we have because of the faith we have in our institutions.

Khrushchev is very clever. He is very agile mentally. He was asked about Hungary and he said, "If you have a rat in your mouth, sometimes it is hard not to swallow it or spit it out."

Fair enough. Khrushchev met the director of the Central Intelligence Agency, Allen Dulles, a great public servant, and he said to Mr. Dulles, "I read your reports, too." I thought Mr. Dulles' answer was quite appropriate. He replied, "I trust you get them legally."

The message I would like to leave with you is, where are we headed as a country? It is very important for a reason that I will mention. If we had a vote here this afternoon in this hall, I am sure we would agree that the most vital thing in the world is the attainment of a just and a lasting peace. That is the thing we want more than anything else in the world. But how are we going to get it? What should be our tactics?

History and logic prove that the only way we can get it is through some form of universal agreement for disarmament. Why should that be true? The Communists cannot be relied upon. We have made 53 agreements with the Russians and they have broken 54. We would like to trust them, but based on the record we can't.

DISARMAMENT KEY TO PEACE

Now is we agree that a negotiated disarmament is the key to peace, then we today only have one thing to answer or decide as people. Based upon the record—the record of Czechoslovakia, Poland, Hungary, and many in addition, do we have a better chance of attaining that peace if we negotiate from a position of weakness relative to our opponents, or if we negotiate from a position of relative strength?

There is the whole story. And by strength we don't mean physical strength any more than we mean economic strength and technological strength and psychological strength.

This problem, then, is closely related to those we were discussing earlier. We must avoid consolidation in any segment of our economy. We must maintain an economic freedom, a spiritual freedom and a technological freedom. We must keep enough physical strength so we can be free. In that way, we can all attain what we all want more than anything else in the world, the opportunity to pass on to our children the heritage that has been given to us, the heritage of a free people.

Benjamin Nields III

EXTENSION OF REMARKS

OF

HON. EDWIN B. DOOLEY

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Tuesday, March 1, 1960

Mr. DOOLEY. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following statement which I have prepared in memory of my friend Benjamin Nields III, of Rye, N.Y.

The cryptic phrase "Ben Nields III, died" may mean little or nothing to the stranger reading it in the CONGRESSIONAL RECORD, but when noted in the local press of Westchester County, N.Y., it signified to multitudes of men and women the passing of one of the county's most distinguished and beloved residents.

Ben Nields was a young—48 years of age—attorney of superb character, winning personality, and magnanimous disposition. He gave much of his time to charitable work and was keenly interested in his government, both local and national. As chairman of the cancer drive in his community he showed highly developed administrative talents, and won the admiration of his colleagues and the gratitude of the people of the area.

Ben read the CONGRESSIONAL RECORD religiously, and it is fitting that this eulogy appear in these pages. He would have made a great Congressman had fate so decreed, for he was an exemplary leader in the finest meaning of the word.

Few men have had a happier family life than Ben. Devoted to his lovely wife, Sheila, and dedicated to his fine son Ben, IV, he experienced the blessings of filial and wifely affection.

Ben was my opponent in the congressional primary. At all times he was most gentlemanly, a natural facet of his good breeding. Entirely devoid of vindictiveness or personal rancor, he was always objective in his approach to his goal, and at all times eminently fair.

As I listened to him divulge his philosophy of government and delineate his approach to national issues, I concluded that here was a man who pledged himself to a life of service to his fellows and his community. His passing leaves all that knew him poorer in spirit, and saddened of heart.

Following is an editorial from the Mamaroneck Daily Times, February 27, 1960, which sums up accurately his contribution to Westchester:

EVEN WHEN HE LOST, HE SERVED

The death of Benjamin Nields III, of Rye, is a distinct loss to Westchester and its political system. Because of his campaigns for Congress and because of his interest in having issues discussed openly and thoroughly, two elections in the 26th Congressional district were distinguished by an informed electorate.

Mr. Nields believed in debate and argument on the complex problems which face Westchester and the Nation. As such, he frequently cleared the air within his own Republic Party and in the Democratic-GOP

election battles that followed. No one ran silently for office when "Ben" Nields sought election—nor when he was not running, for that matter.

It is not unusual for the man who causes debate and the free flow of ideas to go without election to an office. And so it was with "Ben" Nields. He lost in his bid for the Republican nomination for Congress in 1954, and again in 1956 when he campaigned as an insurgent. But, thanks to his efforts, no one could say that the public had not been given opportunity to sound out the ideas of the candidates.

Finally, not the least admirable aspect of this young man's character—he was only 48—was the fact he always had been the best of good losers. He held no grudges. He was not petty. When the people spoke in a primary election in which he had been a candidate, he accepted the verdict and on more than one occasion, without sacrifice of principle or loss of self-respect, he took up the cudgels for men who had beaten him.

Over the years, Mr. Nields had been assistant chairman of the National Taft-for-President Club, had been a member of the Rye City Planning Commission, and leader of a host of charitable and civic movements both in his home community and in the county at large. He had been, in other words, a fine, vigorous American, true to the traditions of his fine American family.

Federal Financial Assistance for School Construction and Teachers' Salaries

EXTENSION OF REMARKS

OF

HON. JOSEPH S. CLARK

OF PENNSYLVANIA

IN THE SENATE OF THE UNITED STATES

Tuesday, March 1, 1960

Mr. CLARK. Mr. President, I ask unanimous consent that a summary and analysis of S. 8, as amended by the Clark-Monroney amendment on February 4, 1960, be printed in the Appendix of the RECORD.

There being no objection, the summary and analysis were ordered to be printed in the RECORD, as follows:

SUMMARY AND ANALYSIS OF S. 8, TO AUTHORIZE FEDERAL FINANCIAL ASSISTANCE FOR SCHOOL CONSTRUCTION AND TEACHERS' SALARIES AS AMENDED BY THE CLARK-MONRONEY AMENDMENT ON FEBRUARY 4, 1960

SUMMARY

SECTION 1. Short title: The bill may be cited as the "School Assistance Act of 1960."

SEC. 2. Findings and purpose of act: The Senate found that despite sustained and vigorous efforts by States and local communities to build schools and to increase teachers' salaries, there are still serious shortages of classrooms and of teachers which require action on the part of the Federal Government. The purpose of this bill is to provide Federal financial support to help meet both the problems of financing adequate school facilities and teachers' salaries, or both, as the States may decide, and thereby to strengthen our Nation's educational system.

SEC. 3. Assurance against Federal interference in schools: "In the administration of this act, no department, agency, officer, or employee of the United States shall exercise any direction, supervision, or control over the policy determination, personnel, curriculum, program of instruction, or the administration or operation of any school or school system." It is significant that, even without this disclaimer section, the opportunity

for Federal control of educational policies simply does not exist.

SEC. 4. Authorization of appropriations: Authorizes appropriations to be made for each fiscal year of a 2-year period beginning July 1, 1960, of \$20 multiplied by school-age population.

SEC. 5. Allotments and payments to States: The U.S. Commissioner of Education shall allot funds to each State on the basis of the State's school-age population, income per child of school age, and effort for school purposes of the respective States.

The allotment ratio for any State shall be \$1 less the product of 50 cents and the quotient obtained by dividing the income per child of school age for all the States except that the allotment ratio shall in no case be less than 25 or more than 75 cents.

The allotment ratios shall be promulgated by the Commissioner on the basis of the average of the incomes per child of school age for the States for the three most recent consecutive years for which satisfactory data are available from the Department of Commerce.

"Child of school age" and "school-age population" refer to those between the ages of 5 and 17, both inclusive.

SEC. 6. Maintenance of State and local support for school financing: The allotment of any State shall be reduced by the percentage the State school effort index is less than the national school effort index during the second year. Reduction will be reallocated among the remaining States. The amendments to this section are technical rather than substantive.

SEC. 7. State applications: Provisions whereby the State education agency of each State desiring to obtain an allotment shall make application to the Commissioner.

SEC. 8. Matching by States and local communities: Provisions to insure that after the first year a State must have increased its expenditures for elementary and secondary education from State and local sources over its share of Federal funds. State and local sources use the base school year 1959-60.

SEC. 9. Period for use of funds and certification by States: Upon receipt by the State, funds allocated under this act shall thereafter be deemed to be State funds. The State education agency shall certify that funds have been distributed and expended according to provisions of this act.

SEC. 10. Labor standards: This section provides that the State education agency shall give assurance to the Commissioner that workmen employed on school construction projects financed by allotments under the bill will be paid wages in keeping with the prevailing wage rates in the area as determined by the U.S. Secretary of Labor under the Davis-Bacon Act, as amended.

SEC. 11. Definitions: This section is self-explanatory. The definitions are stock definitions commonly used in legislation. "Teacher" is defined to be what each State educational agency deems a teacher to be; "teachers' salaries" is so defined that funds may be expended only as compensation for teaching; "school facilities" does not include athletic stadiums, or structures, or facilities intended primarily for events, for which a general public admission is charged.

The Principal of the Year

EXTENSION OF REMARKS

OF

HON. PETER W. RODINO, JR.

OF NEW JERSEY

IN THE HOUSE OF REPRESENTATIVES

Tuesday, March 1, 1960

Mr. RODINO. Mr. Speaker, I would like to call to the attention of the House

an honor accorded Mr. Fred Landolphi, of New Jersey. Mr. Landolphi, who is principal of the South Side High School, in Newark, has been designated "Principal of the Year."

I am proud to know Mr. Landolphi, and I personally feel that no one is more deserving of the honor. His outstanding 29-year record as an educator has been culminated by his achievement in the South Side school, where his dedication and success moved the faculty to nominate him for the "Principal of the Year" competition. Mr. Landolphi's efforts have won the confidence of faculty and students alike.

I should like to include in the RECORD a tribute which appeared in the Newark Star Ledger of February 28. One of the things which this article points out is that Mr. Landolphi has personally solicited funds from friends and alumni so that more of South Side's graduates can go on to college.

The article follows:

SOUTH SIDE SAGA—PRINCIPAL BUILDS, WINS CONFIDENCE

(By Roger Harris)

When Fred Landolphi of South Side High School was designated Principal of the Year, his students greeted him with confetti and cake.

The celebration was greater than any following a major athletic triumph, for Landolphi had done a great deal for the school, and the school was eager to show its appreciation.

Landolphi took over as principal of South Side in 1951. At that time, the job was considered an unenviable one.

"Morale, good manners, scholarship, loyalty, and devotion had reached an unpleasant ebb," his faculty said, in its nominating petition to Arthur C. Crofts Publications, sponsors of the national contest.

"Today," said Landolphi, "teachers are glad to come to our school. Faculty and student morale are both high and nearly a quarter of our students go on to colleges."

Landolphi sees his success at South Side as merely another application of a principle that has guided him throughout a 29-year teaching career.

"You have to give the kids a feeling of confidence," he maintains. "You have to let them know that you're interested in them and that you only bawl them out because you care for them. Then you have something."

"Remember that many of these children are underprivileged and have terrible home lives—some of them so bad that it sounds like something out of a novel."

"It's wonderful to see kids with a real disadvantage, a 10-year handicap, make good. That's the biggest satisfaction I get in this job."

Educator Landolphi has been watching kids make good since 1931 when he came from the campus of Rutgers University with his master's degree to a teaching job at Arts High School.

After teaching history for 11 years in city schools, he was appointed vice principal of Arts High School in 1947 and then occupied a similar job at Weequahic High annex. The same year he moved to the board of education offices to take over the secondary school guidance program.

Landolphi found the administrative job a challenge and rewarding, but left it to take the job at South Side High because "I love to work with kids."

There was plenty of work to be done. "I certainly couldn't have accomplished it without my faculty," he emphasized. "I

think I've got the best darned teachers in the world."

Another aspect of the school which Landolphi is especially proud is the South Side scholarship fund.

The principal noted, upon assuming office, that while the most gifted of his students were able to win scholarships, other youngsters with great potential were denied a college education because of poverty.

He has spent countless hours soliciting funds from the school alumni and has finally developed a worthwhile program. At present, 20 South Side graduates are being supported in college by the fund.

What with attending all school athletic and social events and ministering to the alumni, Landolphi finds the job a long and an arduous one.

"But the thrill of watching a kid develop and make good is the greatest thing in the world," he says. "There's no satisfaction like it."

Federal Contracts and Bias

EXTENSION OF REMARKS

OF

HON. KENNETH B. KEATING

OF NEW YORK

IN THE SENATE OF THE UNITED STATES
Tuesday, March 1, 1960

Mr. KEATING. Mr. President, one of the important provisions in the administration's civil rights proposals would provide for a statutory Commission on Equal Job Opportunity Under Government Contracts to succeed the President's Committee on Government Contracts. Unfortunately, this proposal has received very little attention. I do not believe there can be any reasonable argument against prevention of discrimination in employment under contracts paid for out of Government funds. All persons contribute to the support of the Government without regard to race; it follows that all persons are equally entitled to fair and equitable treatment in work paid for with Government funds.

The New York Times on Sunday editorially endorsed this proposal to give the President's Committee on Government Contracts statutory backing. I ask unanimous consent that this editorial be printed in the RECORD.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

[From the New York Times, Feb. 28, 1960]

FEDERAL CONTRACTS AND BIAS

The President's Committee on Government Contracts, of which Vice President Nixon is chairman, deserves applause for its forthright resolution calling on all Government agencies which have contracts with private firms to direct their compliance with the antidiscrimination provisions in their contracts which are required by the Government. Included for special mention should be two members of the committee—President Meany of the AFL-CIO and President Reuther of the United Automobile Workers—who pledged an all-out drive to get local unions of federation affiliates to stop practices that prevent Negroes from getting Federal contract jobs.

A good test of the future effectiveness of this welcome cooperation between the committee and organized labor would be prompt action in the case of Local 26 of the Electrical Workers in Washington, embarrassingly

typical of conditions in the capital. Negroes are effectively excluded from jobs on Government work by agreements between employers and the union to hire only those referred to them by the union. But local 26 bars Negroes from membership and refers only whites.

The employers, of course, should hire Negroes and the union should admit and refer them. Mr. Meany has given extraordinary evidence of his devotion to the antibias cause by his pledge to furnish qualified Negro electricians to employers who will hire them, regardless of local 26. And the committee has a critical role to play in getting them to do this. Also, local 26 should remove the color bar—another job for Mr. Meany and the federation.

Apart from calling national attention to violations of the antidiscrimination provision in Government contracts, the Washington electricians' case has been useful in raising the whole question of the status and powers of the Committee on Government Contracts. Any agency performing its function should have more of both—especially statutory backing rather than a continuing existence by a mere Executive order as now. After all, the case of the electrical workers in Washington gives only a hint of the prodigious task it should perform.

A New Look in Passports?

EXTENSION OF REMARKS

OF

HON. DANTE B. FASCELL

OF FLORIDA

IN THE HOUSE OF REPRESENTATIVES

Tuesday, March 1, 1960

Mr. FASCELL. Mr. Speaker, since Miss Frances Knight has taken the reins of the U.S. Passport Office, she has shown that an agency of the Federal Government can keep up with the times. Under her direction, great savings of time and money have been made, and increasingly efficient and courteous service has been afforded the American traveling public. We of the Fourth Congressional District of Florida are particularly pleased with her farsightedness in establishing a U.S. passport field office in Miami, thus extending the Agency's service to the southernmost part of the United States. I want to here include an article taken from the Miami Herald of February 24, 1960, which cites just one more example of her constant service to the American traveler:

A NEW LOOK IN PASSPORTS?

Old ways of doing things often are taken for granted, but not by Miss Frances Knight, Director of the Federal Passport Office.

She has taken a fresh look at the product of her Office, unchanged for years. It is a 20-page booklet, measuring 3½ inches by 6½, covered with green cloth. Miss Knight finds several things wrong with it. For example:

It's too big. The size was chosen to fit into a man's inner coat pocket. Yet 57 percent of the passports lost last year were lost by men. More women travel abroad than men, and Miss Knight says a smaller passport would fit more easily into a woman's purse.

The cloth cover is unsatisfactory. It frays. In damp weather, it comes unstuck from its backing. Besides, why is it green? Miss

Knight is having tests made of plastic in blue, maroon and gray as well as green.

Commercial travelers quickly fill the 20 pages. Miss Knight thinks the document should have more pages—say, 50.

Miss Knight's aim is to streamline the passport into the handiest possible form to do its job, which is to serve as the international identification of U.S. citizens abroad.

This may seem a trivial matter, but we think not. It illustrates the virtue of challenging constantly the way things are done in Government, as elsewhere, and striving for improvement.

Change for the mere sake of change is idle, and sometimes change can be for the worse. But wherever there's a better way, let's find it.

The Policy Committee of the Rochester Association for the United Nations Backs International Conference on Problems of Outer Space

EXTENSION OF REMARKS

OF

HON. KENNETH B. KEATING

OF NEW YORK

IN THE SENATE OF THE UNITED STATES
Tuesday, March 1, 1960

Mr. KEATING. Mr. President, for several years I have advocated that the nations of the world take steps to head off legal and other disputes which will inevitably arise as we press forward with the conquest of outer space. We must lay down the rules of the road before vested national interests and conflicting claims make amicable agreements impossible.

It may well be that the convening of an international legal conference to discuss these problems holds the best promise for success in this area, and certainly the United Nations must play a leading role in all these efforts. I have, therefore, read with particular interest a resolution recently adopted by the Policy Committee of the Rochester Association for the United Nations on this subject.

The resolution notes some of the problems which will inevitably arise as space explorations continue, and specifically urges the United States to take the lead in urging the holding of an international legal conference under U.N. auspices at the time of the scientific conference which has been proposed.

I am delighted at this latest example of the alert and informed activities of the Rochester Association for the United Nations. This large and important group has worked long, hard, and effectively for the promotion of the United Nations and its ideals. I salute them for their latest efforts, and ask unanimous consent that the resolution recently adopted be printed in the Appendix of the RECORD.

There being no objection, the resolution was ordered to be printed in the RECORD, as follows:

SPACE AND THE UNITED NATIONS

(A statement from the Rochester Association for the United Nations Policy Committee)

"Space activities must to a large extent be an effort of Planet Earth as a Whole."

This philosophy underlies the U.N. approach to the legal, political, and scientific problems and opportunities presented by man's epoch-making probes into outer space.

Few seriously question the importance of space exploration to the future peace and prosperity of this planet. It is generally agreed that space development and exploration will ultimately become of necessity a shared international concern. The existence of rival space efforts, besides being prohibitive economically, could in the end result in projecting current military rivalries to the limitless dimensions of outer space.

Many scientists foresee that the space timetable for the next 10 years will include: satellites for weather control and communication, man in space, colonies on the moon and orbiting platforms for use as research stations and points for further space probes. These developments are now out of the realm of science fiction. They clearly indicate the need for cooperation and control.

A specific example of the need for agreement is the lack of rules on the use of radio frequencies which is already interfering with communication in space activities. Even more serious is the problem of territorial claims, a matter which will be more complicated if a nation claims possession of the moon before regulations are agreed upon. Although making no territorial claims, the Russians emphasized in official announcements at the time of their moon shot that red pennants were delivered to the surface of the moon.

An encouraging precedent for workable control of outer space is the Treaty of Antarctica negotiated by 12 nations, including the United States and the U.S.S.R. The Antarctic Treaty, which emphasizes scientific work rather than territorial gain, is unique in that military activity is banned from a continent. There is also provision for vetoless unilateral inspection in the treaty.

The establishment by the 14th General Assembly of a permanent Committee for International Cooperation in the Peaceful Uses of Outer Space is an encouraging step toward cooperation and regulation. The resolution setting up the permanent space committee suggested that plans be made for a scientific conference under U.N. auspices in 1960 or 1961 for the exchange of experience in the peaceful uses of outer space.

The RAUN Policy Committee suggests that now is the time to face the urgent legal problems that are already arising in connection with outer space. The policy committee recommends that the United States take the lead in urging that an international legal conference be convened under U.N. auspices at the time of the proposed scientific conference.

The implications of the space age demand serious thought on the part of all who are concerned with the future of mankind. If the philosophy that "space activities are to a large extent an effort of Planet Earth as a whole" is accepted, then through the United Nations and other international agencies patterns for cooperation and control can be found.

Mrs. David M. Allyn, Mrs. Albert Craig, Jr., Mrs. John W. Branch, John W. Branch, Joseph C. Briggs, Richard M. Buxbaum, Dr. Otakar Kutvirt, Jerome P. Lysaught, Miss Catherine N. Nevius, Dr. Prentiss Pemberton, Frank A. Steinhilper, Henry C. Walter, Edward P. Curtis, Jr., Chairman.

Freedom's Last Hope or "Anyone for Tennis?"

EXTENSION OF REMARKS

OF

HON. BYRON G. ROGERS

OF COLORADO

IN THE HOUSE OF REPRESENTATIVES

Tuesday, March 1, 1960

Mr. ROGERS of Colorado. Mr. Speaker, on February 25, 1960, Mr. Palmer Hoyt, editor and publisher of the Denver Post, made an excellent presentation at the Ohio State University School of Journalism, setting forth his thoughts relating to our fight for human freedom. Mr. Hoyt is an excellent journalist who has contributed much to the freedom of the press throughout the United States. I recommend the reading of his excellent address which is as follows:

FREEDOM'S LAST HOPE OR "ANYONE FOR TENNIS?"

I am glad to be here on this podium to follow those distinguished newspapermen who have spoken here, and whose cumulative remarks furnish an informative and vital critique of journalism.

These are able men: Ethridge, Brucker, Johnson, Carter, and Wiggins. I have long respected their cogent comments on journalism.

I congratulate Fred Maguire and the Ohio State University School of Journalism for founding this, the Maxwell lecture series. Such a continuing public search for knowledge is a vital part of democracy in action.

We must continue to remember that we live in a democracy even though some of our citizens and some of our political overlords occasionally forget it.

A democracy, of course, is different from a dictatorship. For example, it would be hard to imagine the editor and publisher of either *Izvestia* or *Pravda* addressing the University of Moscow School of Journalism on news and truth, even if the University of Moscow had a school of journalism, and if *Izvestia* and *Pravda* lived up to the meaning of their names, which translated are News and Truth.

It is important now for us to remember that if we are to compete successfully with dictatorship, we must strengthen democracy; and one of the ways to do that is through discussion, frank and free.

It is well, too, to remember that this country, this America, was founded on the New England town meeting; on the conflicting voices of citizens ever engaged in search for the truths so necessary to bulwark freedom and insure its necessary growth.

And so the seeking has gone on through the ages.

The history of our country is written in the great debates: as to the form of government we were to have; as to whether the Union would or could endure; as to whether we would enter wars to fight for human freedom.

And now the greatest of all the great debates is being joined.

This debate is more important than the great debate in Athens in which the Greek philosophers urged the Athenians to add the social system of Sparta to the culture of Athens; it is more vital than the discussions of slavery that preceded the Civil War; more significant than the words that were spoken

in the world before World War II or the Korean incident; for the very fact of freedom now may be at stake and possibly the very existence of the human race itself.

Because today, at long last, man has the power to destroy himself—and completely. It is doubtful that any living thing on earth could survive all-out nuclear warfare.

The best insurance against that nuclear war is the strength of America, a nation that believes in peace and goodwill and is committed to live and to let live.

Only a strong America can save the world from destruction, and only a strong America can prevent its falling under the rule and domination of imperial communism. Make no mistake: the choice is as simple as that.

And so what is this great debate upon which we now enter?

It is whether affluence and prosperity alone equal strength.

It is whether America, having lost primacy among nations, can afford not to maintain parity.

It is whether we can afford not to match Russia in space exploration, in education and in missiles.

It is whether the President is right or wrong when he says we have nothing to worry about.

It is whether or not America indeed has lost her way.

Some of you may have wondered about the title of this talk: "Freedom's Last Hope or 'Anyone for Tennis?'"

The first part is obvious, but the subtitle may puzzle some persons a little.

To me, the subtitle is the best possible short diagnosis of our trouble.

The expression "Anyone for Tennis?" is an old one. It pops up every once in a while and so interested me that I asked our librarian to check its source. Apparently it first appeared as a laugh line in a musical comedy in the 1920's.

In this play, sort of a society melodrama laid in Newport, one of the characters, let's call him Reggie, was not only a playboy, but a tennis playboy. In the most dramatic moments of the play, whenever disaster threatened, Reggie would appear, impeccably clad in white sweater, white trousers and white shoes, racket under his arm, to demand loudly: "Anyone for tennis?"

The phrase, to me, represents a turning away from reality.

In any event, there is today an obvious unwillingness on the part of public and press alike to face up to the hard facts.

The hard facts include a fight for survival, in which fight so far we often have been second best.

Last month Walter Lippmann wrote a column which, in my judgment, is one of the great utterances of history.

In this column, Mr. Lippmann, a man not given to loose talk, referred to the President's recurrent emphasis on consumer goods as evidence of national strength.

Then Lippmann said:

"There is no doubt that this country is still much richer than the Soviet Union. It may be, although no one knows, not any weaker than the Soviet Union."

"But we have fallen behind and are not holding our own in terms of national power, in overall military capacity, in the competition to pioneer in outer space, in the comparative rate of economic growth, and in education, which is the life-giving principle of national power."

Lippmann closed this important column—which column I wish every American could read—with these moving words:

"While it may be that the days of our primacy, which were brief, are ending, what

must not be allowed to end is our parity with the greatest powers.

"For on it depend many of the dearest hopes of mankind.

"Nobody can say as yet when the Nation will become aroused to the realization that national duty must take precedence over private indulgence, that it is not possible to preserve our society by private affluence and public complacency.

"The voices that will serve this country, and indeed save it, will be those of stern men demanding hard things.

"They may not as yet do well in the Gallup polls. But they will be listened to sooner or later."

So far, generally speaking, instead of stern voices demanding hard things, the voices we have heard in this country are the smooth voices of complacent men, suggesting that we have nothing to worry about. Mostly these are the voices of the administration.

A few newspapers have protested, a few columnists have cried out, some politicians have screamed loudly; but for the most part, the public has heard the pleasing purr of our economy and applause for its performance.

The strongest voices heard now are those of men who seek the Democratic nomination for the Presidency. Unfortunately, these men have not clarified the issue as to our present ability to defend ourselves and the implications of our backwardness in space and educational development. Also unfortunately, some of their soundest criticisms are brushed off as politics.

But stern voices must be heard and will be heard. Foremost among those whose voices can save America must be the newspapers.

Their voices, which are often raised in eloquent defense of freedom of the press also must now, in other words, be raised in behalf of future security of the Nation.

I do not imply that the press should ever slacken its fight for the people's right to know. This is a proper interest for journalists to promote; but there is another interest, which might be called the freedom of responsibility—a freedom which will further guarantee freedom of the press itself.

My point is that the press has something more urgent than freedom of information to talk about—the survival of our democratic society. Meanwhile, it can conduct its fight for freedom of information more effectively than ever by making full use of aggressive and enterprising city editors and reporters.

If our civilization goes down the drain, one of the reasons will have been the failure of our newspapers to meet the challenge of responsibility.

The arrival of the space age puts a grave new responsibility on the newspapers and the newspapermen of the country and on the schools which train the newspapermen of tomorrow.

These responsibilities include:

1. The development of a new breed of writer to translate the abstruse language of science and space into terms which the ordinary reader can understand. In addition to covering local, national, and international news, newspapers must now cover news relating to the entire universe.

2. The stimulation of public understanding of the importance of space. The attitude of Charles E. Wilson, the former Secretary of Defense, that the first sputnik was a "neat scientific trick" still prevails in many places in Washington and throughout the country.

Newspapers must create awareness that space activities are vital to national defense. For the first time in history, this country is becoming vulnerable to possible attack because of Soviet gains in space and missile arts.

We hope that we have a military deterrent sufficient to discourage such an attack, but

there is a responsibility to inform the American people of the inherent dangers and the steps which must be taken to overcome them.

Space activities are also vital to national prestige. Ability to penetrate and cope with space has suddenly become a measure of a country's standing among nations and will be viewed by many people over the world as a measure of the success of democracy vis-a-vis communism.

As William Hinds, science writer of the Washington Star, puts it, "The country produces the best satellites in space is not going to have any trouble convincing people that its political system yields the highest dividends in accomplishment and progress."

The advance of knowledge in such fields as communications, navigation, weather control, etc., create new problems in newspaper coverage. For example, our scientists are now talking about earth-circling satellites for such things as worldwide television broadcasts. They expect to be able to photograph from a height of 300 miles objects on earth that are no larger than 7 feet in diameter. They believe satellites with tape recorders could be used to deliver within a few minutes the messages in all the mail which now moves daily between the cities of the world.

Space has moved from the comic pages to the front pages, and, as Senator STUART SYMINGTON, of Missouri, explains, the people who do not understand the importance of this new dimension are comparable with those who saw no practical use for the explorations of Columbus or the expeditions to tame the western frontiers of the United States.

The creation of popular support for this country's space projects is another responsibility of the press.

We have already learned that in the space race there are no prizes for place or show. The winner takes all. These projects run into high costs—\$107 million in fiscal 1961 for our program to put a man into space, \$230 million for only 1 year's effort on the Saturn program to develop a manned vehicle capable of going to the moon and back. Costs such as these are sure to get involved in politics, and our space efforts will lag unless there is public understanding of the need for them.

There is a heavy responsibility on the press to alert the country to the fact that our space effort will be duplicative, needlessly expensive, and short on accomplishment if it continues to be fragmented between a variety of agencies.

At the present time, we have the National Aeronautics and Space Administration working on the problem of putting a man into space and the development of a vehicle which can go to the moon.

Then we have the Office of Defense Research and Engineering in the Department of Defense working on missile problems.

Also in the Defense Department is the Advanced Research Projects Agency, working on missiles and the development of solid fuels.

The research department of the Air Force is assigned the task of developing reconnaissance satellites; the research department of the Navy is working on the development of navigational satellites; and the research department of the Army is working on the perfection of a communications satellite.

We rely on coordinators and committees to keep these various agencies from overlapping in their work; but the fact remains that all of these six agencies are concerned with common problems—such as thrust and guidance—and duplications in effort are unavoidable under such a system.

In journalistic language, it would be like a newspaper with six managing editors. Or in plain language, like a ship with six navigators.

These duplications have stemmed in part from Mr. Eisenhower's bland delusion that

space explorations have no relation to development of defense systems and that, therefore, space work can be assigned to a civilian agency while missile and satellite work is assigned to a variety of military agencies.

Well-informed persons contend that such separation, into civilian space work and military space activity, is arbitrary and unrealistic. It is as unrealistic as are Mr. Eisenhower's frequent denials that we are engaged in a space race, a view which is not shared by any of our leading space experts and scientists, as far as I can determine.

As General Medaris, a former chief of the Army Ordnance Missile Command at Huntsville, Ala., said the other day, "If we are not in a race with the Russians, we are spending far too much money in an effort to catch up."

Another responsibility is the creation of better understanding of this country's critical shortage of scientific manpower. According to Dr. Herbert York, the Pentagon's Director of Research, the shortage of scientists is a limiting factor on our space progress no matter how much money we might provide.

Which brings up the newspapers' responsibility to education. The fact is that Russia, until recently considered a backward country, is producing more scientists, more engineers, more technicians, and more linguists than we are, and at a time when we can ill afford to be in second place in these all-important categories. Thus it is the job of newspapers to bring these facts home to our people. If the newspapers don't, who will?

These and other pressing problems of our times give newspapers greater importance than ever. But let me say again that this great importance implies the need for a deeper sense of responsibility in the presentation of information.

Printing the news clearly, objectively, and dependably is more vital than ever. A recent speech by Ed Barrett, brilliant head of the Columbia Graduate School of Journalism, supports the thesis that news is now a better sales bet than entertainment for newspapers.

Printing the news, clearly and objectively, is still the prime responsibility of the press in making our democracy work.

Democracy necessarily involves such freedoms as the right of any person, however unorthodox his views, to think and speak these views with impunity so long as he does not do anything that is a clear and present danger to the Nation.

This right is actually the same freedom of speech that we admire so much when applied to people who express only conventional ideas.

We have defamed too many persons whose principal offense was to be unconventional and thereby have left gaps in our educational system, our foreign service, and our military and scientific research programs.

In this connection, it is interesting to note that a new line of argument, potentially dangerous, is beginning to show up in the missile, space, and defense debate. Vice President NIXON, Senator DIRKSEN, and others are beginning to take the position that those who speak disparagingly of our defensive strength are doing a disservice to the country.

Senator DIRKSEN said after a meeting at the White House, February 8, that public testimony on defense may be helping potential enemies. He questioned the wisdom of talking in public about—for example, the number of submarines or bases this country has. He said press coverage, and particularly radio and TV coverage of hearings, has amounted in some cases to providing help for potential enemies.

Mr. NIXON, about the same time, was saying in Milwaukee that criticism of national defense can be destructive when un-

due emphasis is put on our weaknesses, without similar emphasis on our strengths. He warned against critics who play a numbers game regarding our missile strength.

If this should turn out to be the new administration line to silence criticism of national defense in an election year, the line will not be effective.

This line will not silence critics. It actually may serve to point up to the public what the real issues are between the President and his critics.

And what are the real issues?

The real issues are, I believe:

1. That the President does not see clearly the importance of space—space exploration and space vehicles.

2. That the President does not see clearly the pressing need to develop our greatest potential, the mental resources of all our people, through national aid to stepped-up education.

3. That the President does not see clearly that it is not so much our present ability to defend ourselves that is at issue, but where the United States will stand among the nations, 10 years hence.

The President has been consistent in his refusal to see that there are any dangers to the Nation in our second-place position in the space race even though his own advisers see it clearly enough.

George V. Allen, chief of the U.S. Information Service, is greatly concerned that American prestige is suffering all around the world as a result of the spectacular Russian firsts. Dr. George B. Kistiakowsky, the President's scientific adviser, sees our scientific and technological contest with the Soviets as involving "today our national prestige and tomorrow, perhaps our very survival."

These differences between the President and the men around him in positions of trust indicate to me a serious lack of unity of purpose and understanding in our national leadership. It is to these differences that the great debate will be addressed.

In closing, I refer again to the words of Walter Lippmann who said: "We are falling behind in the race because we are not allowed to run."

As the great debate makes this point clear and as the American press fulfills its obligation and presents the facts, I am confident that the American people will demand the right to run, will run and will win.

Mayor of Ripon, Wis., Decrees Job Safety Week

EXTENSION OF REMARKS

OF

HON. ALEXANDER WILEY

OF WISCONSIN

IN THE SENATE OF THE UNITED STATES

Tuesday, March 1, 1960

Mr. WILEY. Mr. President, in response to the President's recommendation that Governors and mayors join in observing February 28-March 5 as Job Safety Week, I am delighted to report that Wisconsin communities are responding in a constructive, creative way.

Recently, the Ripon Commonwealth Press published an article outlining the proclamation issued by Mayor John H. Wilson, of Ripon, establishing the designated period as "Job Safety Week" in that splendid community.

I request unanimous consent also that this article be printed in the Appendix of the RECORD.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

[From the Ripon Commonwealth Press, Feb. 25, 1960]

MAYOR DECREES JOB SAFETY WEEK FEBRUARY 28-MARCH 5

To heighten public interest in job safety, President Eisenhower has called on the Nation's citizens to observe the week of February 28 to March 5 as "Job Safety Week."

To increase the impact of the proclamation at the local level, Mayor John H. Wilson issued the following statement:

"Whereas each year there are a number of workers in the city of Ripon who are injured in the course of their employment; and

"Whereas the loss to the city of Ripon in dollars, in wasted skills and in human bereavement is beyond calculation; and

"Whereas it has been demonstrated that none of those tragedies was inevitable; that methods exist or can be devised to eliminate almost all occupational accidents; and

"Whereas the President's Conference on Occupational Safety is meeting in Washington March 1-3, where 3,000 leaders from all walks of life and all parts of the Nation will seek in concert to discover and devise means to reduce that toll;

"Now, therefore, I, John H. Wilson, mayor of the city of Ripon, Wis., do hereby join with the President of these United States and with the Governor of the State of Wisconsin in establishing the week of February 28-March 5 as Job Safety Week and call on all the citizens of our community to join hands in making Job Safety Week a success and job safety a reality during all the weeks to come."

Castro Shows the Way

EXTENSION OF REMARKS

OF

HON. DANIEL J. FLOOD

OF PENNSYLVANIA

IN THE HOUSE OF REPRESENTATIVES

Tuesday, March 1, 1960

Mr. FLOOD. Mr. Speaker, in the 1956 amendments to the Sugar Act the Philippines alone received no increase in quota. It is hoped that in the present Congress when consideration is given to a further extension of the act more equitable provision for the Philippine sugar producers will be made.

According to the Philippine Sugar Quota Administrator the sugar crop of the Philippines for the year 1959-60 which is now being harvested will turn out a record postwar production of 1,556,785 short tons. After providing for local consumption requirements and export quotas to the United States and to the world's free market, the Philippines will have an additional supply during the calendar year of 1960 of an estimated total of 377,195 short tons of centrifugal sugar. Therefore, the Philippines will have a surplus in excess of 300,000 which they will be in a position to supply to the United States if the Congress allows them to participate in increased consumption when we consider amending the Sugar Act of 1948, as amended, this year.

Article II, paragraph I of the Philippine Trade Agreement Revision Act of 1955 states, and I quote:

The establishment herein of the limitations on the amounts of Philippine raw and refined sugar that may be entered, or withdrawn from warehouses, in the United States for consumption, shall be without prejudice to any increases which the Congress of the United States might allocate to the Philippines in the future.

I do not believe that the Congress will again pass up the chance to give the Philippine sugar industry an opportunity for expansion.

The Philippine sugar industry is to be congratulated on its return to a record postwar crop production when you consider that this industry was completely devastated by enemy action in World War II.

I take the liberty of quoting in full an interesting editorial appearing in the Journal of Commerce, New York, February 17, 1960, entitled "Castro Shows the Way":

CASTRO SHOWS THE WAY

Whatever else may be said of the current political phenomenon of Cuba, Dr. Fidel Castro, we do feel he has produced the most convincing demonstration thus far of the desirability of revising extensively the U.S. Sugar Act of 1956.

For one thing, he has just arranged to double Cuba's present rate of sugar sales to Russia over a period of 5 years. True, this deal provides for payment partly in bartered goods so the cash return will be less than if the whole 5 million pounds were sold elsewhere in the market. But that is not of direct concern to the United States. Suffice it to say, for the moment, that one result of the Castro-Mikoyan deal is to ease somewhat the responsibility the United States has long taken on itself in supporting the Cuban economy by concentrating most of its sugar buying there.

For another, both in his words and official acts Dr. Castro has displayed a vituperative distaste for the American Government and for American business. In brushing aside all attempts to negotiate the "differences" he himself created, he has shattered virtually beyond repair any claim he might ultimately advance for favored U.S. treatment in sugar purchasing which might be extended for purposes of political stability.

So for once, the United States can review its sugar policy without worrying too much about either the immediate economic or political affects that a change in it might create in Cuba. And this, at the moment, is a most welcome thought.

It happens that the present Sugar Act expires at the end of this year and must then either be extended "as is" or revised.

And it also happens that while Castro is busy forfeiting any claims to special U.S. consideration, another far more deserving government in the Pacific is trying hard to find some means of selling more sugar to the United States—namely, the Philippines.

Finally, we recall that nearly four years ago, when President Eisenhower signed the Sugar Act of 1956, he said: "When new amendments are being prepared at the conclusion of the present Sugar Act, consideration should be given to allowing the Philippines to share in increased (U.S.) consumption as is now provided for other countries in this bill."

So if ever the circumstances were tailor-made for the type of change Mr. Eisenhower indicated in 1956, they are just that now, and Manila can be duly grateful to Dr. Castro for having made them so.

But to say this is not to suggest that Congress should now go hog wild with the Sugar Act and riddle it with clauses and prohibitions aimed primarily at making life

tough for Castro, regardless of the consequences to broader American interests.

If Congress follows this course—and some of its Members are talking as though they'd like it to do so—the results could be a rigid and distorted sugar policy that ultimately might do far more harm than good.

On the other hand, Congress could supply the administration with a really effective instrument for dealing with Dr. Castro by simply granting the administration the authority it is apparently considering but has not yet officially sought to adjust all foreign sugar quotas at will. Under such a system, the President could make available larger sugar quotas to the Philippines, and perhaps to other areas, gradually, tightening up on Cuba's quota so long as Castro pursues his present course, but then easing up if he (or a successor) shows any capacity to act rationally.

It is much to be regretted that Chairman Harold D. Cooley, of the House Agriculture Committee, has already expressed his flat opposition to such a grant of authority.

Perhaps Mr. Cooley, and some others of similar persuasion, were irked by Mr. Eisenhower's promise not to reply in kind to the attacks Dr. Castro has lately been making on the United States. But if so, we think they misread his meaning. Not to reply in kind is one thing; actually it would be beneath the dignity of any U.S. Chief Executive to conduct and express himself on the level that seems to come so naturally to Cuba's present boss.

But if Dr. Castro has interpreted these words as meaning that the United States is resigned to letting him have his cake and eat it, too, he couldn't have made a worse guess.

REA Record of Achievement

EXTENSION OF REMARKS

OF

HON. CHARLES B. HOEVEN

OF IOWA

IN THE HOUSE OF REPRESENTATIVES

Tuesday, March 1, 1960

Mr. HOEVEN. Mr. Speaker, under leave to extend my remarks in the Record, I include copy of a letter which I received from David A. Hamill, Administrator of the Rural Electrification Administration, regarding the activities of his agency during fiscal 1959. Mr. Hamill presents a record of real progress and achievement on which he and the REA cooperatives of the country are to be congratulated:

U.S. DEPARTMENT OF AGRICULTURE,
RURAL ELECTRIFICATION ADMINISTRATION,
Washington, D.C., February 29, 1960.

HON. CHARLES B. HOEVEN,
House of Representatives.

DEAR CONGRESSMAN HOEVEN: Enclosed is a copy of my report on the activities of the Rural Electrification Administration during fiscal year 1959. It was a record loan year for REA's telephone program, as well as a year of continued growth for borrowers in REA's electric program.

During 1959, REA's electric borrowers connected 132,000 unserved rural establishments. Three-fourths of these were non-form consumers. At the same time, the average use of electricity continued to rise, and REA borrowers sold nearly 14 percent more electric power in fiscal 1959 than they did in 1958.

During the year, 250 electric loans were approved amounting to \$177,292,100, bringing

total loans since 1935 to more than \$3.94 billion. Principal and interest payments to the Government rose to more than \$1.1 billion, and over \$146 million of this sum represented payments made in advance of due dates. Only two borrowers were delinquent in payments more than 30 days as of June 30, 1959. Net worth of borrowers amounted to 16.6 percent of their total assets at the end of calendar 1958.

REA telephone loans in 1959 set a new record of \$99 million. A total of 223 loans were approved, including loans to 54 new borrowers. They brought the total number of telephone companies and cooperatives participating in the program to 665.

Loans since start of the telephone program in 1949 rose to \$575 million by the end of 1959. When construction is completed, this money will provide modern telephone service for 1.2 million subscribers. More than 180,000 new subscribers were connected during 1959.

Telephone borrowers made payments to REA of more than \$8.8 million during 1959. At year-end, 95 borrowers had a balance with REA of nearly \$1.6 million in advance payments, and the number of borrowers delinquent more than 30 days in their payments had been reduced to 13.

Sincerely,

DAVID A. HAMILL,
Administrator.

Public Housing

EXTENSION OF REMARKS

OF

HON. ROBERT H. MICHEL

OF ILLINOIS

IN THE HOUSE OF REPRESENTATIVES

Tuesday, March 1, 1960

Mr. MICHEL. Mr. Speaker, the genial publisher of the Pekin Daily Times, my good friend, Mr. Dean McNaughton, writes a choppy editorial which appears daily on the front page of his paper. I say choppy not in a derogatory sense, but rather to characterize as best I can the style of writing which is peculiar to the McNaughton family. The style should not detract, but as a matter of fact accentuates the points which Mr. McNaughton seeks to emphasize in his editorial comment.

The particular editorial which I should like to have reprinted in the Record at this point appeared on February 26 and deals with public housing. It points up the tremendous cost per unit of public housing and the loss to the community in real estate taxes. The editorial follows:

[From the Pekin Daily Times, Feb. 26, 1960]

PUBLIC HOUSING

(By Dean McNaughton)

Fred Dancy threw a scare into us last night.

Fred is executive director of Pekin's public housing layout at 19th and Broadway.

In yesterday's Times Fred wrote that our little block of 50 houses lost last year, including amortization, \$33,108.83.

"That's impossible," I thought. I questioned an appraiser.

"The loss is more than \$33,108.83."

The appraiser said that the local Housing Authority pays to the city \$3,360.14 in lieu of taxes, less than half the going rate. "The loss to the city is about \$4,000."

Things began to look blacker.

I spoke to a lawyer.

"The loss is more than \$33,108.83 plus the \$4,000."

The lawyer insists that the Government must tax us more than \$33,108.83 to have \$33,108.83 available to feed back to our local housing authority. (Government pays the losses.)

Let's use \$3,310 (10 percent) as the Government charge for collecting the money from us, running it through the budget, and hauling it back to Pekin.

Our total loss on our local layout now amounts to \$40,000 a year. I didn't pursue the idea any further.

I happen to favor public housing in distress situations.

But let's not take on any more units at a \$40,000-a-year loss until we're able to submit our \$250 monthly book order at the library.

Fred issued a timely warning.

Your Fight in Congress: An Address by Hon. Carl Albert

EXTENSION OF REMARKS

OF

HON. JOHN W. McCORMACK

OF MASSACHUSETTS

IN THE HOUSE OF REPRESENTATIVES

Tuesday, March 1, 1960

Mr. McCORMACK. Mr. Speaker, in my extension of remarks I include a splendid address made at the annual convention of the National Rural Electric Cooperative Association on February 22, 1960, by our distinguished colleague and Democratic Whip, the gentleman from Oklahoma [Mr. ALBERT]. Mr. ALBERT's speech is one of the most powerful presentations that I have ever read as to the justification for the legislation enacted in past years relating to rural electrification, and for the continuation and strengthening of the same. There is no Member of Congress better able to discuss this important activity than the gentleman from Oklahoma [Mr. ALBERT]. He is not only one of the ablest and most dedicated Members of Congress, but one of the best friends that rural electrification in America has in the Halls of Congress.

The address made by our distinguished friend should be read as widely as possible.

The address follows:

YOUR FIGHT IN CONGRESS

(By Representative CARL ALBERT, Democrat, of Oklahoma)

This is the 25th year of rural electrification in America. Twenty-five years ago next May 11, President Roosevelt signed Executive Order No. 7037 creating the Rural Electrification Administration. At that time only about 10 percent of the farms in the United States were electrified. Today more than 95 percent of the farms of this country are connected to electric lines. You have said: "Let there be light and there was light" in every American countryside. This, my friends, is only the beginning. It is only prologue to things that are to come.

The silver anniversary of rural electrification in America is more than a mere chronological dividing line between the past and the future. It comes at a time when legislative decisions of major importance must

be made and issues resolved. This is a good time to look back and appraise the lessons of history. This is also a good time to look forward, to survey the situation ahead, and to gird for impending battles.

Strong forces have opposed REA from the beginning. In 1936 when the venerable, white-haired, 74-year-old George Norris rose to move consideration of rural electrification in the Senate of the United States for the first time, the New York Times was reporting:

"The U.S. Chamber of Commerce asked that the economy drive be started immediately and that the first goal be the defeat of the Norris-Rayburn rural electrification bill.

"Harper Sibley, president of the chamber of commerce, remarked that the organization's membership had voted emphatically in favor of retrenchment in Federal expenditures and against new enterprises. The Norris-Rayburn bill, he said, contravenes this principle."

This statement was from the U.S. Chamber of Commerce in 1936. This is one organization that has not even changed its script in 25 years.

Another group that usually opposes everything beneficial to rural electrification is the power lobby. If this job had been turned over to the private utilities, it would not have been finished in a thousand years.

In 1935, Morris L. Cooke, first REA Administrator, called on power officials to survey the extent of rural electric development and its capability. The power executives reported back: "There are very few farms requiring electricity for major farm operations that are not now served." This was in 1935 when only 10 percent of all farms were electrified.

The power companies have never been interested in the concept of service to farmers through area coverage. They are profit-making organizations only interested in "skimming the cream." They have refused to go out into the country and serve people, and yet they have begrudged every little struggling co-op every profitable customer that might connect to its lines. "Farm electrification is what Congress meant," they shout. Congress meant no such thing. The Rural Electrification Act, as George Norris so often pointed out, was intended to serve all people in all homes, farms, and establishments in the unserved rural areas of America.

When the very first funds were made available to REA, Administrator Cooke invited the good offices of the power officials in spreading the word in the ranks of their industry that the REA was operating and anxious to make loans for area coverage in rural communities. But the power firms made next to no effort to obtain any loans, and in his first annual report, the Administrator said:

"Before December 1935, it became apparent that the industry was not going to use even a substantial portion of the funds available for rural electrification, and farm organizations of a cooperative character forged ahead as the principal borrowers."

That was the story in 1935. That is the story today. Rural electrification is based on service and therefore belongs in the co-operative movement. Destroy the service concept and you destroy the co-ops. Kill the co-ops and you kill REA.

Because service is the very heart and soul of REA, it has also been indispensable to its success to keep it free from partisan politics. It is strange how history repeats itself. In the very first conference committee on the very first REA bill, George Norris won the battle against partisan control of the office of the Administrator. We fought that same battle again in Congress last spring when, with the largest vote in the history of the House of Representatives, up to that time,

and by a margin of only 4 votes, we failed to override a Presidential veto of a resolution designed to take control of the REA from the hands of a politically appointed and politically minded Secretary of Agriculture. Although we lost this battle, that big vote on REA, that show of tremendous strength, has already paid many dividends. Among other things, it explains, in my judgment, the reason why the administration has backed away from its bill to send REA to Wall Street.

There was still another argument in the first REA conference committee. This involved the matter of interest rates. One group wanted to provide that interest rates on REA loans should never be less than 3 percent and might be higher than that at the discretion of the Administrator. Senator Norris, who was defending the liberal version of the bill in conference, insisted that charges should not exceed 3 percent. He opposed higher interest rates on the ground that the entire intent and purpose to provide electricity to farmers would be endangered. He insisted that if the interest rates were advanced high enough, farmers would be discouraged in their efforts to procure the benefits of electricity in their farm and home operations and their undertaking would be financially unsound. It was finally agreed to fix the interest rate at the identical figure that the Government had to pay in its financing program on long-term bonds. Under this program, interest rates to co-ops never reached 3 percent. Yet the enterprise was a very profitable one to the Government, which, during the war, was borrowing money at the lowest rates in history. Although interest rates to cooperatives were fixed at 2 percent in 1944, the Government may still boast a profitable return on its REA loans over the years.

Proponents of high interest rates and tight money policies are in the saddle in the executive branch of the Government today. They are moving forward on every front, making it mandatory that every cent the Government borrows shall cost the taxpayers more. They are doing everything in their power to increase interest rates paid by the Government and to pass these increases on to Government borrowers such as rural electric co-ops. If REA interest rates were not fixed by law, they would be raised before the end of this week, and they would be raised even if it put in financial jeopardy every rural electric cooperative in the country. Sound financing has been indispensable to the success of REA. The interest rate on loans is 2 percent, and we intend to keep it there. We are going to fight every attempt to make this program a victim of the tight money policies of the present administration. We are going to keep the loan program in the hands of the Rural Electrification Administration, where it is, and where it belongs. We are going to resist to the limit every effort to turn the business of rural electrification over to private banking interests. We are not going to subject the future of rural electrification to the mercy of Wall Street. In this field, as in many others, from the time of George Norris to the present, eternal vigilance has been the price of victory.

What we have been saying about the effect of interest rates is, of course, also true of power rates. "An abundance of power at rates they can afford to pay" has been the battle cry of every friend of rural electric co-ops since the program started. If power development and power costs had been left to the private utilities, the REA movement would have been foredoomed. The utilities tipped their hand the very day that REA was born. In their report to Administrator Morris Cooke in 1935, the committee of power executives stated their position in unmistakable language in a simple sentence

that anyone can understand, and I quote verbatim: "The problem of the farmers is not one of rates, but the financing of wiring and purchasing of appliances." The REA Administrator rejected this theory as showing on the part of the companies "a lack of appreciation of the significance of rates and other costs to progress in rural electrification, and especially a lack of vision as to what could be accomplished by a vigilant and consistent program of rural electrification looking toward area coverage."

The most significant thing about the early development of REA was the simultaneous development of public power. It was no accident that the same George Norris who authored the first REA bill also fathered the Tennessee Valley Authority. From the early 1930's to the present time, the greatest champions of rural electrification in Congress—men like Norris, Rankin, Rayburn, and your Clyde Ellis, the men who put it on the track and made it go—have also been the leading advocates of the development of the water resources of this country, including the production of low-cost hydroelectric power. If this fight had not been made, if power development had been left exclusively to the private utilities there would be no rural electrification as we know it today. There would be no competition to keep down the cost of power. There would be no yardstick to measure its value. Public power is the handmaiden of rural electrification. Without the former, the latter could not survive. You and your member organizations depend upon the Federal power program for your existence. More than 450 rural electric cooperatives buy all or part of their energy from Federal agencies. There is nothing in your future which affects you so much as the public power policy of the United States.

Public power policy is, always has been, and always will be interwoven with the water resources policy of the country. You cannot separate the one from the other. Your own future is tied to both. In a broader sense, the entire economy of the Nation is tied to both. "Growth" is a bigger word in our economy today than ever before. We must grow at a faster rate in the next 25 years than in the last 25 years in the face of the challenge of Soviet Russia's progress. In recent years, Russia's rate of growth in power generating capacity has been far greater than our own. She has four projects completed or underway, each greater in capacity than Grand Coulee Dam. During Khrushchev's recent visit, he boasted that he would bury us economically. He made it clear time and time again that he regarded the economic race as even more important than the military race. It is a race we cannot afford to lose.

In the face of all this the present administration has embarked upon policies designed to slow down the development of our water resources and to make impossible their complete ultimate development for the maximum overall benefit of our country. At a time when Russia is speeding up construction of all major water projects, the Eisenhower administration has adhered to a program of no "new starts". This administration until this year had not presented a single recommendation for authorizing or starting a new Corps of Engineers multipurpose project since 1953. Time and again the President has vetoed authorization bills for flood control projects and for rivers and harbors development. He twice vetoed the appropriations bills designed to provide funds for modest water development and conservation programs last year, a veto which was finally overridden because Congress decided they were not only important but imperative. Time and again Congress has been frustrated by the agencies administering these programs. Time and again they have refused to spend money appro-

prized by Congress for certain projects or have postponed expenditures authorized for projects, upon which the national economy including the co-op movement depends. Time and again the administration has called for legislation aimed at the jugular vein of rural electrification. One by one the Congress has fended off these attacks.

Now the time has come when we must go into the whole question by reasserting the right of Congress to determine policy in the field of resources development. In this area as elsewhere in our constitutional system, we must make this "a government of laws and not a government of men". We must have legislation which will set true standards for project evaluation, place project planning on a comprehensive multiple-purpose, regional basis, and make available at reasonable costs to those who purchase the service, the benefits from reimbursable features. The experience of the past 7 years has taught us that we cannot have a loose and disjointed water policy capable of being shipwrecked on the shores of administrative caprice and subject to the whims of whatever administration happens to be in power. We must have legislation declaring the intent of Congress by setting legal standards which will bar the application of administrative devices designed to sabotage worthwhile programs.

H.R. 8, the Trimble bill, which declares these intents and sets these standards in realistic terms, is now pending in the House of Representatives. S. 1591, the Kerr bill, a related measure, is pending in the Senate. So far as rural electric cooperatives are concerned, this is the most important legislation introduced in Congress since the Norris-Rayburn Act of 1936. The Trimble bill reasserts the right of Congress to determine our water resources policy and to develop all the great river basins of this country. The bill establishes firm, legal standards to determine cost allocations and justifications in multipurpose projects. The administrative device known as the "separable costs-remaining benefits" method of cost allocation and similar devices are a misconstruction of the intent of Congress. Historical precedent and commonsense call for the incremental method of cost allocation. The separable costs-remaining-benefits method deserts the concept of power as an incidental purpose which it really is. Its application results in an artificially inflated rate structure which puts a burden on rural electric cooperatives and other buyers of Government power. Good projects are made to seem undesirable by use of a formula deliberately contrived to assign a disproportionate share of their costs to power and so inflate the cost of power to co-ops as to place it entirely out of their reach or to make it an impossible burden. Postconstruction changes in allocation of power costs inevitably result in higher power rates. In my Congressional District there are 5 co-op customers for power from the Southwestern Power Administration. Originally SPA allocated approximately 30 percent of project costs to hydroelectric power. At the present time approximately 52 percent of project costs are allocated to power. The result of this was inevitable. In 1958 the Federal Power Commission authorized a 27 percent increase in power rates in the Southwest. Since this increase went into effect, three of these co-ops have had rate increases ranging from 11 to 16 percent to their members. They attribute at least 60 percent of this increase, not to increased operational costs, not to inflation, but directly to the fact that they have to pay more for power.

One could search forever and never find sound economic justification for still another artificial device used by Government agencies known as taxes foregone. You are all familiar with the practice of charging as an annual cost against multipurpose

projects the figure representing the tax contribution of a privately financed steam plant that might be expected to develop were a Federal plant not built. The Trimble bill would scrap this arbitrary and fallacious justification standard which was tailored by administrative agencies to stifle Federal water resources development.

In the area of project justification, the Trimble bill provides a realistic method by extending the maximum payout period to 100 years or the useful life expectancy, whichever is lesser. Useful life expectancy is the logical yardstick to measure project worth. Many of the projects now under construction have an estimated life span ranging from 50 to as much as 500 years and beyond. It is ridiculous to base project feasibility on the ability to meet a requirement that reimbursable costs of Federal reservoirs be repaid in not more than 50 years. Of all the gimmicks used to inhibit resources development, this is perhaps the most unreasonable.

Still another unrealistic measure of benefit-to-cost ratios is the policy of ignoring recreational benefits. The Engineers assess these benefits through careful studies. They can tell us almost to the dollar what the recreational benefits are today and they further tell us that the sky is the limit on future benefits because recreation is a booming industry and tourism is on the march. Yet the Corps of Engineers is not permitted to submit recreation evaluations to Congress nor are they included in the benefit-cost ratios. Failure to recognize recreation benefits is first of all unrealistic and second is a deliberate and false reduction of project justification. Some 100 million people annually use the recreational opportunities offered by Federal reservoir projects. In many projects the recreation benefits alone are sufficient to offset the entire cost of the project over its useful lifespan. The Trimble bill provides for broadening the scope of benefits that could be assessed by the Corps of Engineers and the Bureau of Reclamation in figuring benefit-to-cost ratios. The Trimble bill forces recognition of recreation benefits as an important fact of life in resources development.

Our national commitment to an expanding economy rests upon the continued development of our resources. We cannot continue to tolerate, without grave risk to our national productivity, the trend in administrative agencies to obscure the real purpose of water resources development by substituting involved formulas intended to prevent, rather than determine, project feasibility. Administration policy reflects in most cases the attitude that water resources development is not very desirable.

Inevitably this mental block to Government leadership in resources development has resulted in arbitrary methods of justifying projects and allocating their costs. The enactment of the Trimble bill will stop these self-defeating practices. This bill is a matter of highest priority to all friends of rural electrification in this session of Congress. If the principles embodied in this bill are accepted and properly implemented during the next 25 years, then what is past is merely prologue to the untold potentialities of the future. The proper development of our water resources is the No. 1 domestic problem in the United States today. The correlated overall development of all our great watersheds will change the face of America. It will make the deserts blossom. It will tame the raging rivers. It will save the soil. It will electrify the farms. It will spin the wheels of industry. It will open new jobs and new opportunities to all the people of our country.

The summons of the second half of the 20th century requires us to energize America's rural powerlines as fast as farmers can hook equipment and appliances onto

them. The natural wealth of the United States is our common trust. The development of this wealth must move along on every front. The relationship between industry and resources development grows closer every day. Your growth is good for the country and the country's growth is good for you. The first 25 years of rural electrification have established a framework of justice and equity in which rural people can do their indispensable part for the greater strength and safety of our Nation. You have created a new society in rural America. You have given rural life a new dimension. You have made a spacious future for farm people in which they can share equally, work in dignity, and live in peace.

Ostrich-like Bureaucrats

EXTENSION OF REMARKS

OF

HON. BASIL L. WHITENER

OF NORTH CAROLINA

IN THE HOUSE OF REPRESENTATIVES

Tuesday, March 1, 1960

Mr. WHITENER. Mr. Speaker, Mr. Henry Kearns, Assistant Secretary of Commerce for International Affairs, made a speech last week before the Charlotte (N.C.) Textile Club regarding the position of the present administration concerning textile imports. His remarks offered no hope for the American textile industry which is fighting a battle for survival against an alarming increase in the importation of textile products manufactured overseas.

The Southern Textile News of February 27, 1960, carried a very fine editorial pointing out the inconsistency in Mr. Kearns' speech before the Charlotte Textile Club and calling attention to the serious economic condition prevailing within the textile industry.

I believe my colleagues in the House will find the editorial most interesting, and I request unanimous consent that it be inserted in the Appendix of the Record:

OSTRICH-LIKE BUREAUCRATS

Henry Kearns, Assistant Secretary for International Affairs in the U.S. Commerce Department, made a speech before the Charlotte Textile Club this week.

To say that it was a disturbing talk, as it was appraised by ACMI President James A. Chapman, is putting it mildly.

If the substance of Mr. Kearns' dissertation could be construed as merely his own personal opinions, it would be disturbing, but if looked upon in the true light of reflecting the thinking of the U.S. Commerce Department, it is calamitous.

One of Mr. Kearns' most ill-advised statements was that imports of foreign textiles were not one of the industry's major problems.

If Mr. Kearns had bothered to step downstairs in his own Commerce Department where they keep tons of statistics, he would have found that imports of cotton yarns in January of this year totaled more than imports of these yarns in the entire year of 1959. Yes, according to Mr. Kearns, that should pose no problem to American spinners.

We hope Mr. Kearns is a subscriber to the Saturday Evening Post and if so that he will turn to page 31 of this week's issue and read an article entitled, "Is Foreign Aid Jeopardizing American Jobs?" The author

of this article, Demaree Bess, is not an employee of the Commerce Department, unfortunately, but he has been studying and writing on America's international relations since 1924. We would therefore term him somewhat of an expert on this subject.

Mr. Bess cites the instance of American Enka which recently thought it worthwhile to build a \$25-million rayon staple-fiber plant at Asheville. The profitable operation of this plant and employment of its thousands of employees was made possible only by an act of Congress in 1958, plugging a loophole in the antidumping law which had enabled European producers to sell rayon fiber on the American market at prices American manufacturers could not meet. How the U.S. Treasury Department has reversed that legislation. The Treasury ruling, in short, has made American Enka's costly new plant unprofitable.

Yet Mr. Kearns maintains imports pose no problem.

The Commerce Department agent also might take a look at the full page advertisement in this issue of Southern Textile News placed by J. P. Stevens & Co., Inc., employer of 34,000 American workers. Tangible evidence is presented here that foreign imports not only are a problem to the textile industry but also to the national economy as a whole.

If Mr. Kearns had not been acquainted with such facts as presented here, statements he made in his Charlotte address might be charged up to ignorance. But such is not the case. Every possible means has been utilized to acquaint the Department with the serious damage being done to a vital industry by foreign imports.

It is high time the Congress should take drastic action and take the matter out of the hands of ostrichlike officials such as Mr. Kearns.

Bruce Alger, of Texas

EXTENSION OF REMARKS

OF

HON. THOMAS B. CURTIS

OF MISSOURI

IN THE HOUSE OF REPRESENTATIVES

Tuesday, March 1, 1960

Mr. CURTIS of Missouri. Mr. Speaker, the February 25 issue of the Christian Science Monitor carried an article concerning my esteemed colleague on the Committee on Ways and Means, BRUCE ALGER.

This distinguished Texan was first elected to the Congress of the United States by the citizens of the Dallas area in 1954. Since then this promising young American has served his constituency with ability and influence; he has served his Nation with patriotism and in accordance with the principle of "the National interest is the Dallas interest." Through hard work, effective organization, and great ability this outstanding Texas Republican has made a major contribution to the patriotic cause of his fellow Americans.

BRUCE ALGER became a member of the Committee on Ways and Means in January 1959. It has been my privilege in the interim period to carefully observe his work. He is a staunch advocate of sound principles in the difficult areas of fiscal and monetary affairs. Congressman ALGER is motivated by a zealous determination that the America of the future

shall be a better land of human liberty and individual economic opportunity for every citizen. He does not pursue a course of political expediency in solving today's national problems with a gimmick and thereby deferring the permanent solution until sometime in the future. To BRUCE ALGER today's problems demand today's solutions.

BRUCE ALGER's very considerable achievements in his young political life have already gained national recognition. He has reflected great credit on his constituents who have honored themselves by electing him to public office.

In closing I would point out that because of this young American's integrity, wisdom, and patriotism, his accomplishments are accomplishments in behalf of a better and stronger America. Mr. Speaker, as a part of my remarks I will include the article from the Christian Science Monitor which is captioned "ALGER Success Story":

ALGER SUCCESS STORY: AN INTIMATE MESSAGE FROM THE SOUTHWEST
(By Bicknell Eubanks)

DALLAS.—The perennial problem of the Dallas County Democratic leadership is: What to do about BRUCE ALGER.

Mr. ALGER is the only Republican Congressman from Texas. He is one of the few Republicans ever to go to Congress from the Lone Star State. Except for one other, some years ago, he has proved to be the most durable.

The prospect of winning the Democratic nomination to Congress in Dallas County has lost much of its luster as a result of Mr. ALGER's successes. Before 1954 the Democratic victory was considered the same as election. But Mr. ALGER changed all of that in 1954, he registered a severe upset when he defeated one of the most popular and influential Democratic politicians in Dallas County, former Mayor Wallace Savage.

Mr. ALGER, who was a real-estate dealer of no known political aptitude, injected himself into the general election campaign amid considerable doubt as to his political judgment. Many Texans, especially in Dallas County, who were supposed to know better, wondered at his willingness to take on such a formidable task. But Mr. ALGER cheerfully began working his way toward a major upset victory. He personally solicited votes in downtown office buildings, among housewives, and along the streets.

When the votes were counted, he was in. The political wisecracks contented themselves by agreeing with each other that it was just a fluke.

But in 1956 another powerful Democrat, District Attorney Henry Wade, tried his hand. He was just as unfortunate as Mr. Savage. Mr. ALGER's victory over Mr. Wade was perhaps even more sensational, for Mr. Wade appeals to a much wider range of political opinion than Mr. Savage.

Again in 1958, another good vote getter tried his hand—State Representative Barefoot Sanders. Besides having an alluring name of considerable political value, Mr. Sanders also has shown a broad political approach. It was thought he might attract enough independent voters to unseat Mr. ALGER.

But Mr. ALGER, like the Mississippi River, just kept "rollin' along." Observers here now say he is going to do it again this year.

His opponent will be former State Representative "Joe" Pool. Mr. Pool has gotten the somewhat dubious honor of opposing Mr. ALGER by default. He is the only one to file for Democratic nomination and thus

will be nominated without opposition in the spring primaries. He is not regarded as a strong contender.

The irony of Mr. ALGER's successes, from the Democratic point of view, is that liberal-minded Democrats look upon him as a man who must be taken out of public office at almost any cost, and conservative Democrats feel somewhat the same way, although not with as much enthusiasm.

The conservative Democrats actually agree with many of Mr. ALGER's political views.

What really bothers them is that Mr. ALGER's continued success will result in a situation that might become hazardous to conservative Democratic candidates.

For one thing, Mr. ALGER has the real advantage of having to run only one race. But any potential Democratic opponent faces the prospect of three races. He has to run against the field in the first Democratic primary. Then, if he cannot get a clear majority, he has to run against the second highest candidate in the runoff. Finally, he has to make the big campaign against Mr. ALGER.

All of this costs money, takes time, and puts the candidate in the position of alienating more voters because he has to put himself on record more often, while Mr. ALGER can keep quiet and attend to his business of being a Congressman.

There are those Democrats who believe that if Senator LYNDON B. JOHNSON (Democrat), of Texas, should be the Democratic presidential nominee, his pulling power would help in a race against Mr. ALGER. That opinion, incidentally, is shared by many Republicans.

The Texas Republican organization, meanwhile, is making some threats of putting a candidate into the field against Senator JOHNSON in the fall. Senator JOHNSON has no opposition in the Democratic primary in his bid for renomination to the Senate.

Should Senator JOHNSON win the Democratic presidential nomination in the summer, he will be running for two offices next fall—for President and Senator.

This is permissible in the Lone Star State under what is known locally as the Garner law. This law was put on the books back in 1932 to permit John Nance Garner to run for reelection to the National House of Representatives and for Vice President on the ticket with Franklin D. Roosevelt. Mr. Garner won both races in Texas. He promptly resigned from his House post and served two terms as Vice President.

Strong Merchant Marine

EXTENSION OF REMARKS

OF

HON. PHILIP J. PHILBIN

OF MASSACHUSETTS

IN THE HOUSE OF REPRESENTATIVES

Tuesday, March 1, 1960

Mr. PHILBIN. Mr. Speaker, the New York Times recently carried a news article containing the views of Capt. Soren Willesen, of Boston, famed sea captain of two World Wars, on the need for building a strong American merchant marine.

Captain Willesen has devoted his life to the sea and continues to play a vital role in shipping activities. He has had an unusual and colorful career; and, under unanimous consent, I include the article from the Times reprinted in the CONGRESSIONAL RECORD.

The material follows:

**SHIPPER OF TWO WARS BEMOANS PEACETIME
NEGLECT OF SHIPPING**
(By George Horne)

A seafaring man who probably commanded more ships during World War II than any other shipmaster was in New York the other day talking about the low state of the merchant marine.

A former New Yorker now living in Boston, Capt. Soren Willesen is a man who does everything in a big way.

He said that he had been talking since 1909 about the need for a strong American merchant marine, and that he sometimes felt he was not making much progress.

He is executive vice president of Sprague Steamship Co. and president of the Boston Marine Society. He was in New York on company business.

"We are at another low ebb in shipping," the captain said. "The tramp shipping segment of the industry is really in the doldrums, competing with foreign-flag tramps that are modern and fast—all built since the war. We haven't built any."

"Unless the tramp industry gets some aid such as an extension of the subsidy provisions to such vessels, this part of American shipping will be exterminated."

"Coastwise trading is also just about extinct. All the big coastal and intercoastal operators are either out of business or in shoal waters, and it was their fleets which formed the backbone of U.S. transport in both World Wars. But this country habitually forgets about shipping in between wars."

Captain Willesen's personal logbook has some dramatic entries.

He won his laurels as the most active shipmaster by what other seafarers might call legerdemain. He had gone ashore after a career that began in 1909 as a cadet on the old schoolship *Newport* in New York.

Assigned by the old Maritime Commission to supervise shipbuilding work at South Portland, Maine, he saw scores of new Liberty-type ships slide out of the building basins.

For part of the war period he delivered new ships to their owners, signing on as master on a total of 70 freighters. Usually he was master for only a day, and he never got out of Portland harbor with his charges.

In World War I, Captain Willesen was torpedoed on the cargo transport *Dora* 700 miles from her destination in France.

The British warship *Savage*, homeward bound after extended convoy duty, rescued the *Dora's* crew. All were safe 30 minutes after the torpedo hit.

But the *Savage* was short of food and "we lived on crackers and Scotch whisky," said the captain, adding, "I got my taste for the latter at that time."

In July 1917 he was navigator on the transport *Saratoga* in New York harbor when she was hit by the ship *Panama* off Staten Island.

Excursion boats, tugs and other craft moved swiftly in and rescued 1,338 men in 15 minutes before the *Saratoga* sank.

Nothing so exciting has happened to Captain Willesen lately. But he is only 84 years old and he said he hadn't given up yet.

**Gimmicks, Gadgets, and Gaudy Plans Are
No Substitute for Solid Postal Service**

EXTENSION OF REMARKS

OF

HON. QUENTIN BURDICK

OF NORTH DAKOTA

IN THE HOUSE OF REPRESENTATIVES

Tuesday, March 1, 1960

Mr. BURDICK. Mr. Speaker, I am extremely concerned about the quality

of the Nation's postal service. This concern prompts the comments I am about to make about the Post Office appropriation for fiscal 1961.

Basically my thoughts are that the Post Office Department should lay aside postal operation by experimental innovation and that truly solid service should be restored. Postal employees and mail users are aware that gimmicks, gadgets, and gaudy plans are no substitute for service.

Mr. Speaker, one of the deepest sources of employee dissatisfaction has been the Post Office Department's distribution guides system. Not one postal employee or supervisor has come to me with kind words to say about the system and yet the hearings before the subcommittee indicate that there is general employee acceptance of the new program. On page 13 of the hearings, for example, Postmaster General Summerfield said:

The morale of the people in the Department who participated in (the distribution guides) program is higher than it has ever been.

On page 213 of the hearings Assistant Postmaster General Barnes says that the guides were requested by many clerks. Mr. Barnes said that in pilot experiment only 33 of 1,250 clerks in the Brooklyn, N.Y., post office were not performing satisfactorily under the guides and that 10 of those were justifiably under the level because of physical handicaps. This, Mr. Barnes said, left a remainder of 23 of 1,250 who were not performing satisfactorily. We could assume that this ratio of 1 to 60 would indeed support the claims made by the Postmaster General about high morale. No amount of protest to the contrary will persuade postal employees that the guides system is anything other than a speedup. If postal productivity is low, let the Post Office Department admit it frankly. If output must be raised, let this also be candidly confessed but let the Post Office Department not cover the fist of the speedup with a soft glove of claims that morale was never better and that the employees themselves made the request against which now they are protesting very bitterly.

In the State of North Dakota we are faced with train withdrawals and postal employees have made very excellent cases for the inauguration of highway post office service to replace discontinued trains. I participated at Jamestown, N. Dak., early in October 1959 in a meeting at which representatives of the Minneapolis postal region also were present. The regional people were unable to refute the case made by the employees for added highway post office service. The routes have not been furnished, answers to the employees' claims have not been given and the Post Office Department's testimony indicates that only 10 highway post office routes are to be supplied throughout the Nation during 1961.

Mr. Speaker, the one thing which the Post Office Department might do to provide a really significant improvement in postal service would be to reinstate a second residential delivery so that overnight mail service might be restored without creating a lot of postal factories

at untold future expense to the taxpayers. Under the new plan which the Post Office Department is proposing, my State will have a transportation center at Fargo. This is very good in its own way but it will apparently mean hauling some mail back and forth across the entire State of North Dakota and it is certainly not an adequate substitute for a sound transportation network with railway and highway post offices interlacing the State. Most disappointing of all perhaps is the Post Office Department's rigid view in regard to adjustments in postal pay. The Post Office Department claims that postal pay scales compare "very favorably" with salaries in private industry. No explanation is given. The National Association of Letter Carriers has developed figures to show that in many communities postal employees receive anywhere from 25 to 75 cents an hour less than do garbage collectors.

Mr. Speaker, the Congress must make certain that the Post Office Department will not wring the reduction in appropriations from the postal employees. Nor can we tolerate a further reduction in the already deplorable postal service. I hope, on the contrary, that the Congress will promptly take positive steps to restore postal service and to ease the economic plight of the loyal postal employees.

St. David's Day

EXTENSION OF REMARKS

OF

HON. DANIEL J. FLOOD

OF PENNSYLVANIA

IN THE HOUSE OF REPRESENTATIVES

Tuesday, March 1, 1960

Mr. FLOOD. Mr. Speaker, under leave to extend my remarks in the Record, I include the following editorial from the Wilkes-Barre Times-Leader, Evening News of Wednesday, February 24, 1960, which comments on the meaning of St. David's Day that is observed officially today, March 1:

ST. DAVID'S BANQUET

While Tuesday, March 1, is St. David's Day, as no individual with Welsh blood in his veins has to be reminded, the St. David's Day Society of Wyoming Valley will celebrate at Hotel Sterling on Saturday night, February 27, with the 81st annual banquet. There is no hard and fast rule about holding the dinner on the anniversary itself, although that is usually the case. This year, as a matter of convenience, the society decided to anticipate the big day or night by 72 hours.

To this community, the annual St. David's Day gathering for the sons and daughters of Wales is a highlight of the year. This is explained not only by the large segment of the population they constitute, but by the sentimental ties with the land of their forefathers.

What makes this especially significant is the activity of the new generation. At the turn of the century, with hundreds of immigrants in our midst, it was understandable that interest in this event was high. The surprising development is that it has not diminished with later generations. In fact, the outlook for the St. David's Day Society and the St. David's Day observance is unusually bright in view of the new blood that

is being infused constantly. This is a most healthy sign for the organization.

Wyoming Valley, today as well as yesterday, offers proof that the Welshman abroad is the best Welshman. Americans of Welsh extraction fall in that category, for their attachment to Welsh traditions is strong, as these affairs, as well as the eisteddfods and song festivals, attest.

St. David's Day commemorates the anniversary of the death of St. David, but it is anything but a sad occasion. He is believed to have died in 561 which would mean that the observance next year will mark the 1,400th year, evidence in itself of the place St. David occupies in the affections of the Welsh people.

Wales today has a population of approximately 2 million and, while it officially is a part of Great Britain, it preserves its ancient culture, customs and language. In recent years, there have been rumblings in the wake of a movement to give Wales dominion status or a measure of freedom in keeping with the general trend throughout the world.

No matter what develops along these lines, St. David will continue to be the revered patron of this ancient land.

ASCAP Members Approve Consent Decree

EXTENSION OF REMARKS

OF

HON. PHILIP J. PHILBIN

OF MASSACHUSETTS

IN THE HOUSE OF REPRESENTATIVES

Tuesday, March 1, 1960

Mr. PHILBIN. Mr. Speaker, early this year the membership of the American Society of Composers, Authors, and Publishers, more familiarly known as ASCAP, approved the terms of a consent decree agreed upon by the society and the Department of Justice under which certain revisions are made in the election of ASCAP directors, of the survey of members' music performed and in the distribution of royalties.

After the tabulation of member votes on the issue, ASCAP issued a press statement which described the outcome as a vote of confidence for the society's board. Under unanimous consent I include the ASCAP statement as part of my remarks in the Record.

The material follows:

OVERWHELMING VOTE OF CONFIDENCE FOR ASCAP BOARD

By an 83.03 percent weighted vote and a more than 67 percent numerical vote, the members of the American Society of Composers, Authors, and Publishers (ASCAP) have approved the terms of a consent decree agreed upon by the Department of Justice and the society.

Chief Judge Sylvester J. Ryan of the U.S. district court announced the vote January 6 after the votes were tabulated in court by five teams of certified public accountants who have been sworn in as officers of the court. Judge Ryan approved the consent order January 7 and with the consent of ASCAP and the Government designated the Honorable John E. McGeehan and the Honorable Irving M. Ives to examine periodically, as is necessary, the society's survey of performances and to report to the court.

Commenting on Judge Ryan's designation of Judge McGeehan and Senator Ives, ASCAP President Stanley Adams said:

"ASCAP commends these distinguished citizens on their willingness to serve. We believe they will make a distinct contribution to the musical life of the Nation in which the members of ASCAP play such an important part."

The new decree amends the consent judgment of 1941 as amended in 1950. It provides revisions in the election of the society's directors, of the survey of members' music performed, and distribution of royalties.

Mr. Adams, in commenting on the outcome of the voting, said: "The society's board of directors and its management are tremendously gratified by the membership's overwhelming vote on behalf of the consent decree. We look upon it as a vote of confidence by the members in their directors and its management."

"The new decree is the result of more than 12 months of hard work between the Department of Justice and the society's counsel and management to revise the ground rules under which ASCAP operates. Under the new decree ASCAP will continue as a progressive organization constantly re-examining its procedures and making changes wherever and whenever they will benefit the society's entire membership. I wish to commend highly the work of our general attorney, Herman Finkelstein, and our special counsel, Arthur H. Dean, for their efforts in bringing this decree to its successful conclusion."

Soviet Anti-Semitic Drive

EXTENSION OF REMARKS

OF

HON. STEVEN B. DEROUNIAN

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Tuesday, March 1, 1960

Mr. DEROUNIAN. Mr. Speaker, ever since 1955, when I visited the Soviet Union, I suspected that Jews are not wanted in Russia by the Communists. Subsequent events have unquestionably borne out this feeling of mine. The following article by David Lawrence, which appears in this morning's New York Herald Tribune, further buttresses my convictions:

SOVIET ANTI-SEMITIC DRIVE REPORTED BY HUNGARIAN

(By David Lawrence)

WASHINGTON, February 29.—The Soviet Union's complicity in the anti-Semitic demonstrations recently in various countries, including West Germany, has long been suspected, but it remained for Dr. Bela Fabian, chairman of the Federation of Hungarian Former Political Prisoners, to reveal what has been suppressed, namely, the background of the conspiracy.

It develops that for several months prior to the swastika painting on synagogues in West Germany, the Soviet Union was carrying on an anti-Semitic campaign but the news was not allowed to get out.

Dr. Fabian, writing in U.S. News & World Report, tells of these occurrences:

"In Baranovich, Bendery, Kishinev, Kiev, Minsk, Voronezh, and Wilna, Jewish cemeteries were desecrated and memorials defaced. No punitive actions were taken against the perpetrators, which also shows that they were inspired or encouraged by the authorities."

Dr. Fabian says that in the last 6 months of 1959 a large number of synagogues in various parts of the Soviet Union were closed down. He names 20 different cities, and

declares that there now are only 60 synagogues functioning in the entire Soviet Union. He states that in Moscow, where there are 600,000 Jews, only 1 synagogue is permitted to remain open. The windows in this church building were broken on New Year's Eve and further damage done a few days later. Dr. Fabian adds:

"Discrimination against Jews in the Soviet Union may be seen by the following facts:

"1. Each Soviet citizen has to have an internal passport that serves as a certificate of identity within the country. Ordinary Soviet citizens have only the place of their birth marked on the cards, while those of the Jews are marked by the word 'Evrei'—Jew.

OTHER DISCRIMINATIONS

"2. Jews cannot be civil servants or army officers. Since 1949, no Jews are admitted to Soviet military schools.

"3. The world was shocked that, under the czars, Jews numbering 5 percent of the student body were allowed to study at Russian universities. Today, there are no more than 1.5 percent, while at the universities of the Ukraine no Jews are admitted. Today, there are still Jews who practice medicine and are employed as teachers and professors, but now they are excluded from the medical faculty, from training schools for teachers and from training schools for diplomats.

"4. Jews are gradually being pushed out of administrative jobs in industrial plants. Nowadays, they even rarely hold the job of a foreman."

A great deal has appeared in the press of the world about the desecration of Jewish places of worship and this has usually been attributed to "hooligans."

PROOF HARD TO GET

The West German Government investigated and found many instances in which there was a tie-up to the East German Communists. But proof in such circumstances is difficult to get because the underground techniques are effective. No Communist contacts the youth directly, but the Soviet apparatus extends to many universities in different countries and it is not a difficult matter for intermediaries to start anti-Semitic demonstrations without the risk of being exposed.

When news does leak out, it is given casual attention. Thus on October 4, 1959, hoodlums set fire to the synagogue at Malakhovka, a suburb of Moscow. It was on the second day of the Jewish New Year services. The 70-year-old wife of the caretaker was strangled and her body thrown into the flames. News of this was not carried in the Soviet press. Discussing the anti-Semitic demonstrations in West Germany, Dr. Fabian asks:

LIQUIDATION GOES ON

"Who was interested in compromising the Liberal-Democratic Chancellor Adenauer of Germany before the summit conference? Who would profit by breaking up the united front of the Western alliance?

"It is obvious that this anti-Semitic campaign did not serve the interest of West Germany—now waging a battle of life and death for Berlin and for the reunification of Germany—as, for this country, not only the support but also the sympathy of the free world is essential. The weakening of West Germany's morale and the disruption of Western unity would profit only one power: the Soviet Union.

"The anti-Semitic campaign would also serve to camouflage the tragic fact that, within the last 6 months, the Soviet Union is the only country to introduce legally and in practice the Nazi principles of Nuremberg."

"The Jewish question is the skeleton in the Soviet cupboard. As long as silence is maintained, the gradual liquidation of Jewry goes on.

DENIED BY KHRUSHCHEV

"History may repeat itself. Had the world raised its voice in time—before Hitler sent millions of Jews to the gas chambers, and not after when there was nothing one could do but lament—millions of lives would have been saved."

The customary denials are issued by Khrushchev when asked about anti-Semitism in the Soviet Union. He declares that religious freedom prevails and that where Jewish churches have been closed it has been because of alleged anti-Soviet activities.

Perhaps the most curious aspect of this whole business is the readiness with which some of the leftwing elements in the United States have been so ready to pooh-pooh and dismiss as absurd the idea that the Soviet espionage apparatus may have been back of the well-coordinated movement throughout the world to paint swastikas on synagogues.

Tragic Death From Common Household Detergent—A Warning to All Parents

EXTENSION OF REMARKS

OF

HON. CATHERINE MAY

OF WASHINGTON

IN THE HOUSE OF REPRESENTATIVES

Tuesday, March 1, 1960

Mrs. MAY. Mr. Speaker, I was saddened and appalled today at the circumstances set forth in a letter I received from one of my constituents in Wishram, Wash. I remembered that the attention of the Members of this House, as well as that of all parents in our country, was called not long ago to the dangerous and often fatal results that had occurred when children were allowed to play with the plastic bags now largely used by cleaning plants to return cleaned garments. I believe that the attention of the Members should be brought to the matters contained in this letter, and that parents should be made aware of the dangerous contents of the dishwashing detergents sold throughout our country, and used in more and more homes every day. Apparently, the lethal contents of these detergents are not listed on the labels of the packages, nor is there any warning of danger on the labels. I have communicated with the Federal Trade Commission, urging that this matter be looked into, and I hope that the manufacturers of these detergents will cooperate by listing contents on their labels and by printing a plain warning on their packages. Excerpts from my constituent's letter follow:

A little Wishram girl, 16 months old, died the other day, in spite of all a modern hospital and able doctors could do, from swallowing a small amount of a commonly used dishwashing detergent. The package label contained no warning whatsoever concerning its lye or other caustic content, does not in fact list or identify the contents. The grief-stricken parents are desperately anxious to get swift action on a nationwide basis to prevent a repetition of this tragedy, but they get no encouragement to believe that any action they can initiate will get any but a slow-moving investigation. Their doctors express shock that anything so lethal should be permitted to be sold and bear no warning. There apparently is no

antidote. The fatal damage was done instantly.

They appeal now to you through me in the hope that you can and will report the matter to the proper Government agency at the earliest possible moment, following up with legislative action, if necessary, every package can have a warning label attached, a striking label, though not even that, nor any listing of the nature of the contents we repeat was on the package in question nor on any other they have examined since.

The child was Kay Williams. Date of the accident was February 15. Date of death was February 18. Autopsy revealed severe internal damage—esophagus destroyed, etc.

This entire community is aroused. We will all deeply appreciate anything you can do to bring about fast action that will prevent another such tragedy.

Mr. Speaker, I am taking this up with the proper Federal agency, and I hope that all manufacturers of such detergents will cooperate in placing warning labels on their packages. But, most important, I want to call attention to this tragedy, so that American parents will be warned of the dangers in these products. Legislative action, and action by the manufacturers and by Federal agencies all take time, and I hope that, by inserting this letter in the CONGRESSIONAL RECORD, I can perhaps save some of that time, and perhaps save another family from such a tragedy.

Jack Riley's Olympic Winners

EXTENSION OF REMARKS

OF

HON. PHILIP J. PHILBIN

OF MASSACHUSETTS

IN THE HOUSE OF REPRESENTATIVES

Tuesday, March 1, 1960

Mr. PHILBIN. Mr. Speaker, under unanimous consent to extend my remarks, I include therein a pertinent and very interesting article from a recent edition of the Washington Evening Star entitled "U.S. Hockey Coach Crosses Up Experts."

The Nation is greatly thrilled by the magnificent victory of our stalwart American hockey team in the Olympics.

The win demonstrated what vigorous leadership, combined with talent, fine playing ability, and courage, can do in competitive athletic contests.

Our great, fighting hockey team made an enviable record that will long serve as an inspiration for American youth interested in athletics.

The players are entitled to great credit for their wonderful work, and their inspiring coach, Jack Riley, is entitled to special gratitude for his superb organizational work and unexcelled leadership.

The victory was not easy to achieve. Our boys were pitted against the very toughest competition throughout the games. Their Russian victory was particularly outstanding because the Russian team was comprised of expert players who were thoroughly experienced and fired with real determination to win. Their sportsmanship was commendable. They were hard-hitting and spirited, and

they were fair and sportsmanlike throughout the game. They were good losers and good sports.

Our boys played a hard, aggressive, fair game and their work and thrilling victory reflects great credit upon them.

We may all be proud of these fine, young American boys who recorded the outstanding victory of the winter Olympic games. I am especially proud of our Massachusetts boys who are members of this great victorious team—the Cleary boys, Bill of Cambridge, and Bob, of Westwood, whose father, uncle, and family are valued friends of mine; Jack Kirrane, of Brookline and Jack Rodenheiser of Malden, all of whom, together with their teammates, covered themselves with glory.

I repeat, we can well be proud of each and every one of these fine young Americans who demonstrated to the world in these contests the competitive prowess, skill, and determination of American youth.

As for Coach Jack Riley, it is almost impossible to measure and adequately express appreciation for his tremendous leadership and achievement. In assembling, training, and inspiring this great team, he rendered a service that has few, if any, parallels in the history of American sport.

This victory marks Jack Riley, not only as a great coach, but as a great leader, and the Nation may be thankful indeed to have a man of his high character, intelligence, ability, and zeal for leadership training our young men at our great U.S. Military Academy and in Olympic competition.

I tender Coach Riley and all the members of his history-making team my heartiest congratulations and express the hope that their tenacious spirit will permeate our other competitors in the Olympic games.

The material from the Star follows:

[From the Washington (D.C.) Star, Feb. 29, 1960]

U.S. HOCKEY COACH CROSSES UP EXPERTS—BIG GAMBLE PAYS OFF

SQUAW VALLEY, CALIF., February 29.—"No one figured us for better than third place—but we beat 'em all," said Jack Riley, mastermind of the U.S. Olympic hockey triumph.

During the winter games, the 39-year-old American coach kept repeating in his crisp Boston accent:

"We hope to be the first American hockey team to beat the Russians and win an Olympic gold medal."

Self-styled experts told Riley he could build a snowman on the Equator easier. And why not? The American players hadn't much more than met each other before last Christmas. Riley's irregulars were a pickup team from hither and yon—Boston insurance salesmen, Minnesota carpenters, servicemen, a television salesman from Wisconsin, a husky fireman from Brookline, Mass.

CLEARYS COME THROUGH

Riley, who has been coach at West Point for 10 years, took a gamble on the Yank squad and won. Eleven players threatened to quit when he added the Cleary brothers of Boston—Bill and Bob—just an hour before the player deadline on February 4.

The 11 resented that the Clearys, busy with their Boston insurance business, hadn't been practicing with the squad.

"I told them if they wanted to come to Squaw Valley as the second best team, OK—I didn't. I said we'd go as the best, or not at all."

The Clearys turned out to be stars on the Yank team that swept five games for the United States first Olympic hockey gold medal.

The world champion team that Riley pulled together is scattered to the winds today—players have gone back to their Army camps, jobs, wives, and kids.

WAS DARTMOUTH STAR

Riley, too, is happy the hectic tension is over and he can resume life at West Point with his pretty wife, Maureen, and their four sons—Jay 9, Mark 7, Robert 5, and Brian, 8 months.

"I got some great hockey players coming up," said Riley, who could always manage a smile even during the hottest hours of the Olympic competition.

Riley, who looks younger than some of his players, was an Ivy League hockey stand-out at Dartmouth where his brothers, Joe and Bill, also starred.

He was a Navy pilot during World War II—cruising the Pacific in a twin-engine PBM patrol bomber. After the shooting was over, Riley went back to a Boston insurance business and his first love—hockey.

Riley was a high scorer in the 1948 Amateur Hockey Association and on the U.S. team that went to the Olympics at St. Moritz, Switzerland, in 1948. He was player-coach on the American team that finished third to Czechoslovakia and Canada at the 1949 world's championship at Stockholm, Sweden.

Jack took the job at West Point on a temporary basis—and fell in love with coaching hockey. He is also assistant athletic director and has just signed a 3-year contract.

Riley doesn't drink or smoke. He lives quietly—except when in Olympic competition.

"I've never been under such tension," said Riley, who sweated his lads through every game. "I'll certainly be glad to get back to the Point and play MIT and some of those other schools."

Water Pollution

EXTENSION OF REMARKS

OF

HON. J. ERNEST WHARTON

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Thursday, February 18, 1960

Mr. WHARTON. Mr. Speaker, under leave to extend my remarks in the Appendix of the RECORD, I should like to comment briefly on the unsuccessful attempt to override the President's veto of the bill, H.R. 3610, which would have increased Federal grants for the construction of sewage treatment works.

In 1956 the Water Pollution Control Act was amended to include such a 10-year program and authorized \$500 million in matching funds to assist communities in the abatement of pollution, but set a limit of \$50 million to be spent in any one year. As to individual projects, restriction was made to limit the Federal share not to exceed 30 percent of the total cost or \$250,000, whichever was less.

Numerous sewage treatment facilities have been constructed throughout the

United States under this program, including several in my own congressional district in upstate New York. While stream pollution has not been completely eradicated since the Federal assistance program was initiated 4 years ago, such was not the intent of the law, which by its own provisions anticipated a 10-year program. Unfortunately some State governments have failed to meet their responsibilities along this line but the majority will agree that the Federal program has established an incentive to local communities. While I am not an advocate of Federal handouts, the monies provided under this 1956 act appear to have been adequate and justified by the benefits achieved.

No project has come to my attention which has been delayed due to insufficient Federal funds, and should such an exigency arise, and annual supplemental appropriation could hardly be said to be unknown to the Federal Government. I cannot help but feel that this maneuver to nearly double the annual appropriation from \$50 million to \$90 million was politically motivated to gain a campaign issue. During my 10-year tenure in Congress, I have yet to see one Federal aid program diminish, and particularly in an election year when there is sought "something for everybody." In view of the taxpayer's burden, I feel that we should uphold the President and give some thought to fiscal responsibility.

Robert A. Eyerman, Wilkes-Barre Architect, Elected to Fellowship in American Institute of Architects

EXTENSION OF REMARKS

OF

HON. DANIEL J. FLOOD

OF PENNSYLVANIA

IN THE HOUSE OF REPRESENTATIVES

Tuesday, March 1, 1960

Mr. FLOOD. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following news article from the Wilkes-Barre Times-Leader, Evening News of Saturday, February 27, 1960, which reports that Mr. Robert A. Eyerman, well-known architect of Wilkes-Barre, has been elected to fellowship and membership in the College of Fellows in the American Institute of Architects. This is indeed an impressive distinction, Mr. Speaker, as Mr. Eyerman is only the second architect from the large area of northeastern Pennsylvania to receive a fellowship in the 103-year history of the institute. I would like to take this opportunity and means of warmly congratulating Mr. Eyerman on the high honor bestowed upon him by the American Institute of Architects.

The article follows:

ROBERT A. EYERMAN, WILKES-BARRE ARCHITECT, ELECTED TO FELLOWSHIP IN AMERICAN INSTITUTE OF ARCHITECTS

Robert A. Eyerman, Wilkes-Barre architect, has been elected to fellowship and membership in the College of Fellows in the American Institute of Architects.

Formal notification of Mr. Eyerman's selection was received today by the Northeastern Pennsylvania Chapter of the American Institute of Architects from the national headquarters. He is one of 43 architects so honored in the Nation for 1960.

Founder of the architectural firm of Robert A. Eyerman & Associates, he will receive his fellowship formally on April 19 in San Francisco, Calif., at the 103d annual convention of the institute.

SECOND IN 103 YEARS

Mr. Eyerman is the second architect from the northeastern Pennsylvania region to receive fellowship in the 103 years of the institute's existence. The other fellow from this region is Col. Thomas H. Atherton of Forty Fort.

In making the announcement upon Mr. Eyerman, the local chapter stated it nominated him for fellowship on the basis of his achievements in service to the institute and his achievements in public service, two of the five categories upon which fellowship is bestowed.

Son of Edward Eyerman, Sr., Wilkes-Barre general contractor and former city building inspector, he is married to the former Alice Hopkins of New York City. The couple resides at Bear Creek. They have a daughter, Mrs. Jean Eyerman Prushinski, and granddaughter, Laurie Kim Prushinski, Dover, Del.

RECEIVED DEGREE FROM CORNELL

Mr. Eyerman attended Wilkes-Barre city schools, graduated from Wyoming Seminary, and received his degree in architecture at Cornell University in 1933. He returned to Wilkes-Barre and started his practice in the office of the late architect Clark Wright Evans, and has continued in private practice here since.

Some of his projects include the Wilkes-Barre-Scranton Airport, Eberhard Faber pencil plant and the addition now under construction, King Fifth Wheel, the VA hospital chapel and numerous industrial plants in the area. He presently is drawing plans and specifications for the YMCA all-purpose building. Mr. Eyerman also was the architect for many residences throughout Wyoming Valley.

In civic affairs, he has been active in Red Cross disaster service, Kiwanis International, YMCA, civilian defense during World War II, Wyoming Valley Council of Boy Scouts of America, VA hospital fund, and Bear Creek Lions Club.

CHAMBER OF COMMERCE DIRECTOR 20 YEARS

He has been an active member of the Little Theater since 1933 and served as chairman of several membership drives. He is one of the organizers of the Wilkes-Barre Junior Chamber of Commerce and served as its first president. He also was one of the organizers and first president of the Pennsylvania State Junior Chamber of Commerce. He has been a director of the Greater Wilkes-Barre Chamber of Commerce 20 years and has served as a director of the Greater Wilkes-Barre Industrial Fund, Inc., since its inception in 1940.

Mr. Eyerman has served as a director of the Children's Service Center since 1943 and as trustee of the YMCA since 1946. He served on the committee which compiled the new Wilkes-Barre city building code and has participated in the city's traffic and parking discussions. He is a life member of the senate of Junior Chamber International.

He became a member of the northeastern Pennsylvania chapter in 1944 and served as secretary-treasurer in 1946 and 1947. He was elected chapter president in 1952 and has been a director for the chapter area to Pennsylvania Society of Architects since 1953. He also has held various offices in the Pennsylvania Association of Architects.

A Jewish View of Brotherhood

EXTENSION OF REMARKS

OF

HON. DANIEL J. FLOOD

OF PENNSYLVANIA

IN THE HOUSE OF REPRESENTATIVES

Tuesday, March 1, 1960

Mr. FLOOD. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following article by Rabbi Albert H. Friedlander, spiritual leader of Temple B'nai B'rith of Wilkes-Barre and Kingston, Pa., which appeared in the Wilkes-Barre Times-Leader, Evening News on Thursday, February 25, 1960. Rabbi Friedlander is identified with the National Conference of Christians and Jews which sponsors Brotherhood Week.

The article follows:

A JEWISH VIEW OF BROTHERHOOD

(By Rabbi Albert H. Friedlander)

"Brotherhood: believe in it, act it, support it" has been made the slogan of Brotherhood Week. During that span of time, all of us have been made aware of the greatness of the American heritage which constantly reminds us that we are brothers, engaged in a common task.

The birthdays of Abraham Lincoln and George Washington dramatize this heritage. They remind us to follow Lincoln's teachings, to act "with malice toward none, with charity toward all." And, in a letter to a Jewish congregation, George Washington rejoiced in a country which "gives to bigotry no sanction, to persecution no assistance." Brotherhood Week thus becomes a pageant of America, of a country living under God, with liberty and justice for all.

Brotherhood is part of the American heritage. Why, then, these reminders? Are they necessary? Unfortunately, the answer to that question has to be "Yes." We do need reminders. Everyone agrees on the principle of brotherhood; few act upon it.

The great religions of our country all place brotherhood at their core. It is manifestly impossible to believe in God as the Father of humanity without accepting the corollary that all humans are brothers, children of the same Father. Yet many, even when they accept this, forget that religion is more than a creed to which one subscribes: it is also the deed that makes life meaningful.

Our beliefs must bring us to action if they are to have meaning. And, during Brotherhood Week, we might well examine ourselves and ask: Have I tried to understand my fellow man? Have I reached toward my neighbor in friendship? Have I considered the rights and privileges, the happiness of others? All of this must be part of our approach toward brotherhood.

And brotherhood must be supported. Wyoming Valley has a proud record here, one that can serve to inspire other communities. Confronting grave economic problems, unemployment, and disasters, the citizens of this community have nevertheless created great institutions of learning, hospitals, playgrounds, justifying their reputation of being a community with a heart.

Our United Fund is only one aspect of the fundamental cooperation on which our city is established. And yet it is not enough. If we are to continue towards achievement of the American dream, we must make sure that our horizons continue to expand, that understanding between man and fellow man will ever grow deeper, that no one is left without help, that everyone is given hope and confidence in his fellow man.

New areas always open up; old prejudices are banished and laid aside. Mental illness is no longer considered a crime, but is seen as a sickness; newcomers are no longer suspicious strangers, but are seen as good friends who need our help; and the more we learn about our neighbors, the more we try to understand him, the closer we come. Long ago, the Old Testament, in the Book of Leviticus, enjoined us:

"Thou shalt not hate thy brother in thy heart, but thou shalt love thy neighbor as thyself."

Let us then turn in love toward one another. For when we turn in love toward our fellow man, we take another step toward God. This is the meaning of Brotherhood Week. It is also the meaning of life.

Tolerance and Respect

EXTENSION OF REMARKS

OF

HON. GEORGE M. WALLHAUSER

OF NEW JERSEY

IN THE HOUSE OF REPRESENTATIVES

Tuesday, March 1, 1960

Mr. WALLHAUSER. Mr. Speaker, mutual tolerance and respect are an important part of our American way of life and the outstanding newspaper, the Montclair Times, published and distributed in Montclair, N.J., a community which I have the honor to represent in the Congress, has published an editorial that states very clearly the significance of these two words.

Under unanimous consent I include it with these remarks so that it can be a permanent record:

[From the Montclair Times, Feb. 25, 1960]

TOLERANCE AND RESPECT

It should not be necessary in a country founded upon the democratic principles of tolerance and respect for the viewpoints of others to set aside a period of 7 days as "Brotherhood Week."

And yet, once again in this year of 1960, strife and friction rampant even within the United States between peoples of differing colors, faith and national origins makes it necessary for the scheduling of special exercises designed to bring these peoples closer together.

Certainly in such an enlightened community as Montclair, populated as it is by a vast majority of people of above-average intelligence, admonitions to be tolerant and respectful of the rights and privileges of our brothers should not be needed.

Let all within the community remember that mutual tolerance and respect are priceless attributes which are earned and not given in the sense that orders are carried out by a private in an army.

Anyone who doubts this or feels that it is not as it should be has only to study the relationships between two children in the same family. Generally, while the formative years may bring their share of scrapes and semimajor battles, a deep and abiding love born of the natural give-and-take daily relationships grows from understanding, tolerance and respect.

And these characteristics can never be one-sided to be effective. They must be freely given and accepted on both sides. Let all of us during this Brotherhood period resolve in all our relationships to bring to them more tolerance and respect, much-needed commodities in a world torn by mutual distrust and suspicion on all sides.

Civil Rights for Children

EXTENSION OF REMARKS

OF

HON. ALFRED E. SANTANGELO

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Tuesday, March 1, 1960

Mr. SANTANGELO. Mr. Speaker, on February 29, 1960, I had the distinct pleasure of attending a luncheon conducted by the Day Care Council of New York, Inc., at the Hotel Astor which was attended by over 1,000 patrons. Over 75 public officials attended this festival which was designed to inform the interested people as to the activities of the child care centers and the status of legislation in the Federal Government and the State legislature which would set up a national program for day care centers. Senator JACOB K. JAVITS of New York and I introduced companion bills providing for Federal appropriation on a cost-sharing basis with the States and the communities. The representatives of the various day care centers enthusiastically endorsed our legislation. Senator JAVITS' bill is S. 1286. My bill is H.R. 7760.

The speakers included Katherine B. Oettinger, Chief of the Children's Bureau, U.S. Department of Health, Education, and Welfare, who spoke of the "National Lines of Day Care"; Commissioner Raymond W. Houston, New York State Department of Social Welfare, who spoke on the "State Horizons of Day Care"; Commissioner James R. Dumpson, New York City Department of Welfare, who spoke on the subject of the "City Perspective in the Day Care Program." Mrs. Jacob K. Javits substituted for her husband, Senator JACOB K. JAVITS, and delivered his address. Mrs. Randolph Guggenheimer, president of the Day Care Council, spoke on the "Completed Picture of Day Care."

The speech delivered by Mrs. Guggenheimer impressed me tremendously. I believe that the readers will enjoy the speech as much as I did in listening to it, and I am, therefore, inserting her remarks in the CONGRESSIONAL RECORD. Her speech follows:

Distinguished guests, members of the Day Care Council, Congressman SANTANGELO and friends, Senator JAVITS unfortunately was unable to attend this luncheon conference and we were pleased to listen to his remarks spoken through his personable and charming wife, Mrs. Javits. We want the Senator to know that we understand the reasons for his absence. However, this was a matter of exigency, around the clock Senate meetings on civil rights. I am sorry he had to stay in Washington, but at least it was in a good cause and we wish him luck.

We thank him and Congressman SANTANGELO for their part of our 1960 picture called Federal legislation. My familiarity with this is so little encompassing that I can cover it with a sentence. We desperately need a national day-care program; we desperately need good care in every part of the country for all children who are being neglected because they do not have adequate supervision during the day—and in order to achieve this, our legislators must be told about the need—and even more about the long-term results of neglect. Senator JAVITS for the last 2 years has introduced a bill call-

ing for \$25 million for the establishment and maintenance of day-care programs. There has been relatively little nationwide support, and I would like to state that this lack of support is based on nationwide ignorance. I would like to pinpoint ignorance further by saying that New York State is surely high on the list of delinquents in its lack of concern for the neglected child.

We have recently been frightened—appalled—by the wave of callous and ugly crimes committed by children. We seem to have been clinging, despite all evidence to the contrary, to the rather maudlin, utterly enchanting Victorian concept of childhood. While electricity has replaced gaslight, and cars have replaced horses and buggies, and television has replaced the family circle, life in our urban communities has become increasingly impossible for children. The disappearance of the traditional family—the absence of grandmother and grandfather, the smallness of apartments, the lack of neighbors because of the constant disruption of neighborhoods, the change in tradition and morality, the lack of thoughtful planning in the absorption of newcomers—all these have led to the final erasure of the Victorian image of childhood. What we are failing to do is draw the modern picture. We know that there has been a staggering increase in the numbers of mothers in the labor force—this despite aid to dependent children programs—and that this increase is not affected by the presence or absence of day-care services. Only the welfare of the child is affected by that. We do not need statistics in New York City to know that there are tens of thousands of children who play unsupervised in our streets during the day. A walk through any of our overcrowded neighborhoods will tell the least observant of our perambulators that—we don't even need rag doll hit-and-run headlines to confirm this.

At the risk of being Ciceronic, I would like to say how long, oh, leaders of New York State, will you continue to devise short-range cures for long-term problems? How long will we have 3,000 children on waiting lists in day-care centers, areas where there are no centers to list those who wait—and how long will we tolerate the conditions that destroy our children for which we—not the immediate perpetrator of the hit-run crime—should be registered as the criminals? This, when we have been offered a seven-point delinquency program—when what we need is a comprehensive child welfare program that envisions spending whatever funds are required—as liberally as we spend funds for roads or nightclubs or other conveniences and pleasures—that will truly keep the children of this State from suffering neglect or abuse—and that will not offer merely a panacea for cases known to the courts.

Here in New York City—because it's spring—at least in the ballroom of the Astor—I'm going to ask our jigsaw puzzlers to put in the first part of the picture we're going to assemble. I am proud of being part of a program that has tried to provide for at least 6,000 children in this city the best we know how to provide in the fields of health, education, and welfare—that has kept as its goal the best interests of children and their families, and that has in some small measure succeeded in giving the children entrusted to its centers something like the American concept of a fair chance. I'm sorry Senator Javits isn't here—because I would like to say to him that we hope he will succeed in his fight for civil rights and, most particularly, in his fight for day care, which is essentially a fight for the civil rights of children.

Bureaucratic Welfareism in Trouble

EXTENSION OF REMARKS

OF

HON. BRUCE ALGER

OF TEXAS

IN THE HOUSE OF REPRESENTATIVES

Monday, February 8, 1960

Mr. ALGER. Mr. Speaker, the proponents of the welfare state promising security from cradle to grave often succeed in painting a deceptive picture of unlimited abundance and bureaucratic omniscience.

Unfortunately, history is replete with instances in which a polity has subscribed to the spellbinding promises of the government paternalist who seeks to impose the welfare state philosophy on the people. History also tells us that welfare stateism is soon followed by deprivation of liberty, decline in individual initiative, and weakening of the national vitality.

It is axiomatic that the government can give nothing to the people that it has not first taken away from the people. It is also axiomatic that the providing of so-called security by a government is followed by bureaucratic controls over the beneficiaries of that security. Therein lie the principal weakness and fallacy in welfare stateism.

Mr. Speaker, the current issue of U.S. News & World Report contains an article on the experience of Sweden with the welfare state. The tenor of the article suggests that there is widespread dissatisfaction and disillusionment with Sweden's welfare state experience. The article suggests that the architects of the welfare state are likely to be voted out of office next September.

The Swedes have learned from disheartening experience that it is not possible to find governmental answers to every social problem that might confront their people. They have learned the inevitableness of the welfare state carried to its logical extreme resulting in the Government taking more than half of the national productivity for redistribution back to the people. They are also feeling the disastrous inflationary pressures that are a part of welfare stateism.

It is true, Mr. Speaker, that the Swedes have gone further in developing the welfare state than the citizens of our Nation have been willing to do. However, Sweden's preeminence in this field of governmental paternalism might not exist if our advocates of federalization of every governmental function had had their way. The proponents of the welfare state in the United States promise Federal funds for schools, sewage disposal, medical care, housing, urban renewal, farm regimentation, electric power and every other aspect of our daily lives that offers an opportunity for Government subsidization. These welfare-state proponents should remember that the promising is easy, the perform-

ance is more difficult, and the paying is much more difficult.

The time is long overdue for us to give real heed to the proven philosophy of government that the echelon of governmental obligation that is closest to the people should do the job; where matters do not require the intervention of government, the government should not interfere.

As part of my remarks, Mr. Speaker, I will include the article contained in the current issue of U.S. News & World Report entitled "When a Country 'Goes the Limit' in Welfare, Here's What Happens":

WHEN A COUNTRY "GOES THE LIMIT" IN WELFARE, HERE'S WHAT HAPPENS—IN SWEDEN, TAXPAYERS ARE REBELLING

STOCKHOLM.—Sweden may have the answer to a question that bothers a good many Americans. The question: How big can a welfare state grow before it runs into strong voter opposition?

The answer: It can grow vastly bigger than anything comparable in the United States.

In Sweden the welfare state is in political trouble. The latest pension plan, favored by the Social Democratic government, was enacted by 115 to 114, with the plan saved from defeat only because the Communists abstained from voting. An election in September will be fought around the welfare issue.

Sweden has become the most highly developed of the world's welfare states. It has gone to the point where defense accounts for 25 percent of the Government's spending, while welfare accounts for 35 percent. In United States by comparison, defense accounts for about 45 percent of the Government's cash spending and welfare accounts for about 25 percent.

In Sweden it seems that almost everybody is taking in everybody else's washing.

Income taxes, levied in important part to support social security, take about 35 percent of the wages of a skilled worker. There now are to be a 4 percent transactions tax and an increased tax on fuels to provide more money for the social security system. There is a question whether taxes, even so, will meet the whole bill.

Christmas every day? Almost everybody in Sweden's welfare state gets something.

An example of retirement benefits: A Swede who has averaged \$6,000 a year in income can retire at age 67 on a pension of \$3,660 a year, based on a percentage of his earnings in his best years. By contrast, the United States has a flat ceiling of \$127 a month, \$1,524 a year, on social security payments to a worker retiring at age 65.

National pensions up to now have been financed by taxes. But costs of a new supplementary pension scheme are to be borne almost solely by employers.

Pensions themselves, though, are only part of it.

For retired Swedes with smaller incomes, there is a rent allowance, paid by the local government. The National Government supports extensive sickness insurance. Low-income families pay nothing for this insurance. Those with higher incomes pay a maximum of \$6 a year. Sickness insurance covers cost of hospital care for a maximum of 2 years, traveling expenses to a hospital and three quarters of the doctor's fee.

Many medicines are available at no cost. Diabetics, for example, pay nothing for insulin. For other prescribed medicines there is a discount of 50 percent if the cost is over 60 cents. Adults pay reduced dental fees

under the national health-insurance plan. In many cases fees are waived. Children up to age 15 have their teeth cared for at no cost. Even the alcoholic is watched out for. The Government pays for hostels where he can live under supervision while continuing to work at his job.

Vitamins free: There are many other Swedish welfare benefits. For example, the Government makes a flat, tax-free payment of \$80 a year to parents for each child under 16. Children also receive free health supervision up to school age in national child-welfare centers, and, during school years, from school doctors and nurses. If a child proves difficult to bring up, free advice may be obtained from child-guidance clinics. The State pays costs of vitamins and inoculation against disease.

Children under 14 are given vacations which cost the parents nothing if their income is low enough. These children may travel free once a year to any part of Sweden and back. They may attend holiday camps or visit private homes outside their home district, with their subsistence paid by the Government.

Day nurseries and nursery schools are available to preschool children at fees which even those of minimum income can afford. Children receive free meals during school hours. And, if a child comes from a poor family, there is a clothing allowance.

Study allowances are awarded for children in secondary and vocational schools who have to live outside their home districts to receive the training they need. These allowances include maintenance grants and traveling expenses.

In the later school years, students can obtain state scholarships for short training courses in vocational fields. University education is available on state study loans of up to \$700 a session.

Some financial aid from the Government is assured for all children from birth through the years of university education. But Government social benefits begin for the Swedish child even before he is born.

"Rewards" for motherhood: Before giving birth, a working mother-to-be is paid \$3 a day by the state for a maximum of 90 days. At the birth of a child each Swedish mother, regardless of her financial status, receives a cash grant of \$54. For women of low incomes, the state pays an additional \$120 at the birth of a child.

There are many other benefits for mothers besides such cash grants. No matter what her income, the Swedish mother receives free services of a trained midwife before, during, and after the birth of her child. She gets hospital care during confinement at no cost. Prenatal clinics provide free examination and consultation.

While her children are growing up the Swedish mother continues to receive other state benefits. A housewife with at least two children under 14 and whose taxable income meets a certain standard may take a free vacation trip to any place in Sweden. The Government also subsidizes holiday homes at which vacations may—but do not have to—be spent. And in some cases cash grants are provided to housewives for vacations.

Special subsidies are paid to widows and widowers with children. Children left fatherless because of industrial accidents receive direct financial support from the Government. Widows of industrial-accident victims also receive special aid.

Loans at 3 percent. In the field of housing, there are not only rent allowances but fuel allowances for low-income families. For those who want to own their own homes a Government allowance is granted where money borrowed from a bank costs more than 3-percent interest. And the Government itself makes additional housing loans at 3-percent interest. Part of such a loan is

free from payments on principal or interest for 10 years. At the end of the 10 years, the homeowner may be excused from repaying the loan at all, if the Government agrees.

Beyond all this, the Swedish Government extends its social-welfare benefits into such fields as unemployment insurance, aid to military-service draftees, and free legal advice. Almost every problem the human being encounters, financial or otherwise, is, at least in part, the responsibility of the Government under the Swedish system of social welfare.

Yet social ills are increasing under Sweden's cradle-to-grave welfare system. The country's suicide rate is climbing alarmingly. Robberies and burglaries have doubled in the last 10 years. Juvenile delinquency figures have tripled. Arrests for drunkenness have nearly tripled.

Some Swedish psychiatrists have suggested that many suicides are committed over marital or other emotional problems because the welfare state has provided such extensive cushioning that some people just cannot face up to personal emergencies.

Now there are signs that a good many Swedes—particularly young people starting out in business and the professions—are turning away from such extensive "Government paternalism." Also building up is a feeling that the workingman, paying more and more taxes to receive Government benefits, is just "taking money out of one pocket and putting it in another," as one political leader here describes it.

Inflation headache: Some economists are warning that the welfare state's built-in inflation could take Sweden to the point where it will have to devalue its currency.

In the face of skyrocketing costs, substantial tax increases and mounting budget deficits, you can get expert political opinion that the Social Democrats—architects of the welfare program—are likely to be voted out next September.

As a result of all these things, there is widespread feeling in Sweden that the welfare state finally has grown too big for the country's own good. But that point was not reached until the whole setup grew far beyond anything yet undertaken in the United States.

Editor Discusses the Cuban Sugar Situation

EXTENSION OF REMARKS

OF

HON. VICTOR L. ANFUSO

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Tuesday, March 1, 1960

Mr. ANFUSO. Mr. Speaker, on February 22, 1959, I introduced a bill, H.R. 10570, which provides for reducing Cuba's sugar quota by the amount it exports every year to Soviet Russia and to allocate this amount among the sugar-producing countries of the Western Hemisphere. I am convinced that this action on our part would remove an important economic prop from the Castro regime and would make it clear to Castro what we think of his flirtations with the Communists.

Since I introduced my bill there have been a number of favorable comments on my bill in letters, newspaper stories, and articles. Among the latter is an article by William Randolph Hearst, Jr., editor in chief of the Hearst Newspapers,

which was published in the New York Journal American on Sunday, February 28, 1960, in his "Editor's Report."

Under leave to extend my remarks, I wish to insert into the Record that part of Mr. Hearst's report in which he discusses the Cuban sugar situation and what our attitude should be:

EDITOR'S REPORT

(By William Randolph Hearst, Jr.)

Another thing we all ought to think about is what to do about Castro's Cuba, and in particular the sugar quota under which we have been buying approximately half of the Cuban crop at premium prices 2 to 3 cents above the world market rate.

Two bills that have been introduced into Congress—one by a Democrat and the other by a Republican—are similar in purpose and reasonable in intent.

In the House, Representative VICTOR L. ANFUSO, New York Democrat, is sponsoring a bill that would cut U.S. buying of Cuba's sugar by the amount she exports to Russia under the new trade-barter deal. This is 1 million tons a year over the next 5 years. Mr. ANFUSO proposes that this amount be allocated among other sugar-producing countries in this hemisphere.

In the Senate, a bill by Senator BARRY GOLDWATER, Arizona Republican, proposes just about the same thing.

So many people are genuinely perturbed by the turn of events in Cuba that it occurred to me it would be of interest to find out how the sugar quotas happened to be established and for what reasons. Without becoming too technical or getting into economic calculus, the research came out as follows:

Until 1934 this country had a tariff on raw sugar of 2 cents a pound to help U.S. beet sugarcrowers and Louisiana cane sugarcrowers. This also helped and caused an increase in sugar production in Hawaii, Puerto Rico, and the Philippines, duty-free U.S. dependencies.

The quota system was born of the depression. In 1934 the Secretary of Agriculture was directed to establish shares (quotas) for domestic and foreign production on the basis of historic trade patterns. There were three objectives: to protect the domestic sugar industry, to assure adequate supplies at stable prices and to promote our export trade by paying foreign producers above the world price and supplying them with dollars to buy from us.

In the assignment of foreign quotas, Cuba has been placed in a privileged position, due to historical ties of friendship and the fact that Cuba was a good customer of our goods and a considerable part of its sugar industry was American owned.

As the Sugar Act now operates, mainland U.S. producers, Hawaii, the Philippines, Puerto Rico, and the Virgin Islands get fixed quotas totaling 5,424,000 tons—based on an estimated basic need of 8,350,000 tons. The Philippines, however, since it gained independence is now on a rising tariff scale.

Cuba gets a fixed quota of 96 percent of the difference between the estimated basic need and the fixed domestic and Philippine quota. All the other countries divide the remaining 4 percent of the difference.

In actual figures Cuba's fixed quota is 2,808,000 tons, and when requirements above the basic need are added, its assignment this year is 3,119,000 tons. In addition, it enjoys a 20 percent tariff differential. The duty on Cuban sugar is 50 cents a hundred pounds compared to 62½ cents a 100 pounds for full-duty countries.

The big point I want to establish out of all this background is that Cuba's privileged position has been based on both friendship and self-interest.

Friendship has gone in the violence hostility of Castro's government toward our country.

Self-interest also has gone in the Castro government's confiscation of American property, in the process of Communist nationalization of all property and industry going on there, and in the barter deal with Russia, with its invitation to Communist infiltration.

Every American to whom I have talked recently in my travels about this country agrees that we should not meekly and passively take Castro's anti-American acts and provocations any longer. This opinion was hearteningly shared by some of the leading Latin American statesmen and businessmen the Hearst task force met in our just-concluded trip.

Therefore, it seems to me the proposals of Senator GOLDWATER and Representative ANFUSO should be enacted into law.

Let's start by transferring at least that portion of the Cuban sugar quota equal to the amount in Castro's Russian deal to Latin American countries that are our friends—Peru, Brazil, Mexico and others that produce sugar and won't insult us for the privilege of selling it to us.

They will sincerely appreciate and be grateful for this move—not heap abuse upon us for our consideration.

Besides, 96 percent of our business to Cuba, and only 4 percent to all our other friends never did make sense.

Now is a perfect time to correct that cockeyed situation.

Conquest of the Ocean World From Top to Bottom

EXTENSION OF REMARKS

OF

HON. JAMES C. OLIVER

OF MAINE

IN THE HOUSE OF REPRESENTATIVES

Tuesday, March 1, 1960

Mr. OLIVER. Mr. Speaker, on Thursday, February 18, I addressed this body with a lengthy, detailed informational speech, referring to the Soviets' planned expansionist activities in all the many broad phases of oceanography over practically every ocean of the world.

By the way of contrast, I referred to the relatively meager programs which are being authorized and funded by the United States to meet this ever-increasing expansion by the Communist nations.

In order that the RECORD may be kept in balance through information of some of our activities in this vital area of oceanography, I am pleased and privileged to incorporate, herewith, the foreword as written by Richard Vetter, Executive Secretary, Committee on Oceanography, National Academy of Sciences, to the following feature articles appearing in February issue of *Navy*, the magazine of seapower.

FOREWORD

(By Richard Vetter, Executive Secretary, Committee on Oceanography, National Academy of Sciences)

Our Nation is excited by, and concerned with, the conquest of outer space. This is as it should be for outer space is exciting and important. Less obvious, but of more practical importance, potentially as exciting—is the conquest of our "inner space"—

the oceans. Both are important to our Nation's future. However, we must not overlook one while pursuing the other.

This feature presentation of the *Navy League's* magazine states this case in concise and imaginative terms.

(EDITOR'S NOTES. Members of the Committee on Oceanography of the National Academy of Sciences are not only in full accord with the position of this presentation and unhesitatingly emphasize that "man's knowledge of the oceans is meager, indeed, when compared with their importance to him." This is highlighted in their report to the Committee's Government sponsors, namely, Office of Naval Research, Bureau of Commercial Fisheries, the Atomic Energy Commission and the National Science Foundation. The same has been conveyed to the Congress.)

The report contains features which I believe are unique. It does not call for a crash program requiring an abrupt and unsettling expansion of oceanographic research activity such as was forced upon us in the space field by the Russian sputnik. A gradual replacement of obsolete ships, and an orderly increase in facilities and scientific manpower is proposed. Unlike many advisory committee reports, it is sprinkled liberally with dollar signs to indicate the amount of effort required in each of several fields to maintain a well-balanced program.

The response to the report in the Government agencies (particularly the Navy and the National Science Foundation) has been most gratifying; and that of Congress beyond our fondest hopes. (Senator MAGNUSON has introduced a bill incorporating many features of the committee report and Congressman BONNER appointed a special Subcommittee on Oceanography of the House Merchant Marine and Fisheries Committee which immediately began a series of hearings.) Public interest is becoming extensive and sincere.

Why this sudden interest in oceanography? The oceans are a new frontier for man's conquest, but this has always been true; the oceans have always been with us. The new ingredient is modern technology. With new materials: plastics, special steels, aluminum; with new devices: electronic computers, aircraft, deep diving bathyscaphs, stable platforms, acoustic transducers; with new techniques for the collection, telemetry and analysis of data, a host of oceanographic problems have been "whittled down to size." Man's mental and physical capabilities have been magnified immensely and formidable problems encompassing tasks which could not have been attempted a decade ago are now within our reach.

This new frontier and its opening must not escape our attention, for with worldwide expanding consumption of energy, materials, and food; with expanding demands for vast amounts of environmental knowledge upon which costly and vital weapons systems depend; with an exploding world population; many nations are turning to the sea.

At present our critical national need for knowledge of the oceans is for defense. Ten, fifty, or one hundred years hence it may be for food. Whether for defense, food, or commerce, our Nation as it looks to the future must look more and more to the oceans.

CONQUEST OF THE OCEAN WORLD—PART I FROM TOP TO BOTTOM

As the world's No. 1 maritime Nation, the United States is belatedly beginning to realize it cannot boast command of the breadth of the seas until it also commands them from top to bottom. For here is the last frontier—the dark frontier of another and hidden world. With oceans covering two-thirds of the earth's surface, there remain 300 million cubic miles of water lying beneath us unexplored, unknown.

(The first major effort at a breakthrough into the fathomless depths with all its hazards is currently being undertaken in the Pacific off Guam, where the famed Navy bathyscaph is attempting a 7-mile plunge to the deepest ocean trench in the world. For details see companion piece to this article titled "Descent Into Terra Incognita.")

Man's knowledge of the oceans is meager, indeed, when compared with their importance to him. That's the way the Committee on Oceanography of the National Academy of Sciences puts the proposition. And little wonder. For within the hidden realms of this 300 million cubic mile vacuum may rest our future security scientifically, economically, and militarily.

The sooner we take a serious look at this space beneath us—as seriously as we have been gaping at the outer realm above us—the nearer we will be to really understanding the meaning of seapower to our lives, our well-being, and our safety.

"From the point of view of military operations there is no comparison between the urgencies of the problems of the oceans and those of outer space. The submarine armed with long range missiles is probably the most potent weapon system threatening our security today. It seems clear that the pressures of establishing effective bases, and of protecting ourselves from attack, are relentlessly driving us into the oceans." Thus, speaks the 1959 report of the Committee on Oceanography of the National Academy of Sciences.

And to put the threat of undersea superiority, especially in the Atlantic, even more to the point, the famous 1960 edition of *Janet's Fighting Ships* (London) suggests any war with Russia will be won at sea and from under the sea.

Editor Raymond V. B. Blackman writes: "Russian leaders have stated that in a future war the struggle at sea will be of immeasurably greater consequence than it was in the last war."

"They well realize the vital importance of the positive control of the seas in the grand strategy of Great Britain and the United States and their clear intention is to isolate North America from Western Europe."

The Russian fleet of 400 to 500 submarines, *Janet* points out, including guided missile and atomic-powered underwater craft, could conceivably wreak great havoc on the 25 million tons of American and 20 million tons of British shipping in the Atlantic.

Projecting the sea picture to 1967, *Janet* calls attention to the fact the United States will have 75 nuclear-powered subs, 40 of them guided missile craft, and comments: "It may well be that these will become capital ships around which the Navy of the future will be built."

Let's put it bluntly: key to our survival, then, would seem to lie in the ocean depths. Thus instead of meager drop-by-drop financing for basic ocean studies, it is recommended we spend \$651 million over the next 10 years. Even that in comparison to what we are spending in moonshooting and outer space exploration is regarded as niggardly by those who understand the peril confronting us if the U.S.S.R. ever attains the upper hand beneath the seas.

Echoing this statement and the flat opinion of the Academy of Sciences is famed Navy scientist and inventor of the Momsen submarine lung, Vice Adm. C. B. Momsen, U.S. Navy (retired), who holds that undue emphasis currently is being placed on the invasion of outer space and is out of all proportion to the grim realities immediately facing us here. Our future, he states, is on the earth, in and below the ocean.

Admiral Momsen, in concert with other naval intelligence and with the top scientists of the day, leans to the opinion that

he who controls the seas—not just coast to coast but from top to bottom—can conceivably control the world. In a word, the threat to the United States, with the greatest exposed coastline of any country in the world, is not from the air but from beneath the oceans. If there ever is another Pearl Harbor or sneak attack, that attack will come from a space where a major surprise is possible, namely, from thousands of feet down under.

Our own *Polaris* weapons system and nuclear subs are the tipoff, very likely to be matched and improved upon by Russia, which, at the moment, is regarded as far ahead of us in the all-important field of oceanography through a crash exploration program. To begin with, the Russians have already built and are operating the first oceanographic submarine, the *Severianka*, which has been operating in the arctic. It is common knowledge that surface icebreakers are of limited value compared to properly equipped submarines.

The submarine-launched missile combined with mobile fleet domination on the surface represents the ultimate in military offensive force.

There is a distinct advantage in being able to cruise, hide, find harbor, and fight for extended periods of times at depths of 2½ miles or more beneath the surface. Seven miles is the ultimate objective, where the pressure is 8 tons per square inch.

Provided the *Nautilus* and her ilk of nuclear sister subs could withstand these deep-ocean pressures, we would have this supreme instrument and exploration of the depths could be rapid. But we do not. That's where basic ocean study or oceanography comes into find out about pressures, depths, mountain ranges, long plateaus, sound detection, and currents that sweep back and forth at 75 miles per hour.

A whole system of maneuvers, communication, sonar detection, and probably even new weapons for undersea fighting will have to be developed before there is any real conquest of the seas. But these things will come as surely as Russia's Sputnik I. The question is, who will be first with the most? And what are we doing to meet this challenge? The answer is, precious little. With billions scheduled for missiles, rockets, and for the outer space program—as important as these may be—Congress has been penurious.

Marine science in the United States presently is the concern of only a few hundred persons, led by such dedicated men as Dr. Maurice Ewing, director of Columbia University's Lamont Geological Observatory; Dr. C. O. D. Iselin of Woods Hole Oceanographic Institution; Dr. Robert Revelle of the Scripps Oceanographic Institute on the Pacific coast; and those in the Office of Naval Research under Adm. Rawson Bennett and those in the U.S. Navy's Electronics Laboratory.

What do we require to explore fully the hidden continent so that we can turn it to our advantage scientifically, economically, and militarily? Immediately, we need ships built and geared to this specialized study. Right now the United States has 11 ships, many of them makeshift jobs ill suited to play any real part in rolling back the water curtain to find what is there in the way of plantlife, fish, minerals, and petroleum. The National Science Foundation has just awarded \$3 million for an all-weather science ship as the forerunner to a program calling for 22 ships by 1970.

The oceanographers advocate, however, much more in the line of equipment. We need bathyscaphs that can descend without harm to the oceans' ultimate depths of 37,000 feet. We need anchored towers and floating buoys.

Better than a ship also would be vertical floating tubes. Dean Athelstan Spilhaus of the Institute of Technology, University of Minnesota, draws this Jules Vernish picture:

"These vertical floating tubes, will be hundreds of feet long, cigar like in shape, heavy on the bottom and projecting a few feet into the air at the top. These will be moored in one place. The men in this tall tubular buoy floating in the sea will be able to live, watch, and record the physical and biological interplay never before observed. Initially we may use submarine hulls standing on end for these buoys, and in the not-too-distant future permanent stations of this kind will be scattered all over the oceans. Not only will they be useful for understanding the sea but they will be mid-ocean lighthouses and emergency shelters for submarine or surface ocean travelers and fishermen; and represent a watery dew line or distant early warning system against subterranean attack.

"As well as these anchored buoys, there will be manned, drifting buoys traveling slowly with the currents, and for each manned buoy, drifting or moored, there will be numerous unmanned ones at surface, mid-depths and bottom, sending what their instruments measure automatically to the manned stations to be retransmitted by radio to great central storage computing and analysis centers, either on land or at sea.

"These networks of buoys in and on the sea will not replace surface oceanographic ships but will, rather, increase the need for them because the buoys will have to be supplied, attended, and their data collected," Dr. Spilhaus points out. "Aircraft flying above the sea also will be used to gather the information about the oceans. From an aircraft at high speed a view of the ocean can show currents, wind streaks, boundaries between water of different kinds, and concentration of marine life. Also, the buoys in the sea can transmit their data from the depths first by sound to the surface and then by radio to an aircraft flying above them. The airplane could question many buoys at the same time and get a synoptic or simultaneous bird's eye picture of the situation," Dr. Spilhaus continues: "The airplanes, too, can drop measuring instruments which, as they sink down into the depths, transmit the conditions of the different layers through which they pass. We may expect to see large mother ships letting down bathyscaphs and sending up helicopters to gather the total data that we will need about the sea. Not only these special vehicles for oceanographic research but also ocean liners and fishing vessels can be equipped with continually recording instruments which, without interfering with their normal business, can chart temperatures, salinities, abundance of plant and animal, plankton, and fish populations. Only by the use of all of these can we hope to obtain the world map of the huge oceans relating their physical conditions to the distribution of life in them. This map will give us the basis to understand the complicated relationships that will enable us to make useful predictions for fisheries, for ocean travel, for underwater communications, and out of it will come many other uses of ocean forecasting."

Obviously—getting back to our "first line of defense"—both the offensive and defensive submarine fleets have a tremendous stake in this subterranean mapping. Here is a vast limitless battlefield and no reconnaissance maps or other important intelligence with which to guide our antisubmarine warfare and/or our retaliatory units.

Since the world beneath the sea is the operating area of the true submarine, detailed information about this environment (previously of minor consequence to surface ships and aircraft) assumes tremendous importance to the submarine.

Just as there are on land, networks of radars which plot aircraft positions to prevent collisions, it cannot be too long before there will be a counterpart of these criss-cross networks in the sea. This is to say, there will be submarine beacons radiating sound beams for the guidance of underwater ships.

Specifically, Dr. Spilhaus makes this prediction:

"Sound receivers must be coupled together in a vast underwater spider web of millions of miles of cables which, like our radar surveillance in the air space, can keep track continuously of normal comings and goings, yet single out any stranger in our midst. To identify friend from foe is one of the most difficult underwater problems the Navy has."

More than that, the Navy itself points out quite simply, "The task of navigating a submarine at high speed and deep submergence without accurate bottom information can be compared with driving a 10-ton truck on the freeway blindfolded."

The problem of locating and identifying enemy submarines at distances beyond the effective range of their weapons is a difficult one. To date the most effective means of locating and identifying submerged targets is by use of sound techniques, called sonar. These techniques involve echo ranging, that is, bouncing a sound beam off a submerged target, or, listening to the noises made by the target.

But in water, sound transmission varies with changes in the temperature, density, and salt content of the water. Temperature differences between water layers present the most critical problem, for the sound beam is reflected or refracted to a varying degree.

Once a submerged object has been detected by the sonar beam, the problem becomes one of identification—is it a whale? School of fish? Friendly surface ship? Or enemy submarine? All give sonar reflections.

In addition, when we listen for target noises we discover that the ocean which has been characterized as a "silent world" is, in fact, anything but. "Actually the ocean is a 'liquid jungle.' Survival depends upon how well we know this environment, and whether, like Tarzan, we can tell the friendly sounds from the unfriendly ones—the monkeys from the tigers," states the Navy Department.

Victory or defeat in future wars may well hinge upon superior knowledge of the seas. One of the vital supporting elements of sea power is oceanographic research. Through this research the Navy will be in a better position to perform its missions under—on—and over the sea.

Our scientific, economic, and military future may likely be locked in the world's oceans. The key to this future lies in study and research in these vast ocean areas. Each of us as an American citizen must be aware of the importance of this last frontier on earth.

Although our small corps of oceanographers and supporting scientists have made a good start on an effective oceanographic research program—"making do" with existing equipment—there is an urgent requirement for new equipment and modern facilities.

We need new ships, and submarines, laboratories and engineering facilities plus trained manpower.

Today we trail the Soviets in numbers, tonnage and quality of seagoing research ships. We also trail in manpower devoted to the job of exploring the seas. Urgently needed then is a clear cut, long range program designed to regain our country's lost leadership in the exploration of innerspace.

Fortunately there is such a plan in the report the Committee on Oceanography of the National Academy of Sciences—National Research Council.

The basic five-point recommendations are as follows:

1. The United States should double its basic research during the next 10 years.
2. The present effort in oceanwide surveys should also be doubled.
3. The support of applied marine sciences, particularly military defense, should be expanded.

4. The Federal Government should assure long range budgetary support.

5. All available facilities, private foundations, universities, industry, and Government agencies should be coordinated in a maximum expanded program.

In support of this national program the Navy has developed its own 10-year program. The Navy's program calls for increased emphasis in the following areas:

"Basic and applied research: The Navy is expanding support of these two types of research. They go hand in hand. Through basic research we obtain fundamental knowledge—without thought of specific application. The success of applied research, however, depends upon this fundamental knowledge.

"The Navy program calls for more new laboratory facilities—and financial support for the education of future oceanographers. Increased emphasis in both are basic to an expanding oceanographic program.

"At the present our knowledge of the ocean bottoms is limited to waters 100 miles from shore. Our efforts must be greatly expanded, particularly if we are to meet anticipated military needs. To accomplish this—and other tasks—increased procurement of oceanographic research ships and equipment is being programmed.

"The future possibilities of the oceans are limited only by the imagination, awaiting exploitation by men of vision."

CONQUEST OF THE OCEAN WORLD—PART 2

DESCENT INTO TERRA INCOGNITA

Locked in a windowed gondola, 6½ feet in diameter, two men on January 23 looked out from a bathyscaph on a scene none had ever witnessed before, the bottom of the ocean's deepest trench—7 miles below the surface in the Pacific's Marianas.

This record plunge represents the most important breakthrough in the science of oceanography to date. It marks the forerunner to conquest of the Ocean World. Scene of the project (using the famous U.S. Navy bathyscaph built by the Piccards 2 years ago at a cost of \$200,000) is a location off Guam in the South Pacific. Called the *Trieste*, the Navy's bathyscaph was piloted by Dr. Jacques Piccard and Lt. Don Walsh, U.S. Navy.

Capt. John Phelps, U.S. Navy Commanding Officer of the Navy Electronics Laboratory at San Diego, which directed the dive, estimates the pressure on the *Trieste* at 7 miles down was approximately 16,833 pounds per square inch. The full plunge required many dives before bottom was touched, according to Franz Kurie, technical director of NEL.

Destined to be future pilots or hydro-nauts will be the following four men: Dr. Andres Rechnitzer, Dr. Jacques Piccard, Lt. Don Walsh, U.S. Navy, Commanding Officer of the *Trieste* and Dr. Robert S. Dietz, consultant and marine geologist.

The two hydro-nauts selected sat in cramped quarters in virtual darkness and were clothed against temperatures close to the freezing point. Conservation of electric battery power called for the inside blackout which was relieved by pinpoint lights on the instrument panel while outside huge search lights played on the eerie scene around the *Trieste* for observation and photography.

The dive is important to the development of antisubmarine warfare devices against the Soviet's huge submarine fleet. The dive was no mere stunt. On the contrary the dive, with the aid of photography and sensitive instruments to check life and currents at the seafloor level, is designed to obtain in-

formation for development of the nuclear submarine. It also will represent a giant stride in oceanographic research, and will point the way to further and larger explorations at various areas throughout the world.

The gondola of the *Trieste* is supported by a 58-foot float of steel three-eighths of an inch thick. The float contains 30,000 gallons of high octane gasoline providing buoyancy and to offset the severe pressure at maximum depths. As the gasoline contracts, sea water will flow into the compartments creating an even pressure over the entire steel hull.

The bathyscaph also will be loaded with 13 tons of small iron pellets as ballast. These can be dumped at the rate of 1 ton every 3,000 feet to control the speed of descent. Fully loaded the *Trieste* weighs 75 tons, empty about 30 tons.

As we know, Mr. Speaker, this epochal feat was appropriately recognized by our Government when President Eisenhower decorated Lt. Don Walsh, U.S. Navy, and Jacques Piccard. It may be somewhat anticlimactic now, but to complete the RECORD, the following information should be available to point up the critical and vast scope of this accomplishment. This is really one of America's sputniks of the sea. If we are to survive in the great American tradition of leading the world, it is urgent that we apply our technological and scientific resources to the realization of more and more oceanographic progress:

RECORD PLUNGE IN BATHYSCAPH TO OCEAN'S DEEPEST

An attempt to descend more than 7 miles into the deepest depression in the earth's surface will be made early this year by a team of Navy scientists, it was learned yesterday.

Two hydro-nauts still to be selected, will make the record-smashing dive in the Navy's bathyscaph, *Trieste*, in the Pacific Ocean's Marianas trench—or Challenger Deep—about 200 miles southwest of Guam. The floor of the trench, estimated at 37,500 feet below the surface by the Navy, is the lowest point in the world.

If successful, the dive will not only more than double the previous undersea diving record of 18,600 feet, set last month by the *Trieste*, but will provide information for the development of nuclear submarines.

TEST DIVE BEGINS

The diving, under the direction of the U.S. Navy Electronics Laboratory, San Diego, Calif., and Dr. Andres B. Rechnitzer, scientist in charge of the bathyscaph project, will begin the first 2 weeks of January if the weather is favorable. Shallow test dives have already begun off Guam, and anywhere from 3 to 10 plunges will be necessary before the expected maximum depth is reached, according to Dr. Franz Kurie, technical director of the NEL.

The two men who will sit inside the bathyscaph's cramped gondola in darkness for 11 hours or more will be selected from the following four: Dr. Rechnitzer and Jacques Piccard, who together piloted the *Trieste* to its 18,600-foot dive (Mr. Piccard designed and built the \$200,000 submersible 2 years ago with his father, Auguste); Lt. Don Walsh, officer in charge of the *Trieste*, and Dr. Robert S. Dietz, project consultant and marine geologist.

THE BATHYSCAPH

The main structure of the *Trieste* is a 58-foot float of steel three-eighths-inch thick. Loaded with 30,000 gallons of high-test gasoline, the float provides the buoyancy for the gondola attached to its under side. At 37,000 feet down, the pressure on the hull will be more than 8 tons per square inch, but as the gasoline contracts, sea water will flow

into the compartments, creating an even pressure all round.

In addition, the bathyscaph carries 13 tons of small iron pellets about the size of BB shot as ballast. These can be released at rate of 1 ton for each 3,000 feet of descent to control the speed of dive. Empty, the *Trieste* weighs 30 tons, but it picks up an additional 45 tons when fully loaded.

Everything is run by batteries, the meters for measuring water current, lights for photography, echo sounders, salt and oxygen content and temperature measurers, underwater sound telephone and bathometers. To conserve the limited supply of power the sitting in the Gondola 6½ feet in diameter, will descend in darkness. Only the instrument dials will be illuminated.

What will the hydro-nauts find when they hit bottom?

"We have no idea," Dr. Kurie said. "But we usually find more life than we expect. One thing for sure, though, it will be very cold and very dark." He estimated the temperature at just a few degrees above freezing at 37,500 feet. The men will have only the heat of the instruments and warm clothing to keep them warm, again because of the power shortage.

WHAT MAY BE LEARNED

Dr. Rechnitzer outlined the reasons for the dives. They are not to set a new undersea diving record. "Direct observations of the biological and physical phenomena of the sea, a study of the behavioral responses of organisms to light and sound and an examination of the water currents near the sea floor are among the objectives," he said.

Among the so-called "fringe dives" will be improvement of present day—and future—ship construction techniques.

"It is reasonable to assume that submarines will, some day, be operating in depths measured in thousands of feet instead of hundreds," Lieutenant Walsh pointed out, "and the experimental nature of the *Trieste* allows more freedom of engineering change than would be practicable on a mass-produced naval vessel."

"What Brotherhood Means to Me" as Observed by Rotary, Lions, Kiwanis, Exchange, and Optimist Clubs of Downey, Calif.

EXTENSION OF REMARKS

OF

HON. CLYDE DOYLE

OF CALIFORNIA

IN THE HOUSE OF REPRESENTATIVES

Thursday, February 25, 1960

Mr. DOYLE. Mr. Speaker, by reason of unanimous consent heretofore granted me so to do, I present the text of a front page news item appearing in the Downey Leader, for Monday, February 22, 1960, one of the most widely read newspapers in the important city of Downey in the great 23d Congressional District, Los Angeles County, Calif. Because this is Brotherhood Week all over our Nation, I believe that this newspaper story of how this week is being observed by the Rotary, Lions, Kiwanis, Exchange, and Optimist Clubs in the important city of Downey will be recognized as a significant occasion as well as a timely one:

WHAT BROTHERHOOD MEANS TO ME

Downey service clubs will celebrate Brotherhood Week tomorrow at a joint

luncheon of the Rotary, Lions, Kiwanis, Exchange, and Optimist clubs at the Downey Woman's Clubhouse at Paramount and Lubec.

Norman O. Houston, outstanding Negro layman, is scheduled to be the speaker. Houston is president of Golden State Mutual Life Insurance Co. at Los Angeles.

The program is being sponsored by the Religious Activities Committee of the Downey Chamber of Commerce, headed by Dr. Joe L. Campbell, and coordinated by James Gillespie and Irving Rosen.

Approximately 250 members of the five service clubs are expected to be on hand at tomorrow's luncheon meeting.

Comments on the meaning of brotherhood by outstanding Protestant, Catholic, and Jewish leaders of the community are carried herewith:

"PROTESTANT"

(By H. A. West, member Downey Christian Business Men's Association)

"Brotherhood, to my mind has many aspects. In a general way it means a common bond of interest in, and a concern for all fellow human beings.

"It is a fellow feeling toward others, whether they are in full agreement with my point of view or not.

"It brings a sense of responsibility for their welfare which breaks through all barriers of race or color, class or creed.

"It must be based on benevolence; it must be manifested by unselfishness; it must be motivated by love.

"It is the spirit of brotherhood that stirs men to relieve the hunger and suffering of a needy world; it is the spirit of brotherhood that rouses men to liberate the oppressed; it is the spirit of brotherhood that longs to enlighten the illiterate and the unlearned; it is the spirit of brotherhood that genders respect for the individual, rather than treating him as a tool of a totalitarian state.

"Brotherhood in its truest sense is concerned also for the spiritual welfare of others, in a yearning to share the freedom and joy in the things of the spirit.

"One of the characteristics of the early church, and still a manifestation of true Christian brotherhood, is a warmth of fellowship that is indefinable but unmistakable. It is epitomized in the hymn so often sung in Christian circles.

"Blest be the tie that binds
Our hearts in Christian love,
The fellowship of kindred minds
Is like to that above."

"True brotherhood is prompted by the love of Christ, who was Himself the greatest teacher of brotherhood, and who in His mission as Savior of the world, was Himself its highest embodiment.

"Greater love hath no man than this, that a man lay down his life for his friends."

"JEWISH"

(By Mrs. Marvin Stern and Rabbi Lloyd Goldman, Downey Jewish Temple)

"Brotherhood is an endless circle like the wedding band on one's finger or the many different kinds of wheels which make our lives go round. It is composed of a series of events growing continuously until we have a complete and unbroken circle which never stops.

"As we mature we find that the more responsibilities we undertake, the more our world expands. Instead of concentrating on merely our own loved ones, we find it important and essential to widen our scope of interests for our children's sakes as well as our own, and this is brotherhood in its truest form.

"Brotherhood is accepting and respecting one's neighbors as Joe or John or Mary—not as Protestant, Catholic, or Jew.

"Brotherhood is an over-the-fence discussion with one's neighbor, or the borrowing of a half a cup of sugar, or the easygoing exchange of baby sitting from time to time.

"Brotherhood is the men getting together to help each other install gaslights as a block project without thought as to each other's religions or beliefs.

"Brotherhood is a toast on Christmas eve which includes 'a merry Christmas—a happy Hanukkah—and above all health and happiness for all.' Brotherhood is a group of women getting together to go out collecting for a cancer drive, or a heart fund, or a community chest, or working for a local nonsectarian thrift shop, or a parents club or PTA, or any one of a dozen national and local charities which help us all, no matter the color of our skin or how we worship God.

"Brotherhood is walking into a schoolroom full of children and admiring them as individual charmers rather than thinking that one is Protestant, Catholic, or Jew.

"Brotherhood is the realization that though you don't have too much in common with your cleaning woman, it's only because of a different environment and education—not because our skins are different shades. Our birth and death throes are as similar as our love for our children.

"All of these things lead us to believe that brotherhood is something that we not only celebrate 1 week of the year, but is something that is as natural and normal a part of our every day living as is the act of breathing in order to keep alive—and that's how it should be.

"CATHOLIC"

(By Michael N. Hajjar, grand knight, Knights of Columbus)

"The term 'brotherhood' is probably one of the most abused words in our language.

"It would seem that every utopian dreamer sees the 'brotherhood of man' as the catalyst which will energize his chimeric theories into working reality, while the promoter or the politician finds the expression a convenient means of adding an air of nobility to his slogans.

"The dreamer, of course, overlooks the fact that brotherhood does not necessarily indicate compatibility or destroy human avarice; the promoter takes it for what he sees in it: a sales aid.

"The result is that most of us get pretty tired of having the word 'brotherhood' thrown at us and the expression has lost a great deal of its basic meaning.

"This is too bad.

"For brotherhood is a noble concept, and all men are brothers in the sense that we have a common origin, move through life to a common and inevitable goal, and are all marked with signs of human frailty.

"One who feels this spiritual kinship is never blind to the faults of his fellows but his feelings about them are tempered by remembrance of his own failings. He would not harm another—and he knows that words often do more harm than violence. He is happy at the successes of others, sympathetic during their trials. He finds even these simple rules difficult to follow, but in trying to follow them, he ennobles himself—and his brother."

Let's Get Our National Monetary Policies Back on Sound and Sane Basis

EXTENSION OF REMARKS

OF

HON. LESTER R. JOHNSON

OF WISCONSIN

IN THE HOUSE OF REPRESENTATIVES

Wednesday, February 10, 1960

Mr. JOHNSON of Wisconsin. Mr. Speaker, at the 18th annual meeting of the National Rural Electric Co-Op As-

sociation, held last week in St. Louis, Mo., 6,000 representatives of 1,000 rural electric cooperatives across the Nation unanimously adopted a resolution urging Congress to hold fast on the tight money issue, to fight off compromises and to get our monetary policies back on a sound and sane basis. I would like to include their resolution in the Record:

NRECA delegates resolve:

Whereas the Congress is about to take up a bill which would compromise the traditional interest rate ceiling and thus remove one of the last effective bulwarks protecting us and all consumers from the ever-spiraling interest costs that are being imposed everywhere under the tight-money policy; and

Whereas this bill, if enacted, will give the President the authority to establish interest rates at any level he chooses, a fiscal power the Congress has never before seen fit to hand over to any President at any time; and

Whereas this bill, if enacted, will touch off a chain reaction that can result only in crippling damage to such programs as rural electrification, resource development, housing, farm credit, education, small business, slum clearance—not to mention the extra costs it would inflict on national defense and Government operations at all levels; and

Whereas the President has recommended that the Congress increase the REA rate to the level of interest on long-term issues, plus an additional amount: Now, therefore, be it

Resolved, That we who are assembled in the annual meeting of the National Rural Electric Cooperative Association representing 1,000 rural electric cooperatives and their 16 million individual member-consumers appeal to the Congress to defeat this legislation and begin forthwith a drive to get our national monetary policies back on a sound and sane basis.

The Voice of the Voter

EXTENSION OF REMARKS OF

HON. THOMAS M. PELLY

OF WASHINGTON

IN THE HOUSE OF REPRESENTATIVES

Thursday, February 25, 1960

Mr. PELLY. Mr. Speaker, for the benefit of candidates of either political party including presidential hopefuls who are worrying about the farm vote next November, I offer some grassroots opinions of prospective voters.

A self-styled young farmer from Williams, Minn., writes me he wants the Government out of his hair. Specifically, his complaint is as follows:

I read with interest your remarks in the CONGRESSIONAL RECORD of February 10, 1960, and heartily agree with you except in the third paragraph where you say "no one has benefited." There have been plenty of people who have benefited but they are not the family farmer. When elevators can be built and paid for in 5 years through Government subsidy or when big operators can get loans of several hundred thousand dollars someone is being benefited. I am not opposed to big farmers as such but am opposed to them being big at the expense of other taxpayers.

Here are some other comments which strongly indict present acreage and price supports and call for a return to the law of supply and demand such as is contained in the provisions of my farm bill, H.R. 10350:

As a farmer it is my opinion the present farm program is nothing but a racket. We should return the control of the farms back to the farmer as soon as possible. Those on the inside circle have really done well at the Government's expense.

Down with the present farm law and all those who are back of it.

I cannot understand as a sensible policy why the Federal Government will grant the Reclamation Bureau millions of dollars to put more land in production and at the same time place 28 million acres in the soil bank; besides paying 1½ million a day for storage for surplus production.

Price supports result in a two-way cost to the consumer. First for the support, second for the higher cost of the goods.

I think price supports are a discrimination against any other business. Farming is a business the same as any other and should be treated as such. No one forced the farmer into his farm and his product should be put on the open market the same as anything else. I am a boat builder and no one pays me to build boats that I can't sell. I am just as good as a farmer and I want to be treated the same.

It is a crime to pay a farmer for what he doesn't raise and to guarantee to pay him a certain price for his crop. I am tired of it.

Do you want my vote next election? I vote every election.

If we have price supports for agriculture then it should be a program to affect all types of agriculture and not just a few who have more influence than others.

There is no reason why we should pay \$5 a sack for flour when we have such a surplus of wheat. We, the housewives and mothers, could use twice as many wheat products if given half a chance.

I am in favor of a gradual return to the normal supply and demand situation.

There should be no need for agriculture price support. People must eat, there is always a market for food.

Price supports as such are not doing the job. Farm income is not being kept in line yet farm program expenditures are mounting.

Is District of Columbia a Capital or a Colony?

EXTENSION OF REMARKS

OF

HON. JOHN V. LINDSAY

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Monday, February 15, 1960

Mr. LINDSAY. Mr. Speaker, in Sunday's New York Herald Tribune of February 28, 1960, there appeared an editorial on the subject of home rule for the District of Columbia. It is well done and I should like to bring it to the attention of my colleagues.

The editorial follows:

A QUESTION OF JUSTICE: IS DISTRICT OF COLUMBIA A CAPITAL OR A COLONY?

In the manner of a railroad president who plays with model trains in his office, the U.S. Congress still insists on taking time out from the urgent business of world leadership to play city council.

The city, of course, is Washington, disfranchised colony, the showcase of democracy whose residents are barred from voting for Presidents, Senators, or Congressmen, and are not even trusted with management of their own municipal affairs. Executive power is in the hands of three Commissioners appointed by the President (two resident civilians and one from the Army Corps of Engineers). Local ordinances are passed, and local taxes levied, by Congress, which is hardly structured for the job of running a city.

In 1944 the locally crucial post of chairman of the Senate District of Columbia Committee passed to the late Theodore Bilbo, who was hardly what the local citizenry would have been likely to choose as mayor, or even as dogcatcher. But, as today, the people had no choice.

Five times in recent years the Senate has passed bills aimed at giving the District limited home rule. Each time the House has balked, and the reason is as un-American as the result: a tight little knot of southerners controls the House District of Columbia Committee and a majority of the District's population is Negro.

Residents of the District have never had the right to vote for Presidents, but their lack of local franchise is more recent. The city was chartered in 1802. From then until 1871 it had an elective council. Beginning in 1820 it also had a popularly elected mayor. But in 1871 Congress repealed the charter and established a territorial-type administration; in 1874 this, too, was abandoned, and the present, totally voteless system inaugurated.

The District is more than a city. It is—and was established as—the Nation's Capital.

It is appropriate that residual authority, perhaps in the form of veto power, should rest with Congress, with the President, or both. But the people who live there have rights too. If we believe in representative democracy, surely we must believe in it for the city we enshrine as its symbol, the city from which we proclaim our democratic ideals to the world.

This means the right to help choose a President, to be represented in the Congress, and to choose the managers of its own local affairs.

It's high time Congress acted to grant the people of its host city those rights its members so often point to as the cornerstone of the Republic.

Special for Brooklyn Post Office

EXTENSION OF REMARKS

OF

HON. ABRAHAM J. MULTER

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Monday, February 29, 1960

Mr. MULTER. Mr. Speaker, the fair borough of Brooklyn houses the 10th largest post office in the United States in volume of mail. For many years the present structure has been inadequate and the postal workers have worked in the most cramped and outmoded quarters.

In that connection, I commend to the attention of our colleagues the following editorial which appeared in the New York Journal-American of February 19, 1960:

SPECIAL FOR POST OFFICE

The drive in Washington for \$1,500,000 repair and modernization of Brooklyn's 68-

year-old general post office is welcome news, but with one important reservation.

The big if is whether the job is regarded as the solution to Brooklyn Postmaster Quigley's mounting woes, or whether it is realistically planned as a stopgap until the borough is given the postal facilities it deserves.

Mr. Quigley, the most authoritative voice on Brooklyn's post office needs, has long maintained that a new, vastly larger general post office is required in a more strategic location.

Modernization of a cramped, ill-designed structure is not going to provide the space needed to handle the 70-year growth of mail volume.

Repairs to the building in the Civic Center probably won't enable it to do the job of a post office near a railroad, which is the kind of location Mr. Quigley says is a must.

The stature of the Brooklyn Post Office is reflected in its rating as 10th largest in the Nation, even though it serves a borough and not an entire city. But, it is recognized by the Post Office Department as a first class city.

Since 1946, its postal income has risen from \$13 million a year to \$33 million in 1959.

Repairs, however, will not make a glittering coach out of the aged pumpkin in the Civic Center.

A Tale of Two Railroads

EXTENSION OF REMARKS

OF

HON. GLENN CUNNINGHAM

OF NEBRASKA

IN THE HOUSE OF REPRESENTATIVES

Monday, February 29, 1960

Mr. CUNNINGHAM. Mr. Speaker, under leave to extend my remarks, I include an excellent article from the American Legion magazine for February 1960. Those who favor strong Federal Government and Federal controls should ponder the message in this article, for strong Federal controls can lead all too easily to nationalization.

The article follows:

A TALE OF TWO RAILROADS

When the chips are down, which is the more successful—private enterprise or government ownership?

This question is being debated all the time, in many countries. Answers tend to bristle with "if," "yes but," "maybe," or "it depends."

Why not look at the world's unique big-scale example, where both kinds operate side by side? Here are two businesses, both in the \$2.5 billion financial class. Both sell the same kinds of service. Both strive to make a profit. One fails to do so; the other steadily pays dividends. Perhaps a closeup view may reveal some aspects of these two giants that argument and theory can't make plain.

Canada is their home. The two largest railroads in the Western Hemisphere run coast to coast. The slightly larger one in terms of mileage is the Canadian National Railways, government owned. The other, the Canadian Pacific Railway Co., is a corporation owned by its stockholders. You can buy its shares on a stock exchange. In no other country will you find a comparable situation, where railroad transport services are about equally divided between private enterprise and public ownership.

To see these big, impressive organizations in their own backyard I flew from Boston

to Montreal in a Viscount passenger plane of Trans-Canada Air Lines, a subsidiary of Canadian National. No competition here from the Canadian Pacific. But in Montreal it was different. There I found the two transportation giants battling it out in the air, on the rails, over the highways and waterways, from one end of Canada to the other—real, tough competition. So when you talk about railroads in Canada, you are talking about a lot of other means of freight and passenger service too.

The referee is the Government, which makes the ground rules, and also owns the Canadian National. Canadians are very much sold on the spirit of fairplay, which is part of their tradition. Whenever the people of Canada think they detect favoritism in the transportation business, they holler. And the referee pays attention.

The airways scrap of the 1950's is a good example. Trans-Canada Air Lines, owned one-half by Canadian National and one-half by the Government direct, had a monopoly on transcontinental flights. The private line, Canadian Pacific Airlines, an integral part of the Canadian Pacific Railway system, couldn't get a Government license to set up competing service. Monopoly is sweet, and hard for anybody to surrender. But the people's protest became so clamorous the Government had to yield, and in May 1959 the new Canadian Pacific Airlines coast-to-coast schedules began, using turbo-prop Bristol Britannia aircraft.

"To be sure," I heard in St. James Street, the Wall Street of Montreal, "the Canadian Pacific Airlines boys are permitted to make only one flight per day each way, Montreal to Vancouver. But the Government just wasn't ready to face up to an old-fashioned laissez-faire competitive battle. We take on these things a bit gradually, don't you know."

"To express the basic transport difficulty in financial terms," another St. James Street source explained, "the Canadian Pacific—rails, air, highways, waterways, hotels, whatnot; all rather large, you know—was so inconsiderate as to turn in a profit of \$36.4 million in 1958, as against a deficit of \$51.6 million on the part of the Canadian National. To permit the gap between the two performances to grow even wider by permitting both to run from scratch on the coast-to-coast flight matter would have been too much. So the privately owned airline has still to carry a slight handicap."

A third financial man said rather grumpily that Canada has socialism trying to get along with capitalism in its basic transport industries, and that this just can't work.

Socialism? President Donald Gordon of Canadian National doesn't talk like it. He said in London last summer:

"As for the Canadian National Railways, as a national policy, and indubitably in the national interest, its operations, its organization, and its business principles must be modeled upon those of private enterprise. . . . To insure the efficiency of its day-to-day operations the yardstick of success must be found in its profit and loss account."

Nowhere I went in Canada were Mr. Gordon or his associates in management described as Socialists, and their integrity is never in question. These men have fallen heir to a most difficult task—operating a government enterprise in a generally free economy—and I suspect that privately they don't like it much.

Mr. Gordon's opposite number in the competing organization, President N. R. Crump of the Canadian Pacific, said at his 1959 annual meeting of stockholders: "The Canadian people as a whole have never consciously or deliberately sought socialistic answers to their problems in transportation or in any other field."

I did not attend this meeting, as I was elsewhere in Canada at the time; but that par-

ticular statement made a hit with stockholders, just because it indicates the traditional fairplay attitude that Canadians like to see. Mr. Crump was not calling names. But he knew which team he was on, for he added:

"If public [government] enterprise were subject to the same ground rules, including penalty for failure in meeting the test of the marketplace, then competition with private enterprise would be possible without prejudice to the principles of the market mechanism. But if public enterprise has access to capital without regard to cost, then sound economic principles governing growth and progress are jeopardized and an added burden is imposed on the taxpayer."

A journalist assigned to Ottawa, the national capital, was somewhat more forceful. He told me:

"We have got this big socialistic enterprise, the Canadian National Railways, hung around our necks like an albatross. Most people didn't really want it in the first place in 1923, and nearly everybody would be delighted to be rid of the monster as a Government business. But let's face facts. It's too late. The government-owned railway is a permanent liability that the people of Canada have got to support with tax money."

"I am proud of the Canadian National, with good reason. It's a fine railroad—its subsidiary companies also turn in the best jobs they can. The fact that I don't like the type of ownership doesn't mean I think the management personnel incompetent. Far from it: they stack up with the world's best. But there is a sickness in socialism that never shows up in advance."

How did Canada get into government ownership of the giant Canadian National Railways in the first place? I have been traveling up, down, and across Canada for a great many years, preparing articles and economic reports. I recall the postwar depression of the early 1920's, when Rod Mackenzie's Canadian Northern was in a bad way financially; the Grand Trunk System was in danger of collapse; and the half dozen or more components that were to be made part of the Canadian National were on their last legs. The Government stepped in and rescued them by taking them over and forming a nationwide railroad empire rivaled only by the privately owned Canadian Pacific. The Canadian people were driven in a time of desperation to take this drastic step of government ownership, almost against their will.

This 37-year-old experiment has proved conclusively that the two incentives that make a private enterprise succeed are lacking in a government enterprise; namely, the reward for accomplishment and the penalty for failure. Before examining some of the evidence of this, let's take a glance at some pretty big arithmetic:

Over the 18-year period from 1941 through 1958, the privately-owned Canadian Pacific paid its stockholders \$368 million in dividends, and paid income taxes amounting to \$340 million to the Canadian Government.

In this same period the Government-owned Canadian National paid no income tax.

And in those 18 years the Canadian Pacific earned a profit of \$669 million while the Canadian National suffered a loss of \$653 million. That meant big spending money for Canadian Pacific Railway shareholders, big taxes for all Canadians.

The Canadian National had a good year in 1953, and paid the Government nearly \$250,000 in dividends on preferred stock. But 5 years later, with railroad operating revenues of \$705 million, its 1958 loss was \$14 million; the Canadian Pacific Railway in 1958, taking in \$467 million in railroad operations, showed a profit of \$55 million. Both had revenue from other activities—the Canadian National \$9 million and the Canadian Pacific \$17 million.

Why these incredible differences? I got two one-word answers by interviewing Canadian shippers, the men who pay the freight. One was "integration." The other was "enterprise." These two points of view give perfectly. Both seem valid to me.

Here's an example of integration that showed a lot of imaginative enterprise: A major headache to railroads, in the United States, as well as Canada, has been the rise of air and truck transportation. The Canadian Pacific launched a pilot plant operation on the west coast, to see whether package shipments—less than carload lots—could be handled through one management no matter how they traveled. Today you can ship from Vancouver by rail, truck, piggyback, or air, in any combination. This service is integrated in control of solicitation, handling, transportation, and accounting. It worked so well in 1959 that it will be extended throughout Canada. The shippers said it saves time, money, trouble, and bookkeeping.

The Canadian National will follow suit. That's it, the Government railroad isn't as free to experiment, to find new ways.

Another example: Both railroads own a string of fine hotels across Canada. But the managements' attitudes are different. The Canadian National, after its experience in building a splendid new hostelry in Montreal, the Queen Elizabeth, has flatly announced it will build no more new ones. The rival Canadian Pacific completed and opened in February 1959 an addition to the Royal York in Toronto that makes this 1,600-room hotel the largest in the British Commonwealth. With enthusiasm, the Canadian Pacific Railway sees itself as "providing facilities for the needs of an expanding nation." (Did you know Canada will have a population of 18 million in 1960?) So while the Government hotel enterprise wants no more, the private enterprise is alert to new places that will yield a profit.

How about the St. Lawrence Seaway? Everybody asks that. Some diversion of freight tonnage from both railroads is inevitable, perhaps a great deal.

"It isn't a threat: it's only seven-twelfths of a threat," a Canadian Pacific Railway official remarked. He referred to the fact that the winter freezeup will probably halt Seaway traffic to far inland ports part of the year. The Seaway, that liquid turnpike that will transform much of Canada's midwest, just as in the United States, also can be looked on by railroaders as a challenge and an opportunity.

The piggyback system of freight shipment—by which wheeled vehicles ride on flatcars, then take off on highways to make deliveries—gave somebody a big idea. Why not a fishback? Why not adapt the same method to freight vessels? So the Canadian Pacific Railway is developing a line of containers suitable for this traffic. This imaginative idea will help shippers pack their freight so that it can travel by land or inland sea, according to the season. The Canadian Pacific Railway rails will provide a usable alternative when the inland waters are frozen over.

As 1960 opened, the Canadian Pacific had had 6 months' experience with its newly streamlined organization. The country, previously divided into eight districts, is now divided into four regions—Atlantic, eastern, prairie, and Pacific. This cuts down overhead tremendously. This is part of the integration policy that seems to go right down the line. For example, rail, air, and steamship tickets can all be purchased at the same place; and the same salesman will help find accommodations at a Canadian Pacific Railway hotel. And if he pushes Canadian Pacific Railway express or Canadian Pacific Railway communications services, that's what he's paid for doing. The

customer doesn't get mixed up trying to find his way to a dozen offices in the same city.

More statistics could be cited—many more—such as comparison of fixed charges ratios, the input of \$50 million more into the Canadian National in 1958 despite a deficit of \$51 million, and so forth. The big point, however, is not in the figures, but in the philosophy and policy. What actually is happening in Canada is that a loyal group of hard-working and able managers are struggling with an impossible adversary—the sickness that is socialism, no matter how one tries to avoid the term.

Can the economic disease be cured? Is it really too late as the Ottawa journalist insists? Or is one big, courageous step all the Canadian Government needs to take? Such a step would simply be to start treating the Canadian National Railways like a private enterprise. To do so, the Government would have to: (a) Set up an income tax account for this railroad on the same basis as its competitor; (b) simplify the corporate structure, streamlining it into an integrated whole (there were 79 corporations in the Canadian National Railways complex 5 years ago, 45 1 year ago, more than 30 still); (c) tell the railroad to keep its hand out of the government till; no more subsidies—when an operation loses money, cut it off.

Ah, what a capitalistic Utopia, with every institution required to fish or cut bait, turn in a profit or sell out. The political screaming that would ensue would shake the polar icecap.

But lest U.S. citizens gain the notion that it is only the Canadians who have drifted into socialistic enterprise without knowing it, let us be aware of the following: The inland waterways system of the United States is wholly supported by the taxpayers, not by the users; barges ride toll free in channels kept open by the Government for their benefit on the pretext of military necessity. The various State-chartered authorities are exempt from property tax, exempt from Federal tax on their securities; none is operated on a basis of full self-support and contributions to taxes. Port facilities, bridges, airports, toll roads do not pay taxes; they collect them, without calling them taxes. The country's major highway system is a public utility. Such a facility is capable of standing on its own economic feet, as other public utilities are required to do.

Will the railroads of the United States of America succumb to the economic disease that is socialism? Of course we know that such a thought is ridiculous, until we recall the words of President Crump: "The Canadian people as a whole have never consciously or deliberately sought socialistic answers to their problems." But in times of economic difficulty, such an answer sometimes seems so easy.

Improved Federal Accounting: One of Our Great National Challenges

EXTENSION OF REMARKS

OF

HON. JOSEPH W. BARR

OF INDIANA

IN THE HOUSE OF REPRESENTATIVES

Monday, February 29, 1960

Mr. BARR. Mr. Speaker, it is absolutely necessary to improve and to modernize the accounting procedures of the United States. Many thoughtful men honestly question whether or not the Congress and the President can continue to manage this monstrous Government.

In my opinion it will be impossible to give the taxpayers efficient management unless we bring our accounting procedures into the 20th century.

Mr. T. Jack Gary, Jr., brother of the distinguished gentleman from Virginia, has recently published an article entitled "Improvement in Federal Accounting: Past Accomplishments and Future Challenges." I recommend this article to every Member of this Congress as a thoughtful and intelligent exposition of the problem, what we have done about it to date, and what we can do in the future.

The article follows:

IMPROVEMENT IN FEDERAL ACCOUNTING: PAST ACCOMPLISHMENTS AND FUTURE CHALLENGES

(By T. Jack Gary, Jr.)

On January 9, 1959, the Secretary of the Treasury, the Director, Bureau of the Budget, and the Comptroller General of the United States released the 10th annual progress report under the Joint Program To Improve Accounting in the Federal Government. A decade is a significant time period for purposes of historic accountability. Therefore, this seems to be an appropriate point at which to take an inventory of progress in Federal accounting. Let us ask ourselves the following questions: (1) What have been the major accomplishments during the last 10 years? (2) In solving the problems of the past have we created new problems for the future? (3) What are the most pressing matters to which we should devote our future efforts?

WHERE WE WERE 10 YEARS AGO

It seems to me that the most dramatic manner in which to present the tremendous achievements in improving the Federal Government's accounting during the last 10 years is to describe briefly the procedures that masqueraded under the guise of accounting 10 years ago. Up to that time there had been little change in the legalistic concept of accounting through the settlement of the accounts of accountable officers which was adopted at the time this Nation was founded.

Warrant system

Perhaps the most stultifying force in the development of modern accounting in the Federal Government was the warrant system. This misconception of internal control resulted in interminable handling of paper and duplication of record keeping within the Treasury Department and the General Accounting Office with frustrating delays on the part of operating agencies in obtaining funds which had been legally made available to them by the Congress.

Under the warrant system receipts were required to be "covered into the Treasury" by means of a covering warrant. Appropriations were made available first to the Treasury Department through the issuing of a warrant only after the most profound deliberations by both the Treasury Department and the GAO to determine the number and title of the appropriation account. The covering and appropriation documents required signatures of both the Secretary of the Treasury and the Comptroller General. The final step in making appropriations available to the agencies was accomplished by the drawing of a requisition and accountable warrant by the agency against the funds in the Treasury Department.

The observance of this ritual resulted in delays of as much as 2 weeks in making funds available to the agencies which the Congress had provided for the payment of the Government's creditors. Moreover, at each point in the involved process where action was required, a set of accounting records was established. This resulted in the following duplication of recordkeeping, all in addition

to the records maintained by each agency which had primary responsibility for administering and accounting for the funds made available to it: (1) five sets of receipt accounts were maintained; (2) appropriation warrants were posted to five sets of records; (3) five sets of records were maintained for requisitions and accountable warrants; (4) disbursements were posted to six sets of accounts; and (5) public debt transactions were entered in seven different records.

Legalistic approach to auditing

Auditing procedures of the Federal Government 10 years ago were based on the same legalistic concepts as accounting. As a matter of fact, the accounting and auditing processes were so hopelessly intermingled that it was often difficult to distinguish one from the other. Many of the duplicative accounting records mentioned previously were maintained for so-called auditing purposes.

The procedure for settling the accounts of certifying officers of agencies for which the Treasury Department acted as disbursing officer is illustrative of the cumbersome nature of these auditing procedures. The steps in this process were as follows: (1) The agency responsible for incurring an expenditure forwarded the original voucher, after examination and certification by the certifying officer, to one of the regional offices of the Treasury Department's Division of Disbursements, where the check in payment of it was drawn. (2) At the end of the month the regional disbursing office summarized these vouchers on an account current and forwarded them to the Chief Disbursing Officer in Washington. (3) The Chief Disbursing Officer gathered together all original vouchers for each agency monthly and transmitted them to the central office of the agency. (4) A so-called administrative audit was performed on these vouchers by the agency, after which they were forwarded to the GAO. (5) The GAO separated the vouchers by type (travel, contract, transportation, etc.) and sent them to specialized sections where they were minutely examined and returned with notations of exceptions. (6) The vouchers were then matched up with the transmittal document, and after months, often years, of haggling with the individual who officially approved the vouchers for payment, the account was finally settled. The remarkable thing about this process is that the documents were not either lost or worn out from handling before they finally came to rest.

Checks issued were subjected to duplicate handling in their payment by the Treasurer of the United States and reconciliation to the disbursing officers' accounts by the GAO. The Post Office was singled out for special audit treatment. Audit procedures for this large segment of the Federal Government's operations involved the maintenance of the official accounts of the Post Office Department by the GAO.

Inconsistency and lack of accounting principles

We become quite concerned today over whether the Federal Government should use the accrual, obligation, or cash basis of accounting. Ten years ago there were several cash bases in use. Receipts were accounted for on the basis of collections, deposits, and covering into the Treasury. Disbursements were recorded on the bases of audited vouchers, checks issued, and checks paid. These inconsistencies resulted in the preparation of financial statements which purported to show the same information but were in disagreement by millions of dollars.

The most serious deficiency in accounting principles insofar as the control of costs and the use of accounting as a tool of management is concerned was the failure, except with respect to certain Government corporations, to observe the accrual basis of ac-

counting. The need for functional costs resulted in an abortive attempt to make obligations incurred serve the purpose for which accrued costs were designed. This resulted in a considerable amount of guesswork, since in many instances it is not possible to determine the functional purpose for which materials and supplies are to be used at the time that orders are placed for them. Moreover, even when this is possible, the obligation basis of accounting does not relate the recording of materials and supplies in the accounts to the period of time in which the end use of them is accomplished. Therefore, performance budgeting could not be satisfactorily instituted on the basis of obligations incurred.

Finally an oversimplified approach was taken to the prescribing of accounting systems. Every agency of the Government was supposed to maintain its accounts exactly as prescribed by General Regulations No. 100 issued by the Comptroller General. This regulation provided a cumbersome system of appropriation accounts in which were to be recorded obligations and disbursements. It not only was entirely unsuited to business-type activities of the Government but also ignored the management needs of non-business-type activities for accounting information with which to control costs.

WHAT HAS BEEN DONE

Some choose to refer to the changes that have taken place during the last decade under the joint program to improve accounting in the Federal Government as an evolution. I would not suggest that it has been a revolution, although there has been some bloodshed along the way. However, the word evolution connotes a slower pace than that at which this program has moved. In substantiation of this position I would like to present a summary of accomplishments under this program.

Improvements in central accounting

It seems appropriate to summarize first the improvements in the central accounting, financial reporting, and auditing processes. This approach may be questioned because the real achievement has been in the use of improved departmental accounting as a tool of management. Nevertheless, I submit that departmental accounting was so restricted in the straitjacket of central accounting requirements as to make it absolutely essential to get rid of these archaic processes in order to create the proper atmosphere for the development of modern departmental accounting systems.

The Comptroller General voluntarily divested his office of central bookkeeping activities. This included the transfer of the official postal accounts to the Post Office Department, which has subsequently developed a modern accounting system responsive to its management needs.

The interminable and devious flow of paper incident to the settlement of accounts of certifying officers has, for the most part, been eliminated through the extension to practically all Federal agencies, of on-the-site auditing by the GAO, which, with minor exceptions, was previously applied only to those agencies for which it was required by the Government Corporation Control Act. A new approach to auditing, which has been termed by the GAO as the "comprehensive audit," has been instituted, which concerns itself with how effective management policies of the agencies have been formulated and executed, as well as whether statutes have been observed and whether the books are in balance.

Perhaps one of the most successfully planned and executed electronic computer programs is the present method under which the 400 million checks issued annually by the Federal Government are paid and reconciled through use of electronic computers. Both

the payment and reconciliation functions are now performed by the Treasury Department under a constant post audit conducted on the site by GAO audit staff. This change not only has resulted in a savings of \$1,500,000 annually but provides more timely and effective control than could have been possible without the use of electronic computers.

The Treasury Department has accomplished an extensive program for the streamlining of its central accounting and reporting procedures. A single set of appropriation, fund, and public debt accounts is now maintained by the Treasury Department in lieu of the numerous ones previously mentioned which were maintained by the Treasury and the GAO. These accounts are maintained on modern accounting machines. Certain of the detailed public debt accounts, as well as the payment and reconciliation of checks previously mentioned, have been converted to electronic computers.

A common basis of cash accounting has been established throughout the entire Federal Government. The result has been that the monthly statements of receipts and disbursements published by the Treasury Department are now in agreement with similar reports submitted by the individual agencies to the Bureau of the Budget. It follows, therefore, that the summary of receipts and disbursements contained in the annual budget, which is prepared by the Budget Bureau from the agency reports, is in agreement with the "Combined Statement of Receipts, Expenditures, and Balances" issued annually by the Treasury Department. Previously plugs which amounted to as much as \$300 million were required to bring the budget summary of receipts and expenditures into agreement with annual figures published in the Daily Treasury Statements.

The Budget and Accounting Procedures Act of 1950 provides that "the Comptroller General of the United States, after consulting the Secretary of the Treasury and the Director of the Bureau of the Budget concerning their accounting, financial reporting, and budgetary needs, and considering the needs of the other executive agencies, shall prescribe the principles, standards, and related requirements for accounting to be observed by each executive agency, including requirements for suitable integration between the accounting processes of each executive agency and the accounting of the Treasury Department."

This has been done.

Improvements in departmental accounting

Certainly the most widely publicized and probably the most significant accomplishment of the joint program is the extension of the accrual basis of accounting. Ten years ago only those activities of the Federal Government of a business-type kept their accounts on an accrual basis. The use of this basis of accounting for purely spending programs was indeed an innovation. This, of course, was essential to the obtaining of program costs for the purpose of controlling costs and instituting performance budgeting.

As agencies began developing new accrual accounting systems, it was found in many instances that the method of financing their programs was not suitable to this new concept of cost control. A diversity of appropriations and administrative allotments could be made to work, however clumsily, under a method whereby control of cost was to be accomplished through controlling obligations against objects of expenditures. However, the use of multiple appropriations and allotments for the financing of a single program made the installation of accounting systems to produce program costs by organizational units practically impossible. The result was that, as a prelude to the installation of modern accounting systems in the departments and other agencies of the

Federal Government, substantial reductions and other simplifications were made to appropriation structures and administrative allotment processes.

In the development of simplified means of financing it was found that agencies in which operations were predominantly of a spending nature had some activities with business-type aspects. Also, a need developed in some instances for a means of temporarily financing costs that were applicable to several programs. This had to be done in order that the distribution of these costs could be made to the applicable programs on a use basis instead of by guesswork at the time funds were committed for the common costs. These two problems were resolved by the use of revolving funds that are not subject to the restrictive requirements of appropriation accounting.

The use of accrual accounting to provide performance and program costing and budgeting began under the joint program on an experimental basis. It was subsequently extended to many Federal agencies. The success and soundness of this approach to financial management in the Federal Government is evidenced by the passage by the 84th Congress on August 1, 1956, of Public Law 863. This statute amends the Budget and Accounting Act of 1921 and the Budget and Accounting Procedures Act of 1950 to require all agencies of the Federal Government to maintain their accounts on the accrual basis as a means of facilitating the preparation of cost-based budgets. The act also requires that the agencies' accounting systems include adequate provision for monetary property accounting records.

Accounting improvements at the departmental level have not stemmed merely from the desire to do a more precise and technically acceptable accounting job. The tremendously increased expenditures and complexity of activities of the Federal Government have made it necessary to get better financial tools for management. Thus the accounting organizations of many of the agencies have been modernized as well as their accounting systems. There has been an increased use of the controllership type of financial organization. This has resulted in better coordination of accounting and budgeting. It has also stimulated the development of financial analysis and internal auditing.

CHALLENGES OF THE FUTURE

Despite the tremendous accomplishments during the last decade under the Joint Program to Improve Accounting in the Federal Government, I am sure there is no one participating in this program who feels that it is time to rest on our laurels. It does seem, however, to be a good time to attempt to identify those problems which deserve the most urgent future consideration. It is certainly of extreme importance that the interest and talent that the program has generated be directed in the areas in which they will be most productive.

Completion of what has been started

The first effort required is to do more of what has been done in the past. Regardless of the spectacular accomplishments of the past, the size of the Federal Government is so gigantic that there are still large segments of it which have not yet installed modern systems of accrual accounting. Even in those agencies which now have modern accounting systems responsive to the needs of management there is the constant process of refining in order to make them more useful. Perhaps the least-developed phase of those accounting systems which have recently been modernized concerns nonexpendable property or fixed asset accounting. There is still more to be done than has yet been accomplished in this area. Also, merely because the central accounting processes have been extensively simplified

and modernized is no reason to assume that these procedures have reached a stage of perfection.

In the Defense Department, which spends the largest part of the Federal budget, methods of procurement with the attendant flow of material from the Government to contractors and back again create obstacles of a most serious nature to the utilization of accrual accounting.

For example, funds made available to one installation will be used by it to authorize another installation to contract for the construction of an end product (tank, airplane, etc.) and to authorize another installation to contract for a component of the end product (engine) to be shipped to the prime contractor for installation on the end product. Most of these contracts are on a cost-plus basis for the total number of items produced with deliveries scheduled over a period of time as the units are completed. The contractor for the component or the end product, therefore, has no need to know how much each of the units produced by him costs. Further, it would be difficult to justify the additional cost to the Government of requiring the contractor to provide unit accounting of these items. Moreover, the cost of the component is of no interest to the contractor for the end product, since he is being paid on a cost-plus basis merely to install the component on the end product. Finally, when the end product is completed (and again this will likely be on a time schedule of delivering certain quantities periodically), it may be shipped to a military installation different from the one which contracted for it or is paying for it.

The explanation above is necessarily involved. However, the complications in applying accrual accounting to such transactions are readily apparent, particularly since these procurement practices constitute the rule rather than the exception in the Defense Department. Some satisfactory answer to this problem must be found before accrual accounting can be adequately applied throughout the Defense Department.

HAVE WE CREATED NEW PROBLEMS WHILE SOLVING OLD ONES?

Accounting staff

The principal motivating force behind the joint program at its inception was the Accounting Systems Division of the General Accounting Office. There were on the staff of this Division some 60 able and dedicated accountants who assisted in the improvement of central accounting and worked with individual agencies in the development of departmental accounting systems.

About 2 years ago under a reorganization of the General Accounting Office the Accounting Systems Division was abolished, and except for a small policy staff its technicians were spread throughout the audit organization of the GAO. Simultaneously the Bureau of the Budget increased its accounting systems staff. This was in accordance with recommendations of both Hoover Commissions that the responsibility for prescribing accounting systems should rest with the executive branch of the Government.

In a joint program under which the Secretary of the Treasury, the Director of the Bureau of the Budget, and the Comptroller General participate cooperatively, I have no strong feeling with regard to which of these officials should have responsibility for prescribing accounting systems. The fact is, however, that the Director of the Bureau of the Budget has so far been unable to obtain appropriations sufficient to employ one-third of the technical staff that previously comprised the GAO Accounting Systems Division. The need, as the joint program gathers momentum, is for more qualified systems accountants to assist in the development of accounting systems and procedures. There-

fore, unless the Bureau of the Budget is able to obtain sufficient funds and recruit qualified staff of at least the number that were previously employed by the GAO Accounting Systems Division, it would appear that a big price has been paid for the transfer of this responsibility to the executive branch of the Government.

Are we overselling accrual accounting?

The use of accrual accounting has provided invaluable cost information at the operating level where costs are controlled. However, the value of accrued costs in the Federal Government tends to diminish as progressively higher levels of management are reached. This can best be illustrated by contemplating that happy day when it will be possible to prepare consolidated financial statements for the entire Federal Government on the accrual basis. What useful purpose would such financial statements serve?

Need for cash basis: It may be argued that it is important to now the cash resources of the Federal Government. This information, however, is published daily by the Treasury Department. Of what value is a total figure for receivables without knowing the nature of the programs and contractual relations from which these assets resulted? The total investment of the Government in inventories is of little use to management, since it will be comprised of a conglomerate of items with such differing characteristics with regard to use, physical shape, turnover, and the like, as to defy any generalization about whether inventories are too high or too low. Current liabilities and working capital ratios are not of the same significance in the Federal Government as in commercial practice, since the Government borrows whether short or long term on the faith of the public and its general financial stability rather than the liquid assets available for repayment of the loan.

It has been suggested that the Federal Government should include in its fixed assets not only those which it has purchased but also the value of all the natural resources which it owns. Aside from the ability to value accurately these properties, it is difficult to determine what useful purpose such information would serve. The amount of the Federal Government's long-term debt is important, but, as is true of cash, this information is readily available and frequently published by the Treasury Department.

Introduction of accrual accounting in the Federal Government has been confined almost entirely to expenditures. The application of this basis to income presents a different problem. The largest source of the Federal Government's income is derived from income taxes for which there is more overpayment in advance of assessment than there are unpaid assessments. Unlike deficiency assessments the amounts of overpayments cannot be immediately determined but must await the subsequent filing of income tax returns. The pay-as-you-go plan for income taxes therefore, makes it practically impossible to determine at any given date on an accrual basis the revenue from this source.

In view of this it would seem that the cash basis now used is the most satisfactory one upon which to determine the operating outcome of the entire Federal Government. This basis, however, is not merely the lesser of two evils. Because of the gargantuan size of Federal revenues and expenditures, the flow of cash to and from the Federal Government has a profound effect on the economy of the Nation. Thus periodic information of this nature is valuable as an economic barometer. Moreover, the end result of the Government's taxing and spending is an increase or decrease in the public debt. These considerations, it would seem,

are most important at the national level and require a cash basis of accounting.

Need for obligation basis: As support for the accrual basis of accounting has grown, the use of obligation accounting has fallen into disrepute. There appears to be a sincere conviction on the part of many, if not a majority, of accountants within and without the Government, that the obligation basis of controlling expenditures should be replaced by accrued expenditures. This has resulted in the passage in August 1958 by the 85th Congress of Public Law 85-759, which provides for placing appropriation limitations on accrued expenditures. Before discarding the obligation concept completely, I submit that we should recall the purpose for which obligation accounting was developed and consider carefully whether it may be the best suited for this purpose.

The general use of obligation, or encumbrance accounting as it is sometimes called, postdates the use of accrual accounting. It is by no means an ancient concept but was developed to control the expenditure of funds within maximum amounts made legally or administratively available because neither the cash nor accrual basis completely satisfied this objective. It is not an invention of the Federal Government. On the contrary it is almost universally used by local and State governments and is recognized by the National Committee on Governmental Accounting, the State and local authority on governmental accounting, as a general accepted principle of governmental accounting.

Despite the support which may be garnered for the obligation basis of accounting, principles must be justified because of their value rather than in relation to who advocates them. The essence of the obligation basis of accounting is to record charges against funds at the time legal commitments are entered into but only to the extent that funds are available. This is the only point at which the initiative rests with the spender as to whether or not an expenditure will be incurred. Although certain restrictions may be placed on the vendor, the initiative for converting an obligation into an accrued expenditure is largely with him.

This situation is recognized in Public Law 85-759, which provides that "whenever any liabilities are incurred within the limitation provided for in any fiscal year (whether or not recorded in such fiscal year) nothing in this section shall be construed to prevent the making of payment therefore in any subsequent fiscal year." Moreover, the accrued expenditure limitation is recognized to be an additional limitation rather than one which is to take the place of an obligation limitation. Even the most ardent advocates of accounting for appropriations on an accrual basis readily admit that some form of contract authorization will be required for the procurement of materials requiring long leadtimes and that obligations will need to be recorded against these authorizations. This is a device that was used extensively during World War II but proved so unsatisfactory that its use has been discontinued by the Congress.

All three accounting bases needed: It is my opinion that it would be as grave a mistake to attempt to make the accrual basis of accounting serve the purpose for which obligation accounting was designed as to attempt the reverse, as previously mentioned. All three bases of accounting are required in the Federal Government—the cash basis to determine the budget surplus or deficit on a national basis, the obligation basis to control expenditures on a broad basis within the amounts legally made available, and the accrual basis to control costs on a functional or program basis and to provide an essential element for performance budgets.

Accounting systems have been developed and installed and are successfully operating

in certain agencies of the Federal Government which produce accrued costs and obligations to the extent and for the purposes required, integrated in a single system of accounting which in turn is integrated with the cash requirements of central accounting. It seems to me that the most productive efforts would result from extending this concept throughout the Federal Government rather than attempting to make accrual accounting mean all things to all people.

Are we carrying accounting too far?

Whenever a phase of administration has been neglected and suddenly comes to the fore, there is a tendency for the pendulum to swing too far in the opposite direction. This has been noticeable to some extent in the implementation of the Joint Program, particularly in the Defense Department. For example, there is prescribed for all installations reporting to the same command a functional account classification which is detailed beyond the point of being able to classify costs from available accounting documentation except by guesswork. Moreover, the classification is detailed beyond the point of being any use to the management of the installation, and it is difficult to foresee the value of this detail at the Pentagon level. There is a point beyond which the further detailing of accounting information not only is more costly than the results will justify but also is illogical. From this point on, informed estimates should be used to supply further detail, if it is indeed required. The more summary information produced by the accounts should be used as a point of departure with scientific sampling techniques used to the extent appropriate for obtaining further detail.

There also seems to be a practice, as directives are passed down from the Office of the Secretary of Defense, for each administrative layer to add more detail to them. By the time these directives reach the installations for which they are intended, they are so specific with regard to both procedure and standard forms to be used that the installations are placed in a straitjacket, insofar as their accounting systems are concerned, similar to that previously produced by General Regulations No. 100.

Although the Defense Department is an operating agency, it encompasses the largest portion of the Federal Government, and its activities are exceedingly diverse and complex. For this reason even the smallest organizational elements in the Pentagon are often fairly well removed from the points of operations. The approach to the promulgation of accounting directives at this level therefore should be confined to overall financial reporting requirements, leaving sufficient flexibility at the installation level to develop detailed accounting procedures to meet individual needs. This is not to say that installations should not be given assistance in developing adequate accounting systems or that a satisfactory method of solving a problem at one installation should not be made available to other installations that are struggling with the same problem. However, it should not be assumed that what is good for one installation is per se good for all of them. That is to say, a distinction should be made between the issuing of directives which should be confined to principles and minimum financial reporting requirements on the one hand and the circulation of detailed procedures which should be purely suggestive on the other.

Extension of comprehensive audit

There are many areas in the Federal Government to which the voucher-type audit still applies. It is recognized that conversion from the voucher to comprehensive audit is a tremendous undertaking. However, accounting in the Federal Government can

never be considered to be completely modernized or adequate until this conversion has been completed. In doing so there are two inherent dangers that need to be avoided. The degree to which the comprehensive audit is concerned with management provides a temptation for the auditor to manage the agency instead of audit it. Also to the extent that the audit delves into problems not of a purely accounting nature it is important to make doubly sure that the individual assigned to the engagement is at least as well qualified in that particular field as those whose judgment he may have reason to question.

CONCLUSION

Progress made in the improvement of the Federal Government's accounting during the last decade is perhaps the outstanding accounting accomplishment of all time. Certainly there is nothing as big and diverse as the Federal Government, and accounting improvements have been of a sweeping nature. However, because of the size of the task, there still remain large segments of the Federal Government which have been touched lightly, if at all, by this program of accounting modernization.

The extension of new concepts of accounting and auditing to the entire Federal Government even today is a formidable task. In the Defense Department, which spends a major share of the Federal budget, the complexities of procurement methods with the resulting flow of material backward and forward from the Government to the contractor pose a major obstacle to the application of the accrual basis of accounting. Even in those agencies that have installed modern accounting systems there is a constant need for further refinement to make them more responsive to the needs of management. The further development of nonexpendable property or fixed-asset accounting is a case in point.

Finally, it may be that new problems have been created in the process of solving old ones. For example, the accrual basis of accounting may well have been oversold; accounting classifications in some instances may be too detailed to serve any useful purpose; and the extension of the comprehensive audit to all the Federal Government may carry with it a temptation for the auditor to manage rather than to audit.

Agricultural Stabilization Program Is Costly Failure

EXTENSION OF REMARKS OF

HON. THOMAS M. PELLY

OF WASHINGTON

IN THE HOUSE OF REPRESENTATIVES

Thursday, February 25, 1960

Mr. PELLY. Mr. Speaker, the February 29, 1960, issue of the Washington Daily News contained an article by Lyle C. Wilson which points up the awful price to the taxpayers of the wasteful and ineffective agricultural stabilization program.

Under unanimous consent to include extraneous matter I have here Mr. Wilson's article which appeared under a title "Ike Cut It Too Thin":

President Eisenhower was a piker the other day when he tossed at the taxpayers the fact that it costs them \$1.5 million a day for the wheat program.

That is at the rate of about \$1,000 a minute. Peanuts, Mr. President; the wheat bite

is merely a part of the cost of agricultural stabilization.

Agricultural stabilization costs the taxpayers more than \$3,750 a minute. It costs about \$5.4 million a day. That is not a patch on spending for national defense or for interest on the national debt. It is a big, fat figure, however. It will be the center of a lot of racket in this year's presidential campaign.

There are only three brackets of taxpayers each of whose annual contributions to the Treasury would pay for the stabilization program. The mother lode of personal income tax is to be found among those citizens whose adjusted gross income ranges from \$5,000 to \$6,000 a year. There are nearly 5 million such citizens.

On the average they would be heads of one-car families, worried, hard-working men. Collectively, the taxpayers in this bracket are relieved each year of about \$3 billion. The stabilization program costs about \$2 billion.

There are about 3 million taxpayers in the \$6,000 to \$7,000 gross income bracket. They pay into the Treasury nearly \$2.4 billion each year. The third rich vein of income-tax paydirt is among the \$10,000 to \$15,000 men and women. There are about 1 million of these. They ante up slightly more than \$2 billion annually.

The point of all of this, if any, is that the entire take from many millions of taxpayers is required to pay for an agricultural program about which one fact, at least, is not disputed. That undisputed fact is this:

THE PROGRAM DOES NOT WORK

If anyone in or out of Government is content with the farm program, he has yet to stand up and be counted. If the program is wasteful, as charged, and ineffective, as is conceded, the taxpayers are paying an awful price for the failure of statesmen to get the program on the tracks.

Few statesmen and no practical politicians expect any satisfactory solution to the farm problem this year or next or, perhaps, thereafter. The farm problem has been troubling American politics since the quickie agricultural depression which followed World War I. The farm problem steadily has become (a) more difficult and (b) more expensive. That trend is likely to continue.

Farmers have the Indian sign on U.S. politicians. The farm vote is loaded—with dynamite. U.S. politicians handle the farm vote with care. They are as careful now as they were 40 years ago, which is astonishing. In 1920, the farm population of the United States was a booming 30.1 percent of the whole. By 1959, the farm population had shrunk to 12 percent.

The farm population was only 17.7 percent of the whole in 1948, but you and I and Thomas E. Dewey will not forget what farm voters accomplished in 1948.

The farmers voted Democratic that year, for Harry S. Truman.

Estonian Independence Day

EXTENSION OF REMARKS

OF

HON. ABRAHAM J. MULTER

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Monday, February 29, 1960

Mr. MULTER. Mr. Speaker, Estonians are one of the smallest nationality groups in Europe in terms of population, comprising no more than a bare million during most of their recent and present history. But they have had a proud

tradition as a free and independent nation.

After they were brought under the Russian regime in 1710, they struggled for their freedom for more than 200 years. Finally they attained it early in 1918, proclaiming their national independence on February 24. Then the Estonian Republic was founded and a democratic constitution was adopted. They governed themselves and lived happily for two full decades under their democratic institutions. Industrious, gifted, public spirited, and patriotic, they worked hard to make their small country a safe and happy place in which to live and enjoy life. Such was their existence when world events overtook them, and thereby they lost their independence and their happiness.

Today that once free country is again part of Russia, this time more firmly chained to Soviet Russia and Communist totalitarianism. Unfortunately the tyranny there is so much more efficient and therefore more cruel that it seems difficult to shake off its oppressive yoke. But brave and sturdy Estonians are struggling against their Communist oppressors relentlessly and with all the means at their disposal, in the firm belief that in the end their righteous cause will win. On the 42d anniversary of their independence day, February 24, I wish them luck and fortitude in their struggle for freedom.

Farm Bureau Plows Wrong Furrow

EXTENSION OF REMARKS

OF

HON. AL ULLMAN

OF OREGON

IN THE HOUSE OF REPRESENTATIVES

Thursday, February 25, 1960

Mr. ULLMAN. Mr. Speaker, under leave to extend my remarks, I want to enter into the RECORD the following editorial from the *La Grande Observer of La Grande, Oreg.*, dated February 17. It deals with the controversial disclaimer affidavit in the National Defense Education Act:

FARM BUREAU PLOWS WRONG FURROW

A copy of the American Farm Bureau Federation's newsletter came into the office this week. In its review of congressional action on current legislation we found a bone to pick.

The letter advises all bureau members to oppose Senator JOHN KENNEDY's bill to eliminate the disclaimer affidavit from the National Defense Education Act.

Disclaimer affidavit happens to be a bad name for a piece of legislative balderdash. It is contained in the act which passes Federal funds to colleges and universities, funds which the schools pass on to students as loans.

Before a student receives such a loan he must sign (1) a loyalty oath and (2) an affidavit swearing he does not belong to or support any organization intent on overthrowing the U.S. Government.

It is the second portion which Senator KENNEDY is trying to eliminate. Farm Bureau policymakers contend it should remain.

The disclaimer is an oath of negative loyalty. Swearing you don't intend to upset the good old United States of America became popular in the black days of McCarthy. It is an unfortunate leftover from that era.

Having to swear a lack of disloyalty is an insult to the integrity of those of whom it is required and a sign of weakness and fright on the part of those who ask it.

The only time a government asks such a question is when it suspects almost everybody of plotting treachery. A few years back our Government was driven to this position by mass hysteria.

By now the sickness of universal suspicion has generally been washed out of public life. To allow a sign of it to remain in the disclaimer affidavit is to place on exhibit weakness which we honestly believe no longer exists.

Furthermore, if someone actually is a member of an organization intent on overthrowing the U.S. Government, he most certainly is not going to reveal his plans merely on being asked.

Objections to the disclaimer have been widespread since the passage of the National Defense Education Act. A number of schools have refused the offered funds because of the insulting requirement.

In the Farm Bureau's argument in favor of the disclaimer, there is the following paragraph:

"We are convinced that the support for the elimination of the disclaimer affidavit does not come from American college men and women, but comes instead from college administrators and professors."

This just isn't true. There are thousands of intelligent college students whose good sense balks at the negative loyalty question.

And can this be an argument in favor of something—to say that college administrators and professors are against it? Before this paragraph turned up we thought America respected its men of higher education. We will continue in this belief.

The Farm Bureau is plowing a wrong furrow when it comes to loyalty and college loans. More power to Senator KENNEDY in ridding our educational legislation of a blemish that was born in darker days, and now deserves a decent burial.

Roosevelt Disliked Questions on Religion

EXTENSION OF REMARKS

OF

HON. THOMAS J. LANE

OF MASSACHUSETTS

IN THE HOUSE OF REPRESENTATIVES

Monday, February 15, 1960

Mr. LANE. Mr. Speaker, under leave to extend my remarks in the RECORD, I wish to include an interesting article which appeared in the *Pilot* published in Boston, Mass., on February 27, 1960: ROOSEVELT DISLIKED QUESTIONS ON RELIGION

On November 8, 1908, shortly after the election of William Howard Taft, whom Theodore Roosevelt had chosen to run as his successor, the following letter was published. Written by Mr. Roosevelt to J. C. Martin of Dayton, Ohio, it deals with the apparently perennial question of whether a Catholic can or should be elected President of the United States:

"MY DEAR SIR: I have received your letter, running in part as follows: 'While it is claimed almost universally that religion should not enter into politics, yet there is no denying that it does, and the mass of the

voters that are not Catholics will not support a man for any office, especially for President of the United States, who is a Roman Catholic. Since Taft has been nominated for President by the Republican Party it is being circulated and is constantly urged as a reason for not voting for Taft that he is an infidel (Unitarian) and his wife and brother Roman Catholics. * * * If his feelings are in sympathy with the Roman Catholic Church on account of his wife and brother being Catholics that would be objectionable to a sufficient number of voters to defeat him. On the other hand, if he is an infidel, that would be sure to mean defeat. * * * I am writing this letter for the sole purpose of giving Mr. Taft an opportunity to let the world know what his religious belief is.'

"I received many such letters as yours during the campaign, expressing dissatisfaction with Mr. Taft on religious grounds; some of them on the ground that he was a Unitarian, and others on the ground that he was suspected to be in sympathy with Catholics. I did not answer any of these letters during the campaign, because I regarded it as an outrage even to agitate such a question as a man's religious convictions, with the purpose of influencing a political election. But now that the campaign is over, when there is opportunity for men calmly to consider whether such propositions as those you make in your letter would lead, I wish to invite them to consider them, and I have selected your letter to answer because you advance both the objections commonly urged against Mr. Taft, namely: that he is a Unitarian and also that he is suspected of sympathy with the Catholics.

"You ask that Mr. Taft shall 'let the world know what his religious belief is.' This is purely his own private concern; and it is a matter between him and his Maker, a matter for his own conscience; and to require it to be made public under penalty of political discriminations is to negative the first principles of our Government, which guarantee complete religious liberty and the right to each man to act in religious affairs as his own conscience dictates.

"Mr. Taft never asked my advice in the matter, but if he had asked it I should have emphatically advised him against thus stating publicly his religious belief. The demand for a statement of a candidate's religious belief can have no meaning except that there may be discrimination for or against him because of that belief. Discrimination against the holder of one faith means retaliatory discrimination against men of other faiths. The inevitable result of entering upon such a practice would be an abandonment of our real freedom of conscience and reversion to the dreadful conditions of religious dissension which in so many lands have proved fatal to true liberty, to true religion and to all advance in civilization.

"To discriminate against a thoroughly upright citizen because he belongs to some particular church, or because, like Abraham Lincoln, he has not avowed his allegiance to any church is an outrage against that liberty of conscience which is one of the foundations of American life. You are entitled to know whether a man seeking suffrage is a man of clean and upright life, honorable in all his dealings with his fellows, and fit by qualification and purpose to do well in the great office for which he is a candidate; but you are not entitled to know matters which lie purely between himself and his Maker.

"If it is proper or legitimate to oppose a man for being a Unitarian as was John Quincy Adams, for instance; as is the Reverend Edward Everett Hale, at the present moment Chaplain of the Senate, and an American of whose life all good Americans are proud, then it would be equally proper to

support or oppose a man because of his views on justification by faith, or the method of administering the sacrament of the gospel of salvation by works. If you once enter on such a career there is absolutely no limit at which you can legitimately stop. So much for your objections to Mr. Taft because he is a Unitarian. Now for your objections to him because you think his wife and brother to be Roman Catholics. As it happened they are not; but if they were, or if he were a Roman Catholic himself, it ought not to affect in the slightest degree any man's supporting him for the position of President.

"You say that 'the mass of the voters that are not Catholics will not support a man for any office, especially for President of the United States, who is a Roman Catholic.' I believe that when you say this you foully slander your fellow countrymen. I do not for one moment believe that the mass of our fellow citizens, or that any considerable number of our fellow citizens can be influenced by such narrow bigotry as to refuse to vote for any thoroughly upright and fit man because he happens to have a particular religious creed.

"Such a consideration should never be treated as a reason for either supporting or opposing a candidate for a political office. Are you aware that there are several States in this Union where the majority of the people are now Catholics? I should reprobate in the severest terms the Catholics who in those States (or in any other States), refused to vote for the most fit man because he happened to be a Protestant, and my condemnation would be exactly as severe for Protestants who, under reversed circumstances, refused to vote for a Catholic.

"In public life, I am happy to say, that I have known many men who were elected and constantly reelected to office in districts where the great majority of their constituents were of a different religious belief. I know Catholics who have for many years represented constituencies mainly Protestant and Protestants who have for many years represented constituencies mainly Catholic; and among the Congressmen whom I know particularly well was one man of Jewish faith, who represented a district in which there were hardly any Jews at all. All of these men by their very existence in political life, refute the slander you have uttered against your fellow Americans.

"I believe that this Republic will endure for many centuries. If so, there will doubtless be among its Presidents Protestants and Catholics, and very probably at some time, Jews. I have consistently tried while President to act in relation to my fellow Americans of Catholic faith as I hope that any future President who happens to be a Catholic will act toward his fellow Americans of Protestant faith. Had I followed any other course I should have felt that I was unfit to represent the American people.

"Yours truly,

"THEODORE ROOSEVELT."

Formation of the American Hellenic Congress

EXTENSION OF REMARKS

OF

HON. JOHN BRADENAS

OF INDIANA

IN THE HOUSE OF REPRESENTATIVES

Wednesday, February 10, 1960

Mr. BRADENAS. Mr. Speaker, on January 31, 1960, the American Hellenic Congress, a federation of the leading 19

American Hellenic organizations in the United States, was officially established.

The declared purpose of the American Hellenic Congress is "to enlarge the areas of service to the United States and to create an awareness of the challenges and opportunities of the United States as a nation and of its citizens as individuals."

In addition to the Orders of Ahepa and Gapa, component members of the American Hellenic Congress include: The Pan Arcadian Federation of America, the New York Federation of American Hellenic Societies, Pan Laconian Federation of the United States, the Thracian Federation, the United Chios Societies of America, Pan Epirotic Federation, the Cyprus Federation of the United States, Federation of Pan Mesinian Societies, Pan Rhodian Federation of America. Other nationwide groups which become component members of the Congress on or before December 31, 1960, will be accorded the status of charter members.

The first elected officers of the American Hellenic Congress are distinguished and respected Americans of Greek origin. They are: National chairman, Dean Alfange, member of the New York bar and past supreme president of the Order of Ahepa; honorary national chairman, His Eminence Iakovos, Greek Orthodox Archbishop of North and South America; national secretary and Washington counsel, Peter N. Chumbris, counsel to the U.S. Senate Antitrust and Monopoly Subcommittee; general counsel, Gregory G. Lagakos, member of the Philadelphia bar; treasurer, Dr. Abraham Michaels of Philadelphia; national vice chairmen, Pericles Lantzounis of New York, Constantine Rorris of Columbus, Ohio, and Demetrius Tsintolas of Washington.

Mr. Speaker, I should like to include at this point in the RECORD a letter to the editor of the New York Times of February 19, 1960, from Mr. Dean Alfange concerning the formation of the American Hellenic Congress:

FORMATION OF HELLENIC CONGRESS

TO THE EDITOR OF THE NEW YORK TIMES:
Though unnoticed in some quarters, an important event which gave substance to a long cherished ideal took place on January 31 in New York City. It marked the launching of a federation of Pan-American Hellenism under the aegis of the American Hellenic Congress. The distinguished churchman, His Eminence Iakovos, Greek Orthodox Archbishop of North and South America, was named honorary chairman of the congress which will achieve de jure status upon ratification.

The component members of the new federation are the leading nationwide American Hellenic organizations, including those which are largest in numbers and oldest in point of service. Though each retains its identity, they will henceforth speak with a united voice in the councils of American affairs.

The American Hellenic Congress will strive, as stated in its charter, "to enlarge the areas of service to the United States and . . . to aid in the great process of shaping our national purpose" by coordinating the solid contributions to America by Americans of Hellenic descent.

That those whose ancestors lit the lamps of culture have seen fit the more effectively

to aid in confronting the challenges to a way of life bequeathed to us by ancient Hellas is, I think, a milestone which deserves to be recorded.

DEAN ALFANGE,

Chairman, American Hellenic Congress,
New York, February 9, 1960.

Our Nation's Highways

EXTENSION OF REMARKS

OF

HON. EARL HOGAN

OF INDIANA

IN THE HOUSE OF REPRESENTATIVES

Tuesday, March 1, 1960

Mr. HOGAN. Mr. Speaker, under leave to extend my remarks in the RECORD, I wish to insert the following speech:

OUR NATION'S HIGHWAYS

(Remarks by Ellis L. Armstrong, Commissioner, Bureau of Public Roads, U.S. Department of Commerce, at the 15th Annual Convention, National Limestone Institute, Inc., Washington, D.C., January 21, 1960)

I feel that I know your problems pretty well, because during my entire professional career I have been primarily directly involved in using, or making designs for the use of, the stone and other materials that go into the construction of foundations and pavements and structures of a better, more wonderful America. This has included construction for highways and dams and buildings and all that they entail.

As a boy in Utah, I used to take our mountains as a matter of course, as so much rock, or little value except to look at. But as I grew older I came to realize that stone is one of our great natural resources. For one thing, it provides the aggregates without which we could not build the great network of highways that is now taking form all across America.

The magnitude of the highway building program may be illustrated by some figures that we in the Bureau of Public Roads have just compiled. For example, nationwide receipts (and receipts pretty well reflect actual expenditures) for highways are expected to reach \$11.4 billion this year, an increase of 10 percent over the 1959 total of \$10.3 billion. More than half of the increase is attributable to increased revenues flowing into the highway trust fund.

Federal funds will account for slightly more than one-fourth of all highway receipts in 1960, and State road-user taxes and other State income for 53 percent of the total. Highway receipts as each level of government are expected to increase in 1960, but the percentages of total revenues supplied by the States and local governments continue to decline as Federal funds increase.

As you know, most Federal funds are not expended directly, but are paid to States as Federal aid in reimbursement for work performed. The States also transfer to local governments about one-fourth of all State road-user tax revenues as State aid for local roads and streets. Taking into account these intergovernmental transfers, the States in 1960 will administer \$7.2 billion of highway funds, or about two-thirds of the total. Federal-aid reimbursements to the States, however, are expected to decline \$400 million (14 percent) from 1959 as a result of these factors: (1) Completion in 1959 of most of the "antirecession" projects financed with Federal-aid "D" funds; and (2) depletion of highway trust fund reserves and the necessity to limit Federal payments in 1960 to avoid creating a deficit in the fund.

If you can bear some more statistics, here are a few figures that may interest you.

Total long-term debt outstanding for highway purposes at the end of 1958 was almost \$12.3 billion. It is estimated that there was an increase of \$485 million in 1959 and an increase of \$630 million is estimated for 1960, with the total outstanding debt reaching \$13.4 billion by the end of this year. State obligations for highways will account for \$9.4 billion of this total, those of local rural governments \$1.1 billion, and of municipalities \$2.9 billion. The total debt will be almost equally divided between obligations for toll facilities and those for toll-free facilities.

Capital outlay (expenditures for right-of-way and construction) is estimated to reach \$6.7 billion in 1960, slightly less than in 1959. The effect of the decrease in Federal payments in 1960 will be offset to some extent by increases in State highway income available for capital expenditures.

Expenditures for maintenance, for administration, research, and highway policing, and for interest on bonds, are expected to show increases in 1960.

Highway construction expenditures (excluding right-of-way and preliminary engineering costs), are estimated to exceed \$5.6 billion in 1960, a decline of about \$140 million from 1959. Construction expenditures on the Interstate System will account for one-third of the total in 1960, and nearly three-fourths of the total will be expended on the various Federal-aid systems.

So much for current statistics on the modern highway program. It may be of interest to look back and see how it all started. The Federal Government got into the picture in 1893 when an Office of Road Inquiry was set up in the Department of Agriculture. Its purpose was to study methods of roadmaking and demonstrate the most improved types by building short sample sections throughout the country. In that same year, 1893, the Duryea brothers built the first gasoline automobile.

Seven years later there were 8,000 automobiles in the United States. By 1916 annual motor-vehicle production exceeded one million for the first time, and the Federal Government entered the roadbuilding field on a nationwide scale. The initial Federal-Aid Road Act, passed in 1916, was a basic and far-reaching piece of legislation.

That act, now nearly 44 years old, laid the foundation for the cooperative Federal-State highway program in existence today. The patterns and purposes established then have been strengthened and improved over the years, and are still in the best traditions of dedicated public service.

Under the Federal law, the States have the initiative and prerogative in selecting roads to be improved and the type of improvement. The States are responsible for surveys, plans, and specifications, for letting contracts, and for supervision of construction—all subject to approval by the Bureau of Public Roads.

Legislation since 1916 has authorized increasing amounts of money and broadened the basic concept of our highway needs and how to fill them, but the generic act fostered a cooperative spirit and approach that underlines and strengthens the Federal-aid highway program even today.

Before we look at the present program and the problems it is designed to meet, let's add just a little more perspective. Perhaps the simplest way is to look back, to the year 1921 for example, when about 10.5 million motor vehicles were registered and the total road and street mileage in this country was just over 2.9 million—not quite three vehicles per mile. Here and there a few streets and main roads were crowded. But the real problem was felt to be how to provide more hard-surfaced rural roads—to get the farmers out of the mud.

By 1930 road mileage in this country had passed the 3 million mark, but motor-vehicle registrations had hit 26.7 million—that figures out to 8.8 motor vehicles per mile of roadway. Moreover, and this is tremendously important, vehicles were larger and faster, and near big cities and industrial areas congestion was developing on many key routes. Accidents were casting a grim and darkening shadow over the whole country.

By 1941 the figure was about 11 vehicles per mile, with every reason to believe that this ratio would go much higher. At the same time, earlier warnings had multiplied. Patterns of congestion were becoming widespread and huge traffic volumes on many routes were threatening the very existence of downtown areas. Traffic fatalities read like reports from a battlefield.

The Federal-Aid Highway Act of 1944 recognized the basic nature of these problems. It authorized the first specific funds for Federal aid in urban areas. It provided for the selection of a Federal-aid secondary system, the farm-to-market roads, and it called upon the States and the Bureau of Public Roads to designate a national system of interstate highways limited in extent to 40,000 miles and connecting the important cities and industrial areas of the country. Requirements of the national defense were carefully considered, for we had learned that modern defense is built around industry, that many of today's highways are an integral part of an elaborate assembly line carrying raw materials, parts, semi-assembled units, and the finished products that sustain both defense and civilian activities.

Slowly, painfully, it had become clear that in order to solve our many traffic problems, urban and rural, in order to equate the motor vehicle with our way of life, we needed a bold new approach—a plan that would not only assure us an Interstate System of super-highways, but would also greatly increase the traffic-bearing capacity of many presently overburdened routes.

That is the declared purpose of the Federal-Aid Highway Act of 1956. Sparked by President Eisenhower's dramatic message to the Governors' conference in 1954, the new act called for a 41,000-mile network of interstate highways built to standards which will handle the types and volumes of traffic predicted for the system in 1975. We are looking 15 years ahead, to the time when at least 100 million passenger cars, trucks, and buses will be on the go—a gain of around 45 percent over the 70 million in use today.

The great expansion of the highway-building movement in 1956 posed several heavy demands on the country—for men, machinery, materials, and—of course—money.

The manpower shortage was chiefly in engineers. I believe the supply is improving, partly because of the educational programs sponsored by the American Road Builders' Association, the Associated General Contractors and other organizations. They have helped to point out to the students and young engineers the advantages of specializing in highway work. States have set up more realistic salary brackets to be competitive. If our engineering potential has increased, so of course has the weight of the expanding highway program, but for the present the outlook is favorable. Aerial surveys, photogrammetry and electronic computers have combined to take a lot of the drudgery out of highway engineering and are making possible more effective use of engineering talents.

Machinery has also improved. In excavation, for example, one big self-powered scraper can do the work that required hundreds of pick-and-shovel men 35 years ago. Better machines developed by the equipment manufacturers have also reduced surfacing costs. There is still room for improvement in machinery and methods for building structures. And I hope more uni-

formity and simplification in the plans and specifications from State to State will effect additional economies.

On the whole, mechanization of road-building and the improvements in equipment, with consequent increases in the productivity of man and machine, have made highway building an efficient industry and have kept down the bills that the taxpayers must meet.

It is in meeting the demand for materials that your organization can be of greatest service to the country. An estimate made a couple of years ago by the Bureau of Public Roads, and still pretty valid, was that \$6½ billion would be spent for sand, crushed limestone, gravel, slag, and crushed stone used in aggregates. In quantity, this would mean about 4½ billion tons. It includes not only commercially produced material, but also the aggregates produced on the job by the construction contractors from local pits and quarries.

It may come as a surprise to some people to learn that the supply of aggregates is not unlimited. Many States have become concerned at prospective local shortages and at the cost of transporting the materials from more distant sources. In reply to a questionnaire sent out by the Bureau of Public Roads, asking whether the States believed that the known supply of aggregates was ample to take care of highway needs until 1972, we learned the following: The supply was not considered adequate in Colorado, Mississippi, or Oklahoma. In Florida it was adequate for at least 10 years, Kansas adequate in the eastern third of the State, Nebraska was short on crushed rock, New Hampshire expected a gravel shortage, New York expected a shortage of fine aggregate and bankrun gravel, Oregon short in the southwest and northwest part of the State, Pennsylvania short of coarse aggregate in the northwest part of the State and fine aggregate in the central part, Virginia short of coarse aggregate in Suffolk district. Other States had minor shortages of some types of aggregates in certain areas.

I am sure that I speak for the State highway departments, as well as the Bureau of Public Roads, in asking your cooperation in conserving the higher types of aggregates for special needs, and in supplying the lower grades where they will serve the purpose just as well. This is not a problem merely for this year and next, but for many years to come.

You will probably find it useful to keep in touch with the State highway departments in your sales area, in order to learn their requirements. Except in a few instances, no actual procurement of materials is done by the States or the Bureau of Public Roads, and your real customers, of course, are the highway construction contractors, of whom there are 6,000 or more.

Considerable road and street construction will likely be generated near the Interstate System in your districts. These may be Federal aid projects that are parts of the primary and secondary systems, or they may be financed entirely by the States or localities. At any rate, it may be to your advantage to watch out for them.

Your national organization can be of service to you by keeping in touch with the Bureau of Public Roads and with the American Association of State Highway Officials, which has headquarters in Washington.

I have given you some indication of the vast size of the country's highway effort. The roads of the ABC program, which have prior claim to the highway trust fund, are being improved at a substantial rate. We can also take pride in the physical progress of the Interstate System in the last few years.

In the 3½ years of the new program we have completed over 100,000 miles of construction on our Federal-aid systems, in-

cluding more than 20,000 bridges, at a construction cost of about \$8 billion. Of this total 5,800 miles are on the Interstate System. We have under construction nearly 24,000 additional miles of which over 4,300 miles are on the Interstate System. Contracts have been awarded during this 3½-year period for approximately \$13½ billion of improved Federal-aid highways for America.

As you know, the excess moneys in the highway trust fund have been depleted. In brief, Federal contributions are limited to the trust fund, and its income has not kept up with the authorizations voted by Congress. For the fiscal year 1961 we have been able to apportion to the States only \$1.8 billion for the Interstate System, as compared with the \$2 billion authorized by Congress in the 1959 act.

As the legislation now stands, we shall be able to apportion \$2 billion for fiscal 1962.

In his budget message of January 18, President Eisenhower reminded the Congress that last year he had recommended an increase in the motor-fuel tax of 1½ cents per gallon for a period of 5 years, to meet estimated requirements in the period that lies immediately ahead. The Congress, however, provided only a 1-cent increase, and for a period of less than 2 years. The President has now again urged the Congress to increase the fuel tax by the additional one-half cent, and to continue the tax at the 4½-cent rate until June 30, 1964; at the same time repealing the diversion of automotive excise taxes enacted last year.

The President also recommended, in his budget message, that \$900 million be provided for the ABC program for each of the fiscal years 1962 and 1963.

I cannot, of course, predict what Federal legislation will actually be passed this year, or in future years.

So far as the Federal-aid highway program is concerned the unsolved problems are two. The first is the determination of the means of financing the program. In 1961, it is expected that Congress will take up the problem and make a determination, largely on the basis of two reports on which the Bureau of Public Roads is working. One will be a revised estimate of the cost of the Interstate System, and the other will be a study of the benefits that the various classes of highway users, as well as nonusers, receive, so that Congress can determine an equitable distribution of taxes.

The second is public understanding of what our new highway system will mean to the country, its value to the economy and the individual driver, and the fact that we are not actually making expenditures but investments. This public information problem is up to all of us.

The outlook for your own business seems favorable. The volume of construction should steadily increase, until a peak and leveling-off period is reached within the next 2 to 5 years. For the present and immediate future the demand for crushed limestone products is certain to remain high.

Reply to Cuba

EXTENSION OF REMARKS

OF

HON. CHESTER E. MERROW

OF NEW HAMPSHIRE

IN THE HOUSE OF REPRESENTATIVES

Monday, February 29, 1960

Mr. MERROW. Mr. Speaker, under leave to extend my remarks in the Appendix of the RECORD, I include an editorial from the New York Times of March 1, 1960, entitled:

REPLY TO CUBA

The State Department's latest note to Cuba will, we believe, be generally approved in this country. The note welcomes the Cuban Government's expressed willingness to negotiate outstanding problems between the two nations, and invites Cuba to submit concrete proposals looking to the opening of such negotiations. The note pledges our Government "to continue by its conduct and through its utterances to reaffirm the spirit of fraternal friendship" between our two peoples. The note rejects the Cuban condition that negotiations be contingent upon a pledge that no unilateral action affecting Cuba be taken by the executive or legislative branches of our Government. The latter position was, of course, inevitable, if only because under our Constitution the executive branch cannot commit the legislative branch.

Much now depends upon how Premier Castro and his associates react to this note. If they are wise, we believe the men in Havana will realize that the basic position of our people has been enunciated time and again in President Eisenhower's statesmanlike declarations. Despite what many Americans believe to be substantial provocation, the President has called for patience upon our part and for continued efforts to improve relations between our countries. He has made no threats and issued no ultimatums. And our good faith was demonstrated again only 10 days ago when our Government promptly apologized after it has become known that a plane which had taken off from a Florida airport had flown over Cuba without that nation's authorization.

At this delicate moment in the relations between our two nations it would be highly constructive if the Cuban reply were to show the same spirit of good will and desire for amicable negotiation that the U.S. Government has exhibited.

Storm of Protest in Nation's Capital Over Pakistan's Barring U.S. Jewish Personnel

EXTENSION OF REMARKS

OF

HON. LEONARD FARBSSTEIN

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Tuesday, March 1, 1960

Mr. FARBSSTEIN. Mr. Speaker, the Jewish Telegraphic Agency, a well-known, authoritative, and recognized news service, has published information to the effect that Pakistan is barring U.S. Jewish personnel and that as a result of the position taken by the Pakistani Government our personnel policy has favored their position. Because of the distress that this has caused me, I have communicated with the Secretary of State of the United States to determine whether the State Department and the International Cooperation Administration are presently screening, formally or informally, individuals considered for assignment to Pakistan or any other country, which countries are listed in the following articles:

STORM OF PROTEST IN NATION'S CAPITAL OVER PAKISTAN'S BARRING U.S. JEWISH PERSONNEL

WASHINGTON.—Members of the U.S. Congress indicated they intend to take action aimed at securing the annulment of a reported "gentleman's agreement" developed

between Pakistan, on the one side, and the State Department and the U.S. International Cooperation Administration, on the other, barring American personnel of Jewish faith from assignment to the U.S. Embassy and the U.S. Economic Mission in Pakistan.

The existence of such an arrangement was revealed to the Jewish Telegraphic Agency by highly placed U.S. Government sources. A measure of confirmation of the agreement was indicated here by the Embassy of Pakistan. The arrangement was described as informal as distinct from the formal agreement made by the United States with Saudi Arabia barring American Jewish personnel from being sent for service to the U.S. base in Saudi Arabia.

Members of the U.S. Senate said they were opening a study on the Pakistani issue in the light of a belief that it is a violation of the Morse-Javits amendment to the 1959 Mutual Security Appropriations Act. This amendment called on the President to oppose religious discrimination against Americans by nations receiving U.S. aid. Pakistan, a predominantly Moslem country, but not a member of the Arab League, receives massive U.S. aid.

Candidates for assignment to permanent duty in Pakistan, the JTA learned, are now being informally screened to weed out the Jews. The heads of the Pakistan desks in the State Department and ICA keep the Jewish factor in mind when passing on personnel for service in Pakistan. There are no written instructions to this effect.

Muhammed Huq, press attache at the Pakistan Embassy, said his country admitted Jews as tourists but barred "Israelis and Zionists because we do not recognize Israel." He said "we are tolerant of other religions but do not desire Israelis or Zionists."

The State Department denied that any screening of Jews took place before foreign assignment except in the case of Saudi Arabia. The ICA said it had "no comment" on the report except that its personnel had made no official complaints on the agency's policies in Pakistan. It had, the JTA was informed, no official information to confirm charges of discrimination.

It was learned, however, that a number of individuals of the Jewish faith, employees of American agencies, had been barred from assignments in Pakistan because of the new pattern of selection. In instances where the religion of the individual was in doubt, it was learned, the individuals were asked privately if they were Jewish. This was done on an informal, man-to-man basis.

The State Department, it was said here, does not consider Jews for assignment to any country that informally advises it would prefer not to receive Jews. The ICA and the U.S. Information Agency appear less content about the "gentleman's agreement" on assignment of personnel, but they apparently follow the State Department's lead.

Several years ago, the State Department entered into an agreement with the Saudi Arabian Government not to assign Jews to service in that country. The United States also acceded, without apparent resistance, to sentiment in the United Arab Republic, Iraq, Jordan, and Lebanon against assignment of American Jews for service there.

In one known case, an individual with a Jewish-sounding name was posted for assignment to Jordan. The Jordanian Government inquired specifically into his religion. The U.S. authorities, instead of rejecting the inquiry, called the man aside and asked him. It turned out that he was a member of the Unitarian Church. He was admitted.

In another known case, prior screening had failed to block the appointment of a man with a Jewish-sounding name. The host government interrogated Washington and the appointee was informally interrogated. He happened to be an American of German

descent whose name was similar to a common Jewish "name." He was shocked to learn of the practice and confided to Jewish friends about it.

Secretary of State Herter was asked Tuesday to explain the new policy barring American personnel of the Jewish faith from assignment to U.S. diplomatic and aid missions in Pakistan, by Representative LEONARD FARBSTEIN, New York Democrat, member of the House Committee on Foreign Affairs.

Representative FARBSTEIN told Secretary Herter that any measures to weed out Jews from among personnel assigned to Pakistan "would be a distinct violation of every American tradition and of the Morse-Javits amendment to the Mutual Security Act of 1959." The amendment calls on the executive department to withhold aid from nations discriminating against Americans on the basis of religion.

Representative FARBSTEIN asked Secretary Herter whether the State Department and the International Cooperation Administration are "presently screening, formally or informally, individuals considered for assignment to Pakistan or any other country," to determine religious affiliation as vocation "qualification." He cited an "authoritative news agency" report that such a practice involving Pakistan had gone into effect. The report had originated with the Jewish Telegraphic Agency.

A formal request was made by Representative FARBSTEIN for a detailed report on current policies of the State Department, involving assignment of American Jews to Pakistan and a number of other Moslem nations. The other nations included Saudi Arabia, United Arab Republic, Jordan, Iraq, Lebanon, Libya, Morocco, Sudan, and Yemen. An administration request for additional appropriations to Pakistan is now before the Foreign Affairs Committee.

(By Milton Friedman)

About the time of President Eisenhower's December visit, Pakistan informally urged American diplomats to assign no more American Jews to U.S. diplomatic and economic aid missions in that Moslem nation. A few Jews already in Pakistan could remain for the time being. Officials agreed, passing the word by subtle means. The informal but strict order went out: Eliminate Jews from among assignees to Pakistan.

Immediate compliance came from the Pakistani desks of the State Department and International Cooperation Administration in Washington. It leaked out to employees, Jewish and non-Jewish, who resented the new policy.

They considered it outright anti-Semitism and an affront to the dignity of U.S. personnel, including officials of Jewish faith. American compliance was seen as translation of foreign bias into an American gentleman's agreement affecting U.S. citizens.

Other news spread within executive department circles. The administration was giving in to Moslem attempts to discourage even transit visas for U.S. officials of Jewish faith. Such officials needed to transit various Arab airports if they were to perform their duties. Sometimes the duties included the implementation of technical and economic aid for the very nations that practiced such flagrant bigotry.

Officials used a rationalization long familiar to Jews. The concession was made to Pakistan for the Jews' "own benefit and comfort" to promote "a better social climate and to avoid embarrassment." Wouldn't the Jewish employee be happier in Bangkok or Rangoon?

For public consumption, Government spokesmen vigorously denied existence of the new policy. Behind the scenes there was a frantic scramble to learn how it all leaked out.

One official asked not to be named because he was a career man. He said the Pakistan development was "utter expediency." He found it reminiscent of real estate operators who justify restricted neighborhoods. He blamed administration indifference to the spirit of the Morse-Javits amendment. That amendment called on the President to use discretion in giving economic aid to nations that practice religious bigotry against Americans. In Pakistan, the amendment was ignored. Jewish employees of the U.S. agency actually channeling aid to Pakistan were insulted with impunity.

LAWS RELATIVE TO THE PRINTING OF DOCUMENTS

Either House may order the printing of a document not already provided for by law, but only when the same shall be accompanied by an estimate from the Public Printer as to the probable cost thereof. Any executive department, bureau, board, or independent office of the Government submitting reports or documents in response to inquiries from Congress shall submit therewith an estimate of the probable cost of printing the usual number. Nothing in this section relating to estimates shall apply to reports or documents not exceeding 50 pages (U.S. Code, title 44, sec. 140, p. 1938).

Resolutions for printing extra copies, when presented to either House, shall be referred immediately to the Committee on House Administration of the House of Representatives or the Committee on Rules and Administration of the Senate, who, in making their report, shall give the probable cost of the proposed printing upon the estimate of the Public Printer, and no extra copies shall be printed before such committee has reported (U.S. Code, title 44, sec. 133, p. 1937).

GOVERNMENT PUBLICATIONS FOR SALE

Additional copies of Government publications are offered for sale to the public by the Superintendent of Documents, Government Printing Office, Washington 25, D.C., at cost thereof as determined by the Public Printer plus 50 percent: *Provided*, That a discount of not to exceed 25 percent may be allowed to authorized bookdealers and quantity purchasers, but such printing shall not interfere with the prompt execution of work for the Government. The Superintendent of Documents shall prescribe the terms and conditions under which he may authorize the resale of Government publications by bookdealers, and he may designate any Government officer his agent for the sale of Government publications under such regulations as shall be agreed upon by the Superintendent of Documents and the head of the respective department or establishment of the Government (U.S. Code, title 44, sec. 726, Supp. 2).

RECORD OFFICE AT THE CAPITOL

An office for the CONGRESSIONAL RECORD, with Mr. Raymond F. Noyes in charge, is located in Statuary Hall, House wing, where orders will be received for subscriptions to the Record at \$1.50 per month or for single copies at 1 cent for eight pages (minimum charge of 3 cents). Also, orders from Members of Congress to purchase reprints from the Record should be processed through this office.

CONGRESSIONAL DIRECTORY

The Public Printer, under the direction of the Joint Committee on Printing, may print for sale, at a price sufficient to reimburse the expenses of such printing, the current Congressional Directory. No sale shall be made on credit (U.S. Code, title 44, sec. 150, p. 1939).

PRINTING OF CONGRESSIONAL RECORD EXTRACTS

It shall be lawful for the Public Printer to print and deliver upon the order of any Senator, Representative, or Delegate, extracts from the CONGRESSIONAL RECORD, the person ordering the same paying the cost thereof (U.S. Code, title 44, sec. 185, p. 1942).

CHANGE OF RESIDENCE

Senators, Representatives, and Delegates who have changed their residences will please give information thereof to the Government Printing Office, that their addresses may be correctly given in the Record.

Appendix

Address of Hon. Kenneth B. Keating, of
New York, at 91st Anniversary Dinner
of Manhattan College Alumni Society

EXTENSION OF REMARKS

OF

HON. WALLACE F. BENNETT

OF UTAH

IN THE SENATE OF THE UNITED STATES

Wednesday, March 2, 1960

Mr. BENNETT. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD the text of an address by the junior Senator from New York [Mr. KEATING] at the 91st anniversary dinner of the Manhattan College Alumni Society at the Roosevelt Hotel in New York City on Saturday, February 6.

The PRESIDING OFFICER. Without objection, it is so ordered.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

The world we live in is described as a two-power world. Those two powers are Soviet Russia and the United States—and, by extension, the two-power concept includes on the one hand the cluster of satellites that add to Russia's mass, on the other, the nations of the free world that share with America the ideals of democracy and of the dignity of man.

The term "power," used in this global sense, normally has but one meaning in the mind of the free-world citizen. It means the relative military posture of the two opposing ideological blocs. It means the force of their nuclear muscle, the thrust and accuracy of their missiles, the refinements they have achieved, or are achieving in the art of mass annihilation.

In the face of this two-power confrontation, with all the potential of menace it involves, there occurs what is to me a deeper, graver, source of concern. It is the tendency of the individual citizen to feel overpowered and submerged by events over which he feels he has no control. It is his sense of being a powerless spectator, sitting in a colosseum, knowing two worlds can collide before his eyes, and hoping the show will never start.

The paradox is plain. What we seek to defend, with all this terrifying new hardware of space, is the identity of man as a free spirit. Yet man, as he contemplates the instruments of destruction, is dwarfed by his own Frankenstein. His own creations belittle him in his own eyes. He feels that somebody has invented a game too big for him to play. History becomes, not something he makes, but something he reads about.

The truth of the matter is that this great new era of cosmic fireworks—this race to the stars—this awesome rehearsal for disaster—is not the true essence of the two-power struggle in our world. It is only the outward mark. It is the weapon a man fights with—not the cause he fights for.

And what cause are we fighting for—what are we struggling to preserve? In our hearts we all know. The most precious thing we all possess is the soul God gave us—the

freedom He breathed into us—the dignity He made our birthmark.

But precious though they are, we sometimes are prone to treat these treasures as though they were burglarproof, as though they were beyond forfeit, beyond loss.

I shall not speak tonight of the lands where mass robbery of human dignity has occurred. I shall confine myself to the threat as it exists here in America—and of the ways in which the challenge of that threat must be confronted.

We are many winters removed from the bitter cold of Valley Forge—where freezing, tattered Americans knew, with a certainty hard as steel, what they were fighting for. Today we look upon freedom as an heirloom handed down—as rightfully ours as our very names. Only when a Pearl Harbor grabs us by the throat—and we have to fight ourselves free do we sense that freedom has a price tag on it—and that tag reads blood and sacrifice—as well as vigilance.

It can well be said that this Nation, built on the rock of eternal values, is suffering the slow erosion of those values. That the pressures of prosperity, of success, of easy living, are washing away the pillars of the spirit, of character, of toughness, that are the true foundations of any civilization worthy to endure.

I do not wish to overpaint the picture—but I am sure that each of us, in his heart, feels occasional qualms of uneasiness over the drift to apathy, to a way of living unfired by inspiration, by ideals, by high purposes—a design for existence whereby taking rather than giving—getting rather than earning—pricing rather than evaluating—becomes the pattern of life.

Several years ago the American people were shocked to learn of American soldiers defecting to communism. How could this happen, the cry went up. Didn't the Army indoctrinate these boys with the principles of Americanism? That very reaction is typical of the times. In a Nation where everything is packaged so perfectly, why didn't the Army package the loyalties of the G.I.'s in a neat, hermetically sealed container, impervious to the germs of a foreign ideology?

We all know why. Because a man's strength of character is not—and never will be—a G.I. issue. The Army can give him a gun to protect his life, but the armor his spirit wears was forged long before his enlistment.

No, there's no "survival kit" of values except the one that a man brings with him—whether to the Army, to college, to business, to the professions—or to the day-by-day challenge of life.

That is where the areas of responsibility open up. And where, in the United States of 1960, we must face the fact that our emphasis has been dismally one-sided. Physical upbringing of our children appears to preoccupy us more than this spiritual and intellectual upbringing. Believe me, I am all for taller, healthier, handsomer young Americans—but not emptier ones, not spiritually undernourished, intellectually underfed children.

Again, I fear our concept of "packaging" education in easy-to-take academic programs, wrapped in loving care and guaranteed not to hurt—can explain the incompleteness of the educative process. The "marshmallow" courses—so light, so palat-

able, so predigested—are a temptation hard to resist. The tough courses—the ones you have to bite into and chew—the ones with the unpleasant taste—even though the teacher tells you it will disappear—these are the courses that whip sleeping craniums into wakefulness—prod brains into action, toughen the mind and the character—and build strength into the spirit.

Let us keep in mind that this "soft diet" in today's education wasn't invented by our young people. It's a reflection of the "age of softness"—of the age where doors open for you, chores are done by buttons, not muscles, and luxury has become one of the inalienable rights.

It's all very laudable, of course, not to want to put a machine out of work, but, our trouble here in America is that, inevitably, softness permeates our moral as well as our physical and mental fabric. This is the dangerous tendency, where values become blurred in the public mind—and the line between right and wrong, between good and evil is crossed as blithely as though it had been painted out by an indulgent Deity.

Only such a blurring of values can explain the present-day "gold-rush philosophy" that measures everything in terms of what it costs rather than what it signifies. This leads unfailingly to a veneration of things rather than principles. It makes success something that's tallied in a man's bank account rather than in his soul.

This is not to condemn the concept of materialism in our lives. Materialism is a fact of existence. We have to be materialistic to survive, as a people, or as individuals. It is only when materialism becomes an end in itself—when it becomes a kind of tribal religion, with Mammon as its Deity—when it tends to drive a wedge between man and his spiritual identity, that it becomes the sworn enemy of man, the potential destroyer of the moral structure on which destinies depend, not merely careers.

In times past the code of expediency was to a great extent confined to certain elements of our society—the avowed opportunist, the confidence man, the amoralist, the criminal. Today, when the tendency is to glorify getting—and let the principles fall where they may—opportunism seems to have become a career with an ever widening, ever vicious appeal.

This constant nibbling away at the values on which good lives and great civilizations are built requires no lists of illustrations from me tonight. All of us are too familiar, far too familiar, with the modern language of payoffs, collusion, fast buck deals, protection-for-pay, organized theft of union dues—yes, and such petty manifestations as the meat-cheat scandal—these and the many other forms that adult delinquency takes. And the loss in honor is a national loss, not merely a personal forfeit. Worse than the effect of any bomb is the "fall out" of contamination that an evil example or an evil precept showers upon the people of our land.

In Soviet Russia the state has operated on man for the removal of his immortal soul. The operation has hardly been an unqualified success. You do not separate man from his God by an official decree. But what is happening in Russia must give us pause. The channels of spiritual love, of religious dedication are being forcibly redirected to a

kind of mock spirituality that makes the state the supreme, sovereign, and eternal master of man. All the fires of loyalty, all the muscles of energy are committed to the greater strength, the greater prestige of this man-made master.

It is in the face of this very zeal, of this intense commitment to the Communist ascendancy over the world, that we Americans must shake ourselves out of our moral lethargy, reaffirm the noble and eternal purposes of our lives, and infuse ourselves with the drive and the dynamism by which free men have always preserved the things they held most dear. We must propagate a respect for the good and the true. We must know expediency for what it is—enemy, not friend—a way of dying rather than a way of living. We must take a national and individual morality off the gold standard, and put it back where it belongs—in the soul and in the conscience of Americans.

In this day "know thine enemy" is no less binding an obligation than to "know thyself." We have only to consider the present Communist infiltration of Cuba to realize how real, how immediate, and how ominous is the danger that confronts the free people of this hemisphere. Cuba is Russia and Red China's most noteworthy victory in the Caribbean.

Despite the great historic bonds of friendship between Cuba and America, despite our warmth of feeling for the fine people of Cuba, the fact remains that like a ship boarded by pirates, Cuba stands menacingly off our shores—a grim belligerent, armed with an alien ideology and eager to sail against freedom and democracy—to attack and to destroy. Cuba is the opening wedge that Soviet Russia and Red China have shaped and sharpened to drive into the free Americas. Their massive propaganda attack in Central and South America is a part of the grand strategy: The splitting of the United States from her traditional allies and the concurrent spread of the blood red of communism over the map of Latin America.

In the light of this fateful campaign, I feel strongly that the time has come to re-study and reevaluate the Monroe Doctrine. This doctrine presently applies only to external aggression, and not subversion and infiltration. Time and events may now dictate its rewriting, in terms of this actual, modern day internal threat to our hemisphere defense.

Since the subject of defense is such a preeminent matter of national interest, and deservedly so, I feel that the true perspective in this matter has been distorted by a preponderant emphasis on what I might call a "competitive numbers game" rather than on the true, live, and existent capability of this Nation to discourage attack by virtue of the deterrent power of annihilation that we have at our command. We are vividly aware that this counterbalance of retaliatory power must grow as the danger grows—and the President has made it plain that the requisite commitment of talent and money and resources will continue to be made, boldly and imaginatively, to assure our continued unassailable posture of defense in the face of the Soviet threat. The American people, as always, are prepared to pay the price of freedom—but it should be the exact, soundly reckoned price—and not one inflated by hysteria and false fears.

In our time, space has become the exciting new frontier. Progress is measured in the successive breakthroughs to newer, higher areas in the great immensity. Rapt in our gropings toward the galaxies, we fail to see the tremendous and challenging new frontiers that confront the human spirit. We had to fight to create this Nation. We still must fight to keep it strong, to preserve it from threats from within no less than from dangers from without. This is, essentially, the personal responsibility of each one of us, not the anonymous mass responsibility of

a faceless bloc of people. For history is created by individuals—let us always remember this—by people like yourselves. No free-man is ever submerged by history unless he thinks he doesn't count. And then he really ceases to count.

Speaking of the citizen's role in society reminds me of the Russian citizen who lived in a small Soviet village. On election day he dutifully went to the polls. An official handed him a sealed envelope to drop into the ballot box. Our little Russian started to tear the envelope open.

"Hey, what do you think you're doing?" demanded the election official. "I just wanted to see who I'm voting for" said the peasant. "Are you crazy?" bellowed the official. "This a secret ballot."

I spoke a moment ago of the new frontiers that challenge the courage and the imagination of Americans. I am confident that the basic spirituality of our Nation is such that we still possess the reserves of strength that a time for greatness calls for. Apathy and the cult of expediency are only symptoms. They are not a fatal disease. To recognize them—to isolate them—to fight them at every turn—that is the nontransferable responsibility of free men.

In the great world struggle for freedom, it is not enough to be on the side of the Lord. We must remind Him—night and day—by word and deed—that we are on His side—and that we are worthy of the strength, the courage and the love He pours into our hearts.

Proud of Their New American Citizenship

EXTENSION OF REMARKS

OF

HON. DANIEL K. INOUE

OF HAWAII

IN THE HOUSE OF REPRESENTATIVES

Wednesday, March 2, 1960

Mr. INOUE. Mr. Speaker, under leave to extend my remarks in the RECORD, I include a copy of an editorial that appeared in the February 27, 1960, issue of the Honolulu Star Bulletin entitled, "Proud of their New American Citizenship."

This editorial warmly depicts the great devotion and gratitude of our "new" Americans in Hawaii.

The editorial follows:

PROUD OF THEIR NEW AMERICAN CITIZENSHIP

Native-born Americans have no full realization of the emotional tug felt by aliens as they take the oath of American citizenship.

Many of these new citizens are well advanced in years. Some are physically feeble. Yet they have spent many hours in the classroom learning American history and institutions. And when they come at last before the naturalization judge for the final ceremony, they stand proudly erect as they accept their new obligations as Americans.

It is not easy to shed a lifetime of allegiance to a homeland rich in tradition and national spirit.

What emotions must have surged through the heart of 93-year-old Hyakutaro Kato, the oldest alien in Hawaii to become an American citizen. What memories must have flashed through the mind of Toyozo Dol, 91, as he put aside allegiance to the Japanese emperor and proclaimed his adherence to the American Constitution and the institutions of democracy.

Many born to their citizenship take it for granted.

No such attitude was exhibited by an eld-

erly Japanese man on Molokai, too feeble to attend the naturalization ceremony. Judge Cable Wirtz administered the oath of citizenship virtually at the deathbed of this intensely devoted new American.

The three elderly new Americans discussed were all of Japanese nationality.

Japanese make up a very large percentage of the citizens who have been naturalized since the passage of the Walter-McCarran Act removed race as a barrier to citizenship.

An almost equally large number of new citizens are Filipinos who have decided to make America their home and to take part fully in the life of their new homeland.

In smaller numbers there are Chinese, Koreans, other Asians, and a good many Europeans.

All approach American citizenship with a sense of dedication and high resolve. Many have known suffering and injustice in the lands of their birth. Most of them have for the first time found opportunity and real freedom under the American flag.

One does not become an American merely by expressing the wish and taking an oath before a judge. Each applicant must meet residence requirements, be vouched for by responsible citizens of long acquaintance, and pass demanding tests in American history and institutions, including basic constitutional law.

Thus reaching the final goal is accompanied by a sense of personal achievement which helps to explain the justifiable pride with which the new citizens stand in court and take the oath of allegiance.

All Americans should feel a sense of pride also that citizenship in our country is so earnestly sought after. There could be no finer tribute to our way of life.

Civil Defense Appropriations

EXTENSION OF REMARKS

OF

HON. HUBERT H. HUMPHREY

OF MINNESOTA

IN THE SENATE OF THE UNITED STATES

Wednesday, March 2, 1960

Mr. HUMPHREY. Mr. President, I ask unanimous consent that there be printed in the Appendix of the RECORD a resolution adopted by the County Board of Commissioners of the County of Roseau, Minn., in support of adequate civil defense appropriations.

There being no objection, the resolution was ordered to be printed in the RECORD, as follows:

"Whereas civil defense is a necessary part of local government to educate and train the civilian population in ways and means of survival in times of disaster or emergency; and

"Whereas local government is authorized and directed to create local organizations for civil defense in political subdivisions of the State, and to cooperate with the Federal Government with respect to carrying out of civil defense functions, to the end the most effective preparations and use may be made of the Nation's manpower, resources, and facilities for dealing with any disaster that may occur; and

"Whereas local government does not have the necessary funds available to carry out the administration and training programs as prescribed by the Office of Civil and Defense Mobilization nor in conformity with the recommended survival program of our State; and

"Whereas organization, administration, training of personnel within the local civil

defense organizations, education of the general public in the carrying out the survival program to the extent that an attack by the enemy would result in lesser casualties is primarily a responsibility of the Federal Government; and

"Whereas the last Congress passed H.R. 7578, now Public Law 85-606, authorizing Federal assistance to individual States and local governmental civil defense organizations financially, to make possible an adequate coordinated program for the safety of the people and our economy, but failed to provide the necessary appropriations to carry the intent of the law; and

"Whereas the leadership provided by Director Leo A. Hoegh, of the ODCM, outlining the necessity of a definite course of action and recommending certain funds be appropriated for this program: Now, therefore, be it

Resolved, That the Congress of the United States in its nonmilitary civil defense program, concur with the Office of Civil and Defense Mobilization and with the recommendations of Director Leo A. Hoegh in providing the necessary appropriations requested to make effective the intent of Public Law 85-606 to the fullest extent;

"That in reconvening of the Congress in January 1960, immediate appropriations be made to facilitate the carrying out of the program; and be it further

Resolved, That this resolution be submitted to the Senators and Representatives in Congress from Minnesota, to Director Leo A. Hoegh, and Col. H. A. Schon, Civil Defense Director, State of Minnesota."

STATE OF MINNESOTA.

County of Roseau, ss:

I hereby certify that the foregoing is a true and full copy of a resolution duly adopted by the board of county commissioners at their February 17, 1960, meeting.

EDGAR OUREL,

County Auditor.

Congress Should Not Preempt the White House Conference on Aging

EXTENSION OF REMARKS

OF

HON. NOAH M. MASON

OF ILLINOIS

IN THE HOUSE OF REPRESENTATIVES

Wednesday, March 2, 1960

Mr. MASON. Mr. Speaker, the following exchange of correspondence I had with former Congressman Robert W. Kean, Chairman of the National Advisory Committee for the 1961 White House Conference reveals the reason why Congress should await the results of the Conference.

Let us not waste the \$2 million we have already appropriated to bring thousands of goods minds together to suggest solutions to problems of our aging population. Certainly we should get the benefit of their advice rather than enact legislation in haste and without proper study.

HOUSE OF REPRESENTATIVES,

Washington, D.C., February 11, 1960.

The Honorable ROBERT W. KEAN,
Chairman, President's White House Conference on Aging, care of Department of Health, Education, and Welfare, Washington, D.C.

DEAR BOB: I am writing to solicit information for the House Ways and Means Committee concerning activities of the President's

White House Conference on Aging. I am informed that State conferences on the aging will be held this year to arrive at recommendations which will be made to the White House Conference in January 1961. These recommendations will probably cover the gamut of housing, recreation, health care, adult education, etc. Your group will have expended in Federal moneys nearly \$2 million under Public Law 908 (85th Cong.) which Congress enacted in 1958. Additionally, you have authority to accept gifts from private groups to further supplement expenditures which will be required to make for an effective conference.

Certain organizations are bringing pressure on Congress to consider solutions to some of the problems of the aging during this year. These pressures urge action, especially in the field of health care of the aged, and would have Congress act without the benefit of adequate study and investigation of these problems—problems which were acknowledged by Congress to be so vast and so complicated as to require a White House Conference at a large expenditure of effort and funds.

My request is for you to give assurance to members of the House Ways and Means Committee that the problems under consideration require the best thinking of such a group of delegates as will attend and participate in State conferences this year and the White House Conference next year, and, further, that dedicated people are at work now performing a chore assigned to them by the Congress.

Would you please be kind enough to furnish the full membership of the Ways and Means Committee with a status report?

Sincerely,

N. M. MASON.

U.S. DEPARTMENT OF HEALTH,

EDUCATION, AND WELFARE,

Washington, D.C., February 19, 1960.

HON. NOAH M. MASON,
House of Representatives,
Washington, D.C.

DEAR NOAH: I have your letter. It is true that if you include salaries of those who have been assigned to aging in the Department of Health, Education, and Welfare, there will be a Federal expenditure of approximately \$2 million to carry out the provisions of Public Law 85-908. Most of the funds appropriated for 1959 were used to provide financial support to the States for preparation for the national conference.

No gifts have been received from private groups, nor are any authorized under law. You ask for a status report?

The conference will be held at Constitution Hall here in Washington, January 9-12, 1961.

In preparation for the conference, Secretary Flemming appointed me on May 1, 1959, as chairman of a National Advisory Committee. He has appointed 148 members to this National Advisory Committee to plan the conference with representation from every State. An attempt has been made to have broad citizenship coverage.

This advisory committee had its first meeting last June here in Washington and made decisions as to the composition of the conference, etc., which decisions were accepted by the Secretary.

It was decided that there be 2,800 delegates: 1,740 to be appointed by the Governor of each State. It was decided that the number of these delegates should roughly be based upon the number of Members from each State in the House of Representatives. Six hundred and sixty to be appointed by the Secretary from national organizations which have been active in the field of aging. Approximately 150 will be the members of the National Advisory Committee. And an additional 250 will be appointed by the Secretary—chiefly interested persons and ex-

perts in the various Government departments.

It was planned that this will be a citizens' conference, not merely a conference of specialists in the field so it was agreed upon that it would be recommended to the Governors that two-thirds of the delegates whom they appoint be those who are not specialists in the field of aging.

It was decided that there should be 20 fields for special consideration at the conference.

At a later date I appointed each member of the Advisory Committee to a planning committee allocated to one of these fields. I appointed a chairman well qualified to study the subject and a technical director was allotted to each committee. These chairmen met in Washington last July and with the aid of the technical directors and consultants have been preparing papers giving background information as to the basic facts and issues in each of the 20 fields. Outlines on most of these subjects have already been sent out to the States. It is expected that the final papers will be completed on March 15.

One objective of these papers is to have available information in the hands of each State before they hold their State and local conferences. This should save unnecessary work and duplication, for under the wise provisions of section 202 it is specified that the States after their State conferences are to make recommendations to the White House Conference on Aging. So you will see the conference is planned to work from the bottom up, not from the top down.

Nearly every State has already scheduled a time for its State conference. We are eagerly awaiting these recommendations and we expect that they will be compiled and included in the conference agenda for careful study.

A meeting of another subcommittee was held last week to make specific plans for the conference itself. It is planned that the conference will break up into at least 100 small workshops, of not less than 20 nor more than 30 people, to go over the State recommendations and to make their own recommendations on the subject with which they are concerned. In this way every delegate can take an active part in the conference.

Then these small groups will report to one of the 20 sections covering the subject which they have been studying, and representatives of these sections will, in turn, make a report to the final plenary meeting.

It is hoped that the reports will include both sides of suggested remedial action in these fields and comments on State recommendations, but there will be no balloting at the plenary session.

It is believed that in all probability most of the recommendations will be for State and local activity which seems most effective in this field, though certainly some suggestions as to additional executive and legislative action at the Federal level may be included. In general, at present, the Federal Government activity has been very much greater than at the State level.

The planning committee chairmen are expected to meet here in Washington on April 21 in order that they may work out how the workshops will be conducted.

A second meeting of the Advisory Committee will be held on May 12 to approve the recommendations of the various subcommittees, etc., etc.

As you know, the law provides for a report, including recommendations, to be made to the new President by April 9, 1961.

The fact that the law was passed by a Democratic Congress, under sponsorship of Democratic Members, was signed by a Republican President and is being administered by a Republican Secretary of Health, Education, and Welfare, leads me to hope

that in every activity the conference will be truly nonpartisan. It must be in order to assure its success.

I will, of course, be happy to give any further information to any of my old and good friends on the Ways and Means Committee.

With kind regards.

Sincerely,

ROBERT W. KEAN,
Chairman, National Advisory Committee.

Address by Claude R. Wickard on
Rural Electrification and the Agricultural Hall of Fame and Exhibition

EXTENSION OF REMARKS

OF

HON. VANCE HARTKE

OF INDIANA

IN THE SENATE OF THE UNITED STATES

Wednesday, March 2, 1960

Mr. HARTKE. Mr. President, a distinguished Hoosier, Claude R. Wickard, made a very excellent address at the 18th annual meeting of the National Rural Electric Cooperative Association in St. Louis, Mo., on February 25. Claude Wickard served as REA Administrator and Secretary of Agriculture under two Presidents, Franklin Roosevelt and Harry Truman. In the St. Louis address he had occasion to comment on the program to establish an Agricultural Hall of Fame and Exposition. I ask unanimous consent that the text of this address be printed in the Appendix of the RECORD.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

RURAL ELECTRIFICATION AND THE AGRICULTURAL HALL OF FAME AND EXHIBITION

(By Claude R. Wickard, former Secretary of Agriculture)

I am most grateful for the privilege and the honor of addressing your great annual convention once more. The last time I addressed your annual convention was 7 years ago in San Francisco when I appeared before you as a bureaucrat. Then I had to speak under bureaucratic restrictions and inhibitions. Because I was under bureaucratic limitations, I couldn't even tell you that I knew that my days as a bureaucrat were nearing an end. I know that some of you sensed that was true because you came to me to personally express your sentiments in the matter. Today I can tell you how much I appreciated your remarks and today I want to tell you how grateful I am to all of you for your cooperation and for your patience and tolerance for my efforts to carry on the responsibilities of REA Administrator.

I did not attend your first convention here in St. Louis 17 years ago. As Secretary of Agriculture, I felt that I was under some severe bureaucratic limitations. Some of you, I am sure, remember that in REA and elsewhere, there were some very bitter controversies concerning your origin and purpose. I was beseeched by sincere friends of REA to denounce you. Perhaps I took the easy way out—the bureaucratic way out—to stay aloof from your early efforts to organize a national association.

Today, as a plain citizen and a member of an REA financed cooperative, I can say just what I think.

First, I want to tell you how pleased I am that you have gained the membership and

influence that you now have. I gain much satisfaction and assurance from your plan to carry the fight to the battle ground chosen by the enemy. The battleground I refer to is the public press. I want to congratulate your president and his board of directors for recommending this plan of action and I commend you co-op officials and members for approving it. It is so wise that you are celebrating REA's silver anniversary in this manner. Otherwise there might never be a golden anniversary celebration. To put it even more bluntly, you are engaged in a fight for survival.

In 1935 your opponents tried to see that REA died aborning. Ten years later they tried to persuade the Congress to decide that there was little or no need for appropriations for the REA postwar activities. In later years they used every tactic in the Congress, and even in the courts, to stop REA cooperatives from obtaining their legal share of power generated by publicly financed hydroelectric plants. They have been equally determined to keep you from putting in your generation and transmission systems. They want to control your source of power and thus keep their hands on your throats, ready to choke you when the time seems propitious.

We won those battles, but it wasn't easy. As an ex-bureaucrat, I can now say some things that I think should be said. In all these battles I had the full support of the President of the United States. At first, it was Franklin Roosevelt and later, it was Harry S. Truman.

Again as an uninhibited ex-bureaucrat, I would like to make a statement about another man which I have never before made publicly. A great part of the credit for the success of your organization and the REA program belongs to your General Manager Clyde T. Ellis. We are so fortunate in having as our leader a man who has so much vision, courage, and determination.

Almost invariably when I talk with veterans in the REA battles of the past, I hear expressions of fear because so few people now realize how difficult it has been to bring rural electrification to its present attainment. When later generations take over, there will be even fewer people who will have any knowledge of the struggles that took place in this field. I agree that this is a matter for genuine concern.

In the last couple of years a movement has started which should go a long way toward meeting this problem of ignorance and indifference. I refer to the program to establish an Agricultural Hall of Fame and Exposition. This program is well under way. A good start has been made on collecting, by public subscription, the \$5 million required by present plans.

A 409-acre site has been purchased. It is located 12 miles west of Kansas City and is bounded by the Kansas Turnpike, U.S. Highways 24 and 40, and State Route 7.

It is fitting and advisable to elect to this Agricultural Hall of Fame men who have made great contributions to the progress of American agriculture. But that is just a part of the program to graphically and realistically preserve for and present to the visiting public what has taken place in the past so that from the lessons learned, we can build more soundly for the future.

In my opinion, nothing could be more important and even soul-stirring in this project than the story of rural electrification if it is told properly.

Clyde Ellis and I are on the board of governors of this Hall of Fame project. I am not on the committee to select the men to be honored. However, I hope that when this committee begins its deliberations, it will give serious consideration to the selection of Senator George W. Norris. During his 40 years in the U.S. Congress, George Norris led more successful battles for

reform and for human rights than any other man. Despite the threats, vilification, and nefarious tactics of the selfish and greedy interests, George Norris never wavered or flinched to do his duty as he saw it.

More than one of his colleagues in the U.S. Senate told me he had the most influence upon the voting in the Senate because he had the respect and confidence of all who knew him.

Just before the end of Senator Norris' long and useful congressional career, my wife and I had the great honor and privilege of entertaining him and his good wife in our Washington apartment.

When the evening meal was finished, we gathered around his chair to glean words of wisdom and to worship at his feet, so to speak.

I started the conversation by making reference to the fact so many of his colleagues who fought by his side in the cause of humanity seemed to lose faith and courage and even became embittered as time wore on. My question was, why did he so steadfastly hold to his course through defeat as well as victory. In his very quiet but convincing manner, he replied by telling us the story of his boyhood on a northern Ohio farm. Because of his father's death, following the runaway of a team of horses, and his brother's death in the Civil War, George Norris at a very early age had to assume many of the responsibilities of a father and breadwinner for the rest of the large family. He became accustomed to privation and hard work. Through all this, his mother exerted upon him an influence which guided him through his illustrious career.

The night he told one story about his mother which I have never seen printed. In those days the wheat harvest brought an opportunity to earn some needed money, since the grain was cut by sickle and bound by hand. On this particular occasion, George was working in the harvest field a few miles from home and it was late on Saturday night before he arrived home.

When he arose the next morning, his mother asked him to sit down with her before he did anything else. She said, "Did you come straight home last night?" George replied, "Yes." Again she asked if he were with a group of men who were guilty of arson the night before. George assured her he knew nothing about it. Whereupon she folded her hands in a prayer of thanks.

This was what had concerned her so much. A machine called the Marsh harvester had been put in operation by a neighbor. This machine cut and bound the wheat into sheaves. Obviously it would displace several men who needed work to support their families. So the men on this night set fire to this machine.

George's mother wanted him to know that it was sinful to burn the machine even though it threatened to reduce or destroy a good source of livelihood for her family. It was George Norris' boyhood experience and his sympathy for the farm women of America that gave him the vision and the determination to bring electricity to rural America.

In George Norris' autobiography, there is a chapter called "Lighting the Farms." I want to read to you four short paragraphs from that chapter.

"I therefore regarded the REA not only as a necessary twin development of the TVA but a step which would extend the blessings of electricity to agriculture throughout the Nation."

"It was a great national undertaking, the utility of which was clothed with the most decent sentimental aspirations."

"I knew the heat of those summer days in a farm kitchen in the Deep South or the Great Plains, where humidity and the blazing sun combined with the stove to create unbearable temperatures. I had seen the drudgery of washing and ironing and sewing

without any of the laborsaving electrical devices. I could close my eyes and recall the innumerable scents of the harvest and the unending, punishing tasks performed by hundreds of thousands of women, uncomplainingly and even gaily and happily; growing old prematurely; dying before their time; conscious of the great gap between their lives and the lives of those whom the accident of birth or choice placed in the towns and cities.

"Why shouldn't I have been interested in the emancipation of hundreds of thousands of farm women?"

At your first convention here in St. Louis in 1943, you had Senator Norris as one of your speakers. I quote one paragraph of his speech that day:

"Oh, how we feel, who are as old as I am, if you've lived the same kind of life I had to live and see my poor old mother, when I was just a baby toddling up the hill, carrying a pail of water, going to the pump and pumping the water, sometimes for the cattle and the horses, always for the house, and carrying it in. I can see her yet taking out of the garden a lot of lettuce, taking it over there near the pump and pumping the water to wash it and get it ready for the next meal."

In 1942 because of some inept handling of his campaign, Senator Norris was defeated in his bid for reelection. He did not want to stand for reelection but some of his ardent supporters prevailed upon him to do so. His defeat saddened him immeasurably. That sadness was reduced by the recognition you gave him in your first annual convention here in St. Louis.

Let me read two sentences from his autobiography which refer to that recognition:

"That final journey to my home in McCook from Washington was marked by an incident which, entirely aside from the personal pleasure it gave me, seemed to lift the curtain of the future."

"In St. Louis at the national convention of the National Rural Electric Cooperative Association at which 725 rural electrification projects were represented, I was given a silver plaque upon which were engraved farm buildings connected with REA lines and the Norris Dam."

I have no authority to assure you that Senator Norris will be given a place in the Agricultural Hall of Fame. I can only say that in my opinion, no one person has worked harder, longer, and more effectively for the welfare of rural people. I just don't see how he can be overlooked when the time comes for choosing the men to be so honored.

However that may be, we must keep faith with him and others who made possible the emancipation of farm women and the lightening of the burdens of all rural people through the rural electrification program. We can best keep the faith by keeping up the fight to preserve and improve this program. Your silver jubilee publicity campaign is one effective way of doing this.

Making it possible for the Agricultural Hall of Fame and Exposition to tell the story is another way. We electric cooperative people will have a special opportunity to contribute to the fundraising campaign for this project. Through the good work of Ken Holm and Albert Hauffe, South Dakota cooperative people have already pledged a sizable amount of money. I hope that other States will respond in a similar manner. Such response will help tell the story of rural electrification, in the years ahead, to thousands and thousands of people who otherwise would never have it brought to their attention.

The Centennial Legion of Historic Military Commands

EXTENSION OF REMARKS

OF

HON. PAUL B. DAGUE

OF PENNSYLVANIA

IN THE HOUSE OF REPRESENTATIVES

Wednesday, March 2, 1960

Mr. DAGUE. Mr. Speaker, it is my honored privilege to be a member, by election, of the Old Guard City of Philadelphia, as well as the Centennial Legion of Historic Military Commands, and it is through those associations that I have become better acquainted with the unvarying dedication of these inspired patriots to those things that have made our Nation great.

High on the administrative lists of these patriotic organizations are the names of three old friends of mine; namely, Col. Albert E. Herrmann, Capt. Harry S. Burr, and Col. William H. McIntyre. They have distinguished themselves in the military service of their country, in service to their disabled comrades and in the support of human dignity and freedom generally, and it is in their behalf that I am pleased to include with these remarks a brief outline of the preamble and organizational structure of the commands to which they have brought honor and in which they are honored:

CENTENNIAL LEGION OF HISTORIC MILITARY COMMANDS

The Centennial Legion was organized in Philadelphia, Pa., on July 4, 1876, to perpetuate the military organizations who served and protected our country in the early days of its history prior to, during, and subsequent to the Revolutionary War, and to unite together such military commands as still exist, or their successors, in one body, pledged to keep alive their ancient traditions and preserve the records of their military achievements; to foster patriotism, encourage national defense, and aid in upholding the national institutions of the United States in their integrity; keep alive a spirit of fraternity and benevolence among the Armed Forces of the United States; to inculcate respect for its flag and constitution, and obedience to constituted authority; to recognize and honor all citizens who have served or are now serving in the Army, Navy, Marine Corps, Air Force, its Reserve Forces, and the National Guard of the several States or of the United States; to uphold allegiance to the United States of America and to defend same against all enemies, foreign, or domestic.

The Centennial Legion is the only organization in the world of its character. It is a composite of the citizenry representing every epoch of this country's history.

In the declaration chamber of the Independence Hall, Philadelphia, Pa., on Flag Day, Monday, June 14, 1928, a permanent organization was perfected, articles of incorporation were entered into, and the charter was granted by the State of Maryland on the 14th day of December 1935, and was incorporated as the Centennial Legion of Historic Military Commands.

The first commander of the Centennial Legion was Gen. Harry Heth, of Virginia,

who took office on July 4, 1876. In 1926 when the permanent organization was perfected, Col. Thomas S. Lanard, of the State Fencibles was elected commander. In 1930 Maj. Wellington Wells of the Ancient and Honorable Artillery Company of Boston was elected commander. He was followed by Col. Edward Havemeyer Snyder of the Old Guard of the City of New York in 1932. In 1933 Col. Charles E. Lochhard of the Second Company Governor's Foot Guard was placed in command. In 1935 Brig. Gen. Frank A. Hancock, retired, of the Fifth Regiment Infantry, Veterans Corps, Baltimore, Md., was elected and continued as commander until January 1955.

Capt. Harry S. Burr, of the Veteran Corps, 1st Regiment Infantry, NGP of Philadelphia, Pa., was elected as commander and served until January 1957. Lt. Col. Donald P. Sherman, of the Old Guard of the city of New York, was elected commander and served until 1958. On February 1, 1958, Capt. Augustus J. Migell, of the Ancient and Honorary Artillery Company of Boston, was elected commander, and on January 31, 1959, Col. Wellington B. Searls, USA, Ret., and who was reelected national commander on January 31, 1960, and is now the national commander of the Centennial Legion.

National officers, CLHMC, elected 1960-61, are: 1st vice commander, Maj. Patrick F. Zito of the Putnam Phalanx, Hartford, Conn.; 2nd vice commander, Lt. Col. George Rosenblum of the Old Guard of the city of New York; 3rd vice commander, Lt. Col. O. H. Linck, of the Richmond Howitzers, of Richmond, Va.; and treasurer, Brig. Gen. Aylwyn P. Williams, USAR, of Havertown, Pa.

National directors by States are: Pennsylvania, Capt. Harry S. Burr, Col. Albert E. Herrmann, and Brig. Gen. Aylwyn P. Williams; New York: Lt. Col. George Rosenblum, Col. William H. McIntyre, and Maj. Charles E. Merritt; Maryland, Col. Wellington B. Searls; Massachusetts, Lt. Col. Walter T. Anzoni, Lt. Col. Loring Lucas, and Lt. Martin F. Bashian; Connecticut, Maj. Patrick F. Zito, and Maj. Everett H. Kandarian; Rhode Island, Lt. Col. William I. Baker; New Jersey, Capt. William J. Boyer, Jr.; Delaware, Lt. Col. James G. Maloney; New Hampshire, Maj. A. Erland Goyette; Virginia, Lt. Col. O. H. Linck and Maj. George F. Marable; North Carolina, Maj. Herman L. Bishop; South Carolina, Col. Rudolph D. Zobel; Georgia, Col. Raymond A. Spitzer.

The following historic military commands are members of the Centennial Legion of Historic Military Commands of the Thirteen Original States:

New Hampshire: Amoskeag Veterans. Massachusetts: Ancient and Honorable Artillery Company of Massachusetts, First Corps of Cadets, Lexington Minute Men, Second Corps of Cadets Veterans Association, Fusilier Veterans Corps, National Lancers, Lawrence Light Guard, Veteran Association of the First Corps of Cadets, Worcester Continentals.

Rhode Island: Newport Artillery Company, RIM, Kentish Guards, RIM, United Train of Artillery Veterans Association, Bristol Train of Artillery, RIM, Cranston Bules, RIM, First Light Infantry Regiment, RIM, First Light Infantry Veterans Association, Varum Continentals.

Connecticut: First Company Governor's Foot Guards, Second Company Governor's Foot Guards, First Company Governor's Horse Guards, Second Company Governor's Horse Guards, New Haven Grays, Putnam Phalanx, Sedgwick Guards.

New York: 8th Regiment Veterans Association, NGNY, Veteran Corps of Artillery, State of New York, 107th Infantry, New

York Army NG, Utica Citizens Corps Veterans' Association, Washington Greys (258th FA Bn NYARNG), Old Guard of the City of New York, Troy Citizens Corps, Veterans of the Seventh Regiment, Defendarm Association, Veteran Association of the 71st Regiment, NYNG, Veteran Association on 12th Infantry, NGNY.

New Jersey: Morris Guards, Hq 102d Armd. Cav. NJAENG.

Pennsylvania: Veteran Corps, First Regiment, NGP, Veteran Guard, Third Regiment, NGP, Artillery Corps, Washington Greys, Washington Infantry of Pittsburgh, State Fencibles Infantry, Old Guard, State Fencibles, Old Guard Infantry Corps of National Guards, 2d Regt. NGP, Old Guard, City of Philadelphia, Inc.

Delaware: American Rifles (156th AAA Bn. DNG.).

Maryland: 175th Infantry (Fifth Maryland) MdARNG, Veteran Corps, Fifth Regiment Infantry, MdNG.

Virginia: 1st Virginia Infantry Regiment, Richmond Light Infantry Blues, Richmond Grays, Danville Grays, Richmond Howitzers.

North Carolina: Fayetteville Independent Light Infantry.

South Carolina: Washington Light Infantry of Charleston, S.C.

Georgia: Georgia Hussars, Irish Jasper Greens, Republican Blues, German Volunteers, Old Guard of the Gate City Guard.

The city of Baltimore and the State of Maryland, along with the 175th Infantry (Fifth Maryland) MdARNG and the Veteran Corps, Fifth Regiment Infantry, MdNG, will be the host this year to the Centennial Legion of Historic Military Commands of the Thirteen Original States at Baltimore, Maryland on September 23, 24, and 25, 1960.

Lincoln's Greatness

EXTENSION OF REMARKS

OF

HON. BARRY GOLDWATER

OF ARIZONA

IN THE SENATE OF THE UNITED STATES

Wednesday, March 2, 1960

Mr. GOLDWATER. Mr. President, on Lincoln's Birthday it was my privilege to participate in services in his memory at the Lincoln Club of Los Angeles. During the course of the evening, a very learned address, entitled "Lincoln's Greatness," was delivered by Mr. Martin Diamond, of Claremont Men's College. I ask unanimous consent that the address be printed in the Appendix of the RECORD.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

LINCOLN'S GREATNESS

What constitutes Lincoln's greatness? In what does Lincoln's greatness lie?

That we love him is good for us, and it does us credit. But to understand rightly what it is in Lincoln that warrants love would do us still more good, and would even do us honor. I do not pretend fully to understand Lincoln's greatness. But I propose to examine with you tonight, briefly, some of the ways men have viewed Lincoln and to learn, from a critical examination of those views, the direction in which our minds will have to move if we are to comprehend and thus appreciate this man.

I propose to examine two popular views of Lincoln and—not to neglect that portion of the populace from which I come, the academy—a certain academic view of Lincoln.

In what I say about these views of Lincoln you will notice an underlying concern with the general problem of political leadership. We will want to see what Lincoln's greatness teaches us for an understanding of the kind of political leadership we need now, that men always need.

How do we love Lincoln? As what, for what? May I tell you how my own love for him was kindled? Perhaps you will recognize in this something of your own experience. When I was a boy in grade school, there was always in my classrooms a framed picture of Lincoln. It was always located just over one of the blackboards. I remember distinctly that it was always covered with chalk dust. And there—as in a gauzy film shot of a Hollywood heroine—was the silent, sad, infinitely kind countenance of Mr. Lincoln. This countenance with its soft, deep, brown eyes instantly confirmed the stories one had heard of sentry boys fallen asleep on duty, condemned to death, but saved when Mr. Lincoln tearfully answered a mother's prayer. This is the man of sorrows Lincoln, the gentle, the tender Lincoln. But the harsh fact is that during the Civil War 267 soldiers were executed for various derelictions of duty and all this with Lincoln's tacit approval. How could it be otherwise, given the terrible circumstances of the war he had to fight? Do I scoff at the Lincoln of my classroom, whom I have portrayed deliberately with an exaggerated bathos? Not in the least. But the view of the tender Lincoln must be enlarged to comprehend the hard Lincoln, in whose armies 267 men were executed, who slapped men into jail and suspended the writ of habeas corpus, who drew unto himself extraordinary executive power, and who pressed his generals to vigorous attack, to destroy armies and not to take cities. The tender Lincoln of tears is a true, but only partly true Lincoln; it ignores the other side of the man, and thus lessens him. It does not do his greatness justice. We have all known and loved gentle men. But gentleness alone—no more than strength alone—does not constitute greatness. If we are to see Lincoln in a way that squares with the greatness we assign to him, then we must go beyond the popular view of the tender Lincoln. We must go beyond that view, preserving its truth but adding to it that which renders more fully the man's greatness. In this way. Yes, he was a gentle man, but he was steel when steel was needed. He forced the crisis of the Union with his famous house divided policy, and this was no tender thing to do. He fought a war, and wars are not won by gentleness. But the soul of a nation is saved, and that the peace that follows war is won by the gentleness of soul of he that does the implacable and terrible things that have to be done in crises and wars. And, to vary a famous modern prayer, he had the intellect, the wisdom to distinguish the things that call for strength from the things that call for gentleness. Lincoln was hard only when and only insofar as hard measures were truly required. It was thus, by his profound understanding of the nature of politics and of the political situation he faced, that he could meet every test with the strength it required, and yet bequeath to his Nation a heritage of moderation and kindness.

This is why we tend to forget that Lincoln pressed the Constitution to its utmost limits, and perhaps beyond. It is because we know he wisely discerned, as far as any man can, what was necessary and exerted power only as it was necessary to his great purposes. We forget, or better, we vindicate his conduct because we know that he never was victimized by the exertion of power never came to enjoy it for its own sake, apart from the great ends to which he was dedicated. I offer one quote from Lincoln

to support my point. You all remember these words from the second inaugural. "With malice toward none, with charity for all." We sometimes forget the words that follow: "With firmness in the right as God gives us to see the right." It is the combining of charity and firmness that makes Lincoln great.

Let me leave this point with one further indication of my meaning. Lincoln wielded great power, and at times wielded it nearly dictatorially. You all know Lord Acton's famous and valuable statement. "Power tends to corrupt and absolute power corrupts absolutely." There is something in Lincoln which goes against Acton or, rather, warns against too simple an agreement with Acton. I think Lincoln shows us the greater wisdom of a wiser man than Acton. I mean the great French writer on America, Tocqueville, who wrote: "Men are not corrupted by the exercise of power or debased by the habit of obedience, but by the exercise of a power which they believe to be illegitimate, and by obedience to a rule which they consider to be usurped and oppressive." There is much more to this problem but I must leave it at this. Lincoln, by his superb and just compound of the tender and the strong has taught Americans how not to be corrupted by the exercise of power or by obedience to it. He teaches us how to face—with a proper fear and yet with a reasonable hope—how to face the task of governing men in a free republic. It is easy to be soft, it is easy to be hard. It is greatness to be both gentle and strong and to know when and how to be each. John Drinkwater in his play has Lincoln say, "I accepted this war with a sick heart." Yes, his heart shrank, but his head and hand were ready to the task. That is his greatness, and we must love it in its fullness.

I turn now to another popular view of Lincoln. Lincoln the common man. He was one of us, this loud laughing, sometimes rowdy, tall galoot of a man. This is the view of Lincoln as the wisecracker, the joke teller, the simple man of homely truths. The poor boy, without education, without advantages, who made good, who was "plain folks" writ large. Is this a true view? Will the Lincoln thus portrayed fit the mantle of greatness we lay upon him? Again I do not scoff. But we must go beyond this. There were a thousand, 10,000 men then, and 10,000 men now who fill this bill. Joke tellers as funny, men without advantages who have made good. It is wrong and it is demeaning to Lincoln to exaggerate his commonness. Let me paraphrase Lincoln to make my point. He was of us, and he was for us, but he was not by us. He was of us, yes. He had our ways, our speech, he sprang from this soil. And he was for us. He bent his efforts to our well-being, he gave infinite dignity to our principles of popular government, and he cared for us. But he was not by us. We did not make him what he was. He was greater than that. His greatness of soul and mind belong not to us, but to man as man. He transcended the conditions of any society as such. But what we can claim, what we can everlastingly claim is that we did accept this prince of men, we gave ourselves to him, we let him lead us, and we have the sense to love him. It is the noblest claim of democracy that this man of humble origin could rise from our ranks, and through our ways, to the height of human achievement.

Let me be specific. Common man? Uneducated? We all remember the story of his scratching his sums on a shovel, by the light of the fireside. True. Fine. But if we flatter ourselves that that is all, that a simple education, a good clear head, and lots of practical experience is enough for the greatness which is Lincoln, we go wrong. Let me remind you of some things about his education. I do not, of course, mean the schoolroom. I mean his studies. Unfortunately,

and as I know only too well, schoolrooms and studies are not always synonymous. As it were, you can lead the student to the schoolroom, but you can't make him think. Lincoln was an extraordinarily well-read man. I have been going over the list of books he read. Merely to name some will make my point. The Bible, Shakespeare, Aesop's Fables, Robert Burns, Lord Byron, Milton, Gibbons, Paine, Euclid, Bacon, Feuerbach, Fichte, Paley, Homer, Plutarch, Cervantes, Blackstone, Story's and Kent's Commentaries, and dozens more. He read lots of history. He mastered some science. He even devoured a Greek grammar. And, of course, he read nearly all the great speeches and writings of American statesmen, and much American history. And, of course, he read more journals, papers, periodicals than I could here list. Let me add this: When I say he read these great books, I mean he really read them. He read intensely, studiously. He committed to memory endless pages of what he had read. He was in the deepest sense a learned man.

What is my point? I want to show what is lacking in the view of Lincoln as common man. Certainly Lincoln had frontier wit, but he had also the brilliance and depth of Shakespeare. He had the best of cracker barrel commonsense and he had also that philosophical wisdom that comes only from intense scholarly, intellectual study. He had the richness and flexibility that comes of practical experience and he had the depth and rigor of the trained philosophical mind, the depth and rigor that comes only to the uncommon mind and that comes only with an uncommon devotion to intellectual reflection. The view of Lincoln as common man is true, but only partly true. Frontier wit, cracker barrel commonsense, practical experience—these make him a splendid fellow. When to this is added genius honed by intense study and reflection we begin to perceive Lincoln's greatness. Frontier wit, cracker barrel commonsense, and practical experience. This was by us. This we gave him, and in this he was only the best of what all Americans had in some degree. But the genius reaching out to the company of great minds in every age and place, that is beyond us. We may give thanks that he happened among us and that we had it in us to accept him. Let me put it this way. He was not, as some would have it, a "cross-section of humanity," but rather a man who shows us to what height the human nature can reach. He was the "common man's uncommon man." We must learn to love his uncommonness and pray that such will rise among us again, and prepare ourselves to accept and not reject it.

I have been speaking of the qualities of Lincoln during this examination of two popular views of Lincoln. Now let me turn to an academic view of Lincoln. Here we will examine especially the policies of Lincoln. It is appropriate to my profession that, during this little talk, I should give you at least one reading assignment. There is a new book on Lincoln that I must mention because I owe it so much. In my brief comments on this academic view of Lincoln, I will be drawing on it heavily and therefore must mention it. I know the author well enough to know he will forgive me my reliance on his work. The author is Prof. Harry Jaffa. The title of the book is "Crises of the House Divided." I recommend it to your attention.

Now to this academic view of Lincoln. It goes by the name "revisionism." In recent years, certain historians have come to revise the established views on the Civil War; hence revisionism. Since trends in scholarship often involve revision of earlier views we have these days several schools of revisionism. I am talking now about the Civil War revisionists. The center of this view is the opinion that the Civil War was a needless

war. It was not, in Seward's phrase, an "irrepressible conflict"; rather it was a repressible conflict. It was a tragic breaking down of our political process, of the give and take, the bargaining and compromise of politics. Extremists arose, North and South, the abolitionists and the "peculiar institution" defenders of slavery as morally sound; and they passionately injected moral issues into politics, thereby inflaming the political situation. And thus the breakdown of compromise, secession and the terrible Civil War. If only the wisdom of a Clay had prevailed, if only politicians had stayed calm and pragmatic all would have worked out. Thus revisionism. But what about slavery? Perhaps the Union would have been saved, but what about slavery? The revisionists have an answer to this. There was no need to fight. The Union could have been saved, compromise would have worked, and slavery would have died a natural death. How so? Because there was a natural limit to the extension of slavery. It would have been unable to advance farther into territories whose soil, climate, and circumstances made slavery unprofitable. And in time it would have died of unprofitability and opprobrium in the South itself.

Now what has all this to do with Lincoln? Why he is the villain of the piece. The anonymous villain, I hasten to assure you. Few are so bold as to name and blame him fully. But there is no other possible implication. While Lincoln was no abolitionist, it was he more than any other man who drew the line on slavery. On this Lincoln was implacable. And that meant that he was implacable on the one issue where the North had to give if secession was to be avoided, because the right to extend slavery into the territories was the very issue to which all of the passions of the South had been drawn. It was Lincoln who molded and hardened northern resistance on the very thing where resistance meant southern secession. Thus he is revisionism's implicit villain. And even more. In the house divided speech, Lincoln made clear the meaning of his policy on the territories. Its whole aim was to turn the Nation's face against slavery, to stop it in its tracks and thus "to place it where the public mind shall rest in the belief that it is in the course of ultimate extinction." While Lincoln assured the South that, because of constitutional necessity, he would not take action against slavery in the existing States his territorial policy was aimed at the ultimate extinction of slavery everywhere, in territories and States alike. This is what Lincoln meant by his statement that the Nation could not endure half slave and half free, and this was what the South knew he meant. Villainous is it not? It was Lincoln who made the conflict irrepressible. The only way to repress it was to conciliate the South, to abandon any restraint upon slavery. And this Lincoln would not do, nor allow the Nation to do. There was a man who wanted to repress the conflict, and he is the implicit hero of revisionist historians. Stephen A. Douglas. Douglas' policy of popular sovereignty was aimed at extinguishing the political crisis of slavery, by removing it from the Nation's jurisdiction and placing it within the jurisdiction of the localities, the States or territories. Indeed, he denounced Lincoln as being a tyrannical nationalist, who wanted to destroy the Federal character of the Union. Douglas and his policy were the last remaining hope that the crisis might be averted. But in the famous debate of 1858, it was Lincoln who, though losing the election, forced Douglas into such utterances as destroyed his policy and his standing. When the debate was over Lincoln had destroyed the last remaining hope that the crisis might be averted. From that moment events rushed headlong to war. Villainous is it not?

Why did he do it? Revisionism, the

academic view I am discussing, answers explicitly or implicitly, he did it as a politician, an ambitious man desperately seeking issues, the agitation of which would prevent Douglas' domination in Illinois. That is, he took a position ruinous to his Nation for the sake of his own political advancement. I needn't say that this is a view of Lincoln which does very little justice to his greatness. How may he be rescued from this fix? It all depends upon the question of whether slavery was in the way of dying a natural death or whether it needed the hard push Lincoln gave it. All are agreed now that slavery had to go. In justice to Douglas it is probable that he too thought it had to go, and thought his policy the best way to permit it to die. I cannot tonight give the long and careful argument Lincoln offered to sustain his position that the time had come to hold fast against slavery. But as far as I understand him, I agree with him wholeheartedly. I offer you the barest outline of his argument. The American situation regarding slavery was worse in 1858 than it was in 1776 or 1789. From an evil tolerated as a necessity in the expectation that it was dying, millions had come to view it as a positive good. The defense of this positive good was leading millions of men into a denial of the full meaning of the Declaration of Independence, into a denial of the noble principles upon which free government must rest. And nature would not stop this growing and fatal evil. Once before men had hoped it would fade away, but the cotton gin had caused a new birth of slavery, by making it profitable again. Who could say—with new means of simplified labor, of mass production occurring daily—that technology would not give new life to slavery by making it profitable. Soil and climate would not stop slavery because men, driven by economic interest and doctrinal commitment, would find ways to use slavery. Consider only how slavery could have been employed in the mines—the classical occupation of slaves—in the new southwest. No, said Lincoln, it had to be stopped politically, affirmatively and hard. He held back his hatred of slavery, was utterly loyal to the Federal principle of the Constitution with regard to slavery in the existing States. But he found—and this was his superlative skill as a political leader—the great issue—prevention of slavery in the territories—which would rally the majority of the nation back to its ancient faith, to the defense of the Declaration and its principles against the claims of slavery, and thereby to purify the Republic.

I say he was right. When would slavery have died its natural death? 1862? 1863? 1875? 1890? 1900? The imagination boggles at the horrible thought of that disease continuing in our Republic. I say Lincoln was right because he knew a moral issue when he saw one, because he had the superlative skill to win the consent of Americans to his side on that moral issue, because he had the firmness to do what had to be done, and because he did it so that charity might come again to the Nation. On the view of Lincoln held by some of my academic colleagues, he is reduced from greatness to baseness. But they are wrong. His greatness may be vindicated. I have tried to show you what has to be thought through in order to vindicate his greatness. Knowledge of Lincoln does not cool one's ardor. On the contrary, to know him more is to love and honor him more.

One last word and I am through. What does Lincoln teach us regarding political leadership? Emerson said of Lincoln that he was "the executive of the best public sentiment of the country." That tells us much that we need to know about political leadership. Great political leadership is not a matter merely of techniques and means. Nor is it a matter merely of mouthing pious aspirations. Political leadership must be

judged by the ends and purposes to which the led are advanced, by both the ends and purposes it offers and by the extent to which men are brought to fulfill those ends. Great political leadership makes a nation nobler than events could have made it without that leadership. Never was this more superbly done than by Lincoln.

The Commodity Credit Corporation Storage Investigations

EXTENSION OF REMARKS

OF
HON. BEN F. JENSEN

OF IOWA

IN THE HOUSE OF REPRESENTATIVES

Wednesday, March 2, 1960

Mr. JENSEN. Mr. Speaker, much is being said and written about the investigation into the U.S. grain storage costs, which would give the impression that those who store farm commodities for the Government have been carrying on their business outside the law—or that they have been making huge profits to which they are not entitled to under law.

The facts are, of course, that the rates for storage were set by the Government, not by the people who store these commodities in their own storage facilities, so it is plain to see that if the storage rates are too high it is not the fault of the owner of these storage facilities; hence, it is unfair and unjust to attempt to hold them up to public scorn.

Mr. Speaker, I am sure you will remember that before 1953 it was necessary for Congress to appropriate each year hundreds of millions of dollars for CCC grain bins and for storage facilities of every nature, over and above the amounts appropriated since 1953. Why? Because in 1953, shortly after the Republicans took control of the White House and Congress, we passed a law which permitted private industry, farmers included, to write off for income tax purposes over a period of 5 years capital investments for the building of agricultural commodity storage facilities which encouraged the building of such facilities enormously, by not only the dealers in such commodities, but also by our farmers and other people who had money to invest.

That rapid writeoff law applied also to farm machinery because we felt that since private investments in all facilities for military supplies and storage were allowed the rapid 5-year writeoff for income tax purposes, then surely private investments for the production and storage of feed, food, and fiber—the most essential military commodities—were also entitled to it.

I have given these facts in order to clear up in the reader's mind the history of this grain storage program. I am sure you remember the unjust criticisms which were directed at the 80th Congress during the 1948 campaign by Mr. Harry Truman and others in his party, claiming that the Republican 80th Congress had not appropriated enough money for grain bins, only to learn after that election that the contracted ship-

ments of such bins from the factories had been unduly delayed.

Now, Mr. Speaker, I am sure good profits—and, no doubt, too good in some instances—have been made by those who store CCC commodities, but I'm also sure that after most of those companies paid their local, State, and Federal taxes, their insurance and their high overhead expenses of doing business, and after deducting depreciation and upkeep on their bins and buildings, the repairs on their trucks, shellers, loading and unloading devices, and so forth, that the net returns to total investment would show an entirely different picture than the stories and figures we read about in the newspapers these days.

And again may I say, let us not forget that they did not set the storage rates.

Here is a letter which I feel deserves to be inserted at this point in the RECORD:

McARTHUR CHEMICAL Co.,
Eldridge, Iowa, February 6, 1960.

HON. BEN F. JENSEN,
House of Representatives,
Washington, D.C.

DEAR SIR: During 1958, our county ASC man encouraged us to go into the business of storing Government grain. After investigation, we decided to erect a 130,000-bushel bin. There were doubts as to getting the site filled, though we were strongly reassured that there was more than enough corn coming in. Our building was ready late that summer, but we only received some 58,000 bushels of corn. Our revenue was \$9,200. Our costs were \$8,030 which includes insurance, monthly inspections, fumigation, taxes, interest, and depreciation based on 10 years. We figure no labor because that was equalized by receiving charges. Nor have we included any reserve for spoilage loss and shrink. That leaves a net profit of \$1,170 on \$34,000 investment, or 3 percent return.

However, during 1960 we should be able to make a reasonable profit because we now have 93,000 bushels of corn. But, of course, this is assuming that there is no reduction in storage rates.

When making the decision on what the rate will be, please bear in mind the reason for private grain storage. That is because heretofore there was excessive spoilage in Government bins. Consequently, private enterprise was invited to store grain at a fee set by the Government. So it doesn't seem fair to lower this fee.

Granted, there are cases of high profits. For instance, the faux pas wherein a party leased a Government building for \$28,000 and grossed almost \$2 million on it. This and other cases are not representative and, therefore, not admissible evidence. The average, small operator must be studied and considered because he went into the storage business at the Government's request and on the Government's terms.

Very truly yours,

M. McARTHUR, Jr.

Minnesota's Own Children's Ranch

EXTENSION OF REMARKS

OF

HON. HUBERT H. HUMPHREY

OF MINNESOTA

IN THE SENATE OF THE UNITED STATES

Wednesday, March 2, 1960

Mr. HUMPHREY. Mr. President, recent Senate approval of legislation de-

signed to combat America's juvenile delinquency problems reflects a growing awareness of the problems and the needs of our young people. I wish to call attention to the achievements of a special program operated in Minnesota by the Volunteers of America in line with the purposes of the delinquency control legislation we passed here in the Senate.

The Bar-None Ranch, Minnesota's Own Children's Ranch, located in Anoka County 32 miles from Minneapolis, receives boys and girls referred through the Hennepin County Department of Court Services and the Anoka County Probation Office. These boys and girls come to the ranch for an intensive weekend program of work and play, group therapy, and personal counseling.

This experimental program begun last October shows a tremendous potential cost-saving in treating and rehabilitating children who have got into trouble with the law. It is possible that similar projects near large cities throughout the United States can rehabilitate many children through weekend programs which are far less costly than complete institutional care.

I ask unanimous consent that an article about the Bar-None Ranch from the Minneapolis Tribune of January 31 and a subsequent letter to the editor by Lt. Col. Robert E. Nolte, executive director of the Volunteers of America in Minneapolis, be printed in the Appendix of the RECORD.

Lieutenant Colonel Nolte is one of our most respected and admired citizens. I have known him for many years and am honored by his friendship.

There being no objection, the article and letter were ordered to be printed in the RECORD, as follows:

[From the Minneapolis (Minn.) Tribune,
Jan. 31, 1960]

"RANCH" OPENS NEW VISTA TO DELINQUENTS
TO THE EDITOR:

The January 31 Sunday Tribune story about the Volunteers of America Bar-None operation ("Bar-None Ranch Offers New Approach to Delinquency Fight," by Daniel J. Hafrey) vividly portrayed some of the interesting developments in our weekend ranching program.

Hafrey is correct in calling this effort a fight against delinquency. But especially significant is the fact that in each of these lives the battle for success is being won by the parents and the youngsters themselves. They are not being forced to conform. They are seeking and finding a new way of life.

These parents admit that somewhere they've made mistakes. They still love their children and want to help them.

We can honestly say that the success of the program is due as much to the interest and zeal of the parents of the weekend ranchers as it is to the fine professionally trained and experienced staff working with the boys and girls.

All of the parents agree in advance to attend six group sessions. Many of them continue to attend these sessions long after the requirement is fulfilled, driving 70 miles for each visit. These parents and their youngsters are making a significant contribution to society's quest for an answer to the delinquency problem.

As a parent of five children with many mistakes behind me, I enjoy meeting every Sunday afternoon with these folks, whose courage exceeds my own. How many times

they have said, "We know we've made mistakes. Help us and we'll do our best."

We of the Volunteers of America are thrilled with this new addition to our other Bar None Ranch services. Its success thus far has come because of the excellent background work of the department of court services, which has made possible a diagnostic and treatment approach to each child's problems. This has been followed through by an excellent ranch staff headed by Jack Fallon of the court services department.

Hats off again, though, to these courageous parents. In finding some answers to their children's problems, and in letting the stories be told, they help all society.

Lt. Col. ROBERT E. NOLTE,
Executive Director, Volunteers of
America, Minneapolis.

BAR NONE RANCH OFFERS NEW APPROACH TO DELINQUENCY FIGHT

(By Daniel J. Hafrey)

ST. FRANCIS, MINN.—When 13-year-old Joe first started coming to Bar None Ranch for weekends, his pockets were loaded with candy and small change.

"I'll give you 15 cents if you'll play ping-pong with me," he would tell a counselor. "Will you let me drive the tractor?" he would ask Dick Ketcham, farm supervisor, proffering a candy bar.

One Saturday morning he walked up dejectedly to Ketcham in the barn.

"I don't suppose you'll let me drive the tractor today," he mumbled with a sidelong glance at the burly farmer. "I haven't got any candy bars."

This is where the education of Joe began. "Listen, boy," said Ketcham, who claims no knowledge of psychology or social work. "Do you think I let you drive the tractor because of your candy bars?"

"I let you drive it because you like to do it and I think you can do it. If I didn't think you can drive the thing all the candy bars in the world wouldn't change my mind."

As far back as he can remember, chubby Joe, who lives alone with his doting widowed mother, has tried to buy friendship. Also, he's skipped school with regularity and engaged in petty theft with the same regularity.

That got him before Juvenile Judge Thomas Tallakson and to Bar None.

Now look in at the comfortable office of Lt. Col. Robert Nolte, national youth director for the Volunteers of America, who own the ranch, and executive director of the organization's Minnesota division.

Sitting across the table from a pair of giggling, fresh-complexioned teenage girls, Nolte asked: "Let's hear, girls, what you hope to be and have when you grow up."

Said blond, petite Jean: "I want to be a singer. I want a family, four kids, a nice husband who doesn't run after other women and doesn't drink too much. He must be a good Christian and go to church. I want a church wedding. I want a small house, a good car, no furs and lots of love."

Added brunet, bubbly Betty: "I want to be a secretary or a beautician. I want a family with 13 kids and a nice husband. He doesn't have to be handsome, but he must be a gentleman. He must not drink. I want a big house, a boat so we can water ski, a station wagon and nice clothes. And we'll all go to church."

This, in part, is where the education of Jean and Betty began.

Nolte, who is too modest to claim much knowledge of psychology and social work but has a great deal of both nonetheless, as well as much commonsense and vast experience, looked up after a moment and asked:

"Do you think you can get the kind of nice men you want the way you are living now?"

Jean and Betty smoke heavily. Their language would make a stevedore blush. Both have a long history of conflict at home. At

15, Betty is a compulsive drinker. At 15, Jean has run away from home repeatedly and lived with older men.

That got them before Tallakson and to Bar None.

Joe and Jean and Betty are not the youngsters' real names. But there are girls and boys at Bar None with just these problems. All three are taking part in what Tallakson calls a new and wholesome approach to the growing challenge of juvenile delinquency.

It grew out of a feeling on the part of Nolte and his wife, each in volunteer work for 25 years, that existing youth programs seem to bring no concrete changes in delinquency.

"Giving them recreation, sports, and handicrafts just isn't enough," said Nolte. "We need a more realistic approach that will try to get to the bottom of these youngsters' difficulties."

Nolte went to Paul W. Keve, director of Hennepin County court services. No one is more aware than Keve of the pressures of growing numbers of delinquents, insufficient probation and parole staffs and the overcrowding of juvenile institutions such as Red Wing Training School or Glen Lake Home School.

Besides wanting to save the money required to build new institutions, Keve always is looking for new, more effective ways of treating delinquents.

From the meeting of the two men resulted the new program—first of its kind in the Nation which, Tallakson believes, may set a new pattern.

"Weekend ranching" means that delinquent boys and girls on probation are left at home during the week so they can continue school and lead a normal family life.

On Friday afternoons they are taken to Bar None for 2½ days of hard work, supervised recreation, and intensive counseling. There are farm and housekeeping chores, horseback riding, skating, tobogganing, parties, and indoor games.

Central to the whole program is close supervision and continued counseling, said Jack Fallon, a young, self-assured probation officer from Keve's office who runs the show.

Saturday nights the youngsters break up into small groups for group therapy under guidance of a staff member. They are encouraged to talk out their problems, to try to understand what has led them into delinquent ways. The youngsters comment on and criticize each other's actions, thoughts, and attitudes.

Group therapy, relatively new in Minnesota, has been acclaimed elsewhere as producing good results in treating persons with emotional and behavior problems, adults and juveniles alike.

There's more than the formal sessions. Fallon and his staff are on hand at all times to make a telling point with a boy or girl when necessary.

A counselor may interrupt hay-pitching chores at the barn to talk over his behavior with a boy. Or he may take aside another after undue boisterousness at lunch.

Early Sunday afternoon the parents arrive. They may spend a few hours with their children in the cheery, spacious lodge. Or they may wander down with the children to the lake for skating or sledding. Or they may just go for a walk.

Around 3 p.m. there is a group therapy session for the parents. Again, under guidance of experienced staff members, the parents are encouraged to talk, are helped to understand what has gone wrong with their children, what they may have contributed to their delinquent behavior and what they might do to improve things.

Once again, the exchange between parents is an essential part of the process.

After the session there is a buffet supper for parents, children, and staff. Then the parents take their sons and daughters home for another week of life at home and school.

Launched in October, the program now serves 17 boys and 8 girls. Nobody knows yet how long they will stay there or whether all will benefit. But a stay of 8 to 10 months is a good guess.

Hennepin and Anoka County court services pay Fallon's salary and transportation. A citizens' committee now is trying to raise the \$23,000 it takes to run the program for the first year, in addition to Bar None's free facilities.

Said Nolte: "We think this is a more realistic, deeper reaching approach. This way we don't uproot a child. When he goes to an institution he must readjust all over to living at home after discharge."

"This way he lives his normal life all week long. But over the weekend he gets much more intensive treatment than he could get from an overloaded probation officer. Then, too, the weekend is the time of greatest opportunity for getting into trouble at home. By getting them to the ranch we avoid that."

Added Tallakson: "One of the virtues of the program is the recognition that you can't deal with a child in isolation. Many delinquency problems go back to the home. This program recognizes both the parents' rights with regard to their children and their duties."

Already, said the judge, the program has shown encouraging results.

What Tallakson didn't say, but what helps too, is that parental visits are part of the conditions on which a child goes to Bar None. If a parent refuses to come, his child may end up in Red Wing since he would not benefit from weekend ranching.

The same thing may happen if the child absolutely refuses to go to the ranch. So far, Fallon said, there hasn't been a child who simply couldn't be persuaded to give it a try, although some approach it with real fears.

Tallakson's point was illustrated by one woman whose son has been rebellious, truant and runaway and whose father had threatened to "break his backside down until he minds."

After a half-dozen Sunday visits she conceded that "maybe not all the fault is Jim's. Maybe part of the fault is ours, too."

Said a father whose son by a previous wife just couldn't get along with his stepmother, and who has been skipping school, stealing, and setting fires:

"Down at the plant I run a lot of men and have no trouble. But I have never been able to run Bob. Here at the ranch is the first time anybody can get to him. I sure appreciate what they are doing for us here."

Bob himself, a likeable 11-year-old tow-head who looks as if butter wouldn't melt in his mouth—until he opens it to speak—unwittingly summarized best what to Fallon, Nolte, and Keve is the gist of the program, what they are trying to give their young charges.

When his turn came to lead a song during the after-lunch pandemonium, Bob conducted with gusto a song containing the following lines:

"You must go and stand your trial
You have to stand it by yourself
Oh, nobody else can stand it for you
You have to stand it by yourself."

Poll Results

EXTENSION OF REMARKS

OF

HON. ROBERT J. CORBETT

OF PENNSYLVANIA

IN THE HOUSE OF REPRESENTATIVES

Wednesday, March 2, 1960

Mr. CORBETT. Mr. Speaker, I have just completed another of my regularly

conducted polls of public thinking in my congressional district. The poll was based on some of the extremely important issues facing the Congress and the American people today. Total response far exceeded my expectations and the tabulated results virtually constitute a referendum of my district.

My polls are in the form of a printed questionnaire, requiring simple yes-and-no answers, mailed to the registered voters in the district, regardless of political affiliation.

The district is very representative and is composed of many varied interest groups. It has the wealthy, the poor, and the so-called middle class. It has a high concentration of labor, white-collar workers, small business, large industries, and productive farmlands. Its political complexion is slightly Democratic.

The percentage tabulation of the answers on the poll I have just conducted are included below without comment. I trust the results will prove as interesting and informative to all who study them as they are to me.

POLL RESULTS

1. President Eisenhower, in his state of the Union message, prophesied a \$4.2 billion surplus for the next fiscal year. Do you feel this surplus should be used to reduce the national debt instead of reducing taxes? Yes, 81 percent; no, 19 percent.

2. He also declared that our defense installations and aggression-deterrent weapons were adequate to our needs. Do you agree? Yes, 65 percent; no, 35 percent.

3. The budget will recommend for space exploration about twice as much money as was available this year. Would you vote? Yes, 69 percent; no, 31 percent.

4. A bill is pending to provide tax-paid medical and hospital insurance for people eligible to receive social security benefits. Does it have your support? Yes, 53 percent; no, 47 percent.

5. Public Works appropriations, which contain provisions for flood control and rivers and harbors improvements are often labeled "pork barrel bills." Do you oppose them? Yes, 48 percent; no, 52 percent?

6. Has the time come when the United States should insist that the prosperous industrialized nations of the free world join in contributions to aid the underdeveloped non-Communist nations? Yes, 91 percent; no, 9 percent.

7. Do you believe that the full force and power of the Federal Government should be employed to guarantee the civil rights of all citizens? Yes, 77 percent; no, 23 percent.

8. The Congress will again be asked to provide funds for urban renewal projects. Do you favor this program? Yes, 41 percent; no, 59 percent.

9. A key issue: Do you favor increased Federal spending to expand the economy in preference to reduced spending to retard inflation? Yes, 15 percent; no, 85 percent.

10. There will be a bitter controversy over whether or not to raise the legal interest rate that the Government may pay on long-term bonds. Would you vote "yes" or "no"? Yes, 48 percent; no, 52 percent.

11. Would you favor legislation prohibiting the sale and serving of alcoholic beverages aboard commercial airlines? Yes, 63 percent; no, 37 percent.

12. Legislation is pending to increase minimum wages above the present floor of \$1 per hour. Should it be passed? Yes, 55 percent; no, 45 percent.

13. (Answer by number.) If a Democrat is to be our next President, do you favor (1) Stevenson, (2) Symington, (3) Kennedy, (4)

Humphrey, (5) Johnson, (6) Somebody else? (1) 20 percent; (2) 12 percent; (3) 35 percent; (4) 7 percent; (5) 13 percent; (6) 13 percent.

14. (Answer by number.) If a Republican is to be our next President, do you favor (1) Nixon, (2) Rockefeller, (3) somebody else? (1) 69 percent; (2) 20 percent; (3) 11 percent.

Medical Civil Defense

EXTENSION OF REMARKS

OF

HON. HARRISON A. WILLIAMS, JR.

OF NEW JERSEY

IN THE SENATE OF THE UNITED STATES

Wednesday, March 2, 1960

Mr. WILLIAMS of New Jersey. Mr. President, we Americans have come to realize that a strong civil defense program can be an effective part of overall deterrent strength against enemy attack. If a nation has the plan it must have to recover quickly from an all-out attack, those who might launch such an attack will think long and hard before making any such decision.

Any such program must obviously rely heavily on medical civil defense. In an article in the February 1960 issue of the Journal of the Medical Society of New Jersey, Jack R. Karel, M.D., discusses this vital matter. Dr. Karel is chairman, Civil Defense Committee, Union County Medical Society; medical coordinator, Union County Civil Defense and Disaster Control; and a member of the Special Committee on Disaster Medical Services, the Medical Society of New Jersey.

Mr. President, I ask unanimous consent that this article be printed in the Appendix of the RECORD.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

MEDICAL CIVIL DEFENSE¹

(By Jack R. Karel, M.D.)

History has shown that when the "chips are down" the doctors of this country were ready for any medical emergency that arose, whether it was in war, floods, hurricanes, explosions, railroad accidents, and so forth.

Since World War II, regardless of the apathy (a word I am beginning to detest) amongst the general public and the medical profession particularly, the lack of proper leadership by the Federal Government, the Congress, and State executives throughout the United States and especially by lack of medical leadership in the State medical societies, certain county medical societies in collaboration with the county civil defense and disaster control organization have gone ahead and developed excellent medical civil defense organizations. This has been possible only through the concerted effort of a hard core of individuals dedicated to civil defense. Many of them have given much of their time to the enhancement of local medical civil defense organization. In the past 4 years this constant pressure and enlightenment of the medical profession is beginning to bear fruit.

There is much to be done yet in enlightening every doctor about his medical civil defense responsibilities, but the opening wedge has been made. Naturally, more progress will be made in some areas than in others,

Footnotes at end of speech.

but progress there must be. In this atomic and hydrogen age, space and missile activities, time is of the essence. The medical profession is the most important division of civil defense. We doctors must not falter and get behind the times. We must not show any sign of helplessness. We must demonstrate with our knowledge that survival is possible, especially when proper precautions are taken ahead of time. We must not sell ourselves or America short.

What can we as doctors do to enhance the capabilities of survival in the nuclear age? We can surely do something—giving a very small amount of time—even as little as 1 hour a month, or more if possible, to the cause of medical civil defense throughout New Jersey. If we do this, we will show the general population of America that we doctors are not deaf when asked to think about defending ourselves against a possible nuclear attack.

How can we by devoting a small amount of time contribute to the survival of this country? The answer is to devote this time to the medical civil defense program in each municipal and county civil defense organization. Medical civil defense may be divided into the following categories, each of which will be briefly touched upon: organization, emergency first aid, hospital disaster plans, radiation defense, and civil defense emergency hospital.

On March 10, 1955, the Governor of New Jersey signed a proclamation entitled "The New Jersey State Disaster Control Plan" part of which is as follows—"I do further proclaim that the aforementioned New Jersey State Control Plan and the requirements, rules and regulations set forth therein shall, according to their respective terms be binding upon all political subdivisions, public agencies, public officials and employees and upon each and every person of the State." This was the beginning of the State, county and municipal civil defense organization as we have it today.

EMERGENCY FIRST AID

Every doctor must become familiar with newer concepts of treatment in this nuclear age of such urgent conditions as hemorrhage, fractures, blast damage, shock and burns. Doctors must learn that the key to management of disaster victims is Sorting.² Under this heading the following divisions come into focus:

1. Casualties requiring minimal treatment.
2. Casualties requiring immediate care.
3. Casualties whose surgical treatment may be delayed without immediate jeopardy to life.
4. Casualties whose therapy will be expectant (the most critical group).

To be effective, each municipal civil defense organization must have readily available medical teams to go to the scene of a disaster, able to function individually or to set up first aid medical posts throughout the community, for example, in schools. A mobile team to go to the disaster areas might consist of two doctors and a nurse or one doctor, one dentist and a nurse. Each should have available and easily transportable a first aid emergency kit about the size of an army foot locker containing essential medical supplies. The first aid medical post team would be a larger medical organization for emergency service.

Every hospital must have a hospital disaster plan, for only then will the hospital be able to cope with large numbers of injured in a disaster. The plan must be tried out so that the organization will function smoothly. The Boy Scout organization and rescue squads are very cooperative and willing to assist in this endeavor.

RADIATION DEFENSE

Every doctor must become familiar with the medical aspects of nuclear radiation. He must learn more about alpha, beta, and gamma

ma rays than he ever learned in medical school. He must have some basic knowledge of bomb fallout and how the bomb causes blast damage, burns, and hemorrhage. It is essential that he know how much radiation a person can take each day and how much is lethal. The field of radiation is now a most important medical problem.

THE CIVIL DEFENSE HOSPITAL

The final category in medical civil defense is that which has come into being during the past 3 years and which is essential near potentially critical areas. This is the emergency civil defense hospital. It is a 200-bed, completely equipped hospital. The equipment, when packed, weighs approximately 13½ tons. The packaged unit can be loaded into one large van truck and transported when needed. The mission of this civil defense emergency hospital is to provide early hospitalization for the seriously ill and injured casualties as close as possible to the stricken area for life saving, initial and reparative treatment or surgery. It is recommended that the supplies and equipment be set up in a preselected public building in time of emergency. Modern school buildings not more than two stories in height are preferable.

In establishing the medical organization for these civil defense emergency hospitals, the disaster plans of the fixed hospitals must not be disturbed. Doctors for the emergency hospitals must come from those not having an assignment in a hospital disaster plan. To accomplish and arrange a competent staff for the civil defense hospital, it is advisable that there be collaboration between the civil defense committee of the county medical society and the county civil defense coordinator and his medical coordinator. Before such a meeting takes place, the council of each county medical society must announce its policies to the complete membership and must stress each member's responsibilities to civil defense.

Civil defense is here to stay and has become a way of life whether we like it or not. By joining in voluntarily with the thousands in other walks of life, to enhance the capabilities of civil defense, we will be contributing immeasurably a most important factor for our survival and the survival of this country, and giving notice to our potential enemy not to underestimate our people.

¹ Developed from an exhibit at annual meeting of the Medical Society of New Jersey in Atlantic City, Apr. 25 to May 1, 1959. Dr. Karel is chairman, Civil Defense Committee, Union County Medical Society, medical coordinator, Union County Civil Defense and Disaster Control, and member of the Special Committee on Disaster Medical Services, the Medical Society of New Jersey.

Inflation Is a Deadly Menace to All Segments of American Life

SPEECH

OF

HON. JAMES E. VAN ZANDT

OF PENNSYLVANIA

IN THE HOUSE OF REPRESENTATIVES

Wednesday, March 2, 1960

Mr. VAN ZANDT. Mr. Speaker, inflation has long been recognized as the Nation's No. 1 domestic problem. Today we are congratulating ourselves on what appears to be a current lull in

rising prices. While we may be entitled to congratulate ourselves, nevertheless there must be no cessation of our anti-inflationary efforts. Constant vigilance is the price of avoiding further inflation. I heartily concur with the opinion of President Eisenhower and many other responsible leaders of American thought that inflationary pressures continue to be a dire threat to the American economy.

Past experience has taught us that without continued efforts to curb price advances and to restrain inflation-breeding situations, renewed increases in prices may well occur. We must not be complacent. We must not allow the dollar to be further deflated. It is for this reason that I am speaking to you today and urging that all thoughtful Americans unite in a common effort to oppose rising prices.

As the Committee for Economic Development has recently stated, continuing inflation will:

Undo one of the major achievements of recent generations. Never before have so many people, even of the lowest income groups, owned some liquid assets such as bank deposits, savings bonds, insurance policies, and savings and loan shares. With this has come a great independence and freedom of the average man. Inflation will eat away the values of these savings. Workers who now have a large investment in private and public pension funds would be among the chief victims of the process, since they will be forced to rely on fixed pensions, whose value has been eroded by inflation, to support themselves after they retire.

Recently, I read a headline, "December Living Costs Drop to October Level." This is encouraging news. However, let us not be deceived. We must not forget that from 1940 to 1953 the cost of living increased 91 percent and that during President Eisenhower's 7 years in the White House the cost of living has increased 9.8 percent. In other words, during the 20-year period the total increase is over 100 percent. Although it is quite true that the average increase last year, 1959, was less than 1 percent, we must ask the question, Will the price spiral be renewed? Prices for food, clothing, and durable commodities, including automobiles, were lower in December than in previous months. Nevertheless, service items, including medical care, transportation, light and heat are still mounting.

It is common knowledge that the dollar today is worth less than half its 1939 value. In other words, in 1939 a dollar was a dollar. From 1939 to 1952 the dollar dropped 48 cents or to 52 cents. Despite President Eisenhower's efforts since 1953 to halt the decline in the value of the dollar, today, the experts tell us, a dollar will only buy as much as 48 cents did in 1939.

A few startling statistics will explain this deflation of the dollar. Since 1939, food costs have risen 150 percent, medical costs 111 percent, rents 90 percent, and gas and electricity 17 percent.

Inflation has been called many things. Essentially, it is a continuous and unchecked general rise in prices.

Inflation has been explained by several different theories. The methods used in tackling this monumental problem de-

pend, of course, upon the approach to the problem. According to the classical economic theorists, inflation is essentially a monetary matter. When money and credit rise out of proportion to the output of goods and services—prices rise. I am sure we all have frequently heard the definition of inflation as "too much money chasing too few goods."

Currently, however, inflation is also being analyzed in terms of cost-push factors. That is, many economists and other experts believe that rising costs, particularly wages, rather than the forces of demand and supply in the marketplace, tend to cause increases in prices. Certainly this analysis appears valid as applied to the 1957-58 uptrend in prices. The price rise in those 2 years occurred in the face of unemployment and excess productive capacity.

Whatever the controversy concerning the causes of inflation, there can be no question as to the effects of unchecked price rises.

Let us look squarely at some economic facts. According to the latest survey of Consumer Finances of the Federal Reserve Board, the average family income in the United States in 1958 was \$5,150. Now, ladies and gentlemen, this is no princely sum. Furthermore, in that year 20 percent of all families had incomes of \$1,890 or less. What effect would a resurgence of inflation have on the average American family? How could the American home survive further deterioration of income through a renewal of inflation?

The dire experience of the past should warn us against the dangers of the future. A man with a wife and two children, who earned \$5,000 in 1942 needed about \$9,300 last year to be as well off. What of the \$5,000-a-year man today? What will be his plight in 17 years?

Those who are most severely affected by steep advances in prices are our senior citizens, retired persons, and those approaching retirement. The income of these individuals cannot be boosted with every increase in prices.

Today there are more than 15 million older citizens in the group of those 65 years of age and over. These senior citizens comprise between 9 and 10 percent of the population. In contrast, there were only about 9 million older persons among us in 1940. In view of the steadily increasing proportion of older people, we may expect 25 million aged 65 and more by 1980. In other words, Americans are living longer and there are more of them.

As the proportion of seniors in our total population expands, so does the number of retirees. Almost half a million persons are added each year to the number of retirees.

In this wealthy land of ours which takes such pride in high standards of living, the median income of all persons 65 years and over was under \$1,000 as of March 1958.

At least 1½ million of our citizens and a considerable number of dependents are living on private pensions. Monthly benefits total \$950 million. Eighty-five percent of these private pension plans have been started since 1940.

However, the value of a 1940 pension of \$150 per month has been more than cut in half, in terms of purchasing power. What will happen to these retirement systems if inflationary forces once again gain momentum? Another 13.5 million persons are receiving old-age, survivors, and disability insurance under the Federal social security system. Although old-age and survivors insurance benefits have been increased several times in the past few years, the average monthly old-age pension in 1959 was only \$73.

There are now at least 57.8 million workers covered by old-age and survivors insurance programs. Renewed inflation would take a tragic toll of the future welfare of these citizens.

In addition to persons living on retirement, there are about 2½ million recipients of public old-age assistance. Payments currently average almost \$65 a month, compared with \$19 in 1939. Over the years, public old-age assistance has had to keep step with inflationary tendencies. How far will \$65 stretch 10 years from now?

Inflation has corroded the benefits of pension and annuity plans. In addition, the value of many other different forms of savings has shrunk in the wake of spiraling prices.

As I mentioned earlier, an unprecedented number of Americans own bank deposits, bonds, insurance policies, and savings and loan shares. These Americans have followed the ideals of thrift and savings. Many are planning to supplement retirement incomes, provide for their children's education, for a vacation or for an emergency. Such Americans have been unsuspectingly robbed of the full value of their savings by inflation.

To demonstrate the toll that inflation has taken of financial assets, one study showed that a given sum of money invested in various media on December 13, 1948, would have had the following real value 10 years later: Cash in the bank, a loss of 16.7 percent; preferred stocks, a loss of 25 percent; U.S. Treasury bonds—2½s of 1967-72, a loss of 29 percent.

How the value of the Government bond has plunged over the years is a notorious chapter in our economic history. I have just quoted one example. There are many others, with especial reference to the smaller denominations of savings bonds, so important to the average American. The value of currently outstanding investments in U.S. savings bonds amounts to around \$49 billions. How can we urge Americans to be patriotic and "Buy U.S. Savings Bonds," if the future value of these securities dwindles and dwindles?

In addition to Government savings bonds, savings accounts in savings and loan associations have mounted to about \$48 billions. Accounts in mutual savings banks and in savings accounts of commercial banks have a value of \$34 billions and \$60 billions, respectively.

An unprecedented number of Americans own life insurance—about 280 million of us. Preliminary estimates place

the value of all life insurance now in force in the 50 States and Puerto Rico at \$534 billions.

I am stressing the evils of inflation because of my concern with maintaining the future integrity of these vast investments.

My warnings concerning inflation include the wage earner. It is an undisputed fact that the American workman "never had it so good." To quote a recent study by a well-known international labor union, "the average wage in 1958 was 157 percent of what it was in 1948; prices in 1958 were 130 percent of what they were in 1948."

But we forget that inflation has levied an indirect tax on wages and salaries.

A very revealing table, appearing in the January 1960 Economic Report of the President, likewise illustrates the tribute exacted by the pirate inflation. Average spendable weekly earnings of a worker with three dependents amounted to about \$25 a week in 1940. In 1959, this spendable weekly income had climbed to about \$30 or an increase of \$5. However, inflation has cut the value of this dollar gain almost in half.

About 3.4 million workers are covered by cost-of-living increase provisions. As the cost of living advances, an increase in hourly wage rate is guaranteed. Let us think for a minute. These gains may be very costly to the workers receiving them. As labor costs are raised, so then are prices in these industries. Thus the products of such industries become less and less competitive with those of other domestic industries which are not bound by escalator clauses in wage contracts. And, too, industries which grant cost-of-living wage increases become less and less competitive with imports from countries abroad where wages are so much lower than in the United States.

Prices chasing wages which in turn chase rises in the cost of living can only spell economic disaster by pricing goods out of the market. Thus apparent wage advantages of today run a serious risk of being wiped out tomorrow.

I have reviewed briefly the tragic tale of the economic hardships inflicted upon millions of our citizens by inflation.

It is all well and good to talk about inflation. The big question is, "What can we do about it?" The administration has utilized a variety of measures to restrain inflation. So some extent these have been effective. Excessive Government expenditures above and beyond receipts have an inflationary influence. This we all know. I believe that the President's hold-the-line budget should assist materially in the continuing restraint of inflationary forces.

The President has made provision for a \$4.2 billion surplus. This he proposes to use in paying off some of the huge national debt. Such action will surely in the President's own words, "help counteract inflationary pressures." When the Federal Government cannot meet its expenditures by revenues, it must turn to borrowing. Such fiscal actions usually add to the supply of money. Thus, with some debt retirement, the amount of funds in circula-

tion will actually be reduced. This in turn will diminish inflationary tendencies.

In examining the national budget, we must constantly view Government expenditures with a critical eye toward economy. I do not mean that we should shortchange the defense and national security of our country. But we must be assured that we have the most efficient organization for production of arms. As President Eisenhower insists, we must be assured that we receive a dollar's worth of arms for every dollar spent.

Now let me turn to other means of dealing with inflationary trends in the economy. As we have seen, excessive expansion of money and credit frequently produces upswings in prices. The Federal Reserve Board is the chief regulator of the monetary system in the United States. Various courses of action are available to the Board to contract the supply of money and credit, by restricting the lending power of commercial banks. This goal is accomplished through open-market operations, raising reserve requirements of member banks, and raising the discount rate.

With interest rates raised to an all-time high through action by the Federal Reserve, the high cost of borrowing funds has tended to place a check upon feverish business activity, and in turn, upon prices.

Management of the national debt is also a prime factor in controlling inflation. I have praised the President's intention of paying off some of the national debt. However, there is another aspect of debt management which requires our attention. Many financial specialists believe that a great proportion of the debt should be in longer term securities than is now the case. Meeting payments on short-term debt and constant refinancing requires borrowing and more borrowing. This in effect increases the supply of money and credit. As the President has suggested, a helpful move would be to eliminate the ceiling of 4¼ percent on interest rates on long-term Government securities, those maturing over 5 years. Thus the Treasury would have greater flexibility and market appeal in sale of intermediate and long-term bonds. Consequently, undue expansion in the supply of money and credit would be curbed.

So much for monetary and fiscal measures utilized in coping with inflation.

No honest discussion of inflation can overlook the recent prolonged steel strike.

It is the situation in the steel industry which may contain the sparks of renewed inflation.

As I have indicated, there are the proverbial two schools of thought concerning causes of inflation. The newer school emphasizes rises in price levels as a result of boosts in wage rates above improvement in productivity.

The recent steel strike is a case in point. Steel production is basic to our economy. But for 116 days the steel furnaces were idle. As a result one-half a million workers were unemployed.

Let us examine the steel settlement for a moment. The many clauses of the new contract add up to this: Wage and fringe benefits up to 40 cents an hour over a 30-month period.

Despite the increases in wages steel management has announced that there will be no immediate price increases. Nevertheless, Mr. Blough, chairman of the United States Steel Corp., has stated that for the past 20 years, employment costs have been upped on an average of 8 percent a year and prices have been increased 5.5 percent.

On the heels of Mr. Blough's statement many ask this question: How then can we escape another advance in the price of steel, even though employment costs have been raised less than half of the above 20-year average?

They assert it is true that improvements in productivity have been emphasized as a means of preventing advances in prices. However, those skeptical insist that a sincere, all-out effort will be needed to stem another upturn in prices of steel. Yet their attitude is one of doubt. They ask: What effect would another rise in steel prices have on the economy as a whole?

They remind the public that steel is used in all kinds of machinery, buildings, railroads, automobiles, trucks and in many other ways. They stress the fact that steel literally pervades our entire life. Finally, the skeptics ask: How is it possible, then, in the event that steel prices are raised a notch in a few months, say, that a general surge in prices can be avoided?

Concluding, they urge a more positive and stringent approach to the problem of the pressures on the general price level exerted by strikes for increases in wage and fringe benefits.

In this connection, many suggestions have been put forward. The President stated in his state of the Union message that he will "encourage regular discussions between management and labor outside the bargaining table." Such discussions presumably would deal with general problems of the economy, such as the disaster of inflationary prices, as well as questions relating to specific industries. Such friendly talks will be helpful, I am sure.

Other tools for dealing with strikes have been suggested. Factfinding boards of inquiry which are empowered to make recommendations should be established as soon as a strike is declared, some say. Others say the Federal Mediation Service should be called immediately into a labor controversy. Some feel that in the last analysis we may be forced to establish compulsory arbitration, with representatives of consumer interests well represented on the arbitration panels. It may well be that all of these procedures should be included within the possibilities of labor law yet many urge that those stubborn cases which refuse to give way to settlement within a reasonable period of time should be submitted to compulsory arbitration.

Ladies and gentlemen, I have reviewed the story of the ravages of inflation. I have discussed those measures which have been successfully instituted in

fighting this scourge of our economy. In addition, I have felt impelled to warn against the possible renewal of price upswings. To guard the economic security of our country we must institute additional machinery now for preventing further erosion of the economic foundations of our Nation.

Crack the Filibuster, and No Yielding

EXTENSION OF REMARKS

OF

HON. KENNETH B. KEATING

OF NEW YORK

IN THE SENATE OF THE UNITED STATES

Wednesday, March 2, 1960

Mr. KEATING. Mr. President, an editorial in this morning's New York Herald Tribune, contains some very pertinent comments on the current civil rights debate.

The editorial warns against the danger that Senators reluctant to shut off debate would be agreeable to weak legislation. It points out correctly that civil rights diluted would be a triumph for the filibuster.

Mr. President, I ask unanimous consent that this editorial be printed in the Appendix of the RECORD.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

CRACK THE FILIBUSTER, AND NO YIELDING

Yesterday was more of the same in the Senate, and no one could be sure how much longer the small southern minority would go on filibustering.

To the complaints of "ordeal of torture," the relevant answer, of course, is that the southerners can any time stop the torture by agreeing to a vote on the pending civil rights legislation.

But they are clearly not ready for surrender, and thus it must be assumed that the minority has trust in lungpower and quorum calls to the point where the majority yields either completely or accepts compromise.

This, however, isn't happening. For one thing the windbagery has only just begun. Senator JOHNSON, with perhaps a sense of humor, thinks there ought to be plenty of debate (around the clock to provide ample opportunity) on insuring the Negro's right to vote. And this is precisely what the southerners are getting until such time as enough of the majority may or may not become restive enough to invoke cloture.

In our opinion, there is nothing much lost in letting the so-called debate go on for a while. Certainly the minority is proving to the public the emptiness of its case.

But what the majority should understand is that there must be no resort to compromise. True enough, Senator RUSSELL denies that he has any thought of "wrapping an olive branch around a white flag," but we imagine the Georgian would listen to terms.

This is precisely the danger—that the Senators reluctant to shut off debate would be agreeable to weak legislation. Thus the southerners would in effect gain a victory, because when it comes to making the Negro vote an actuality there has to be strong law. Civil rights diluted would be a triumph for the filibuster.

If this thing has to be settled by a test of physical endurance, so be it. But let's have a law with meaning.

The Growing Problem of Footwear Imports

EXTENSION OF REMARKS

OF

HON. JAMES A. BURKE

OF MASSACHUSETTS

IN THE HOUSE OF REPRESENTATIVES

Wednesday, March 2, 1960

Mr. BURKE of Massachusetts. Mr. Speaker, on February 16, 1960, I had the pleasure of meeting with officials of the United Shoe Workers of America, AFL-CIO in Washington, D.C. Present at this meeting were Mr. George Fecteau, president; Mr. Angelo G. Georgian, general secretary-treasurer, and many others. Due to serious illness, Mr. John Jankowski, President of the Independent Shoe Workers Union of Brockton, was unable to attend.

This group is greatly concerned about the growing problem of imports of footwear into the United States and I submit the following facts to the Members of Congress:

Imports of footwear of all types have increased from 3,601,000 pairs in 1949 to 80,508,000 pairs in 1959. Practically all of this increase has taken place in the last 5 years—since 1954. In 1954, footwear imports of all types—leather, rubber, and other materials—totaled less than 8 million pairs. In 1959, they totaled over 10 times that number.

Over the same period, our exports of all types of footwear have been declining. We exported 5,759,000 pairs in 1949, as compared with less than 3,750,000 pairs in 1959.

In other words, in 1949 we exported roughly six-tenths of a pair of footwear for each pair we exported. In 1959, we imported over 21 pairs for each pair we exported.

Dollarwise, imports of all types of footwear have skyrocketed from about \$6 million in 1949 and \$11½ million in 1954 to nearly \$94 million in 1959. On the other side of the picture, the value of our exports of all types of footwear, which totaled over \$19 million in 1949, had fallen to less than \$12 million in 1959.

While the greatest increase in imports has been in rubber footwear, there has also been an alarming growth in imports of other types of footwear. Nonrubber footwear imports in 1959 were over twice as large, in numbers of pairs as in 1957, and nearly four times as large as in 1954. The number of pairs of men's, youths' and boys' leather shoes imported in 1959 was twice as large as in 1957 and more than eight times as large as in 1954. In women's, misses, children's, and infants' leather shoes, the increase was even more striking. Imports in this classification in 1959 were about 2½ times as large as in 1957 and almost 13 times as large as in 1954.

Continuation of this trend cannot fail to have serious consequences for American shoe workers and their employers. Imports of nonrubber footwear grew from only about 1 percent of domestic nonrubber footwear production in 1954 to over 3½ percent in 1959. If rubber footwear is included, the increase in relation to domestic production is even more striking. Imports of footwear of all kinds have grown from about 1 percent of domestic production of all kinds of footwear in 1954 to over 10 percent of domestic production in 1959.

While the average value per pair of our leather footwear exports has been rising since 1954, the average value per pair imported from many foreign sources—Italy, Switzerland, West Germany, France, and Spain—has decreased. Large numbers of shoes in

the leather classification came in during 1959 from Japan, Hong Kong, Mexico, and Czechoslovakia at very low average values—as low as 57 cents a pair average value for women's shoes in the leather classification from Hong Kong.

Friends of the American shoe worker must not lightly disregard these alarming trends in footwear imports. Unless proper consideration is given to the protection of the American shoe worker from competition from underpaid foreign labor, he will find his employment prospects, his income, and his standard of living seriously affected by the rising tide of footwear imports.

Disposal of Surpluses

EXTENSION OF REMARKS

OF

HON. FRANCIS CASE

OF SOUTH DAKOTA

IN THE SENATE OF THE UNITED STATES

Wednesday, March 2, 1960

Mr. CASE of South Dakota. Mr. President, I know that many Members are following the outstanding series of articles on India appearing in the Washington Post and written by J. R. Wiggins, executive editor of the Washington Post. Mr. Wiggins has just returned from an extensive tour of that nation.

The third article in this series, dealing with disposal of American surpluses in India, was a particularly searching examination of this troublesome field.

Mr. Wiggins, who comes from my neighboring State of Minnesota, well knows and understands the problems of American farmers who are being hampered by the great production which has resulted from their improved technology and efficiency, but he also rightfully points out that there are many weighted considerations which must be taken into account when disposing of the great American agricultural surplus.

I commend this article to the attention of all who are seriously concerned about the surplus problem in this country and the hungry problem abroad.

I ask unanimous consent that the article be printed in the Appendix of the RECORD.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

MILLIONS HUNGER FOR SURPLUSES OF UNITED STATES

(The executive editor of the Washington Post has just returned from an extensive tour of India. This is the third of a series of stories reporting his findings.)

(By J. R. Wiggins)

India's food deficits and America's surpluses ought to go together like the "love and marriage" and a "horse and carriage" of the song hit.

They are as complementary as the parts of a mortise and tenon joint.

They do go together, to a degree. Under Public Law 480, the United States, since 1956, has agreed to furnish India surpluses worth \$959.73 million. These have been paid for in counterpart funds, the rupee accounts of which are expendable in India and thus do not add to India's foreign exchange problems.

They have gone largely to projects under India's 5-year plans.

These programs have included more than 10 million tons of wheat and 350,000 tons of rice.

BILLION A YEAR FOR STORAGE

They have come out of the bulging warehouses of America's surplus agricultural commodities, on which the country is spending \$1 billion a year for storage (more than \$1 million a day for wheat alone).

To a sixth grade student of arithmetic it looks as though we could save \$1 billion a year by giving India the whole stock—kit and kaboodle.

Why haven't we?

One of the reasons for my trip was to find out why India didn't ask for more and why we didn't send her more—if not all—of our surpluses.

There are encouraging reasons to believe the program will be stepped up. Among them is the projected visit of S. K. Patil, Minister of Food and Agriculture, who is bringing to the United States his plan to put from 1.4 million to 5 million tons of wheat in reserve storage. Patil began to mull over his plan long ago. He got more steamed up over it as the result of figures supposed to have been given President Eisenhower:

"Every year the earth produces 1.7 billion tons of food. Divided equally among the planet's 2.8 billion people this would furnish a diet of 2,350 calories to each one. But the United States has surpluses worth \$9.2 billion—1.4 billion bushels of wheat."

STORAGE BINS ABUILDING

The Indian Government has begun to add to storage capacity and to buy land for more bins. A dispersed storage is envisioned so that supplies may be quickly available in case of crop failures. The plan has the interested backing of the Prime Minister. Patil is thinking of initial storage of 55 million bushels.

This is a needed and a useful and prudent thing to do in a country with limited storage facilities and the menace of local shortages. It costs the United States 17 cents a bushel to store grain; some Indian experts think they can store it for 7 cents. (FAO figures do not show this discrepancy.) It would meet a greater need at a lesser cost in India. It would help to stabilize prices in India too.

The best place to store grain (and the cheapest) is in the bellies of hungry people. There is (according to social scientists) no large-scale starvation in India; but the odds are they are well-fed scientists. There are plenty of people who can and should eat more. Even 130 million bushels in Patil's outside plan wouldn't notably diminish the wheat stocks we are piling up at 400 to 500 million bushels a year.

OBSTACLES ARE LISTED

What holds up a larger movement? What are the obstacles in India?

There is some fear that accumulations of counterpart funds in rupees might have an inflationary effect, or at least put into foreign hands too much control over Indian monetary stability.

Some Indian officials fear Indian farm output might slow down if relieved of the pressure of stark necessity.

There is some fear that heavy in-shippments would unsettle the markets of Indian farmers and thus slow up their production.

There is uncertainty about the ability to handle the off-loading and dock storage and transport of a greatly accelerated movement. Wheat shipments are all off-loaded in bags at a rate as slow as only 1,000 tons a day compared with 5,000 tons off-loading rate for bulk grain at modern terminals.

Flat storage construction might cost from 35 to 70 cents a bushel and not all experts agree it is as good as upright concrete stor-

age which costs from 75 cents to \$2 in the United States. (This would be another drain on foreign exchange.)

In the Indian Government there is an astonishing unanimity of belief that food grains should not be brought in under title III in the form of grants for charitable distribution except in cases of flood, famine, and disaster. I heard warnings about demoralizing the needy with free contributions that I hadn't heard since debates on the relief bills of the 1930's in the United States.

Worry was expressed that our surpluses will not last forever and India might develop a dangerous dependence and then be suddenly left without American grains.

Many of these objections to larger intake of wheat do credit to Indian prudence, pride, and independence. They are, in part, however, considerations that a short diet for Cabinet Ministers probably would remove.

OBJECTIONS IN UNITED STATES

In the United States there are also objections based on:

Shipping costs. (Often compounded by returning ships empty.)

Skepticism about the adequacy of storage in India (and pest control).

Fear of offending other grain exporters. (The Joint Wheat Utilization Committee, representing Canada, Australia, France, Argentina, and the United States, may help solve this issue.)

These attitudes, on both sides, are not altogether of imaginary origin. Still, there are those commercial warehouses bulging with 1,028 million bushels of wheat, those Commodity Credit bins with another 39 million bushels, those old Liberty ships with their 37 million bushels. (Fall of 1959 figures.) And there also are those hungry people.

It seems as though most of the legitimate fears of India could be met by more formally tying the food imports and their counterpart funds to a program for improving Indian agriculture at the same time. Some of them have been spent for this under existing programs. But what if the rupee accounts were committed officially to building drainage ditches, irrigation canals, bunds, terraces, farm-to-market roads, godowns (or storage pits), buying seed, building fertilizer plants and educating farmers? Then the American surpluses would fill the current and impending gap between production and need; and would hasten the day when there would be no gap to fill.

Apart from the mutual economic advantages of such an accelerated program there is that other consideration cited by Eugene R. Black, President of the International Bank for Reconstruction and Development:

"... never before in history was it possible to say, as we can say now, that the kind of poverty that destroys individual dignity and stifles individual creative effort is not necessary."

Some of the simple agricultural construction projects that would increase India's farm output would also attack its problem of underemployment and unemployment—most of it in rural villages. P. C. Mahalanobis, director of Indian statistics, has used figures that show 20 million Indians are employed less than an hour a day, 27 million less than 2 hours, 45 million less than 4 hours. He recently said he had heard it stated in another way—that there are 30 million people who work 5 days a month, 40 million who work less than 10 days a month, 53 million who work less than 15 days a month. This, of course, is no fault of the thrifty and would-be industrious Indian workers. To help diminish this staggering economic waste might greatly advance India's progress toward a self-generating economic growth.

Texas Independence Day

EXTENSION OF REMARKS

OF

HON. BRUCE ALGER

OF TEXAS

IN THE HOUSE OF REPRESENTATIVES

Wednesday, March 2, 1960

Mr. ALGER. Mr. Speaker, today is Independence Day in Texas.

The glories of my home State's history, and the caliber and courage of the men and women who produced that history, deserve a good deal better—and a considerably longer—commemorative speech than I am prepared to deliver here today. I will not even try to do them justice.

But before we continue the business at hand today—before we occupy our minds and energies with carping criticisms and indignant rebuttals about the state of the Nation's defenses—continue our worrying over America's possible weaknesses in relationship to the military might of a potential enemy, I believe that it would be of real benefit to all of us to just sit and ponder for a moment what must have occupied the minds of our forebears on another March 2—in 1836.

In much of the country, business was going on pretty much as usual. In Connecticut, they were getting ready to enact the Nation's first incorporation law, I am told; and a Mr. McGuffey was working on the final draft of his reader to be published later that year. His textbook might or might not have been hastened had a Federal grant been available to help finance its preparation. It might have been improved had the advice and counsel of some office of education been available to Mr. McGuffey. But I rather doubt that even the possibility of such advantages ever occurred to him or to anybody else in that early day.

Business as usual? Yes; to some extent. But a time to try men's souls too. In March of 1836, our people had every reason to have confidence in themselves and in their leadership. Andrew Jackson was President—the same Jackson who had whipped a superior foreign force at New Orleans. True, we are not aware of what gap might have existed in our weaponry at the time. I seriously doubt that Jackson was. In another part of this continent the intrepid missionary, Marcus Whitman, had already got his little band of pioneers underway on a trek which would take them all the way to the Columbia River in Oregon. And there they would stay. What do you suppose the odds against them were?

And in Texas when a small group of determined men gathered at Washington on the Brazos and on March 2 asserted Texas' independence, the desperate battle at the Alamo was already underway. This war, for those of you who may not recall it, began when a detachment of troops sent to seize a single cannon in Gonzales, Tex., were confronted by a group of volunteers who had mounted a flag on the cannon bearing the words, "Come and Take It."

Certainly such was the spirit, too, of the men who laid their future on the line at Washington on the Brazos.

As I said at the outset, it's futile for us to try to pay adequate tribute to these men or to the defiant confidence and courage they demonstrated whenever the chips were down. Perhaps it is enough that we here today pause a moment to remember the cost of the heritage entrusted to us. Enough, if we resolve to deal with today's problems and today's dangers in a way that would make them as proud of us as we are of them.

County Government

EXTENSION OF REMARKS

OF

HON. HARRISON A. WILLIAMS, JR.

OF NEW JERSEY

IN THE SENATE OF THE UNITED STATES

Wednesday, March 2, 1960

Mr. WILLIAMS of New Jersey. Mr. President, as administrators and legislators face up more and more to the problems facing metropolitan areas and other regions in the United States today, many of the persons most concerned with the problem are taking a closer look at county government.

Here, they point out, is an existing unit of government that has not been used to its fullest possible extent. Here is a unit of government that, even if it cannot cope with all the challenges now facing our city-suburban areas, can certainly offer many more services.

As we in the Senate discuss metropolitan problems and propose new studies to help us understand the difficulties we face, we should certainly pay close attention to the potential part that counties could play if streamlined to meet new conditions. Though one State has abolished county government in recent months, others may find that counties will meet future regional needs better than, or in conjunction with, new regional governments which may be created.

Mr. President, an article by John W. Tramborg, New Jersey commissioner of institutions and agencies, discusses this question in the January 1960 issue of New Jersey County Government, the publication of the New Jersey Association of Chosen Freeholders. An editorial by the editor in chief, A. Paul King, in the same issue also explores the question.

Mr. President, I ask unanimous consent that the editorial and article be printed in the Appendix of the Record.

There being no objection, the editorial and article were ordered to be printed in the Record, as follows:

DECADE FOR DECISION—THE SIXTIES

The 1960's offer county governments in New Jersey their greatest chance for service in this century. A rapid turn of our times has made this an exciting decade for decision. In it our counties will play a tremendous role for the common progress—may well gain guarantees of home rule and optional charters, if that is their wish.

Dramatic changes have increased the county's ability to serve more completely a

rich, new era of suburban maturity and urban renewal. As never before, the traditional part played by the counties in ordering progress is being brought to light. Its leadership must be bold to seize endless opportunities to serve with courage, forthrightness, and imagination.

This decade will see the reformation of the New Jersey county—shucking off old ways and girding on fresh powers to do the jobs demanded of its freeholder boards. The quiet ferment of title 40 revision (counties and municipalities) is at work in the legislature. In this, the county's part is bound to be enlarged, because it is the logical unit to perform many new regional functions.

Also, a devoted cadre of freeholders is urging a better balance of responsibilities between the State, the counties, and the municipalities. It includes such foreseers as Lawrence M. Lear (Cape May); Richard J. Coffee (Mercer); Karl E. Metzger (Middlesex); Joseph S. Holland (Mercer); and Frank C. Dalrymple (Hunterdon).

This adds up to a healthy state of affairs for New Jersey county government. It will serve the sixties as never before in its history, gathering strength to refine its functions. It will widen its ability to serve more people with greater improvements. This is the beginning of a brilliant and heartening decade for decision.

THE COUNTY CHALLENGE OF LEADERSHIP
AND IMAGINATION

(By John W. Tramborg)

The challenging question has been raised whether New Jersey should not follow Connecticut's example of abolishing county government by legislative action. Because I am convinced that county government is not only important, but essential, I view this question with some concern. I should like to help in any way I can to stem the rising tide against county government. How has a belief in county government been weakened? What must be done to sustain the county?

Every county official has to search his conscience for the answer. He must ask whether he is being responsive to the demands and needs of his county constituents who elected him to office; if the framework in which he works can withstand modern criticism; if he is giving his best performance as a public official. It does little good to talk about responsibility if all of us do not perform in an equally responsive fashion to the challenges placed before us.

There is no assurance that county government will continue to exist in New Jersey or elsewhere unless county officials are willing to meet the test for survival with leadership, imagination and vision. They must demonstrate that they are responding to the changing world. In this endeavor they can count on the support of everyone to improve the administration of county affairs through county government.

Politics and the Loyalty Oath

EXTENSION OF REMARKS

OF

HON. EDGAR W. HIESTAND

OF CALIFORNIA

IN THE HOUSE OF REPRESENTATIVES

Thursday, February 18, 1960

Mr. HIESTAND. Mr. Speaker, under leave granted by the House I call to the attention of my colleagues and the country a most informative and persuasive editorial on the student loyalty oath of

the National Defense Education Act. This editorial appeared in the February 10 issue of the highly respected Cincinnati (Ohio) Enquirer.

Last year an attempt was made to repeal both the loyalty oath and the so-called Communist disclaimer affidavit. It failed. This year a move to repeal only the Communist disclaimer has tentative approval, but no other safeguard is offered as yet to replace the disclaimer in the interest of protecting against perversion of these funds by Communists and their fellow travelers.

Then too, last year a substitute was proposed for the Communist disclaimer which would have eliminated the affidavit and simply made it a Federal offense for anyone to accept such a loan while belonging to an organization listed by the Attorney General as "totalitarian, Fascist, Communist, or subversive." Violation would have been punishable by appropriate penalties. Unfortunately, this proposition never came to a vote by the Congress.

Both the loyalty oath and the Communist disclaimer affidavit were part and parcel of the bill as presented originally for a vote of the membership of the Congress. If a change is now in order, it would seem that the logic presented in the Enquirer editorial would be a compelling factor and suggests a solution which could not conceivably impinge upon academic freedom; which is in no sense discriminatory; and which simply applies the statutory safeguards applicable to all Federal employees to those students privileged to receive the grants and loans made available under the National Defense Education Act.

The editorial follows:

POLITICS AND LOYALTY

There are growing signs in Washington that the Democratic Congress will repeal or radically amend the loyalty affidavit now required of college students under the Federal student loan program. Under present law the applicant for such a loan is required not only to take an oath of allegiance to the United States but also to file an affidavit that he does not believe in and is not a member of any organization that believes in overthrow of the Government by force.

It's not the oath of allegiance but the affidavit of nonbelief that has irked many students and even more educators. No such requirement is made in the case of businessmen who receive Federal loans or farmers who receive Federal subsidies or veterans or their dependents who receive pensions. The students argue that they are singled out as special objects of suspicion.

In addition, President A. Whitney Griswold of Yale raises the point that the affidavit conflicts with the first amendment to the Constitution which guarantees freedom of belief and conscience. This has stirred up a somewhat misty debate. On the other hand, it is possible to share President Eisenhower's view that the affidavit is justifiably resented.

What has been ignored is that much controversy could have been avoided if the Senate had accepted the amendment offered by Senator KARL E. MUNDT, Republican, of South Dakota, last year, imposing penalties on anyone accepting a loan while belonging to an organization on the Attorney General's list of totalitarian, Fascist, Communist, or subversive groups. That amendment never came to a vote, but the bill of Senator JACOB K. JAVITS, Republican, of New York, to repeal the affidavit alone did, and was passed 46 to 45. However, a motion by Democratic

Senator RUSSELL B. LONG, of Louisiana, caused it to be sent back to committee, where it died. Now Democratic Senator JOHN F. KENNEDY is bringing up precisely the same measure.

Senator MUNDT is expected to offer an amendment that would restore some of the prohibitions contained in the affidavit, without raising the dubious constitutional question of what a student is or is not permitted to believe in. Whether that amendment goes through or the Kennedy bill for outright repeal of the affidavit is passed, the Senate could have avoided months of controversy by keeping the question out of politics last year.

The Rights Issue Stirs Ill Feeling

EXTENSION OF REMARKS

OF

HON. J. ALLEN FREAR, JR.

OF DELAWARE

IN THE SENATE OF THE UNITED STATES

Wednesday, March 2, 1960

Mr. FREAR. Mr. President, I ask unanimous consent that there be printed in the Appendix of the RECORD a column written by David Lawrence appearing in the Washington Star of March 2, 1960, entitled "The Rights Issue Stirs Ill Feeling."

There being no objection, the column was ordered to be printed in the RECORD, as follows:

THE RIGHTS ISSUE STIRS ILL FEELING—DEMONSTRATORS IN SOUTH ARE REMINDED ACTIONS AID IN SPREAD OF RESENTMENT

(By David Lawrence)

Resentment, hypocrisy, deep-seated antagonisms, political selfishness—all these are part of the background of what is being called a civil rights debate in the United States Senate.

Little is apparent of the feeling that disputes can better be resolved if a conciliatory spirit prevails. Instead, friction and bitterness are being engendered daily—indeed, it is actually promoted as a means of getting publicity.

The "sit down" demonstrations in the South, for instance, are regrettable evidences of the mistaken theory that progress in a controversy can be made by stirring up more and more hostility between the groups involved.

Even many of those citizens who not so long ago were crying out for law and order seem strangely silent when Negro and white demonstrators enter private business establishments and refuse to leave seats pre-empted by them in the restaurants until ousted forcibly.

Reports from the South are that many people who enter the stores and see the demonstrators are beginning to send unfriendly glances toward all Negroes they see. This is the way bad feeling is spread and violence provoked. One wonders whether the instigators of the sit-down stunts have taken into account the damage to race relations which has already been done by the demonstrations in the restaurants and lunch rooms.

The debate in the Senate is supposedly over voting rights. This is not the basic issue. For the South does recognize the right of a qualified citizen to vote. The controversy is over the method that shall be used to determine whether a voter is qualified. The theory is advanced by Northern proponents of so-called civil rights legislation that the Federal Government shall police the registration of voters—

hitherto predominantly a State function. In the North as well as the South, literacy tests are required, and in some States property must be owned as a qualification for voting.

The 15th amendment to the Constitution says that the right of citizens to vote shall not be abridged because of race or color. This amendment was declared ratified in 1870, but the legislatures of States like California, Delaware, and New Jersey rejected it. Even New York State, after first voting to ratify, then voted to rescind its ratification.

There is a moral question, too, as to whether the amendment was really ratified by the will of the people's elected representatives in three-fourths of the State legislatures. For in the South the legislatures were dominated by military forces sent there by the Federal Government after the war was over. Ratification of amendments to the Constitution was compelled, in some instances, at the point of the bayonet.

The South hasn't forgotten all this. Many of the wounds of those days were healed in part by the 1896 decision of the Supreme Court of the United States. It approved the many State Supreme Court decisions of the previous 25 years, including those in New York and Ohio, which upheld the principle of "separate but equal" facilities for education. Now that the 1954 decision of the Supreme Court of the United States has completely upset the 1896 ruling, the South feels it has been mistreated all along the line, beginning with the forced acceptance of the amendments to the Constitution by illegal legislatures in the years following the War Between the States.

The southern Senators know they are outnumbered. But they wouldn't be true to the sentiments of their constituents if they didn't use every proper occasion to debate the issues. Extremists on both sides are beclouding the issues. The controversy is being used to gain votes in the North for so-called champions of civil rights, but hypocrisy is evident because protection for the citizen in his right to cross a picket line in a labor dispute is ignored. There apparently will be no legislation on that phase of civil rights.

What's the answer? A significant statement was recently made in a new book written by W. D. Workman, Jr., of Columbia, S.C., a veteran of World War II, whose newspaper and magazine writings have brought him civic, industrial, agricultural and military awards in addition to some in the field of journalism. His book is entitled "The Case for the South," and he writes:

"Short of utter amalgamation of the races, a thing utterly unacceptable to white Southerners, there is no solution to the problem of race relations: There can only be a continual adjustment and readjustment of relationships. The sense of race, no less than those of religion or of nationality, is so deeply embedded in man's nature—both conscious and unconscious—that it cannot be eradicated in the foreseeable future, if indeed it should be eradicated. Some persons, whose impulses can be regulated or whose incentives can be manipulated, may rise above, or descend below race consciousness, but the masses are not likely ever to shed their recognition of race.

"Whatever may be the future of race relations in America, this much seems evident: That neither satisfaction nor peace can come from any coercive mingling of the white and black races against the will of either, and that little hope can be entertained for any assimilation of one in the other. There remains, then, only the prospect of accommodating their differences in a pattern of peaceful coexistence based upon a friendly tolerance and helpful understanding. It is the recognition of racial distinctions, not their denial, which will lessen the tensions and enhance their adjustment."

Statement by Martin B. McKneally Before the House Committee on Veterans' Affairs

EXTENSION OF REMARKS

OF

HON. KATHARINE ST. GEORGE

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Wednesday, March 2, 1960

Mrs. ST. GEORGE. Mr. Speaker, under leave to extend my remarks in the Appendix of the RECORD, I include a statement of principles and objectives made before the Committee on Veterans' Affairs by the national commander of the American Legion, Martin B. McKneally.

This program is certainly of the greatest possible interest to all Members of Congress. The fine spirit of true patriotism is here and is heartening and refreshing.

The statement follows:

STATEMENT BY MARTIN B. MCKNEALLY, NATIONAL COMMANDER, THE AMERICAN LEGION, BEFORE THE HOUSE VETERANS' AFFAIRS COMMITTEE, TUESDAY, MARCH 1, 1960

On behalf of the American Legion I deeply appreciate this opportunity to appear before your distinguished committee for the purpose of presenting the 1960 program of the American Legion for the rehabilitation and economic welfare of veterans and their dependents. The national commander of the American Legion has no assignment of greater importance.

To share this privilege and responsibility I have with me today many members of the American Legion and of the American Legion Auxiliary. From every State, they are in Washington to participate in the 37th Annual National Rehabilitation Conference of the American Legion. The conference will commence this afternoon and continue through Friday, noon, at the Statler-Hilton Hotel.

The purpose of the conference is to provide a forum in which community, State, and national representatives of the American Legion, together with the responsible Government officials, might discuss problems encountered in the day-to-day administration of veterans' benefits and services; and, seek solutions acceptable to all concerned.

We are aware of your busy schedule but we would be greatly honored if any of you could find time to attend one or more sessions of the Conference and join with us in our discussions.

Many of those who accompany me this morning are already well known to Members of your committee. I do wish to introduce to you the young man on my left, however. He is Robert H. Hazen of Portland, Oreg., chairman of our national economic commission. I am sure the gentleman on my right needs no special introduction. As chairman of the American Legion National Rehabilitation Commission, Bob McCurdy of Pasadena, Calif., is often referred to as "Mr. Rehabilitation." He has long been a leader in the American Legion's fight for the rights of the disabled, while continuing to insist upon programs and principles that are fair both to the veterans concerned and to the taxpayers of this country.

The American Legion is fortunate to have men of such caliber, ability, and understanding as Bob McCurdy and Bob Hazen devote so much of their personal time and effort to the cause of veterans and their dependent survivors.

The American Legion realizes its good fortune in its association, in connection with

its responsibilities to the veterans of three wars, with the members of this committee, and takes this opportunity to salute the members of the committee for their courage, wisdom and objectivity. It need not be observed that in all of your progressive and splendid enactments in behalf of the cause of veterans the spirit which characterized your committee has been one of nonpartisanship. No higher praise can come to such a group.

The American Legion recognizes that the able chairman of this committee has worked hard to great effect in curing the weaknesses and correcting the defects and integrating the law with reference to veterans matters. The American Legion is deeply grateful to him for his interest in the disabled veteran, and lauds him as a great contributor to the welfare of the veteran, and by that means the welfare of our country.

The American Legion notes with sorrow the passing of Congressman Stephen V. Carter, of Iowa, and wishes the record of this meeting to show its regret. Congressman Carter, although his membership on this committee was for a short period of time only, demonstrated a keen interest in the needs of veterans.

For the accomplishment of our legislative program on behalf of veterans, we are dependent upon the members of your committee and our other friends in Congress. Needless to say, our proposals will only be as effective as they are sound. Therefore, just as we solicit your help in translating our thoughts into law, we invite your counsel and advice.

We want you to feel free to utilize our channels of communication and service. Every veteran in America is within reach of some service officer of the American Legion. Our service network forms a very effective medium for both the dissemination and the gathering of information. It is a well-seasoned sounding board for the testing of new ideas in veterans' affairs.

Those with me today are but a portion of the thousands of individuals who are in daily touch with the Nation's veterans, largely on a volunteer basis, in the name of the American Legion. They see and talk with the men, women, and children whose lives have been vastly improved; whose sufferings have been alleviated; and whose talents have been utilized for the good of the country, as a result of the laws over which your committee has primary responsibility. They also see cases that need additional help—help that can come only in the form of new legislation, or revitalized and liberalized existing legislation.

It is this latter group of cases that gives rise to our legislative program. Relief-seeking resolutions, adopted in community posts of the American Legion, are channeled upward to department and national conventions. Only those with merit become a part of the program that we bring to your committee for consideration.

The current rehabilitation and economic legislative program includes resolutions adopted as early as our 1958 national convention. To save your time, I shall speak only to those resolutions that have been added to the program since my predecessor, Preston B. Moore, of Oklahoma, appeared before you 1 year ago.

A full listing of all resolutions forming a part of our current program is attached to my statement. At the appropriate time, Mr. Miles D. Kennedy, director of our legislative division, and other staff officials, will be happy to present the views of the American Legion on specific legislation concerning these resolutions.

With your permission, I shall cover what I deem to be the more pressing and vital of these issues by subject categories.

SERVICE-CONNECTED COMPENSATION

The American Legion believes it is appropriate to grant increases in the rates of disability and death compensation.

The monthly rates of disability compensation were last increased effective October 1, 1957, at which time the amount for total disability was raised by slightly more than 24 percent; whereas, the amounts for ratings less than total were raised approximately 10 percent.

Since 1957, practically all other forms of pay and allowances over which Congress has control have been increased, including civil and military salaries and retirement pay, railroad retirement, and social security benefits.

The rates of death compensation have not been increased since 1954. It is true that many widows, children, and dependent parents did receive higher awards beginning January 1, 1957, by switching to rates of dependency and indemnity compensation under the Servicemen's and Veterans' Survivor Benefits Act. But those who were not in a position to take advantage of that act should hardly be expected to continue indefinitely at death compensation rates without a cost-of-living increase.

The Bureau of Labor Statistics announced only last Thursday that the Consumer Price Index for January was 125.4, only two-tenths of a point down from its alltime high of last November. For those veterans and widows who must rely on their VA compensation check, this index might more realistically be described as a "survival index."

The American Legion also believes it necessary to reestablish balance in the compensation program by making the amounts payable for the several disability evaluations accurately reflect the degree of disability; and, by providing additional amounts for veterans with dependents when rated less than 50 percent in degree on the same basis as for those rated at 50 percent and above.

The rates of disability compensation were first thrown out of balance in 1952 when the amounts payable for ratings of 50 percent and above were increased by 15 percent; whereas, amounts for ratings below 50 percent were increased by only 5 percent. Subsequent legislation has further distorted the relationship between one rating and another insofar as the respective amounts of compensation are concerned. For example, the amount of compensation today for a 90 percent disability rating is not 90 percent of the amount payable for total disability; rather, it is less than 80 percent of this amount.

Disparity in the amount of compensation payable, as compared with the percentage evaluation, tends to defeat the principle upon which the rating schedule is based. The schedular ratings are intended, insofar as possible, to reflect the average impairment in earning capacity due to the various kinds and degrees of disability. The amount of compensation payable for a given percentage evaluation should bear the same relation to total compensation as the percentage bears to 100 percent disability. The degree and the dollars should coincide.

It is understood that your committee has had the matter of disability ratings and compensation under study for some time. It is hoped that your investigations will culminate in upward adjustments of compensation during this session of Congress.

We also are aware that the Veterans' Administration is conducting related studies, possibly with a view to making major modifications in the rating schedule. It would appear that the impetus for such studies derives from certain recommendations which were contained in the report of the Bradley Commission.

The philosophy underlying these recommendations is in opposition to that held by

the American Legion. In particular, the Bradley Commission recommendations relative to the VA rating schedule seem to stem from considerations of economy rather than justice. Such recommendations would eliminate most if not all of the 10 and 20 percent ratings. They would put in jeopardy the average-impairment principle. In addition, the time-tested extraschedular statutory awards would be discarded for new and vague norms for disability evaluations.

We are confident your committee will provide opportunity for a full hearing on any legislative proposals to modify the VA rating schedule.

VA HOSPITAL AND MEDICAL PROGRAM

American Legion service officers and field representatives continue to report that VA hospital managers are experiencing difficulty in operating at maximum capacity under their inpatient and outpatient fund allocations. For this reason, we are inclined to question the adequacy of the President's 1961 budget requests in these sensitive areas. The amounts are considerably short of what are considered necessary by the operating services.

We feel sure that you will do what you can to prevent any reductions in the proposed VA budget on the part of the Congress.

It is gratifying to see that the budget will include funds to commence construction of the badly needed replacement hospitals at Martinez, Calif., Cleveland, Ohio, and Washington, D.C., plus additional amounts to launch the 12-year modernization program. The American Legion acknowledges with deep gratitude the part played by your committee in bringing to pass this essential effort to prevent further deterioration of the hospital facilities.

I bring to your attention that the VA hospital system is facing a crisis of another kind, and one which will also require your most earnest interest. I refer to the rapidly advancing number of patients who are chronically ill, yet have received maximum hospital benefits. The VA is experiencing great difficulty in placing such individuals in satisfactory non-VA institutions. As the veteran population grows older this problem will be magnified greatly. Steps must be taken forthwith to arrive at an acceptable solution.

This matter has deeply concerned the American Legion for some time. We have concluded that the VA must be provided with new authority to cope with the situation. In recent hearings before your Subcommittee on Hospitals, staff representatives of our national rehabilitation commission presented a proposal based on a resolution adopted last fall by the national executive committee of the Legion.

We ask that the Congress grant the VA authority to construct convalescent cottages on the grounds of five widely scattered hospitals in order to conduct a pilot study of ways and means to meet the impending crush of cases. It is suggested that selected patients be discharged to such cottages for appropriate medical supervision and nursing care.

Such a proposal could have many far-reaching beneficial effects. It would release an otherwise occupied hospital bed for use by a veteran requiring active treatment. It would lengthen the time for which the 125,000 authorized bed level might adequately serve our basic hospital needs. It would provide ideal opportunities for research in geriatrics without tying up more expensive hospital beds.

More important, however, it could well lead to solutions for dealing with the great bulk of cases yet to come. In the meantime, the VA would be continuing its efforts to rehabilitate all patients of this type, with a view to restoring their capacity for independent living.

The addition of convalescent cottages should make for a more balanced hospital community. Administrative details relative to the transfer of a patient from a hospital bed to a cottage, or back again as required, should be held to a minimum. We visualize that the buildings should be as homelike as possible; that is, they should avoid both the appearance and atmosphere of an institutional setting.

Regardless of the details, we deem it essential that steps be taken soon to meet this threatening issue. I respectfully urge your serious consideration of our proposal.

LIFE INSURANCE PROGRAM

The American Legion believes that the life insurance contract rights of otherwise eligible World War II and Korean conflict veterans should be reopened for a limited time. When the right to apply for amounts or additional amounts of national service life insurance was removed, many veterans were prevented from securing the desired protection because of personal circumstances.

It would be simple justice to make the coverage available to them, if only for a short time. We suggest a 1-year period following date of approval of the enabling legislation in which the veterans concerned might apply. It is agreed that the administrative cost on insurance so issued should be borne by the policyholders.

ADMINISTRATION OF BENEFITS

The American Legion supports the maintenance of not less than one VA regional office in each State, and opposes the closing of any office that, by reason of its location, provides the necessary services with a minimum of inconvenience to the veterans in the affected area. We further oppose any curtailment of VA services through workload consolidations.

We view with a great deal of concern the reported reduction of contact offices. It is difficult to understand the rationale which says that this will lead to greater efficiency. It is my belief that internal efficiency of the Veterans' Administration is not the ultimate thing to be desired. In all these matters the concern is for service to the veteran, and that only. Not even the desire for internal efficiency must be allowed to interfere with that. Such a rationale defeats the purpose for which the American people demanded that the Veterans' Administration be ordained.

LOAN GUARANTY PROGRAM

The American Legion believes that the loan guarantee program for World War II veterans should be extended for 2 additional years; and, that the program for both World War II and Korean conflict veterans should be revitalized by taking steps to insure the renewed and continued flow of private investment into GI home loans.

The World War II program is scheduled to end this coming July 25. We ask that it be continued to July 25, 1962. We further ask that the Administrator of Veterans' Affairs be provided with the same authority to regulate the interest rate on GI loans as the Federal Housing Administration Commissioner now exercises over FHA loans.

PENSION PROGRAM

The American Legion has no current resolution seeking amendment of the new pension law. The 1959 national convention went on record in support of H.R. 7650, the bill introduced by your chairman that became Public Law 86-211.

This action by the convention was based upon the same reasons that our organization, under the leadership of the then commander, had earlier supported your committee in the development of the legislation. The numbers of needy veterans and dependents to be benefited, as estimated by the Veterans' Administration, made

it imperative that we do so even though we had requested rates higher than those contained in the bill.

Our national staff and our department service officials are carefully scrutinizing the interpretations placed on the terms of the law by the Veterans' Administration, with particular regard for the more controversial features such as the counting of a spouse's income and the corpus of estate test. Likewise, we are interested in the procedural instructions for implementing the law. This will be a major topic of discussion during this week's rehabilitation conference.

When the law takes effect next July 1, we will closely observe its impact on the pension program as a whole as well as on individual cases. Naturally, we are very curious as to whether the VA's predictions as to numbers and percentages of cases to be favorably affected will be borne out in practice, since these figures played such a large part in our decision to support the legislation. It is important to note that the President's 1961 budget request to service the new law is \$225 million; whereas, the first-year cost estimate had originally been placed at \$308 million.

Surely, by the time of our national convention next October, we should have more concrete data both as to the law's effect and its possible defects.

While this completes my brief résumé of the major aspects of the Legion's 1960 legislative program for veterans, I should like to say a few words about some related and equally important issues.

The American Legion is not unmindful of the high cost of veterans' benefits; and, it is obvious that many of our current resolutions would require additional expenditures of public funds. We have pointed out, however, that the cost of veterans' readjustment and rehabilitation programs is in reality a delayed cost of conducting war. We have likewise called attention to the fact that the annual Federal expenditures for veterans' programs, expressed as a percentage of our yearly gross national product, have remained almost constant for close to three-quarters of a century even though the veteran population has fluctuated widely in that time.

Further, we sincerely believe that so long as the principles upon which our veteran programs are based remain sound, the cost will never be out of keeping with the Nation's ability to pay.

Those who, on grounds of false economy, seek to destroy veterans' benefit programs, discover upon investigation that the underlying principles are unassailable. Failing to find fault with principles, they turn the attack on the veterans themselves. By this strategy, they hope to undermine public support of the benefit programs.

Thus, they spread misconceptions as to the nature and cost of benefit programs; they magnify and distort minor issues out of all proportion to their statistical and monetary importance. They attempt to disparage the significance of the sacrifices made by servicemen in time of war; to discredit the time-honored axiom that a special status accrues to those citizens who have borne arms in time of national peril; and, most wretched of all, to cast doubt upon the very patriotism of veterans.

This attack is the more curious inasmuch as recognition of the honorable and special status of the Nation's veterans is an act of patriotism in itself. Obviously, veterans are no less patriotic today than when they made themselves available for unlimited service in time of war.

We are certain that all members of your committee share this view, and that you deplore these unjust attacks upon our veteran population as much as does the American Legion.

Jimmy Driftwood

EXTENSION OF REMARKS

OF

HON. J. W. FULBRIGHT

OF ARKANSAS

IN THE SENATE OF THE UNITED STATES

Wednesday, March 2, 1960

Mr. FULBRIGHT. Mr. President, last fall I had the good fortune to visit and speak at Mountain View in Stone County, Ark. At the meeting I met James C. Nearris, better known in America as Jimmy Driftwood, the creator of the "Battle of New Orleans," one of the most popular songs in recent years.

Jimmy Driftwood is a fine man, a genuine mountain man, with a natural talent for folk music. He sang for the meeting which I attended and was warmly received. I consider it an honor to have such a man among my constituents.

Recently the Arkansas Gazette carried a story about Jimmy Driftwood. I ask unanimous consent that it be printed in the Appendix of the Record.

There being no objection, the article was ordered to be printed in the Record, as follows:

[From the Arkansas Gazette, Feb. 21, 1960]
JIMMIE DRIFTWOOD, NATION'S FAVORITE HISTORIC TEACHER, MAKES A SUBJECT LIVE THROUGH SONG

(By Betty Buchanan)

The name of Jimmie Driftwood is synonymous with the terms "folk singer" and "composer" and his creative talents were brought to the Nation's attention last December when the Academy of Recording Arts and Sciences awarded him a coveted "Grammy" for the most popular song of the year, "The Battle of New Orleans." He had composed it and he sang it that night to a television audience of several million people. But these are not Jimmy Driftwood's only abilities. He is also a teacher, unique in his method and sincere in his purpose.

George Peabody College of Nashville gave him the honorary degree "Doctor of American Folklore" last August, with the remark that "there never was a schoolteacher like Jimmie Driftwood."

How right they were. Jimmie's unique method of teaching grew out of his desire to stimulate his students' interest in history. In this effort he began singing some of his own compositions to his history class at Snowball High School, strumming his accompaniment on the guitar made by his grandfather 40 years ago from a fence rail, an ox yoke, and the headboard of an old bedstead.

This unusual history lesson, needless to say, made the boys and girls perk up. They began to show an interest in history they had never shown before, asking pertinent questions about the various incidents. The next thing Jimmie knew they were suggesting still other subjects from the textbook for him to set to music.

And so, Jimmie Driftwood composed more and more ballads for the purpose of teaching history, never dreaming he would ever sell one.

He not only composed but he also collected folksongs from far and near, often traveling hundreds of miles to track one down. When RCA Victor expressed a desire to record these early American folksongs, his large collection was immediately brought out and put into use. Then, when he was

asked to record the album called "The Wilderness Road," Jimmie got his students to help him select the songs to be recorded.

"The kids picked songs that went over big," Jimmie disclosed. "You know, kids are not diplomatic; they tell you the truth about what they like or don't like without hedging around. And when it came to selecting songs for 'The Wilderness Road' they didn't try to please me; they just selected the songs they liked. And because they did such a fine job, I have let them choose most of the songs to be recorded ever since."

Driftwood is often awakened in the middle of the night by a song crying to be born, with the tune and lyrics coming to him simultaneously. He immediately gets up, takes his guitar to another part of the house to avoid disturbing his family, and gets to work on the composition.

"When I'm working on a song," he drawled, "time means absolutely nothing to me. I invariably get my biggest surprise when I look in the mirror after spending 4 or 5 days on a composition and see what a mess I am, with several days' growth of beard."

"If I am driving the car when the song comes—and that's often the case—Cleda, my wife, writes down the words as I sing them, and when I can stop I jot down the notes. Nowadays," he added, "when I'm composing a song, I consider what my students have told me concerning their likes and dislikes and write it accordingly, because, as you know, it's the kids who do most of the record buying today."

Jimmy has been writing songs for a long time, in fact he wrote his first poem when he was 8 years old, and began setting them to music when he was 12. It all started when his third grade teacher asked the class to write poems for the next day's assignment. She complimented Jimmy's poem so much that for some time afterward she was showered daily with poems written by that little boy. He used to make up tunes to fit the words in old song books he resurrected from the attic, and it wasn't long before he was setting his own poems to music.

As for teaching school, he was initiated into that profession before he, himself, completed high school. As a boy of 16 he rode a mule 8 miles both ways to teach an eight-grade, one-room school in Stone County. And for the next 25 years he not only taught but also attended school, graduating from Arkansas State Teachers College in Conway.

Home-loving Jimmy Driftwood refers to himself as a "plain man of the hills." His rise to popularity in the folksong field, and his sudden wealth (his income reportedly jumped from \$3,000 a year as a high school principal, to \$100,000 last year from song royalties and guest appearances) have not changed him. His Ozark charm and culture are genuine, and his sense of values has not been altered. He is the same warm and friendly man he was 4 years ago before fame came his way.

So far, he has not purchased the poor man's dream car, as so many newly rich entertainers have done; he still drives his old car of 7 or 8 years vintage. Neither he nor his wife sport flashy clothes and jewelry; they dress conservatively. His stage attire consists only of a buckskin jacket decorated with beadwork, a bolo tie, and cowboy hat work with his usual conservative sport shirt and trousers. * * * and of course, his grandfather's homemade guitar.

The Morris (Driftwood's real name is James C. Morris) are using their new wealth to send their 19-year-old son, James Franklin, to Arkansas College at Batesville, about 75 miles from their home, and to make improvements on the home they built with their own hands 5 years ago near Timbo. Their 16-year-old son, Alan Nixon, is a sophomore at the Timbo High School.

Possibly the most outstanding improvement they are making in their home is the installation of plumbing, a necessity they have not had before. A smokehouse, which will be a storage place for their own cured pork and Cleda's canned goods, is also being constructed, and they are enriching their 200 acres of land with Arkansas lime.

Two years ago Jimmy gave up his school at Snowball in order to start touring the country singing the ballads from his album, "Early American Folksongs." And this past year Cleda discontinued her teaching so that she could accompany her husband on his personal-appearance junkets.

Concert stages, radio, and TV microphones never have frightened Jimmie. He is as much at home before a large audience as he is in the schoolroom. Nevertheless, on the Grammy Awards Presentation he believes he must have been a little more excited than he realized because, as he recalls, "My throat felt awfully dry before I went on stage." With all the excitement, however, Jimmy says his biggest thrill was, and always is, "to know I'm going home."

Even though he gave up his school, Jimmie has not given up teaching. Today he is teaching American history in song. Young minds are being stimulated by his catchy tunes about our American heritage, a few of which are: "Tennessee Stud," "Soldier's Joy," "Sailor Man," and of course "The Battle of New Orleans." Three and a half million records of these historical ballads have been sold throughout the land. Teenagers in 50 States are writing disc jockeys asking questions about American history, and Jimmie is credited nationwide by teachers and disc jockeys alike with "creating an unusual interest in history."

But Jimmy's teaching does not stop here, either. He has made three education films in Hollywood, one of which, called "Get Along Boys," concerns the pioneer westward movement of the last century. These films, using a different approach as far as film education is concerned, will be used in schools all over the Nation, and that different approach is Jimmy's own unique teaching method. He sings his song and then gives a brief lecture on that particular incident. The Los Angeles School Board members are so completely sold on Jimmy's films that they are using them throughout their entire school system.

Jimmie has written about 1,000 songs in his 42 years and has stored most of them in a trunk. In fact, "The Battle of New Orleans" was resurrected from this storage bin. Now when he is asked to make an album he goes to his song trunk and pulls out a few he thinks will be appropriate, and uses these along with several new compositions to make up the album.

It is safe to predict that Jimmy will never quit writing songs. That would be like asking him to stop breathing. The same goes for teaching. As long as Jimmy Driftwood can write and sing his songs he will continue to teach Americans the rich heritage of their freedom-loving, democratic Nation.

The Late Tom Rayburn

EXTENSION OF REMARKS

OF

HON. ROBERT L. F. SIKES

OF FLORIDA

IN THE HOUSE OF REPRESENTATIVES

Wednesday, March 2, 1960

Mr. SIKES. Mr. Speaker, may I express the deep and earnest regret of the Florida delegation over the sad news of the death of the Honorable Tom Ray-

burn, beloved brother of our distinguished Speaker. We extend our sympathy to the Speaker and to each member of the family in their bereavement and we stand shoulder to shoulder with them during this sad and trying period.

Shameful Summit: The Story of Roosevelt at Yalta

EXTENSION OF REMARKS

OF

HON. BARRY GOLDWATER

OF ARIZONA

IN THE SENATE OF THE UNITED STATES

Wednesday, March 2, 1960

Mr. GOLDWATER. Mr. President, excerpted from a new book entitled "Roosevelt's Road to Russia," written by George N. Crocker, in an article entitled "Shameful Summit—the Story of Roosevelt at Yalta," which was published in *Human Events* of January 28, 1960. I ask unanimous consent that the article be printed in the Appendix of the RECORD.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

SHAMEFUL SUMMIT: THE STORY OF ROOSEVELT AT YALTA

(Excerpted from a new book "Roosevelt's Road to Russia," by George N. Crocker, former law school dean)

Franklin D. Roosevelt's fourth inauguration was held on January 20, 1945. Three days later, he boarded the cruiser *Quincy*. For several months his fondest dream, next to his reelection, had been another love feast with "Uncle Joe" Stalin. ("I like this man," he had told Frances Perkins, "and I want to keep on good terms with him.") But now the Russian dictator had made it plain that if the President of the United States wanted to see him, he would have to trek to Russia.

All of the President's advisers except Harry Hopkins opposed his going. Cocksure, ill-prepared, and, as at Teheran, with no strategy beyond his old obsession that the important thing was for Stalin to "like" him, he ignored them and went across the world in an ostentatious spectacle of personal vanity and power which was to be his last. The Yalta Conference was held in February. On April 12, Roosevelt died.

Just before he left for Yalta, he received some momentous news at the White House. Secretary of War Stimson and Gen. Leslie R. Groves, director of the Manhattan project, which was developing the first atomic bomb, informed him that the success of the A-bomb was "a 99 percent certainty" and that it "would probably be ready in August."

This could have dissipated any lingering doubts that the United States, unaided, and without storming the Japanese homeland, would be able to blast Japan out of the war. But already there were no doubts in the minds of those best able to know, and Mr. Roosevelt knew this.

The previous July he had gone to Honolulu. There, Gen. Douglas MacArthur and Adm. Chester W. Nimitz, commander of the naval forces in the Pacific, had told him, in the presence of Adm. William D. Leahy, that "Japan could be forced to accept our terms of surrender by the use of sea and air power without an invasion of the Japanese homeland." Since then, what was left of the Japanese fleet had been crushed in the battle of the Leyte Gulf in October, the

Philippines had been retaken, B-29's were bombing Japan from Guam, Tinian, and Saipan, and Japanese peace feelers had been put out.

When Roosevelt went to Yalta, he kept MacArthur and Nimitz far away. He asked them nothing, told them nothing; yet they were the two men most qualified to counsel him on the Pacific war. The neglect would be incomprehensible but for the fact that he already knew what their advice would be and it was not compatible with his plans. At this stage elementary statesmanship, for the security of American interests in the Far East, required that the Soviet Union be, at almost any cost, dissuaded and forestalled from entering the war with Japan. Roosevelt went to Yalta and secretly did just the opposite.

Woodrow Wilson may have been naive at Versailles after World War I, but he was a meticulous scholar and was never casual. Roosevelt approached Yalta as if he were on a vacation. In fact, Harry Hopkins' notes frankly say: "I was sure the President would wind up by going to the Crimea, the primary reason being that it was a part of the world he had never visited and his adventurous spirit was forever leading him to go to unusual places and, on his part, the election being over, he would no longer be disturbed about it for political reasons."

Roosevelt's health was obviously deteriorating. ("His face had a transparency . . . and often there was a faraway look in his eyes. . . . I felt that he had a slender contact with life," Churchill writes.) But the malodorous decisions finalized at Yalta—for slave labor, forcible repatriation of refugees, the uprooting of millions of human beings in Europe from their homes and lands, the breaking of pledges of the right of self-determination, and similar brutalities—which have made Yalta a symbol of international turpitude cannot be blamed on the President's illness.

The plain fact is that Roosevelt had succumbed to Stalin's wiles back at Teheran in December 1943. There the two—often over Churchill's objections—had stacked the deck with which the game was played out at Yalta, but the deck had been hidden away until after the fourth term election of November 1944.

The *Quincy* took the President to Malta, where he joined Churchill. Transport planes waited them and their entourages of some 700 people across the Aegean and Turkey and the Black Sea to the Crimea. Roosevelt flew in his luxurious new four-engine plane, the Sacred Cow, which was equipped with elevators.

This, indeed, was the purple path of adventure. President Roosevelt and his retinue were domiciled in Livadia Palace, built as the summer home of Nicholas II. The British were housed in Vorontsov Villa, 12 miles away, and the Russians, cleverly, occupied the Yusupov Palace, midway between.

The Soviet secret police were everywhere and were under the personal command of the notorious Commissar L. P. Beria, who was destined to be denounced as a monster and executed after Stalin's death. Beria's duties at Yalta were, no doubt, exacting, but not unpleasant. For example, he had the opportunity to jolly up with Roosevelt, his daughter, Mrs. Anna Boettiger, Secretary of State Stettinius, and the others at a dinner at the Russian headquarters, which included 20 courses and 45 toasts. Also draining vodka at this wassail were Andrei Y. Vishinsky, the grisly public prosecutor at the liquidation purge trials Stalin had staged from 1935 to 1939, and V. M. Molotov, who in August of 1939 had contrived with Hitler's Von Ribbentrop the unholy pact which signaled the start of World War II. Such a feeling of fraternity welled up in Mr. Roosevelt, in the company of Marshal Stalin and Messrs. Beria, Vishinski, and Molotov, that he offered a

particularly saccharine toast in which he observed that the atmosphere at the dinner was "that of a family."

Alger Hiss was brought to Yalta as an expert from the State Department. His influence there should not be magnified. However, James F. Byrnes saw him "frequently consulted by Mr. Hopkins and Mr. Stettinius" in the conference room, and Hiss himself later testified before a congressional committee that "I helped formulate the Yalta agreement to some extent." Indeed he did. Some of his handwritten notes went back and forth between President Roosevelt and himself. At the plenary sessions, the three heads of state and the senior officials sat at a great round table. Where was Alger Hiss? He sat with Harry Hopkins behind the President.

Yalta was, of course, Stalin's show. He was the star. At the conference table, he was at once the most blunt and the most subtle. As a host, he overwhelmed his impressionable guests with lavish care, so that Churchill telegraphed home that the Russians' "prodigality exceeds belief." On one occasion somebody said casually that there was no lemon peel in the cocktails. The next day, a lemon tree, loaded with fruit, was in the hall, brought from far away by air.

Mesmerized from the start, Roosevelt presented a spectacle that can only be described as pitiful—this fading President, floating slowly out of this life, outmatched and outwitted at every point, mouthing meaningless clichés, and dripping with flummery in the presence of the dictator.

How did the host of Yalta look in the flesh? "He has got an unpleasantly cold, crafty, cruel face," wrote Alanbrooke in his diary, "and whenever I look at him I can imagine his sending off people to their doom without turning a hair. On the other hand, there is no doubt he has a quick brain."

Sly and disarming, Stalin was an expert at the Communists' forensic device of giving special emphasis to an assertion of which the exact opposite was the real truth. "I am talking as an old man; that is why I am talking so much," he said at a dinner at the Yusupov Palace on February 8. "But I want to drink to our alliance. . . . In the history of diplomacy I know of no such close alliance. . . . In an alliance the allies should not deceive each other. Perhaps this is naive? Experienced diplomats may say, 'Why should I not deceive my ally?' But I as a naive man think it is best not to deceive my ally even if he is a fool." Yet no man at the table could have doubted that Stalin would make an alliance with the Devil, or with angels, if it would be to his advantage, or break it whenever it suited him.

At the end of the 8-day conference, a public communique and secret agreements were signed. Poland was to be dismembered. Some 11 million people who lived in the eastern half of prewar Poland were to be surrendered to the Soviet Union without any semblance of a plebiscite. Thus, Stalin, Roosevelt and Churchill decreed Soviet annexation of 48 percent of Poland's territory and about one-third of her population. No Pole was present.

The Polish Government-in-exile, under which whole regiments of Poles were fighting valiantly for the Western Powers in Italy and on the western front, was now betrayed, and the Lublin committee, a group of Polish Communists trained for years in Moscow in Stalin's tough school, was described in the communique as "the present provisional government of Poland." This meant the surrender of Poland to communism.

For 4 days Churchill fought against this faithlessness, but his American colleague would not stand fast with him. Sharp differences between Churchill and Stalin came

to the surface the first day this subject was discussed. That evening, the President made a fatal move. He compromised his independence by sending a letter to Stalin in which he announced: "I am determined there shall be no breach between ourselves and the Soviet Union." With that statement he admitted that if Stalin made an issue of Poland, the United States would give way. Thus fortified, Stalin tossed the Prime Minister and the President only some high-sounding words to take home, about "free elections." Admiral Leahy quickly recognized the loosely worded formula as a "phony," and spoke up before it was signed. "Mr. President," said Leahy, "this is so elastic that the Russians can stretch it all the way from Yalta to Washington without ever breaking it." Roosevelt said he knew that.

A huge chunk of Germany was to be torn off and given to Poland as a sop for the mayhem to be performed on that unhappy country; some choice morsels, such as the ancient Germanic city of Königsberg, were to be donated to the Soviet Union outright; the rest of eastern Germany was to be spread-eagled for forced communication by Russian masters, since occupation by the Red army meant nothing less than that; and the fate of Berlin was left in a fog. How and when this nightmare would ever end was too unpleasant a subject to be faced at Yalta.

Ten million Germans were doomed to be turned out of their homes and set adrift on the roads to flee westward, for all the territories to be detached were ethnically German. What followed Yalta was a mass expulsion which Churchill himself was impelled to allude to as "tragedy on a prodigious scale." Actually, never in history, even in the worst of pagan times, has there been such a millionfold uprooting of human beings, and Churchill admitted in the House of Commons in August of 1945 that it was "not a good augury for the future of Europe." The Atlantic Charter, at the beginning of the war, had pledged against "territorial changes that do not accord with the freely expressed wishes of the peoples concerned," but at Teheran and Yalta this pledge had been torn to shreds.

Roosevelt had always taken pains to pose as a humanitarian, so it is not surprising that the agreement for forced human labor was kept out of the public communiqué and put into the secret protocol. That relapse into barbarism of past ages was hidden even from James F. Byrnes, a member of the American delegation. "Had I known it," he writes, "I would have urged the President to oppose the inclusion in the protocol of any provision for the use of large groups of human beings as enforced or slave laborers."

Another dark moral blot upon the Yalta record was the promise to Stalin that the Russian nationals rounded up by the Americans and British in Germany, France, and Italy would be deported to Russia, by force if necessary. There were about 2 million of these. Some had been captured by the Germans; others had voluntarily fled from communism early in the war. Many were found in German uniforms, but others were civilian escapees who only wanted to find freedom. Most of them begged not to be sent back to Russia, knowing their fate would be the firing squad or Siberian slave camps.

The State Department had decided to disallow forcible repatriation and abide by the Geneva Convention on the treatment of prisoners of war, but a message was dispatched to Washington from Yalta overruling this decision. As a consequence, when the war ended a sickening drama was enacted. All the Russians were herded indiscriminately—screaming, in tears, at bayonet point or dragged bodily—into boxcars

and sent to Russia. Not the slightest attention was paid to the Geneva Convention, the doctrine of asylum, or the humane regard for individual choice which had ameliorated man's cruelty in less barbarous years. The gruesome spectacle was singled in many memories, but not until 10 years later, when the State Department published the so-called "Yalta Papers," was it known for sure that this unholy crime against humanity had been cannibalized at Yalta.

After lunch on the afternoon of February 8, Stalin and Roosevelt, like two arch conspirators slinking off to hatch the direst plot of all, vanished behind the locked doors of a room in Livadia Palace. At the President's request, Churchill was not there. In this room, Stalin was bribed, with Japanese and Chinese territory and concessions and vast stores of American equipment, to enter the war against Japan "2 or 3 months after Germany has surrendered."

This is one agreement which was never broken. The Soviet Union entered the Pacific war 6 days before Japan surrendered and 2 days after the atomic bomb was dropped on Hiroshima. Her contribution to Japan's defeat was nil, but she walked off with spoils of victory of incalculable value. It is this secret deal that General Patrick J. Hurley, Roosevelt's Ambassador to China, characterized, after he learned of it, as a "blueprint for Communist conquest of China," and that William C. Bullitt, who had served by appointment of Roosevelt himself as Ambassador to Russia and to France, called "entirely dishonorable" and "potentially disastrous to the United States." Bullitt has written: "No more unnecessary, disgraceful and potentially dangerous document has ever been signed by a President of the United States."

The evidence is overwhelming, from many sources. Roosevelt's generosity to Stalin that afternoon in Livadia Palace was a willful caprice of his own. There was no force majeure pressing on him. He faced no Hobson's choice. He should have spurned what he was bargaining for even if it had been tendered as a gift. The Russophilism which possessed his mind at this time blinded him to all other considerations. The claim that he acted under military advice has always been a sham.

James F. Byrnes was kept in the dark about this agreement, too. Roosevelt did not tell him about it at Yalta, nor when they were back in Washington. "When the President returned," Byrnes attests, "he did not mention it to me and the protocol was kept locked in his safe at the White House." It was not until some time after Roosevelt's death that the safe in the White House yielded the astonishing document, to the surprise of the new President.

Yalta was, of course, more than the unhappy culmination of Roosevelt's long series of blunders in Weltpolitik. It was a moral debacle of unimaginable evil to the world. But from a power standpoint alone, it climaxed the pattern of action which made the Soviet Union the dominant power on the Eurasian land-mass, a result which, according to documentary evidence, Roosevelt and Hopkins had anticipated with equanimity at least as far back as the Quebec Conference of August 1943, and to which they had given persistent support. In these days, Winston Churchill, according to his own words, moved about "with an aching heart and a mind oppressed by forebodings." When we cast the light into the dark recesses of the summit conferences of World War II, we find that Churchill's strategy for the war and the peace was repeatedly thwarted by Franklin D. Roosevelt in favor of Stalin's desires.

What did Roosevelt tell the American people when he came home from Yalta? In a carefully staged performance, he addressed a joint session of Congress sitting in a wheel

chair. "This conference concerned itself only with the European war and the political problems of Europe, and not with the Pacific war," he swore. This was, of course, a falsehood, for he had in his safe the secret agreement signed at Yalta concerning the Pacific war. He had, it is true, promised Stalin to keep the secret, but had he also promised to perjure himself before the Congress of the United States?

Then came the glittering words: "The Crimea Conference . . . spells—and it ought to spell—the end of the system of unilateral action, exclusive alliances, and spheres of influence, and balances of power . . . I am sure that—under the agreement reached at Yalta—there will be a more stable political Europe than ever before."

This may well rank as the most blustering, the most reckless—and the most wrong—prediction ever made within the walls of the National Capitol.

By this time, American public opinion was so drugged by wartime propaganda that it was possible for the President to make such a statement and be believed by millions. There were voices of dissent, too, and widespread uneasiness in the country, but people believed because they had made great sacrifices for—they hoped—something, and they desperately wanted to believe. Optimism had always gushed from the summit conferences—from the Atlantic Conference, from Casablanca, Quebec, Cairo, Tehran, and now from Yalta, the end of Roosevelt's road to Russia. People had been lavish in their hope and trust. But for decades they and their children were to pay for the folly.

Resolution of the Committee on Science and Astronautics

EXTENSION OF REMARKS OF

HON. OVERTON BROOKS

OF LOUISIANA

IN THE HOUSE OF REPRESENTATIVES

Wednesday, February 17, 1960

Mr. BROOKS of Louisiana. Mr. Speaker, on this date the Committee on Science and Astronautics agreed to a resolution expressing sympathy to the Speaker of the House, the Honorable SAM RAYBURN, upon the passing of his brother, Mr. Tom Rayburn.

Under leave to extend my remarks, I submit the following resolution:

Resolution extending the sympathies of the Committee on Science and Astronautics to the Speaker of the U.S. House of Representatives, the Honorable SAM RAYBURN, and to his loved ones:

Whereas the Speaker of the House of Representatives has suffered the loss of his brother, Tom Rayburn; and

Whereas it is recognized that the bond of love and respect between the Speaker and his brother could not be exceeded; and

Whereas "Mr. Tom" had served long and faithfully as bulwark and anchor of the Rayburn family home in Bonham, Tex.; and

Whereas by his unstinting devotion to, and labor on behalf of, his home, his community, his State, and his Nation, "Mr. Tom" helped ease the great burden which has so long rested upon the shoulders of a great Speaker: Now, therefore, be it

Resolved, That the Committee on Science and Astronautics of the House of Representatives hereby expresses its deepest sympathy to the Speaker of the House and to his family upon the passing of Tom Rayburn in his native State, March 1, 1960; and be it further

Resolved, That the Speaker be notified of this resolution by the chairman of the committee; that a copy of this resolution be made part of the permanent archives of the committee, and that this resolution further be placed in the RECORD of the Congress of the United States.

OVERTON BROOKS,
Chairman,
CHARLES F. DUCANDER,
Executive Director.

Controversy in Panama

EXTENSION OF REMARKS

OF

HON. GEORGE A. SMATHERS

OF FLORIDA

IN THE SENATE OF THE UNITED STATES

Wednesday, March 2, 1960

Mr. SMATHERS. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD a letter written to me by the Panama Canal Society of Florida, signed by Macon A. Turner, in which they set out their views with respect to the present controversy going on in Panama. I commend it to the Senate for their attention.

There being no objection, the letter was ordered to be printed in the RECORD, as follows:

THE PANAMA CANAL SOCIETY OF FLORIDA,
St. Petersburg, Fla., January 12, 1960.

By the terms of a treaty entered into between the United States of America and the newly created Republic of Panama in 1903 and ratified by the highest tribunals of these nations on February 23, 1904, and December 2, 1903, respectively, it is stated in article II thereof that, "The Republic of Panama grants to the United States in perpetuity the use, occupation, and control" of a delineated piece of land now known as the Canal Zone. There is no uncertainty about the choice and use of the word "grant." It was placed there in that best form of a contract and its use approved by the most brilliant and keenest legal minds of the Republic of Panama.

The treaty further states: "The Republic of Panama grants to the United States all rights, power, and authority within the zone mentioned in article II . . . which the United States would possess and exercise if it were sovereign of the territory . . . to the entire exclusion of the exercise by the Republic of Panama of any such sovereign rights, power, or authority."

Please note in view of the communistic inspired aggression of November 3 and 23, 1959, we repeat, "To the entire exclusion of the exercise by the Republic of Panama of any such sovereign rights, power, or authority." This is the binding, bilateral agreement never abrogated which misguided agitators are now trying to break by coercion and force.

It is common knowledge that there is neither a higher nor more binding agreement between nations than a treaty properly negotiated, signed, and ratified. The Hay Bunau Varilla Treaty of 1903 to which the Republic of Panama and the United States of America were signatories was such an agreement.

The consideration necessary in all contracts was considered ample. The United States received exclusive jurisdiction to a parcel of land and the Republic of Panama received \$10 million in one lump sum, with the United States further promising Panama a \$250,000 annuity. The United States at that time also guaranteed the independence

of the Republic of Panama, an independence which wasn't worth the breath of its declaration without such guarantee. There was also a multitude of other obligations which the United States was to assume and did so; but comb the treaty word for word and one will find little if anything which was Panama's to give without our sponsorship, economic backing and guarantee of freedom.

Since the United States sponsored the independence of Panama, and we use the word "sponsored" advisedly, it has lived up to each and every one of its promises. Beyond and above its obligations it has been ever ready with assistance, whether it was in the nature of cash, gifts, loans, medicines, food, supplies, teachers, scholarships, agricultural machinery, seed, or other aid immeasurable in value. In a section of the Hull-Alfaro Treaty of 1936-39 the United States increased the annuity payment from \$250,000 to \$430,000. In 1955 the United States increased the \$430,000 annuity to \$1,930,000. This was incorporated in the Eisenhower-Remon Treaty of 1955. We also gave Panama about \$25 million worth of real estate in the city of Colon and the railroad stations, buildings and yards in the cities of Colon and Panama.

We, former employees of the U.S. Government, members of the Panama Canal Society of Florida, have spent nearly our entire lives on the Isthmus of Panama. Some of our fathers, we are proud to say, arrived with Colonel Gorgas in 1904, braved the many lifetaking fevers and other obstacles and helped construct one of the great wonders of the modern world, the Panama Canal. Some of us have children working for our Government on the Canal Zone. Although transplanted from many States of our native land, in over half a century we acclimated ourselves and learned to love the Isthmus—for it became our home. We not only found many of its people to be excellent neighbors, but formed many lasting ties and warm friendships.

November 3 is Panama's day of independence, heretofore happily celebrated by the citizens of the United States and those of Panama. However on November 3, 1959 these memories of international friendship were rudely shattered by a small, but violent minority of Panamanians refusing to listen to reason but instead following the leadership of Cuban mercenaries, communistic travelers in their midst, and radical leftwing misguided demagogues of their own.

Not content with the bloodshed and the malicious damage committed on the Canal Zone, the crazed anti-American mob proceeded to the U.S. Embassy where they disrespectfully hauled down the flag of our country and despicably tore and defiled it. Our Embassy officials listened to orders on the radio from their headquarters to the Panama police or Guardia Nacional telling them to stay away from the Embassy. Not a policeman showed to quell the riotous action.

To add insult to injury and further infamy, the Panama radio and press immediately after the November 3 demonstration, commenced calling for another march upon the Canal Zone, abused the good Governor of the Canal Zone and insultingly denounced the U.S. Government in most vicious and scurrilous language. Again the hoodlums marched and again U.S. citizens and soldiers were injured trying to stop the crazed abusive mob from committing further injury and damage.

We, retired employees of the Panama Canal, who left so many good friends in Panama, cannot comprehend this lamentable and pitiable state to which they have permitted their actions and consciences to deteriorate.

Just what are the desires of these disillusioned, ill-advised, misguided "pot-of-gold" seekers?

They scream, yell, and shout "sovereignty." No less a dignitary than William Howard Taft when he was on the Isthmus of Panama in 1904, as Secretary of War, declared that Panama was titular sovereign of the Canal Zone. He did not enlarge upon the definition and meaning of this and never did he state that this included jurisdiction over our grant. At best a titular sovereign is but nominal, it is one who is such in name only, a sort of honorary designation. The fact remains as is so clearly stated in the Treaty of 1903, the Republic of Panama granted to the U.S. Government the area now known as the Canal Zone in perpetuity as if it were sovereign to the entire exclusion of the exercise by the Republic of Panama of any such sovereign rights, power or authority." That is the irrevocable, indisputable and nonabrogated law of the Republic of Panama and the United States of America. May our President and our Congress with God-given strength keep it so.

Somebody who go his abacus counters mixed is yelling for 50 percent of the Panama Canal's gross income. Just how long would the goose live which has been laying the golden eggs for Panama under such fan-fetched ridiculous bookkeeping? Quoting from the official Panama Canal Company's Statement of Revenue and Expenses, we find that the total revenue for the fiscal year ending June 30, 1959, was \$87,250,871. The operating expenses and deductions were \$83,837,339. This leaves a net revenue of \$3,413,532. Our annuity to the Republic of Panama for our grant is \$1,930,000 or 56 percent of our net revenue.

Echoes of "equal pay for equal work" boldly resound. Yet the minimum wage on the Canal Zone is \$1 per hour and has been so for some time whereas the Panamanian Assembly recently passed a bill establishing a minimum rate of 40 cents an hour in the Republic.

For more than 56 years we have given and given in to the Republic of Panama. Our gifts have been cast upon troubled waters and have brought home to us in America nothing but disrespect for our flag, our country and our citizenry. We should now certainly be firm believers in the adage that the quickest way to lose a friend is to give or loan him money.

La Hora, La Nación, Critica, La Estrella and El Dia, all publications printed in the city of Panama, as well as their radio stations, blatantly declare that the flying of the Panamanian flag on the Canal Zone is but the beginning of their demands and they will neither terminate nor cease until the Panama Canal is theirs.

Some months ago Gen. Robert E. Wood, who was Chief Quartermaster of the Panama Canal during its construction days had the following to say: "Our State Department should inform the Panamanian Government in no uncertain terms that we have a treaty; that we will observe it; and that we shall not amend the treaty further. We should also request them to clean house of communistic agitators. . . ."

As this new year dawns we have continued and absolute faith in the dedicated men employed by our Government. With their profound knowledge and ability and our country's great reservoir of clear thinking and reasoning, we have no doubt that this grave question will be resolved without loss of honor to our great Nation or its citizens. That our sons and daughters working, traveling or residing on the Canal Zone may live their lives unmolested, free from insult, proud of their great country, their heritage and their citizenship.

Respectfully,

MACON A. TURNER,
President, Panama Canal Society of
Florida.

World Court Is Packed

EXTENSION OF REMARKS

OF

HON. DANIEL J. FLOOD

OF PENNSYLVANIA

IN THE HOUSE OF REPRESENTATIVES

Wednesday, March 2, 1960

Mr. FLOOD. Mr. Speaker, in an address by me to the House on January 13, dealing with the Caribbean situation with special reference to the Panama Canal, one of the key points stressed was the danger that a proposed rescission of the Connally reservation to the U.N. World Court resolution of August 2, 1946, would involve to continued U.S. sovereignty over that key waterway.

Since that address there have been numerous published statements and resolutions, including a joint resolution passed by the Commonwealth of Virginia, in strong opposition to the proposed rescission.

Thus, I read with special interest the February 28, 1960, weekly newsletter of Thurman Sensing, which I quote with the text of the Virginia resolution:

THE WORLD COURT IS PACKED

(By Thurman Sensing)

If the Connally amendment to the World Court resolution is repealed, the United States will be subjected to an international judicial tyranny. A handful of judges, appointed by the United Nations—including neutralist and Iron Curtain countries, will be able to rule on U.S. tariff laws, immigration laws, economic relations with foreign countries, and the American presence in the Panama Canal Zone.

The story of this amendment goes back to 1946, when the then Senator Tom Connally of Texas made a six-word addition to a resolution approving American participation in the World Court. The resolution itself said the court wouldn't have jurisdiction over domestic matters. But the original language of the resolution left unclear who would decide what is or is not a domestic matter. Senator CONNALLY added these words, "as determined by the United States."

The meaning of this amendment is that the United States cannot be sued in the World Court without its consent. This is the same situation that prevails within the United States, for the United States cannot be sued in a Federal district court without its consent.

Senator HUMPHREY, Democrat of Minnesota, and Senator JAVITS, Republican of New York, two of the most extreme liberals in the Senate, have banded together to repeal this protection for the United States. The President and apparently the Vice President mistakenly lend support to the repeal move.

To repeal the Connally amendment would be like repealing the Monroe Doctrine or other great legal documents protecting the national interest. Repeal will be an invitation to the enemies of the United States to engage in legal harassment of this country.

The rise of the Afro-Asian bloc in the United Nations insures that the United States and its free world allies will have a very small voice in selecting future judges of the World Court. In all likelihood, the court will be made up of a Russian, a Czechoslovakian, a Ghanian, an Indian, a Cuban, and other judges with little or no desire to treat the United States with fairness. In other words, the advocates of repeal of the Connally amendment are urging that the sovereignty of the United

States be subjected to men who dislike the American way of life. The World Court is a stacked court, and one that is even more radical and bent on judicial tyranny than Earl Warren's court.

Repeal would enable the World Court to interfere with race relations in the United States. It would also enable the Court to order U.S. ships and Marines out of Guantanamo Bay, Cuba, or demand continued sugar subsidies. Repeal would open the way for Asians to insist that handsome immigration quotas be opened to members of the yellow race. Indeed there is no limit to the amount of troublemaking, or to the number of invasions of national sovereignty, that the World Court would stir up.

Some of the advocates of repeal are perfectly open in expressing their hopes and wishes. Walter Lippmann, syndicated columnist, said recently that "We have an interest that every property dispute, as with Castro today, should be decided by a court, and not left to propaganda, coercion, and force." And what chance would the United States have before a World Court dominated by neutralist and Communist nations? None at all, of course. No doubt the United States would be branded an aggressor in Cuba and told to compensate Dictator Castro with American assets on the island.

The seriousness of the threat to American sovereignty contained in the repeal proposal should be made apparent to all thoughtful citizens. Elimination of the Connally amendment would be a heavy blow to the United States.

COMMONWEALTH OF VIRGINIA, HOUSE JOINT RESOLUTION 41, OPPOSING RESCISSION OF THE CONNALLY AMENDMENT TO THE WORLD COURT RESOLUTION OF AUGUST 2, 1946, OFFERED FEBRUARY 5, 1960

Whereas in 1945 the Senate of the United States, without adequate debate, ratified the pact known as the Charter of the United Nations; and

Whereas the attendant publicity featured two key points in this Charter: (1) to save succeeding generations from the scourge of war and (2) to deny the right of the United Nations to intervene in matters which are essentially within the domestic jurisdiction of any state; without which, the Charter would not have been accepted by the United States; and

Whereas on August 2, 1946, the Senate of the United States ratified the United Nations World Court resolution but in so doing, in line with our system of constitutional government, provided that the United States would not accept compulsory jurisdiction of the International Court of Justice in matters which are essentially within the domestic jurisdiction of the United States, the last six words being known as the Connally amendment;

Whereas since May 1, 1958, there has been a subtle campaign by internationalists of various types aimed at rescission of the Connally amendment;

Whereas the rescission of the Connally amendment would expose the United States to serious juridical dangers before an international court of 15 judges, only 1 of whom can be from the United States;

Whereas Communist nations have judges on the Court but do not and will not accept its jurisdiction; and

Whereas the damages inherent in such rescission would expose various U.S. domestic issues to judicial interpretation of such international tribunal; and

Whereas the compulsory jurisdiction of such tribunal would endanger not only the constitutional powers of Federal agencies as delegated in the Constitution of the United States but also those powers reserved to the States and to the people; and

Whereas U.S. Senate Resolution 94 would, by repealing the Connally amendment, re-

move that safeguard against usurpations by an international judicial tribunal: Now, therefore, be it

Resolved by the house of delegates, the senate concurring, That (1) rescission of the Connally amendment would jeopardize the Constitution of the United States and impair the powers reserved to the States and to the people; and (2) copies of this resolution shall be sent to the President of the United States, the President of the Senate of the United States, the Speaker of the House of Representatives, all members of the Virginia delegation in the Congress, and to the Governors and presiding officers of all legislative bodies of all the States.

The Role of Small Businesses in America's Defense Efforts

EXTENSION OF REMARKS

OF

HON. KENNETH B. KEATING

OF NEW YORK

IN THE SENATE OF THE UNITED STATES

Wednesday, March 2, 1960

Mr. KEATING. Mr. President, I should like to call attention this morning to an excellent and informative article, "The Role of Small Business," by Elliot E. Wentworth, vice president of the Cincinnati Vulcan Co. This article is contained in a publication entitled, "The General Electric Defense Quarterly," which includes a number of excellent articles on our various defense needs and programs. Mr. Wentworth is himself an official of a small business which has done work for the Government. In a frank and forthright manner, he discusses the problems involved in negotiating and carrying out a Government defense contract. He refers to "mountains of paperwork" and the "beastly slow flow" of funds which in many instances are characteristic of Government contracts and subcontracts.

Nonetheless, Mr. Wentworth makes it very clear that the small businessman has a definite and very important function to perform in the organization and construction of our overall defenses. He cites the responsibility of small businesses to participate actively in our defense effort and points out further that many large corporations depend very heavily upon the valuable assistance provided to them by small businesses.

Mr. President, I know that this excellent and thoughtful article will be of interest to countless American small businessmen, who have or who in the future intend to contract work for the Government. The Federal Small Business Administration provides many valuable and important services and often significantly assists these businesses in bidding for and financing Government contracts. Their efforts combined with constructive and forward-looking attitudes on the part of small businessmen such as Mr. Wentworth have contributed greatly to our various defense programs.

Mr. President, I commend Mr. Wentworth for his article and ask unanimous consent that it be printed in the Appendix of the Record in order that other small businessmen may have an oppor-

tunity to read and study this excellent analysis of the role of small businesses in Americas defenses.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

THE ROLE OF SMALL BUSINESS

(By Elliot E. Wentworth)

There are thousands of small businesses throughout the United States having the opportunity to participate in the over-all concept of an adequate defense system in a sound economy. But, do their managements always appreciate this opportunity in view of the fact that the bulk of all defense contracts is placed with large, nationally known manufacturing and engineering companies? Published figures from Washington indicate that \$90 billion of defense contracts placed in a particular period went directly to large organizations, and only one-half billion directly to small companies. Here is the problem, the potential pool, and the great opportunity for small business. It is time for small business to take a new look at its own evaluation of its place in this market.

MANY OPPORTUNITIES

Just as these large companies have their responsibilities to the Nation, to their immediate buying public, to their employees, to their managements, and to their stockholders, so too have smaller companies (those employing 500 or less people, according to the Small Business Administration standards.) An appreciation of the opportunities in the defense marketplace by many of us in small business who may have products and services to sell there will not only improve our positions in that sprawling market, but even more basically will allow us to contribute some small part to the growth line of the overall national economy.

It is almost trite to remind ourselves that the whole economy is no stronger than the sum of its parts. Therefore, the great national organizations which are furnishing services and equipment to the Army, Navy, and Air programs properly expect their many thousands of small "feeder" or subcontract suppliers to be healthy and vigorous in their own economic and social identities. This very expectation creates immeasurable small business opportunities. As a member of a smaller company employing approximately 450 people when operating at peak capacity, I find it difficult to agree with those who suggest that it is extremely difficult and even hazardous to bid on and work for prime contractors tied directly to the defense effort.

PROBLEMS OF SUBCONTRACTING

Haven't we often heard managements of small companies say that they would much prefer to avoid the terrific strains of subcontracting with large organizations doing primarily Government defense business? Perhaps justification is based partially on the following arguments:

1. The question of quoting on all of a project or none.
2. The 'beastly slow flow' of funds from the Government agency to the large prime contract company to the small subcontractor.
3. The serious difficulty in often not being able to get adequate working capital to finance internally when large amounts of company funds are so tied up.
4. The mountain of nine-copy paperwork involved.
5. The superimposed inspection system required.
6. The sheer pressure of defense expediting, being asked for unusual preference over peacetime work going through the shops.
7. The pressure of heavy experimental costs without a commensurate coverage in orders.

These complaints are a few of the many

which impel small company managements to eventually shy away from facing up to a national responsibility and a social opportunity to participate and grow in a continuing guns and butter economy.

SMALL COMPANIES HAVE A VOICE

Why shouldn't representatives of small companies feel free to call for a change of thinking concerning such problems by larger defense contract organizations? Is it a lurking fear that whoever they might be—if they are the customers—they cannot be approached on legitimate complaints? But, if there is an attitude of indifference or complacency toward the whole problem of national defense and survival, then each of us has his small part in asking himself what must be done to change, and change quickly.

The small company's strength and growth potential lies in the genuine dignity each of its members feels in working for that group. Since that group's real competition is in its own ability to be continually more competent, if each employee recognizes a high purpose in working not only for a wage, but for a common company and national cause, his enthusiastic attitude will reflect in improved efficiency for his company. The sum of all such improved efficiencies will mean a better product at a power price for both the guns and the butter markets making up such a large portion of the overall American economy. This then is true economic advancement in the best sense of the world.

DIVERSIFICATION PAYS OFF

Our company has some good experience in this defense economy. It has included engineering and manufacturing contracts for diverse type of defense program work. For example: (1) Development studies in a semi-research area for a large chemical group, (2) equipment for an important arsenal on the east coast, (3) a series of military engine test-stands for a large engine manufacturer, and, (4) heavy fractionating tower units for an important technical agency of the Federal Government.

The technical experience gained in process in such jobs has been helpful in bidding projects involved in the peacetime markets of the chemical, petrochemical and the petroleum industries.

Obviously, the small company needs added volume to cover fixed overhead burdens which tend to slowly increase in an inflationary interval such as the entire postwar period. Thus, any overhead hours recovered on a defense subcontract are just as helpful as those recovered in work processed on those month in and month out projects wherein the end products may ultimately be used by companies manufacturing synthetic industrial alcohols, acids, and other chemicals.

PEACETIME SERVICES AN ASSET

It is a fact that as the volume of peacetime services is enlarged, there is added opportunity for the smaller company to invite research and/or development thinking with companies involved in the defense effort. And why not, if peacetime services emphasize the importance of continuing development studies in order to maintain a strong competitive position?

So it is that development studies are often invited by the companies tied directly to defense. Their sympathetic approach to the problems of small companies doing this kind of added work is well known. Costs are realistically approached and the responsibility for the paying of such costs is often borne by the base companies. And this is the way it should be, inasmuch as our experience has indicated that the nondefense manufacturers expect to have such preliminary costs included when contracting on overall jobs. In other words, practical experience at least suggests sitting down with the large com-

panies and thinking through on the problems involved before going ahead.

Thus, the plea is that managements of both large and small companies ask themselves—wherein can they find a common ground of cooperation in serving each other, in this good purpose thinking—each really needing the other? Not only then are their immediate groups benefitted, but their social responsibilities to the Nation are carried forward, and thus a whole people is protected and improved simultaneously.

Clean Elections Bill

EXTENSION OF REMARKS

OF

HON. JOSEPH E. KARTH

OF MINNESOTA

IN THE HOUSE OF REPRESENTATIVES

Wednesday, March 2, 1960

Mr. KARTH. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following article which appeared in the Minneapolis Tribune, Minneapolis, Minn., on January 28, 1960:

CLEAN ELECTIONS BILL

The first major piece of legislation to come before the current session of Congress, the so-called clean elections bill, has passed the Senate. The 50-to-39 vote, however, was hardly an impressive victory for so important a measure, and it appears the bill may not even reach the House floor.

This is unfortunate, for the bill proposes election law reforms that are long overdue. In fact, the basic law which the bill proposes to amend—the corrupt practices act—was drawn over 35 years ago.

Campaign spending limits set in 1925 are not realistic in 1960. They have not been realistic for many years—and the fact is that the spending limits have been honored more in the breach than in the observance.

An analysis of 1958 spending on congressional races by Congressional Quarterly, for example, showed that reported totals came to only about \$5,000 per candidate—hardly enough to wage a serious campaign for Federal office. No one can learn, under present law, how much unreported money goes into the campaigns.

Another loophole is that primary campaigns involving Federal offices—which are tantamount to election in one-party States—are not covered by the reporting requirements. Significantly, some of the heaviest opposition to the Senate bill came from southern Senators.

There remains an unresolved area of controversy concerning the wisdom of superimposing Federal laws on certain election matters now under State regulation.

But the direction of the Senate bill, we feel, is healthy. Controls are tightened even though spending limits are raised (except in the case of individual contributors). Heavy emphasis is given to fuller disclosure of the sources of campaign funds—and this is a matter of vital concern to voters.

If the house takes the easy way out by pigeonholing this bill, it will be demonstrating a callous disregard for the people's right to know. In effect, failure to bring the bill to the floor would be the equivalent of condoning flagrant evasions of the present law.

The Senate has recognized the problems—although not all of them—and has offered a portion after many previously unsuccessful efforts. Let's not let the matter die there.

Red Missiles in Cuba

EXTENSION OF REMARKS

OF

HON. DANIEL J. FLOOD

OF PENNSYLVANIA

IN THE HOUSE OF REPRESENTATIVES

Wednesday, March 2, 1960

Mr. FLOOD. Mr. Speaker, the President of the United States on February 24, 1960, during his address to the Brazilian Congress in Rio de Janeiro, took advantage of the opportunity to warn the nations of the free world of the mounting dangers of the all-powerful state and its "unenlightened system of tyranny." As to the extension of such doctrines to the Western Hemisphere he declared that "we would consider it intervention in the internal affairs of an American state if any power, whether by invasion, coercion or subversion, succeeded in denying freedom of choice to the peoples of any of our sister republics."

That statement, Mr. Speaker, has been heralded over our Nation as a reaffirmation of the Monroe Doctrine and it has been so interpreted in other nations. But it is not sufficient.

As will be seen from a thoughtful news story in the February 21, 1960, issue of the News and Courier of Charleston, S.C., by Anthony Harrigan, which I shall quote, the Presidential statement to the Brazilian Congress does not go far enough. The Congress of the United States must assert its views in unmistakably clear terms. This I endeavored to do in House Concurrent Resolution 445, which is still pending.

The indicated news story and House Concurrent Resolution 445 follow:

RED MISSILES IN CUBA WOULD THREATEN UNITED STATES

(By Anthony Harrigan)

What action will the United States take if Fidel Castro asks the Soviet Union to help defend Cuba by installing missile bases on Cuban soil?

There's a question that puts the Cuban problem in perspective. For what is a more logical follow-up to the Soviet-Cuban trade pact than a military pact between the two countries? Soviet Deputy Mikoyan, who visited Cuba earlier this month, is on record as saying his government will supply Cuba with MIG jet fighters if Castro asks for them. Should Soviet military aircraft be sent to Cuba, Soviet missiles can't be far behind.

So a very real possibility exists that within a year Soviet missiles, manned by Red "technicians" will be in position on Cuban soil. Cape Canaveral, U.S. rocket testing facility in Florida, would be at point blank range. The H-bomb materials plant here in South Carolina would be well within range of such missiles, many of the great military and industrial centers of the United States would be easy targets.

For more than a decade, the Soviets have been saying to the American Government: How would you like to be encircled by military bases? They strenuously object to U.S. ground forces in Europe and Japan, and to U.S. airfields and missile base in North Africa, Saudi Arabia, Turkey, and other lands along the perimeter of the Communist empire.

The American people never imagined that a similar situation could confront this Na-

tion. No one dreamed that the Soviets would be able to set up rocket bases in this hemisphere. Now such an action is not a remote possibility, but a probability—unless the United States takes firm and prompt action.

Will the United States act to prevent establishment of Soviet missile bases 100 miles south of Miami? It would seem inconceivable that any administration could ask the American people to send military forces to Formosa and, at the same time, ignore the threat in Cuba.

For generations, wide seas and the Monroe Doctrine, which bars foreign involvement in this hemisphere, have protected the American people from threats on this side of the Atlantic. Suddenly, this Nation is faced with a new challenge—an active communist conspiracy at work in a Latin revolution. If any question existed as to the foreign character of the Castro revolution, it was dispelled when the revolutionary government of Cuba formally accepted Soviet aid.

Unless free Cubans who are refugees from Castro's tyranny receive help from Uncle Sam, the cause of freedom in Cuba will expire. The United States should invoke the Monroe Doctrine, declaring to the world that Castro's Cuba is falling under the influence of a European power and poses a threat to peace and freedom in this hemisphere.

Many observers of Cuban affairs realize that a necessary step in the removal of Dictator Castro is withdrawal of U.S. recognition of his regime on the grounds it is not representative of the Cuban people but dominated by foreign influences.

This action might mean confiscation of U.S. properties in Cuba not yet touched by Castro's regime. But it is only a matter of time, anyway, before those properties are seized by the revolutionary government.

With recognition denied Castro, permission should be granted free Cubans to establish a government in exile in the United States. As things now stand, patriotic anti-Communist Cubans are refused the right to form a government opposed to the dictatorship.

Once free Cuban leadership were established in the United States, moderate elements in Cuba would have a symbol of hope and a rallying point. The financing for a free Cuba movement should not be hard to find in the United States. No doubt many private citizens would be happy to contribute to such a movement. If the U.S. Government can contribute billions to a free China movement on Formosa, why couldn't it help freedom-loving Cubans? When Castro was conducting his revolution, the State Department managed to overlook shipments of arms to his units in the Sierra Madre Mountains.

The State Department is still managing to overlook the political activity of Castro agents in New York and Miami.

To cut off the flow of Soviet arms to Castro is a necessity if Cubans are to regain their freedom. The way to do it is to halt ships bringing arms to Cuba, regardless of nationality. The United States threatened to do this when arms from Iron Curtain countries were sent to Guatemala in 1954.

No question exists as to the ability of the U.S. Navy, operating out of Guantanamo Bay and Roosevelt Roads, Puerto Rico, to halt Soviet arms shipments. All that's needed is determination on the part of the United States to protect itself against aggression in this hemisphere.

If the 7th Fleet will fight to keep Red China's warships from attacking Formosa and Free China's ships, the U.S. Government should be able to use the Atlantic Fleet to bar arms shipments to Cuba.

Unless bold measures are employed, Cuba will become a Communist police state and

Soviet missiles will be emplaced on Cuban soil.

HOUSE CONCURRENT RESOLUTION 445

Whereas the subversive forces known as international communism, operating secretly and openly, directly and indirectly, threaten the sovereignty and political independence of all the Western Hemisphere nations; and

Whereas the American continents, by the free and independent position which they have assumed and maintained, are not subject to colonization or domination by any power; and

Whereas the intervention of international communism, directly or indirectly, or however disguised, in any American state, conflicts with the established policy of the American Republics for the protection of the sovereignty of the peoples of such states and the political independence of their governments; and

Whereas such a situation extended to any portions of the Western Hemisphere is dangerous to the peace and safety of the whole of it, including the United States: Now, therefore, be it

Resolved by the House of Representatives (the Senate concurring), (1) That any such subversive domination or threat of it violates the principles of the Monroe Doctrine, and of collective security as set forth in the acts and resolutions heretofore adopted by the American Republics; and

(2) That in any such situation any one or more of the high contracting parties to the Inter-American Treaty of Reciprocal Assistance may, in the exercise of individual or collective self-defense, and in accordance with the declarations and principles above stated, take steps to forestall or combat intervention, domination, control, and colonization in whatever form, by the subversive forces known as international communism and its agencies in the Western Hemisphere.

Incremental Price Supports for Wheat and Small Grain Crops

EXTENSION OF REMARKS

OF

HON. ODIN LANGEN

OF MINNESOTA

IN THE HOUSE OF REPRESENTATIVES

Wednesday, March 2, 1960

Mr. LANGEN. Mr. Speaker, at a time when the rest of our national economy is in a state of unprecedented prosperity, the agricultural segment obviously is "out of step." Inflation and other effects which have accompanied the steady increase in standard of living and income in our nonfarm population have increased substantially the costs of operation to the farmer, while at the same time, the prices he has received for the fruits of this production have been steadily going down. This just does not make sense to anyone who stops to think about it. It certainly, in firsthand terms, does not make sense to the farmer.

Obviously, this situation has been caused, to a large degree, by the inability of our present farm laws to cope with the problem at hand. That these laws are not solving the problem goes without saying and would not be disputed by anyone.

But getting agreement on a new set of laws to supplant these old, ineffective ones is another matter.

I would venture to say, however, that a plan which would give to the farmer the opportunity to voluntarily deal with his problem, which would assure to him an increased gross and net income, which would assure reduction in the large agricultural surpluses presently costing our taxpayers so much and depressing the markets for these crops, and which would offer the definite possibility of eventually adjusting supply to the market while still providing a floor during transition periods, will meet the needs and desires of all interested parties and overcome their objections.

The bill which I have proposed today with regard to wheat and other small grain crops I believe fits this description. It offers and provides for the following 10 goals:

First. It offers opportunity for the farmer to achieve full parity prices and his rightful share of our gross national income.

Second. It offers less Government control to the farmer and provides him with the opportunity of voluntarily curtailing production to meet demands.

Third. It offers sufficient incentive to the farmer which will encourage a very high percentage of compliance. Experience has surely proven that no program will be effective to any greater degree than the extent to which we can expect to get compliance.

Fourth. It presents no problem of administration. All of the provisions of the bill can be successfully and effectively administered through the township, county, and State committees and the regulations which govern our present program.

Fifth. It permits the law of supply and demand to function within the provisions of the legislation so that acreage shifts from one crop to the other will be governed by prices as determined by supply and demand.

Sixth. It deals with the entire national productive unit of wheat and small grain feed crops and reductions are required from actual planted acres, giving assurance that compliance will produce a reduced total production.

Seventh. It offers a reduced price support on wheat to those who make no contribution to a reduced production and eliminates the present loophole permitting anyone to seed 15 acres by permitting him to collect a payment in kind if he elects to keep these acres out of production entirely.

Eighth. It does not permit the acres taken out of production to be used in producing other crops that can further enhance the surplus situation.

Ninth. Compliance with this program will be less costly to the Government in that it will reduce surplus costs and so be beneficial to consumers and taxpayers as well as to farmers.

Tenth. It will permit the law of supply and demand to again function as soon as present surplus stocks have been diminished to a point of having only adequate supplies in cases of emergency.

That this program can achieve these desired objectives. I think is emphasized by statistical research compiled by our office which indicates that if our total

production of all the crops covered by this legislation had been reduced by an average of less than 8 percent during the past 10 years we would have had no growth in our total surplus stocks. Consequently, provisions for reduced acreages by 20 percent, as included in this legislation, provide sufficient reduction to allow for the disappearance of surpluses on hand today.

Some of you, in the light of these 10 objectives, may say they sound like an impossible "have our cake and eat it, too" set of goals. Before I am charged with this, however, I urge you to familiarize yourself with the mechanics of the proposal.

The bill is based on a system of incremental price supports and is a combination of the two bills which I proposed last year, one dealing with wheat and one with the remaining small grain crops. It has been substantially revised so as to incorporate provisions dealing with a payment-in-kind, cross-compliance, the 15-acre exemption, and the importation of foreign agricultural commodities.

Under this proposal, a small grain farmer could voluntarily achieve a higher price support in proportion to his efforts in helping to reduce the surpluses in these crops, as exemplified by the following table:

Wheat		Corn, barley, oats, rye, soybeans, flax, grain sorghums	
If the percentage of his acreage allotment withdrawn from production is not less than—	His level of price support in percentage of parity price shall be—	If the percentage of his acreage average withdrawn from production is not less than—	His level of price support in per centum of the parity price shall be—
5.....	70	5.....	70
10.....	80	10.....	80
15.....	90	15.....	90
20.....	100	20.....	100

Farmers choosing not to participate in this incremental program would receive 60 percent of the parity price for their grain crops.

The acreage-average referred to in the above table with regard to grains other than wheat is the average annual acreage which a farmer has devoted to the production of any combination of these crops during the past 3 years. The acreage allotment referred to in the section of the table pertaining to wheat is the wheat allotment established for each farm by law and directive. A reduction in such acreage will be treated as though it had been planted to wheat for purposes of maintaining wheat history.

To qualify for incremental price supports under this bill, a farmer must reduce his acreage by at least 5 percent in both wheat and other small grain crops. This "cross-compliance" is necessary to effectuate the purposes of the bill, which is a real reduction in production, and not just the retirement of the least productive acres on each farm.

To help provide for the expenses involved in taking this land out of production, a farmer will receive a per-acre payment not in excess of \$10 per acre for land of the highest assessed valuation,

and scaled down proportionately from this figure. This payment can, in effect, be in either cash or grains, and the payment-in-kind provision of this part of the bill is such that it should encourage this further means of reducing our surpluses.

The land which is taken out of production is not to be planted to any other crop or to be used for grazing, so as not to aggravate any other surplus problem.

The steps outlined above, will, in my estimation, go a long way toward providing the farmer with a more fair and just share of the national income, while at the same time reducing the costly, market-depressing surpluses presently on hand. But two other provisions are necessary to really make them effective.

The first is a provision that repeals the 15-acre exemption presently in effect. It has been shown that 15-acre producers are contributing a substantial amount to our surpluses, and until we deal with this exemption, it is my opinion that no proposal will be truly effective.

My bill provides that a farmer who does not plant a crop to, or graze, wheat acreage previously under the 15-acre provision will receive a payment-in-kind equal to two-thirds of the product of the normal yield for the farm and the number of acres withdrawn from production. He will thus be receiving aid in taking this land out of production, and at the same time we will have taken a further step toward reducing our wheat surplus.

I have on previous occasions during this Congress called to the attention of this body the effect which importation of foreign agricultural commodities is having on our farm surpluses and total farm program. I will not reiterate these observations here, except to say once again, by way of example, that American farmers have not produced enough barley and oats during the past 10 years to provide for our own domestic consumption and exports, and yet prices of these two crops, as well as many others, have been constantly decreasing to almost the disaster point, while surpluses have been increasing due to imports.

The legislation which I proposed today provides that the President shall institute an investigation whenever it would appear that agricultural commodities are being imported in such amounts as to interfere with the laws and price-support programs for those crops. This should serve as one more step toward reducing our surpluses and effectively administering our agricultural laws for the good of the entire Nation.

This then is the bill. It does, I believe, offer a solution to the two most pressing agricultural problems today—lowered farm income and mounting Government surpluses. By dealing with the first of these problems it offers to the farmer the opportunity to achieve an increased gross and net income, and therefore assures his part in the continued development of our small towns and their churches, schools, and businesses. It gives him the opportunity of voluntarily achieving full return for value received—something that is lacking today.

And by dealing with the second problem, it will cut down the large surpluses in storage, and thereby, the large tax burden which is required to buy and store these commodities. It looks forward to the day when the surpluses will be completely eliminated, and the program will be needed only as a backdrop to insure against the building up again of as large a surplus as we today have to deal with.

This is a political year. It seems that every journalist from here to Los Angeles predicted, even before this session had gotten underway, that no new farm bill would be forthcoming. But might I submit for your consideration my opinion that our appeal to farm people or to any other segment of our population, as parties or as candidates, will never be any better or stronger than the extent to which we can prove to them that we are capable of dealing with their problems in a manner that will serve to strengthen their individual opportunity in their respective fields, in compliance with the principles of a nation which offers a freedom of opportunity.

And, even more important than this, we must deal with this situation if we are to entertain the hope that our Nation will continue to offer agricultural stability and maintain its position as the best fed nation in the world. It would be well for us to remember that periods of prosperity have always been gained by tackling the most difficult problem and with persistence, accomplishing what seemed like almost impossible solution.

It is in this spirit, that I offer this bill for your consideration.

Associated General Contractors' Executive Injects Race Issue in Fight Against Unions

EXTENSION OF REMARKS
OF

HON. ELMER J. HOLLAND

OF PENNSYLVANIA

IN THE HOUSE OF REPRESENTATIVES

Wednesday, March 2, 1960

Mr. HOLLAND. Mr. Speaker, during the public hearings on H.R. 9070—situated picketing—Mr. Robert Patten, executive vice president of Carolinas branch, Associated General Contractors of America, appeared and made some very damaging statements regarding the labor unions of North and South Carolina.

For 14 years, Mr. Patten as a hireling of the Associated General Contractors of America has carried on an antilabor fight against unions and union membership.

I am asking unanimous consent to extend my remarks and include a letter written by a representative of a union, Claiborne S. Woods, secretary-treasurer, North Carolina State Conference, B.M.P.I.U. of A., and a column appearing in the Durham Labor Journal, Durham, N.C., refuting his remarks.

I might add that the per capita income for North Carolina is \$1,384 per year, while the per capita income for South Carolina is \$1,218.

The letter and article follow:

DURHAM, N.C., February 25, 1960.

HON. E. J. HOLLAND,
House Office Building,
Washington, D.C.

DEAR SIR: I was attracted by a newspaper report that appeared in the Durham, N.C., daily papers on February 24, 1960. Of all the gross misstatements I have ever read, the report made before a congressional committee by Robert Patten, executive vice president of the Carolinas Branch, Associated General Contractors, is the most exaggerated.

According to the paper, Mr. Patten reported that the workmen in the Carolinas do not desire to be unionized. The truth of the matter is that the people that Mr. Patten serves have so intimidated their employees that in a great many cases the people fear for their job to the extent that they are reluctant to affiliate with an organization to represent them. Mr. Patten should have advised that the union that he represents is doing everything in its power to prevent its employees from becoming unionized, even to the extent of firing known members.

Mr. Patten should have told the committee of the understanding that is in existence in the Carolinas among members of his union, that they will not employ organized workmen when it can be avoided. He should have told of the near starvation wages that exist here and that he, as a highly paid individual and servant and officer of the general contractors union, is largely responsible for the condition.

Mr. Patten was a deliberate and purposeful perjurer when he testified that virtually all construction locals are entirely segregated and should the industry become unionized, many Negroes would lose work. It so happens that I am in a position to dispute Mr. Patten's allegations and I also know that Mr. Patten is aware that he misinformed the committee.

Of the 40 local unions in the two Carolinas encompassing trowel trade members, including bricklayers, plasterers, stonemasons, tilers, etc., there is only one case of a segregated local and this is in a large city where three locals exist. Of the three locals the colored local has the greatest membership. Practically all of the 40 locals plus the State organizations are headed by a group of mixed officers and in many cases all of a local's executives are of the Negro race.

Mr. Patten is fully aware of the harmonious relations that exist here among the building tradesmen and his only interest in any of the Carolinas' building tradesmen is to keep them down to where the general contractors can work them for far below their worth.

I sincerely trust that the committee will overlook Mr. Patten's statements and realize that he is a paid opponent to decent wages and that the committee will act in favor of the low-wage earner.

Very truly yours,

CLAIBORNE S. WOODS,
Secretary-Treasurer, North Carolina
State Conference, B.M.P.I.U. of A.

[From the Durham Labor Journal, Feb. 26, 1960]

ASSOCIATED GENERAL CONTRACTORS EXECUTIVE
INJECTS RACE ISSUE IN FIGHT AGAINST
UNIONS

Robert Patten, of Charlotte, who is executive vice president of the Carolinas branch of the Associated General Contractors of America, in Washington to fight unionization of workers in the two Carolinas, has expressed his alarm that "many thousands of deserving

colored persons would be thrown out of work * * * if construction in the area became completely unionized."

Patten states that "virtually all construction locals in our area are entirely segregated." Further along he said, "Nonunion contractors prefer to employ colored men on such jobs as laborers, bricklayers, and plasterers."

Patten knows that local laborers' unions in the two Carolinas are integrated, and their membership, for the most part, is composed of Negro men. Indeed, in his hometown of Charlotte the laborers' local union is officered by Negroes.

Patten also knows that unions of bricklayers, plasterers, cement finishers, and other trowel trades in North Carolina has integrated conditions. Bricklayers Local 10 in Durham has about 50 percent Negro membership. Local 731 of the Plasterers in Durham is officered by Negroes.

Patten, whose organization, the Carolinas branch of the Associated General Contractors has no Negro membership, is blatantly drawing a red herring across the path of those who should see that his real objective is to obstruct the organization of construction workers, both white and colored, in order to perpetuate the miserably low wages in the construction industry of the Carolinas.

North Carolina is among the lowest of the States in per capita income, and Mr. Patten has done his part in keeping it that way. This paid minion of the General Contractors has been able to keep construction wages in this State far below the average of other States where union contractors make fair profits and pay fair wages.

The subcommittee of Congress before which Mr. Patten cried out for the poor colored man has only to look at wage comparisons in the construction industry in the United States to satisfy itself whether this hiring of an all-white association is really worried about the poor workingman, whatever his race, in the two Carolinas.

Hawaii's Role in World Brotherhood

EXTENSION OF REMARKS

OF

HON. DANIEL K. INOUE

OF HAWAII

IN THE HOUSE OF REPRESENTATIVES

Wednesday, March 2, 1960

Mr. INOUE. Mr. Speaker, the Vice President of India, Dr. S. Radhakrishnan, in summing up his impressions of his 9 days' visit to the United States, remarked that the racial harmony and social equality among the 600,000 people of Hawaii, where he spent 4 days, were most impressive. He noted that the people of the varied ethnic groups in Hawaii were "getting on very well."

The Indian philosopher-statesman added:

If that (racial harmony and social equality) could be extended on a wider range, if we can implement ideals granting political equality to underdeveloped people and use technological devices to redeem them from drudgery, from cramping toil, we may go a fair way toward the establishment of a world commonwealth. But what prevails in Hawaii does not prevail in many other parts of the world. That is our difficulty.

Mr. Speaker, under leave to extend my remarks in the RECORD, I include a copy of an editorial appearing in the February 25, 1960 issue of the Honolulu

Star Bulletin This editorial entitled "Hawaii's Role in World Brotherhood" describes the role of the world brotherhood movement in Hawaii to foster racial harmony and social equality:

HAWAII'S ROLE IN WORLD BROTHERHOOD

Statehood has given Hawaii a new role in the world brotherhood movement.

It has become the focal point of efforts to build East-West understanding and friendship—officially as well as through volunteer groups which have labored for years to broaden the influence of Hawaii's aloha spirit.

Hawaii's election to Congress of two men who are of Asian ancestry—Senator HIRAM L. FONG and Congressman DANIEL K. INOUE—has proved a conspicuous and powerful example of exactly the sort of harmonious mingling which World Brotherhood advocates and promotes.

The week February 21-28 is observed as World Brotherhood Week. A busy schedule has been arranged by Dr. and Mrs. William Z. Shimer, Honolulu leaders of the movement, and an eager and energetic corps of volunteer leaders.

Music, arts, the theater, sports, fashions—emphasizing the international flavor—are being recruited to assist in getting the message across that in the differences of cultural expression there are untold riches waiting to be discovered and appreciated.

World brotherhood exists to help people meet, understand and appreciate those who spring from different cultural backgrounds in the hope that mutual understanding and respect will pave the way for world peace with freedom.

The task is long, the way is hard. But some progress can be measured. Statehood for Hawaii was one of the longest forward steps of the past year.

Religion in American Politics

EXTENSION OF REMARKS

OF

HON. ABRAHAM J. MULTER

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Tuesday, February 9, 1960

Mr. MULTER. Mr. Speaker, Harry Golden, editor of the *Carolina Israelite* and author of many books, including the masterpiece "Only in America," has been commended by America's No. 1 newspaperman, James "Scotty" Reston of the *New York Times*. Mr. Reston delivered a speech before the Inland Press Association in which he said:

Harry Golden of Charlotte, N.C., is writing some of the best editorials in America today.

I thoroughly agree with Mr. Reston and I commend to the attention of our colleagues the following editorial by Harry Golden which appeared in the *Carolina Israelite*, January-February 1960 issue:

RELIGION IN AMERICAN POLITICS

I have been invited to address the delegates to the mock national convention organized by the undergraduates at Oberlin College in Ohio. Some of the leading Democratic presidential aspirants as well as Mr. Nixon will address the convention. I will speak on "Politics and Religion" and I would like here to give a few preliminary remarks on this increasingly important subject.

In his book about America, Lord Bryce wrote that six Southern States excluded

from public office all those who denied the existence of a Supreme Being. He found that Pennsylvania and Tennessee declared ineligible for public office "whoever did not believe in God and in a future life in which rewards and punishment would be equitably distributed." For a long time in Maryland and Arkansas no one could be empaneled as a juror who did not believe in God and the rewards and penalties of a future life.

Happily, these disabilities against the freedom of conscience have virtually disappeared in America. Lord Bryce might not think us perfect, but he would nevertheless be deeply impressed in the freedom of the individual to deal with his religious conscience as he sees fit. Freedom of religious conscience is due to the fact that churches (I include temples, synagogues, mosques, and witness-houses) are not only respected but considered an integral part of our civilization. We had a religious civilization in America before we had a secular civilization. It was a Protestant civilization which left every man the master of his own conscience. Though our separate religious faiths are now becoming secularized, freedom of conscience still remains paramount.

That truly great man, President Theodore Roosevelt, saw this paramount importance of free conscience and the confusion the religious issue injected in politics clearly as far back as 1908, when he campaigned for William Howard Taft his successor.

Letters which demanded to know if it was true that Taft was a Unitarian swamped Mr. Roosevelt. In addition to the charge that Mr. Taft was a Unitarian, there circulated a strong rumor that Mr. Taft's wife and brother were Roman Catholics. "Underneath," charged the gossip mongers, "Mr. Taft nourishes a dangerous love for the Roman Catholic Church." This was serious anti-Taft propaganda. The Protestant Churches disliked Unitarianism because it denied the divinity of Jesus and the existence of the Trinity. Add to this the 1908 attitude toward Catholicism and you will see that Mr. Taft, as Plato once said, was fighting some powerful shadows.

To Mr. Roosevelt's credit, he refused to answer any of these charges. He would not honor the question by mail nor would he dignify his platform by replying publicly. Privately he said these questions were "profane," that they were unworthy of citizens of a great republic.

When Taft had won the election, only then did Roosevelt decide to answer these charges against his successor and only because he realized his own tremendous influence on the American scene. In answer to a direct question, "What is Mr. Taft's religion?" Mr. Roosevelt replied: "That is Mr. Taft's private affair, a matter between him and his Maker which concerns only his innermost conscience. The demand that he make a public declaration of his faith denies the first principle of our Government which guarantees every individual full religious liberty and the right to conduct himself as his conscience dictates."

Mr. Roosevelt went on to say that if anyone was interested it was not true that Taft's wife and brother were Roman Catholics. "But even if they were," he asked, "even if Mr. Taft himself was a Catholic, what of it? How can the citizens of the United States allow themselves to be influenced by petty bigotry. How can they refuse their vote to a worthy candidate through antipathy to his religious faith? This Republic of ours will last for centuries. Without doubt there will be among its Presidents Protestants, Catholics, and very probably at some future time, also Jews." Roosevelt was happy to have in his own cabinet seated side by side Catholic, Protestant, and Jewish members, every one of whom had been chosen by reason of his character and ability.

Project Walrus: The Role of the U.S. Merchant Marine in National Security

EXTENSION OF REMARKS OF

HON. HERBERT C. BONNER

OF NORTH CAROLINA

IN THE HOUSE OF REPRESENTATIVES

Wednesday, March 2, 1960

Mr. BONNER. Mr. Speaker, early this month the National Academy of Sciences-National Research Council released a searching and significant report on "The Role of the U.S. Merchant Marine in National Security."

The study was conducted last summer by a panel of distinguished Americans, of varied technical and business background, under the chairmanship of former Chairman of the Joint Chiefs of Staff, Adm. Arthur W. Radford, U.S. Navy (retired). Called Project Walrus, the program takes its name from the well-known lines of Lewis Carroll's "Through the Looking-Glass":

"The time has come," the Walrus said,
"To talk of many things:
Of shoes—and ships—and sealing-wax—
Of cabbages—and kings—
And why the sea is boiling hot—
And whether pigs have wings."

The very able NBC news commentator, Robert K. McCormick, reviewed this report in a broadcast several weeks ago. I was impressed by Mr. McCormick's concise yet complete and thought-provoking comments, and secured a copy of the transcript which I request permission to insert in the RECORD at this point: TRANSCRIPT OF RADIO BROADCAST FEBRUARY 1, 1960, BY NBC NEWS COMMENTATOR ROBERT MCCORMICK

The man who makes the same mistake twice is to be pitied; the man who makes the same mistake three times is to be despised. The old saw fits the United States perfectly, in the way it has handled its merchant marine. Before World War I, we were caught with a ghastly shortage of ships to carry our men and weapons to the scene of the fighting.

Came World War II—and the same thing happened. And if we have world war III—or even a serious brush-fire war—we will be caught again.

A special panel set up by the National Academy of Sciences and the National Research Council says that our merchant fleet—the ships owned by or under the control of the United States—isn't enough to handle a cold war, let alone a warm one. The panel was headed by Adm. Arthur Radford, former Chairman of the Joint Chiefs of Staff.

Our merchant marine is dwindling away to a ghost fleet, because of our high costs both in construction and operation; Government subsidies can't (or don't) make up the difference.

Meanwhile, the Communist-bloc fleet is not only growing at an alarming rate, but the ships are thoroughly modern, even providing air-conditioned quarters for crews. This fleet is being used as an economic weapon, and by displaying its sleek streamlined beauty in ports all over the world, it is making a deep propaganda impression.

Radford's panel says our only hope is to modernize and mechanize our own ships. We should have what's called a unitized system of handling cargo, one form of which is the business of having cargo all packaged when it reaches the dock; the packages are simply

hoisted aboard the ship. This process can be partially handled by automation, and part of the actual handling of the ships themselves could also be done by automation.

And our ships should be faster—some capable of 30, or even 40 knots. And cargo should be concentrated. One ship should carry goods to England and France, for example, and another to Italy and Greece, rather than having each ship leapfrog from one port to another unloading a little here and a little there.

If these things were done, Radford's panel says, our ships could be run economically enough so that with much smaller subsidies they could compete with foreign ships, whose costs are so much less than ours.

We should even have "over the beach" unloading facilities to get cargo ashore where there are no adequate docking facilities—especially in underdeveloped countries.

And then, if a war came along (large or small) we would, for once, be prepared, so far as shipping is concerned.

American merchant marine operators, the report says, do not now have much incentive to cut costs—because Government subsidies pay three-fourths of them anyhow. And the unions involved won't want to give up their featherbedding practices, which are sometimes outrageous.

It won't be easy. But, if we don't move, this will be the third time we've made the same mistake.

James N. Cole

EXTENSION OF REMARKS

OF

HON. THOMAS J. LANE

OF MASSACHUSETTS

IN THE HOUSE OF REPRESENTATIVES

Tuesday, February 9, 1960

Mr. LANE. Mr. Speaker, under leave to extend my remarks in the Record, I wish to include an article that appeared in the Essex Farmer and Homemaker, monthly periodical published by the trustees of the Essex County Agricultural School at Hathorne, Mass., concerning the passing of one of the kindest and finest persons that I have ever met.

James N. Cole was not only an instructor at the Essex County Agricultural School and a counselor for the boys, but he took a great deal of interest in outside activities to help and assist students and other boys in the community to be worthwhile citizens.

His passing is mourned by all of us since it will not only be a great loss to his school, the county of Essex, and the greater Lawrence area, but to his countless friends and admirers.

The article follows:

SCHOOL SADDENED BY LOSS OF INSTRUCTOR COLE

James N. Cole passed away suddenly at his home in Methuen, Monday morning, January 25, 1960. He was 55 years of age.

Previously to his appointment as assistant instructor in physical education in 1939, Mr. Cole was boys' counselor for after-work activities and the general supervision of boys working on the school farm.

During his years of service, Mr. Cole made a host of friends as it was his responsibility to organize and conduct campus tours for visitors. Everyone who knew Mr. Cole was impressed by his deep sincerity and enthusiasm for the school and its students. He was especially fond of describing the school

grounds and farm facilities as the one area where a person could derive complete satisfaction. He was really happy at this school, and he conveyed that same feeling to all who knew him.

Mr. Cole was largely responsible for the success of our guidance program. He was constantly promoting the school and publicizing its many educational opportunities.

Mr. Cole was responsible for coaching the junior varsity football and the hockey teams. He taught "West Point" sportsmanship as well as the techniques of these sports, and in competition his teams exemplified the character traits which he instilled in them by precept and esprit de corps.

Mr. Cole is sadly missed by the students, the alumni, and his associates here at the school, and our deep sympathy is extended to his family.

Fish Oils Combat Cholesterol and Heart Disease

EXTENSION OF REMARKS

OF

HON. JAMES C. OLIVER

OF MAINE

IN THE HOUSE OF REPRESENTATIVES

Wednesday, March 2, 1960

Mr. OLIVER. Mr. Speaker, statistics indicate that heart disease is our Nation's greatest killer. High cholesterol content is considered an important factor in the incidence of heart attacks. Consequently, news of scientific progress in reducing excessive cholesterol content is of vast significance to every American.

The Bureau of Commercial Fisheries has experimented extensively with unsaturated fish oils. Tests on animals have revealed noteworthy declines in cholesterol levels. Since these experiments are continuing, I am sure the Bureau will have even more significant results to report in the future.

Naturally, we in the State of Maine, with an economy dependent upon a thriving fisheries industry, are glad to hear this news. It has been recognized that in addition to fish, we have available in the ocean depths a vast untapped source of nutritional matter. Now, this discovery of the preventative value of fish oils should open an important new frontier of medical research into the medicinal properties of fisheries products. This discovery may well signal the rejuvenation of an industry which has been severely affected by increasing imports and production costs.

The following article published in the Washington Post and Times Herald details the results thus far achieved by the Bureau of Commercial Fisheries:

FISH MAY MELT THAT CHOLESTEROL

(By Nate Haseltine)

Relief may be in sight for persons worried about high blood cholesterol count, a factor in heart attacks and other consequences of artery clogging.

The relief may come in capsules of fish oil which, in animals at least, has shown quick and dramatic reductions of excessive cholesterol levels. The special oils have been made available for human trials.

Let it be said at the start that, the role of cholesterol in the bloodstream, and any casual part it may play in heart attacks and

strokes, has long been controversial. Even more controversial is the role of cholesterol-rich foods in diet.

The newest findings come from a series of research projects of fish body oils conducted by the Bureau of Commercial Fisheries, U.S. Fish and Wildlife Service, and by the Hormel Institute of the University of Minnesota operating under a Bureau contract.

Key findings of the research are that (1) many fish oils are composed largely of unsaturated fatty acids, which make so-called soft fats; and (2) these components, fed to test animals, reduced their blood cholesterol levels in direct proportion to the degree of their softness.

The research showed that about half of the body oil of most species of fish is unsaturated, and that about 10 percent of it is "highly unsaturated." This latter fraction is the part that is exciting to medical investigators.

It is this fraction—and Bureau scientists have developed a way to separate it from the calorie-laden remainder of the fish oil—that is undergoing careful clinical trials. Its potential for reducing blood cholesterol levels is about three times that of vegetable oils. And the vegetable oils (corn, etc.) are noted for their softness.

The animal research with the fish oil fraction showed that the ingested material acted almost immediately in lowering the animal's blood cholesterol level. By contrast, the cholesterol-depressant activity of linoleic acid (the active ingredient of the vegetable oils) must be taken for about 2 weeks before any significant reduction can be observed, the investigators said.

The cholesterol-reducing activity of vegetable oils led to diets which included a daily swig of corn or safflower oil. It was recommended on the presumption that the oil would neutralize blood cholesterol buildup blamed on the intake of animal fat and animal fat products (saturated, or hard fats). The Food and Drug Administration, however, recently cracked down on such promotion of salad oils and shortenings of vegetable origin.

"Any claim, direct or implied, in the labeling of fats and oils or other fatty substances offered to the public that they will prevent, mitigate or cure diseases of the heart or arteries is misleading and constitutes misbranding," said Food and Drug Administrator George P. Larrick.

He was speaking of the use of the soft oils as a dietary supplement, rather than as a substitution for hard fats in the diet. Many medical investigators agree that the health of Americans would be improved if the diet contained a better balance between the too abundant animal fats and the little-used soft fats.

Second only to the findings in the fish oil research that the oil fractions readily reduce blood cholesterol levels was the development of a method to separate this beneficial part from the rest. It means that the patient would be taking only one-tenth of the calories (weight builders) he would have to take if given the whole oil.

Donald L. McKernan, director of the Bureau of Commercial Fisheries, said that the Bureau is now undertaking the preparation of the oil fractions on a pilot-scale basis, using a centrifugal molecular still. Samples are being made available, without charge, to responsible researchers, he said.

The soft fat features of fish oil can also be used to promote fishery products in diets, to bring about a better balance between the hard and soft fats in meals. Many medical authorities have advocated increasing soft fat consumption and decreasing the hard variety.

The researchers haven't yet devised a soft fat index of fish to show which might be best for an anticholesterol diet, and which might be best for the capsule concentrates.

They say that the most common and readily available fish with high oil content include herring, mackerel, menhaden, mullet, salmon, sardines and anchovies, and tuna.

Menhaden would probably be the fish of choice for the capsules. It is caught in abundance, and is used largely in the making of fertilizers. It is not considered a food fish, but it yields considerable amounts of the soft oil fractions, the researchers noted.

Saturated fats, such as lard or the fat around a sirloin steak, harden at low temperatures. Unsaturated fats do not readily congeal, remaining liquid at room temperatures. This is the property which permits oil-laden fish to move freely in water of low temperatures.

Maturity Needed in Arms Debate

EXTENSION OF REMARKS

OF

HON. HALE BOGGS

OF LOUISIANA

IN THE HOUSE OF REPRESENTATIVES

Tuesday, February 23, 1960

Mr. BOGGS. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following editorial from the New Orleans Times Picayune of February 29, 1960:

MATURITY NEEDED IN ARMS DEBATE

In discussion of the momentous question of our national strength for the deterrence of war and, if need be, for defense, every last one of us Americans should constantly remember well our supreme concern: effective service of our purpose.

Obviously partisan and personal considerations should be strictly subordinated.

Intelligent, sustained endeavor should be uppermost neither to foster dangerous overestimates of our strength, nor also perilous underestimates of it.

Despite political and individual concerns, the vast majority of Americans, we believe, earnestly desire to avoid both these dangers. But doing so under the pressures of current conditions—worldwide, national, and personal—calls for unremitting endeavor on the part of the wisest and best informed to consider and express ourselves with maximum responsibility, maturity, and accuracy.

Loose and exaggerated expressions as to our military power could make for a complacency or even overconfidence that could be disastrous—for a relative weakness that could fall of adequate service both to the prevention of war and the meeting of attack.

Likewise, unbalanced, distorted assertions and calculations presenting false conceptions of national weakness could involve similar danger.

Our leaders, from the President on down the line of authority, who know most about our actual military capacities and about those of the Soviet Union and other lands, are under an awesome responsibility to deal with and talk about such matters with the greatest wisdom they can possibly attain. Only in that way can they serve the aim of security and peace, which most should constantly concern us all. Political and personal impulses and considerations will—all of us being human—have their influence at times. But steadfast vigilance should be maintained against such influence becoming uppermost.

The people generally cannot, of course, expect to know all that our leaders know. That means that citizens should ever be watchful lest their opinions and influence be exerted under dominance of excess emotion or ignorance. It does not mean that the people

should be deprived of as clear and full an understanding of our national position as it is wise and feasible to give. Lack of that could make for acutely disturbing feelings and divisions among us.

Let us all ever bear in mind the overriding aim of building an all-round, united strength that, so long as need be, will operate effectively to discourage any aggression.

But in striving to that end let us take particular care against giving any unwarranted impression of weakness or fear that would tempt Russia or any other leaders to military adventures.

And in all this perilous business of seeking in competition a military deterrence of war—a very uncertain enterprise at best in this age of stupendous power and anxiety—let us never for a moment forget that, despite every discouragement, we should press on ceaselessly to advance the cause of true peace by agreement and dependable international controls. On March 15 West and East will be meeting again with that proclaimed purpose. Secretary Herter, just the other day, once more impressively declared our fervent desire to forward sincere and fruitful negotiations. President Eisenhower repeatedly avows that desire. All of us should give it support and expression, acutely concerned as we must be meanwhile with the business of deterrence and defense.

War Claims Act of 1948

SPEECH

OF

HON. HARLAN HAGEN

OF CALIFORNIA

IN THE HOUSE OF REPRESENTATIVES

Tuesday, March 1, 1960

The House in Committee of the Whole House on the State of the Union had under consideration the bill (H.R. 2485) to amend the War Claims Act of 1948, as amended.

Mr. HAGEN. Mr. Chairman, I merely rise to propound an inquiry about H.R. 2485. Does the bill cover property loss claims of American nationals living in Shanghai at the time of the Japanese attack on Pearl Harbor?

Mr. MACK of Illinois. It does not. It is my understanding that warning was given to these people who resided in that area at the time, and for that reason they are not covered under the provisions of this bill.

Mr. YOUNGER. Mr. Chairman, will the gentleman yield?

Mr. HAGEN. I yield to the gentleman from California.

Mr. YOUNGER. The gentleman is talking of property losses now?

Mr. HAGEN. Property losses in China.

Mr. YOUNGER. Yes. Beginning with 1937, those property loss claims are covered under this bill.

Mr. MACK of Illinois. Mr. Chairman, if the gentleman will yield, I stand corrected. I misunderstood the gentleman's question.

Mr. HAGEN. I thank the gentleman and commend him and the members of his committee for the value of this legislation. I have followed it from the outset because I am personally aware of the hardship caused large numbers of U.S. citizens through the aggressive action of the Japanese in China and other por-

tions of the Far East prior to, during, and after Pearl Harbor. I am pleased that they will be compensated for property losses incurred from such actions. Such reimbursement is just because their presence in Shanghai and other foreign ports of call served the purposes of our great country as well as their own purposes.

City and Farm Folks Must Hang Together or They Will Hang Separately

EXTENSION OF REMARKS

OF

HON. LESTER R. JOHNSON

OF WISCONSIN

IN THE HOUSE OF REPRESENTATIVES

Wednesday, March 2, 1960

Mr. JOHNSON of Wisconsin. Mr. Speaker, in an open letter to the Members of the 86th Congress, the editors of the Progressive Farmer made a plea for a concerted effort on our part to work out a farm program which will insure a healthy agriculture now and in the years to come. They pointed out the very real interdependence of city and farm people and how a depressed agriculture has an adverse effect on the entire economy of our Nation.

Under leave to extend my remarks, I would like to include this letter in the RECORD:

OPEN LETTER TO MEMBERS OF THE 86TH CONGRESS, WASHINGTON, D.C.

Ladies and gentlemen, a long time ago, a famous American said that if we do not all hang together, we will all hang separately. That's what the Progressive Farmer wants to talk over with you in this letter.

We want to talk to you about what may be the most serious, and certainly the hardest, domestic issue you will face this year, the farm problem. If you let yourself be "sold" by some of the easy, glib talk going the rounds these days, you may strike a damaging blow at all Americans who live in towns and cities.

You're going to hear a lot in these coming months about these things: how old farm programs have failed, how taxpayers could save millions if they didn't have to pay storage bills on farm surplus, how farmers could be more "competitive" if they weren't propped up by Government price-support programs, how farmers want to get rid of Government controls.

Some people will try to sell you on the idea that because of these shortcomings in our present farm program, we should throw the whole thing out the window.

If you fall for that line we may all be hurt badly, city man and farmer alike.

We're speaking on behalf of farmers, sure. Our main interest is in a healthy agriculture. But the American people who are not farmers have a vital pocketbook concern with a prosperous agriculture, too.

If most of the people in the district or State you represent are not farmers, you have a special interest this year in seeing what can be done to help keep agriculture prosperous.

Does that sound farfetched?

It won't to people who work in plants making farm machinery, autos, trucks, fertilizers, chemicals, building materials, and hundreds of other farm-used materials. Fewer sales of machinery, motor vehicles, and all the other items just listed mean more

layoff days, less overtime, less money in the pay envelope for a lot of city folks.

Farmers rank with the biggest customers of the steel and oil industries. Do the millions who get extra income from steel and oil stock dividends feel happy when the buying power of a big customer like the American farmer slumps? Of course not.

Maybe you have heard some fellows say: "Why should we city boys worry if farm prices drop some? Cheaper food will be popular with city voters."

Frankly, it would. Cheaper housing would be popular, too. So would cheaper clothing. But while the Secretary of Agriculture asks for lower farm prices we don't hear the Secretary of Labor asking the Congress to cut minimum wages. If he did, he'd be laughed out of town. We don't hear proposals to cut wages in those fields of agriculture that lie beyond the farm gate—in the food-processing and distributing industries. And that's where you'd have to go to take any substantial bite out of grocery bills.

We think city people are too smart to believe they'd come out ahead in the long run if farmers were depressed. A lot of them are old enough, as all of you in Congress today are, to remember that low farm prices in the 1930's brought no flush of prosperity to Main Streets and big cities. City people want a fair, stable food price policy in an economy where everyone gets a fair share.

Agriculture is more than people who work and live on farms. There are about 6 million more people who produce for and serve the farmer. They had families. Another 10 million men and women process and distribute farm products.

Agribusiness employs nearly 4 out of every 10 Americans. None of these will be permanently happy with any policy that leaves their farm partners seesawing on the edge of trouble.

Consider the advantages that have come to factory workers since Congress passed legislation starting a strong farm program.

In 1929, an hour's pay for the average factory workers would buy 6.4 loaves of bread. Now it buys 11.3 loaves. The hour's pay bought 1.2 pounds of round steak then. Now it buys 2 pounds. It bought 3.9 quarts of milk then and 8.9 quarts now.

The Agriculture Department has predicted that average retail food prices, which declined in 1959, will drop again in 1960. In view of the fact that industrial prices generally are rising, is it just to claim that the farmer has been subsidizing the buying public in recent years?

Farm production, which is still rising, gives the American buyer the world's best diet in return for less than 25 percent of the buyer's income. For this same diet 30 years ago, the buyer would have had to spend 48 percent of his income.

City people would not have reaped these benefits if there had been no farm programs to keep some element of stability in farm prices.

Competent economists tell us that through the last 25 years, Government farm programs have increased farmers' net incomes by as much as 20 to 50 percent in years when incomes would have been lowest because of too much production.

In the last six years, it is estimated that our much-abused farm programs have held net farm income one-third above where it would have been without the programs.

What should you do about the farm program? We agree with Chairman ALLEN J. ELLENDER of the Senate Agriculture Committee that "the families which use the food and fiber products grown on American farms must be told the truth . . . the campaign of misunderstanding which threatens to divide city buyers from rural families must be ended."

We believe that you and all other Members of Congress of both parties from farm and

city want to end these senseless charges against farmers.

The farmer's problem today is that he can produce more than he can sell at a fair price. The individual farmer has no way to influence markets in which millions of producers compete.

We suggest that in working out a new farm program, fair to buyer and producer alike, you will want to consider the special character and problems of each commodity. Only with many approaches can best use of our various and far-flung agriculture be made for all our citizens.

In the case of many commodities, sensible proposals have been made, but rejected. Present programs are meeting the test for some commodities such as sugar, wool, and others. It will be to the advantage of everyone in our Nation for us to get together on proposals in a spirit of compromise, try them out, and see if they will work.

Yours truly,

Eugene Butler, Clarence Poe, Alexander Nunn, W. C. Lasseter, Sallie Hill, Joe Elliott, Romayne Smith, Pete Head, O. B. Copeland, the Editors of the Progressive Farmer.

A Greeting to the All-African People's Conference

EXTENSION OF REMARKS

OF

HON. HUBERT H. HUMPHREY

OF MINNESOTA

IN THE SENATE OF THE UNITED STATES

Wednesday, March 2, 1960

Mr. HUMPHREY. Mr. President, the American Committee on Africa, an organization of which I am proud to be a member, will hold its second annual African Freedom Day celebration next month. In recognition of that event, I would like to have printed in the Record "A Greeting to the All-African People's Conference from Americans." This was signed by 87 distinguished Americans who were leaders in various walks of life. Among the signers were 18 Members of Congress of both political parties, of whom I was one.

In my travels around the country, I have noticed an ever-increasing identification on the part of American people with the freedom movement in Africa. The great majority of Americans, whether they be in labor, business, professional circles, or in Government, realize that the African motivations for freedom are quite parallel to the great principles on which our country was founded. We wish our African brethren well in attaining their noble goals and aspirations.

I ask unanimous consent that "A Greeting to the All-African People's Conference from Americans," together with a list of the signers, be printed in the Appendix of the Record.

There being no objection, the greeting and list of signers were ordered to be printed in the Record, as follows:

A GREETING TO THE ALL-AFRICAN PEOPLE'S CONFERENCE FROM AMERICANS

It is a privilege to extend greetings and felicitations to the delegates at Tunis on the convening of the Second All-African People's Conference.

We followed with hope and confidence the proceedings of the First All-African People's Conference 13 months ago in Accra. With profound belief in the right of Africans to liberty, equality, and dignity, we now await the deliberations and decisions which shall insure that soon all Africa will be free.

Certainly the far-reaching results of the Accra Conference signal great expectations for Tunis. The fact that men and women, representatives of Africa's racial and cultural diversity, meet together to speak and act as one, gives new hope for freedom to the peoples everywhere on the continent. It also signifies to others that Africa is determined to be united as well as free.

The number of independent African states is rapidly increasing, and 1960 will see several new countries with combined populations of 40 million people, at the very minimum, achieve their freedom. The colonial walls are tumbling all over the continent. Surely, 1960 will be known as the African Year.

These great events impel the remainder of the African Continent, from the peoples of Algeria in the north to those of the Union and Mozambique in the south, to race toward freedom. But the way is not equal for all. Today in southern Africa ugly racial oppression is imposed by a temporarily dominant minority; for those who suffer there the struggle for national sovereignty, political freedom, equality, and dignity, is indeed onerous.

As Americans citizens, mindful of our heritage, aware of the gap between ideal and practice in our own society, we pledge our help to you. Our President has recently, though briefly, visited two African nations. We will work for the active implementation of President Eisenhower's frequently expressed desire to give meaningful economic aid to African nations. We will urge official American political support for the independence of those trust territories and colonies not yet free—as the American Committee on Africa has done at the United Nations and elsewhere since 1953.

Bandung and Accra have shaped history. Now Tunis distinguishes itself as host to a forum of significant planning for historic political change.

We are proud to extend our greetings to you at this momentous time.

SIGNERS OF THE GREETING TO THE ALL-AFRICAN PEOPLE'S CONFERENCE, JANUARY 25, 1960

1. Sadie T. M. Alexander.
2. Roger Baldwin.
3. Prof. John C. Bennett.
4. Representative ALVIN M. BENTLEY, Republican, Michigan.
5. Pres. Sarah Gibson Blanding.
6. Judge Jane M. Bolin.
7. Henry S. Canby.
8. Walter C. Carrington.
9. Mrs. Samuel McCrea Cavert.
10. Pres. Rufus E. Clement.
11. Representative ROBERT J. CORBETT, Republican, Pennsylvania.
12. The Rev. Dr. Henry Hitt Crane.
13. Mrs. Ethel Clyde.
14. Max Delson.
15. Robert Delson.
16. Representative CHARLES C. DIGGS, Jr., Democrat, Michigan.
17. Fred Ferber.
18. The Rev. Dr. Harry Emerson Fosdick.
19. Lewis Gannett.
20. Dr. Sabine Gova.
21. Oscar Hammerstein II.
22. Lorraine Hansberry.
23. The Rev. Dr. Donald Harrington.
24. Maxwell Harway.
25. Representative ELMER J. HOLLAND, Democrat, Pennsylvania.
26. Dr. John Haynes Holmes.
27. George M. Houser.
28. Dr. Homer A. Jack.
29. Mrs. Sophia Yarnall Jacobs.

30. Representative BYRON L. JOHNSON, Democrat, Colorado.
31. Pres. Robert L. Johnson.
32. Representative WALTER H. JUDD, Republican, Minnesota.
33. Representative GEORGE A. KASEM, Democrat, California.
34. Ella Kazan.
35. Senator KENNETH B. KEATING, Republican, New York.
36. Senator JOHN KENNEDY, Democrat, Massachusetts.
37. Emily Kimbrough.
38. The Rev. Martin Luther King, Jr.
39. Elizabeth S. Landis.
40. William B. Landis, Jr.
41. The Rt. Rev. W. Appleton Lawrence.
42. Hon. George M. Leader.
43. Stanley D. Levinson.
44. Dr. John A. Mackay.
45. Senator EUGENE MCCARTHY, Democrat, Minnesota.
46. B. F. McLaurin.
47. Representative WILLIAM H. MEYER, Democrat, Vermont.
48. Frank Montero.
49. Henry Lee Moon.
50. Senator WAYNE MORSE, Democrat, Oregon.
51. John Murra.
52. The Rev. Dr. C. Kilmer Myers.
53. Dr. Reinhold Niebuhr.
54. Dr. F. D. Patterson.
55. Irving Pfiaum.
56. Clarence Pickett.
57. The Rt. Rev. James A. Pike.
58. Representative CHARLES O. PORTER, Democrat, Oregon.
59. Prof. Saunders Redding.
60. Prof. Ira deA. Reid.
61. Representative JAMES ROOSEVELT, Democrat, California.
62. Hon. Francis B. Sayre.
63. William X. Scheinman.
64. Adelaide Schukind.
65. Prof. Hugh H. Smythe.
66. Pres. Edward J. Sparling.
67. Mark Starr.
68. Hope R. Stevens.
69. Rex Stout.
70. Irwin Sull.
71. Norman Thomas.
72. Dr. Howard Thurman.
73. Sacha Volman.
74. Noah C. A. Walter.
75. Peter Weiss.
76. Representative WILLIAM B. WIDNALL, Republican, New Jersey.
77. Representative ROY W. WIER, Democrat, Minnesota.
78. David C. Williams.
79. Representative CLEMENT J. ZABLOCKI, Democrat, Wisconsin.
80. Charles S. Zimmerman.
81. Prof. Stringfellow Barr.
82. A. Philip Randolph.
83. Bayard Rustin.
84. Senator HUBERT H. HUMPHREY, Democrat, Minnesota.
85. Dean Walter G. Muelder.
86. Mrs. Franklin D. Roosevelt.
87. Nelson Bengtson.

Job for Ex-Presidents

EXTENSION OF REMARKS

OF

HON. EUGENE J. KEOGH

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Wednesday, March 2, 1960

Mr. KEOGH. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following editorial

which appeared in the Buffalo Evening News of February 6, 1960:

JOB FOR EX-PRESIDENTS

James A. Farley's proposal (see "This Week" section of today's News) to make "all former Presidents lifetime, nonvoting Senators-at-large" is a good one, though not a new one. Mr. Farley himself notes that it was mentioned in Congress as long ago as 1889. The idea has been pending in bill form for at least 13 years; we know, because we endorsed legislation to put it into effect that long ago, and have urged its passage several times since.

Giving ex-Presidents nonvoting status in the Senate, as Mr. Farley notes, could be done by statute; to make them full-fledged voting Senators would take a constitutional amendment. But the main purpose of giving them seats there would not be to change the voting structure in any case; it would be to "keep and use the wisdom and abilities of our Presidents after they have left the White House."

Every President, as Mr. Farley suggests, acquires a priceless and unique experience that should be made constantly available to Congressmen seeking his help and advice. Giving him a Senate seat would accomplish this; it would also provide an unparalleled forum for a former President to speak out on major public questions; and, in a very practical sense, it would be better than a mere pension as a means of providing adequate remuneration, official status and secretarial staff for all ex-Presidents. Maybe Mr. Farley's article will stir enough public interest in this proposal to get it enacted at long last. We hope so.

The Constitution of the United States

EXTENSION OF REMARKS

OF

HON. WILLIAM M. COLMER

OF MISSISSIPPI

IN THE HOUSE OF REPRESENTATIVES

Wednesday, March 2, 1960

Mr. COLMER. Mr. Speaker, I ask unanimous consent to have printed in the Appendix of the RECORD an editorial entitled, "The Informed Will Hold On to Our Rights." This editorial was written by the courageous editor of the Prentiss (Miss.) Prentiss Headlight, Mrs. F. A. Parker, and was published in the February 18, 1960, edition of that paper.

Mr. Speaker, I submit that most Americans today are more than familiar with certain articles and sections of the Constitution of the United States since they have witnessed, by means of television or other media, suspected and known criminals, hoodlums, and the like, taking refuge in the protections of the Constitution. I believe Mrs. Parker's editorial clearly states cogent reasons why the majority of the citizens of America should learn their rights under the Constitution. The editorial follows: ONLY THE INFORMED WILL HOLD ON TO OUR RIGHTS

In this day, when so many people have the erroneous impression that the Supreme Court rather than the Constitution is the law of the land, we are happy to note that the Memphis Commercial Appeal will begin a series of 22 installments next Sunday in presenting a condensation of "Your Rugged Constitution" by Bruce and Esther Findlay,

a book enthusiastically endorsed by leading educators and businessmen throughout the United States.

The Memphis paper says: "that our readers and their children may better understand and appreciate our proudest American heritage, the Commercial Appeal will serialize one of the most revealing treatments of the Constitution of the United States ever written."

The book, written by Dr. Bruce Findlay, superintendent of schools in Los Angeles, Calif., assisted by his wife, a social studies supervisor, gives a simple explanation of each section of the Constitution and the Bill of Rights, in simple, easy-to-understand language.

We sincerely hope the explanations will be true to the meaning incorporated in the document by the founders. Surely, there is a need today, and there has been a need through the years, for deep study and real understanding of the meaning of the Constitution, "the most wonderful work ever struck off at a given time by the brain and purpose of man."

The Constitution of the United States, together with the treaties and Federal laws passed in accordance with its provisions, is the supreme law of the land. Surely, if anything is clear to the student of the Constitution it is that: no man or set of men should rule the people, but that the people of the individual States of these United States are capable of creating their own local government, and should be left free to choose their own associates, run their own schools, and provide the registration and voting qualifications of their own people. This great document has been amended only 22 times in all of its proud history, and the first 10 of these amendments are embodied in the matchless Bill of Rights, the hub, wheel and safety valve against Federal dictation and rule, the kind now being arrogated by the Warren Court and the bureaucrats in Washington.

The Federal Government is made up of individual States, that by no manner or means gave away all of their rights to the Federal Government . . . we have a two-way government . . . that of rights reserved by the peoples of the States as guaranteed in the 9th and 10th amendments in the Bill of Rights . . . and that given over to the Federal Government. We also have a Federal Government made up of three different and separate departments and functions, so designed that one could not lawfully encroach upon the duties of the other. Executive power is vested in the executive department headed by the President of the United States. All legislative powers are vested in the Congress of the United States, and this body is the only arm of the Federal Government that has the power to make and enforce laws. The judicial powers are vested in the Supreme Court, composed of nine men who shall hold their offices during good behavior, and supposed to be separate and distinct from the executive and the legislative branches of the Government.

Section 4 of article 3 of the Constitution says in words that even a wayfarer, though he be a fool, may understand: The United States shall guarantee to every State in this Union a republican form of government . . . and, just what is a republican form of government? It is a form of government where the people rule through their elected representatives or officers elected by them at the polls.

Under the Constitution, brought into being by the God-fearing, God-led founders, every State in this Union has the right to make its own register-voting laws . . . run its own schools . . . and choose its own associates, despite the preaching to the contrary by some people who have swallowed, hook, line, and sinker, the sop sired

and bred by the Communists who seek our destruction.

Yes * * * we desperately need to know our rights as individual States under the Constitution and fight until hell freezes over to keep these rights.

Revival of the Hoary Old Hoax

EXTENSION OF REMARKS

OF

HON. CHARLES O. PORTER

OF OREGON

IN THE HOUSE OF REPRESENTATIVES

Monday, February 29, 1960

Mr. PORTER. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following editorial which appeared in the February 27, 1960, edition of Labor. The windmill joust continues, as Labor so aptly points out: WELFARE STATE HOAX IS TROTTED OUT AGAIN

A hoary old hoax about the welfare state has been revived, this time by U.S. News & World Report, a weekly magazine appealing largely to businessmen. The magazine reported in the February 8 issue that in the next fiscal year the Federal Government will spend \$20 billion for welfare.

Under President Eisenhower's budget for that year, the article says, "21 cents of every \$1 goes for welfare." These figures are cited as proof that America is becoming something terrible called the welfare state.

Actually, the article and its figures are full of bugs which falsify the picture. Some of the major ones can be pointed out as follows:

1. Included in the \$20 billion for welfare is \$12.8 billion for old-age and disability pensions paid under the Social Security and Railroad Retirement Acts. Not a single dollar of this \$12.8 billion is contributed by the Government. Every dollar comes from contributions by employers and employees.

Thus, much more than half of the alleged Government spending for welfare vanishes when the facts are analyzed.

2. Also as Government spending for welfare, the article lists \$985 million for civil service retirement pensions. Actually, most of that money is contributed by the Government employees. Their contributions are supposed to be matched by the Government, but it hasn't been doing so fully, and won't under Ike's budget.

Thus, another large chunk of the alleged welfare spending by the Government vanishes in the light of the facts.

3. Likewise included in the \$20 billion is \$1.9 billion for jobless benefits paid under the Social Security and Railroad Retirement Acts. Every dollar of that is contributed, not by the Government, but by employers. Thus another huge slice of the Government welfare spending vanishes.

The social security, railroad retirement, and civil service pension and benefits listed above—even after subtracting the money the Government does contribute to the civil service fund—add up to about \$15 billion. Thus, only about \$5 billion is left of the \$20 billion falsely pictured as Government welfare spending, and even the \$5 billion shrinks when subjected to further analysis.

4. Perhaps even more significant is the trick the article used in order to make it possible to falsify the picture. That trick depends on the fact that there are two Federal budgets.

One is the "regular" budget—the only one generally discussed in Congress and reported in the newspapers. This one estimates the total tax revenues in the coming fiscal year,

and the total amount of money the Government will spend from those revenues. Ike's budget puts this spending at about \$60 billion.

Anyone reading the magazine article would get the impression it is talking about this "regular" budget. Actually, the picture it gives is mostly based on a different one—the so-called "cash" budget. This one was barely mentioned in the budget message sent to Congress by Ike. However, he did point out that the cash budget, unlike the regular budget, includes the money taken in and spent by the social security, railroad retirement, civil service retirement and other "trust funds," which do not belong to the Government but are administered by Government agencies.

The President estimated that, as shown by the "cash" budget, the Government will pay out a total of \$96 billion during the coming fiscal year, and that this will include about \$16 billion from the trust funds, on top of \$84 billion from tax revenues.

In other words, Ike made it clear that the regular budget and the cash budget are two different things, and that the \$16 billion is not Government spending because the money doesn't belong to the Government. It belongs to the people who contributed to the social security, railroad retirement, civil service and other trust funds.

The magazine article did not make that clear. On the contrary, it caused its readers to believe that the entire \$20 billion to be paid out for "welfare" is Government spending of Government money.

Why did the magazine revive this hoary old hoax and bring it up to date? The article itself suggests the answer. It attacks the Forand bill, which would provide medical and hospital care for old folks under the social security and railroad retirement systems, as a sinister proposal to extend the welfare state.

Brucellosis Eradication Program

EXTENSION OF REMARKS

OF

HON. CLEM MILLER

OF CALIFORNIA

IN THE HOUSE OF REPRESENTATIVES

Monday, February 29, 1960

Mr. MILLER of California. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following article and resolution:

MENDOCINO COUNTY BRUCELLOSIS-FREE

UKIAH.—Mendocino County was among the first in the State to be declared a modified certified brucellosis-free area, Roderick A. Shippey, farm adviser has announced.

Spearheaded by the Mendocino-Trinity Cattlemen's Association, the program was completed in near record time. In being a brucellosis-free area, cattlemen can ship cattle anywhere in the United States with a clean bill of health, Mr. Shippey said.

The program initiated by the cattlemen themselves, consisted of blood testing a percentage of their cattle.

When reactions were found, the entire herd was tested and the reactors slaughtered.

Modern research has produced a vaccine which, used on calves, gives the animals a lifetime immunity to the disease.

RESOLUTION RE FEDERAL BUDGET (FISCAL YEAR 1961) FOR FEDERAL-STATE BRUCELLOSIS ERADICATION PROGRAM

Whereas the fiscal year 1961 budget proposed by the U.S. Department of Agriculture for eradicating brucellosis is considerably

less than funds available for this purpose during the current fiscal year; and

Whereas Federal funds allocated to the States for brucellosis eradication during the current year resulted in suspension of the brucellosis program in a number of important cattle counties and prevented inauguration of the program in others; and

Whereas we have been advised that the budget proposed would only permit brucellosis eradication activities at the current level, with some limited extension into new areas during fiscal year 1961; and

Whereas it appears that under the proposed budget the program could not be extended during the next fiscal year into many important cattle areas, including several dairy counties of California, thus delaying completion of the brucellosis eradication program indefinitely in such areas and permitting the disease to become further established and eventually resulting in greater costs for eradication and creating an economic burden on cattle owners in such areas: Now, therefore, be it

Resolved, by the California State Board of Agriculture, meeting in Sacramento, Calif., on February 15, 1960, That this serious situation be brought to the attention of the Congress, and that they be urged to increase the amount of funds budgeted for the fiscal year 1961 for brucellosis eradication from \$15 million to \$20 million in order to prevent this important work from being seriously delayed; and be it further

Resolved, That copies of this resolution be sent to the Honorable THOMAS H. KUCHEL and the Honorable CLAIR ENGLE, U.S. Senators from California, to Members of the House of Representatives from California, to the chairman of the Senate Committee on Agriculture and Forestry, to the chairman of the House Committee on Agriculture, to the chairman of the Senate Committee on Appropriations, to the chairman of the House Committee on Appropriations, to the Honorable Edmund G. Brown, Governor of California, to the Secretary of Agriculture, and to the proper officials of our sister States.

Antarctic Treaty

EXTENSION OF REMARKS

OF

HON. THOR C. TOLLEFSON

OF WASHINGTON

IN THE HOUSE OF REPRESENTATIVES

Tuesday, February 23, 1960

Mr. TOLLEFSON. Mr. Speaker, under leave to extend my remarks I should like to inform the Members of the House that on February 4, 1960, the American Association of Patriotic Societies at its annual meeting unanimously adopted a resolution opposing the recent Antarctic Treaty which would internationalize the Antarctic. This treaty has yet to be confirmed by the Senate.

The association also urged that the Antarctic areas explored by the United States be claimed by our Nation. A like resolution was adopted by the Women's Patriotic Conference on National Defense during its annual meeting on February 5.

House Joint Resolution 97, which I have introduced, declares the rights of sovereignty of the United States over those areas which she has explored, and reserves her rights to other areas.

Veterans of World War I

EXTENSION OF REMARKS

OF

HON. ROBERT W. LEVERING

OF OHIO

IN THE HOUSE OF REPRESENTATIVES

Wednesday, March 2, 1960

Mr. LEVERING. Mr. Speaker, I have said many times that our veterans of World War I are the forgotten men of our times. While I have voted in favor of all veterans' legislation, I think it is most regrettable, bearing on the tragic, that the Congress has not seen fit to give greater consideration to the welfare of those who served in the uniform of our country in the First World War. I would remind my colleagues again that it was the veterans of World War I, serving in the Congress of the United States during the tense days of World War II, who led the fight to put upon the statute books of this country the kind of measures which saved the veterans of that war from having to face the same economic conditions and privations which confronted the men who came back from World War I.

Mr. Speaker, I am proud of the fact that a fine veterans' organization, the Veterans of World War I of the U.S.A., Inc., had its beginning in my native State of Ohio.

Under leave to extend my remarks in the RECORD, I include a fine article by my dear friend, Mr. Doyle Ditmars, publicity officer of the Ohio department, entitled "Ohio, Birthplace of V.W.W.I.," in order that my colleagues may become better acquainted with the aims and objectives of this organization:

OHIO BIRTHPLACE OF VETERANS OF WORLD WAR I

Many men and women who served in the First World War, still living in Ohio, have never heard of the organization, the Veterans of World War I.

I wish to direct those remarks to veterans of that war in this community to acquaint them with some of the aims and objects of our organization, which was formed in Cleveland back in 1949.

The group had a small beginning. It has now grown and established departments in every State of the Union. But it still is not large enough in membership to attain its objects and secure just rewards for war service to which we are entitled. To accomplish those objects, we must secure more members. We must add more barracks to the 2,000 now established. There are 73 in Ohio. Of the 2,600,000 veterans of our war remaining, we should have a membership of at least a million.

To acquaint the men and women of this community with our organization, and perhaps interest them in establishing a unit (or barracks), I wish to present our program.

1. To coordinate veterans of World War I into an organization for their mutual benefit, pleasure, and amusement, giving them the opportunity of personal contact, in order to keep alive friendships and memories of World War I.

2. To cooperate fully with all veterans' organizations, so that the best interests of all veterans of all American wars may be served.

3. To stimulate communities and political subdivisions into taking more interest in veterans of World War I and their problems,

as well as the widows and orphans of such deceased veterans.

4. To uphold the Constitution and laws of the United States, as well as the individual States of the Union.

5. To fight for our national security, in order to protect Americans from enemies within and without, to the end that our American way of life shall be preserved.

6. To fight all alien forces, particularly and especially Communists, whose objectives are to deny our very existence as a free people.

7. To secure for veterans of World War I the same policy and treatment by our Government accorded to Civil and Spanish War veterans, who through patriotic service and sacrifice to their country, have earned and to which they are justly entitled.

8. To work for cost-of-living increases to veterans now receiving service connected pensions.

9. Work to secure pensions for widows of World War I veterans comparable to that now being paid to Spanish War widows.

10. Establish an Accredited Claims Department, so that every World War I veteran may always secure friendly, trained, and experienced representation before the Veterans' Administration.

11. Secure hospitalization for all World War I veterans without the "pauper's oath" and income limitations.

These are some of our objectives, in addition to working for a liveable pension for every man and woman who served 90 days or more in the first World War. THIS IS YOUR OUTFIT. It was formed FOR YOUR benefit. Only those who served in the first war are eligible to join. We are all getting older! Our time is running out. Three hundred die every day.

World War I veterans of this community, get together and talk it over. It requires but ten (10) members to get a barracks charter. You can add to that number as other buddies wish to join. For further information, write me at my address. I can give you the name and address of the barracks commander nearest you. Don't put it off. Do it now.

DOYLE DITMARS,

Department Publicity Officer.

HOLMESVILLE, OHIO.

Song of the Independent Farmers

EXTENSION OF REMARKS

OF

HON. CRAIG HOSMER

OF CALIFORNIA

IN THE HOUSE OF REPRESENTATIVES

Wednesday, February 17, 1960

Mr. HOSMER. Mr. Speaker, adopting the motto "To what avail, a plow or sail, or love of life, if freedom fail?" a stock farmer in North Georgetown, Ohio, sat down and wrote a song he calls "Song of the Independent Farmers." He dedicated it as follows: "to my fellow countrymen who value their freedom under the Constitution of the United States of America." I do not know what the music of Farmer George Saffell's song sounds like, but the words sure sound good. Here they are:

We can't grow wheat, we can't grow cotton,
Our freedom now has been forgotten.
Had our fill, won't take from the till,
Subsidies make the granaries fill.
Oh, how did we get in such a pickle.
Over our farms hangs a hammer and sickle.

Scale of Justice is out of balance,
No jury trial decides our grievance.
Three little men in each county seat
Have all the power no judge will defeat.
Free enterprise helped make this country great.
Let's throw out the act of nineteen thirty eight.

They took Doc's car and Simpson's money
Sold Yankus out which was not funny.
Stangland's tractors have been returned,
The rest of us are yet to be burned.
And our little wheat made all this trouble,
The Justice Department is seeing double.

CHORUS

Just to run our own farms with no help
from Uncle Sam
That supply and demand would keep us
from this jam,
But the people got soft, would not help in
our fight.
But we'll never give in 'cause we know that
we are right.

Interest Rate Ceilings

EXTENSION OF REMARKS

OF

HON. LESLIE C. ARENDS

OF ILLINOIS

IN THE HOUSE OF REPRESENTATIVES

Wednesday, March 2, 1960

Mr. ARENDS. Mr. Speaker, in this morning's mail I received a communication from Mr. Clyde T. Ellis, the general manager of the National Rural Electric Cooperative Association. Accompanying this letter was an emergency resolution adopted by his association on February 24, 1960. The letter and the resolution expressed criticism of the legislative proposal to adjust the interest rate ceiling applicable to long-term U.S. marketable securities so as to facilitate proper debt management on the part of the Treasury.

Mr. Speaker, I was shocked by the lack of understanding of this urgent national problem that was reflected in Mr. Ellis' letter and in the resolution. I immediately responded to Mr. Ellis in an attempt to dispel the numerous misconceptions he had in regard to this legislation.

One of Mr. Ellis' misconceptions is that the 4 1/4 percent interest rate ceiling on marketable bonds has kept the interest rate down. The fact is that the ceiling has not kept the interest rate down; it has forced the Treasury Department to rely heavily on the short-term money market at rates in excess of 4 1/4 percent in managing the public debt.

A second of Mr. Ellis' misconceptions is that the President of the United States establishes interest rates. The fact is that interest rates are established under our free enterprise economy by the laws of supply and demand in much the same manner that other prices are established. The interest rate is the price of borrowing money.

A third misconception on Mr. Ellis' part is his belief that the enactment of legislation adjusting the archaic 4 1/4 percent ceiling will touch off a "chain reaction" to the detriment of such things as farm credit, small business, and housing. The fact is that the interest rate ceiling

by confining the Treasury to short-term borrowing has raised interest costs to the small businessman, the farmer, and the homebuilder.

Mr. Speaker, these are only a few of Mr. Ellis' tragic misconceptions. The issue of interest rate legislation will be debated in the House of Representatives in the near future and at such time we can give detailed consideration to the urgent national problem of proper debt management.

I understand that other Members of the Congress have received similar communications from Mr. Ellis.

So that Mr. Ellis' letter and my reply to him may be a matter of public information, I will insert both the original communication and my reply in the RECORD at this point as a part of my remarks:

NATIONAL RURAL ELECTRIC
COOPERATIVE ASSOCIATION,
Washington, D.C., February 29, 1960.

HON. LESLIE C. ARENDS,
House Office Building,
Washington D.C.

DEAR MR. ARENDS: The attached resolution appealing for your help in opposing a compromise on the interest-rate-ceiling issue has just been adopted by our association board of directors and the membership. This action was taken at our 18th annual meeting now being held at St. Louis, where we have nearly 6,000 of our system directors, managers, members, and friends registered and in attendance.

We sincerely urge you to give this expression your earnest consideration and then your vigorous support.

Respectfully yours,
CLYDE T. ELLIS,
General Manager.

EMERGENCY RESOLUTION UNANIMOUSLY RECOMMENDED BY THE NRECA BOARD OF DIRECTORS AND ADOPTED BY THE MEMBERSHIP IN GENERAL SESSION AT ST. LOUIS, MO., FEBRUARY 24, 1960

Whereas the Congress is about to take up a bill which would compromise the traditional interest-rate ceiling and thus remove one of the last effective bulwarks protecting us and all consumers from the ever-spiraling interest costs that are being imposed everywhere under the tight-money policy; and

Whereas this bill, if enacted, will give the President the authority to establish interest rates at any level he chooses, a fiscal power the Congress has never before seen fit to hand over to any President at any time; and

Whereas this bill, if enacted, will touch off a chain reaction that can result only in crippling damage to such programs as rural electrification, resource development, housing, farm credit, education, small business, slum clearance—not to mention the extra costs it would inflict on national defense and government operations at all levels; and

Whereas the President has recommended that the Congress increase the REA rate to the level of interest on long-term issues, plus an additional amount: Now, therefore, be it

Resolved, That we who are assembled in the annual meeting of the National Rural Electric Cooperative Association representing 1,000 rural electric cooperatives and their 16 million individual member-consumers appeal to the Congress to defeat this legislation and begin forthwith a drive to get our national monetary policies back on a sound and sane basis.

HOUSE OF REPRESENTATIVES,
Washington, D.C., March 1, 1960.

MR. CLYDE T. ELLIS,
General Manager, National Rural Electric Co-
operative Association, Washington, D.C.

DEAR MR. ELLIS: I have your letter of February 29, enclosing a resolution adopted by the membership of the National Rural Electrification Cooperative Association on February 24, 1960.

I note that the caption on the resolution suggests it was adopted on an emergency basis. Such hasty consideration is certainly reflected in the misunderstanding evident in the resolution of both the problem which the Treasury faces at the present time, and the solution which the House Ways and Means Committee has proposed. The bill referred to does not remove the interest rate ceiling on long-term marketable securities but merely provides a limited exception to the ceiling.

Your resolution fails to recognize further that the present ceiling has already added substantially to the current interest cost on the public debt by forcing the Treasury to do all its financing through short-term borrowing. This has resulted in pushing interest rates in the short-term market far above those on long-term securities, reaching the highest levels in almost 40 years. The Congress has a duty to see that this unwise pressure on short-term interest rates ceases immediately.

Your resolution furthermore ignores completely the fact that one of the segments of our economy most hurt by high short-term interest rates is the American farmer who must meet demands for seasonal loans and other short-term needs at rates which are much higher than if the Treasury were able to meet at least some of its requirements through borrowing beyond 5 years. The Treasury cannot do its borrowing in a vacuum—it has to do it in competition with all other borrowers. If the Treasury is completely denied access to borrowing beyond 5 years it obviously must add to the already heavy volume of demand for short-term funds. Qualified experts have testified that short-term rates would be perhaps as much as one-half of 1 percent lower if the Treasury were not forced to do all of its borrowing in the short-term market in competition with consumers, farmers, and small businessmen.

The statement in your resolution that "This bill, if enacted, will give the President the authority to establish interest rates at any level he chooses, a fiscal power the Congress has never before seen fit to hand over to any President at any time" ignores four facts: In the first place, in our free enterprise economy the prevailing interest rate is the barometer of the relationship between the demand for credit and the supply of savings determined through the individual decisions of literally millions of Americans. Secondly, the President already has authority to sell U.S. securities on short-term issues, at whatever interest rate the market demands, and has had it for more than 40 years. Thirdly, no responsible President or Secretary of the Treasury is going to borrow money at any rate of interest other than at the very lowest rate he can, consistent with the public interest. Fourthly, the bill reported by the House Ways and Means Committee does not remove the ceiling—it merely permits certain exceptions to be exercised, with definite limitations.

The report of the House Ways and Means Committee on its bill makes it very clear that the intended purpose of this bill is to permit the Treasury to manage the debt effectively, economically, and efficiently. It is in the best interests of 177 million Americans and the strength of the free world that

the Secretary of the Treasury be given authority to manage the public debt in the least inflationary manner possible.

In your resolution you indicate criticism of the Federal Reserve System and place yourself in favor of an undefined monetary policy that is "sound and sane." It is my conviction that the Federal Reserve's flexible monetary policy has been skillfully handled and deserves the support of all thoughtful citizens. Every American has much to gain by the proper management of the public debt and by other sound financial policies, in helping to avoid inflation which can seriously impair the confidence of our people in the American dollar. Excessive short-term borrowing by the Treasury is inflationary in that it, in effect, adds to the supply of money in the country and is only one step removed from "printing press" money.

No one has more to lose from inflation than the farmer who, under inflation, finds his crops priced too low and the costs of his purchases mounting every time he goes to the market. This fact is well recognized by the leading national farm organizations. I would like to remind you that the National Farm Bureau has adopted a resolution supporting the removal of the 4½-percent ceiling in the interest of the farmer as well as all other citizens. In addition, the master of the National Grange has supported the removal of the ceiling.

All Americans—including the 16 million which you mention in your resolution—can only be harmed by a further erosion in the purchasing power of the dollar since it eats away at the value of their savings. The best way to insure further deterioration in the value of the dollar and impaired confidence in our national economic strength is to try to force down interest rates artificially in the vain hope that some other means may be found to fight inflation, short of complete regimentation and socialization of our economy.

In conclusion, therefore, I would suggest that your board of directors and membership consider a little more carefully your ill-advised action which is based on an obvious lack of understanding of both the problem and the proposed solution. This matter of proper debt management is too important for politically motivated caprice.

Very truly yours,
L. C. ARENDS,
Member of Congress.

Adm. Jerauld Wright Retires

EXTENSION OF REMARKS
OF

HON. PETER FRELINGHUYSEN, JR.

OF NEW JERSEY

IN THE HOUSE OF REPRESENTATIVES

Wednesday, March 2, 1960

MR. FRELINGHUYSEN. Mr. Speaker, one of this country's most important military leaders, Adm. Jerauld Wright, has just retired after a most distinguished career. Though relatively unknown to the public, Admiral Wright has been a key figure in the defense of the United States and the free world. For the last 6 years he has served with distinction as commander of the North Atlantic Treaty naval forces, as commander of the U.S. Atlantic Command, and commander of the Atlantic Fleet.

I ask unanimous consent, Mr. Speaker, to include in my remarks the following editorials, which indicate the remarkable services Admiral Wright has rendered our country:

[From the New York Times, Feb. 29, 1960]

AN ADMIRAL RETIRES

Adm. Jerauld Wright retires today at Norfolk, Va., after 42 years of distinguished service. In dual ceremonies, international and national, he will relinquish the responsibilities of heading up three of the world's major commands. For almost 6 years he has worn three hats: Supreme Allied Commander Atlantic of NATO; Commander in Chief of the Atlantic Command, and Commander in Chief of the Atlantic Fleet.

Jerauld Wright deserves richly the honors done him today. As commander of the world's first international ocean command he contributed greatly to developing the military structure of the NATO alliance. And in his dual role as Commander in Chief of U.S. Atlantic forces he worked intensively to maintain their strength, particularly in his efforts to increase the fighting power of our antisubmarine forces.

Admiral Wright served in both the Atlantic and Pacific in World War II and held many vital naval posts in the peacetime years. He also served in World War I after graduating from the Naval Academy at age 19. He was the youngest member of his class and one of the youngest ever to graduate at Annapolis.

We wish him well in retirement. Certainly he merits a "well done" for his many fine achievements in four decades of service to his country.

[From the Washington (D.C.) Evening Star, Feb. 29, 1960]

A TOP COMMANDER RETIRES

America and the free world have lost an outstanding military leader and defender of the peace with the retirement at Norfolk today of Adm. Jerauld Wright, veteran of two world wars and the current cold war. "Jerry" Wright, as his friends here and abroad knew him, is relinquishing three important commands—Supreme Allied Commander Atlantic of the North Atlantic Treaty Organization (NATO), commander in chief of the Atlantic Command, a unified American group of Navy, Army, and Air Force elements, and commander in chief of the Atlantic Fleet. In this triple role he has headed powerful forces on which we and our American and European allies have relied to help keep the cold war from becoming hot.

Admiral Wright, as he leaves active service today, can look back on a 42-year career of varied, colorful, and often dangerous service in peace and war. As a junior lieutenant he served with allied antisubmarine forces in World War I. Between wars he had sea and land assignments—the latter including tours as naval aide to Presidents Coolidge and Hoover. Washington came to know him well then. Early in World War II he had the storybook assignment of landing surreptitiously by submarine on the north African coast with Gen. Mark Clark and others to make contact with French resistance officers. He commanded a second submarine operation which evacuated French General Giraud and his staff from southern France. Later he participated in numerous assaults and landings on Japanese-held isles in the Pacific.

Recognized as an expert on amphibious warfare and joint operations, Admiral Wright was a natural selection in 1954 as Supreme Allied Commander Atlantic. In this post he has commanded the world's first international navy, composed of the Atlantic forces of all the NATO powers. He has worked tirelessly and effectively to organize this navy into a coordinated, co-

operative defense fleet, ready for any emergency. As he turns his commands over to another outstanding officer, Adm. Robert L. Dennison, U.S. Navy, we are glad to learn that Jerry Wright plans to make Washington his permanent home. We hasten to welcome him back as friend and neighbor.

[From the Washington (D.C.) Post, Mar. 1, 1960]

THE UNSUNG ADMIRAL

Adm. Jerauld Wright, who retired at Norfolk yesterday after 42 years in the U.S. Navy, served his country well without ever writing disputatious memoirs or otherwise causing clamor about his assignments or views. This did not mean that Admiral Wright lacked conviction or purpose; far from it. As commander of NATO forces in the Atlantic for the last 6 years, he held one of the free world's two most important unified commands (the other being that of General Norstad as NATO commander in Europe), and one which required considerable acquaintance with diplomacy in addition to military proficiency. But Admiral Wright shares some of the self-effacing quality of the late Gen. George C. Marshall in his shunning of personal publicity. His distinguished career, starting with graduation from Annapolis at 19, included combat service in both World Wars and assignments in the Pacific as well as Atlantic in World War II. He is the second generation in his family to attain top military command (his father was the late Lieut. Gen. William Mason Wright), and when he turned over his command yesterday he had served on continuous active duty longer than any other officer of recent years. He and Mrs. Wright, who will now make their home in Washington, will receive many salutes of warm good wishes.

James Zetek: Entomologist and Scientist

EXTENSION OF REMARKS

OF

HON. DANIEL J. FLOOD

OF PENNSYLVANIA

IN THE HOUSE OF REPRESENTATIVES

Wednesday, March 2, 1960

Mr. FLOOD. Mr. Speaker, the Panama Canal undertaking has produced many graduates of distinction from that great project. Though the canal was primarily an engineering and construction endeavor, the leaders it has produced were not limited to engineers, but have included many to attain fame in other fields.

Among these was Dr. James Zetek, formerly of Chicago, Ill., who came to the Canal Zone in 1911 as an entomologist for the Isthmian Canal Commission at the time when the renowned William Crawford Gorgas was chief sanitarian of the isthmus.

A man of high intelligence, boundless energy, and great driving force, young Zetek dedicated his life to a great purpose—the study of tropical insects in relation to medicine, sanitation, and economics.

This led him into original investigations into such matters as the ecology and behavior of the mosquito as vectors for malaria and yellow fever, the study of fruitflies, termites, and forest inhabiting mollusks, as well as destructive forms of marine life.

The results of his many years of inquiry, which have been extensively published in scientific literature, form a vast store of knowledge. His writings are an enduring monument to one of the most outstanding personalities ever associated with the Panama Canal enterprise and merit stressing in the permanent annals of the Congress.

William R. McCann, of Hopewell, Va., himself a distinguished engineering graduate of the canal enterprise, has sent me an interesting letter from Clayton J. Embree of Quarryville, Pa., together with an obituary notice in a recent issue of the *Lions' magazine*.

Mr. Embree's letter and the notice follow:

FEBRUARY 23, 1960.

DEAR MCCANN: The enclosed clipping was in the *Lion's magazine*. I do not know if you ever knew Dr. Zetek, but he was a wonderful man and certainly knew a great deal about insects. We were having trouble with the greenheart look sills; and I dug out a part of one and took it to him and he stated that it seemed to be a different species, had a new pallet or tail. He sent some of them to Washington for identification and they stated that they were a new kind, they are called Zetekii.

Another of his hobbies was snakes, he kept a live boa constrictor in a cage under his laboratory table, as well as others. I asked about the coral snake, and he said that its nervous disposition was such that it would not live in captivity. He had a number of houses built on Coronada Island trying to make them proof against the termites; whether he succeeded I do not know.

Kindest regards,

C. J. EMBREE.

Noted entomologist, Dr. James Zetek, the "baron" of Barro Colorado Island, died at the age of 73. His death was due to a cardiac condition, aggravated by pneumonia. A member of the Balboa, Canal Zone Lions Club, he had retired 3 years ago because of his heart trouble. Dr. Zetek, a native of Chicago, went to the Canal Zone in 1911 after graduating from the University of Illinois. He was with the Canal Zone Sanitary Department, the Board of Health Laboratory, and the U.S. Department of Agriculture prior to being named research specialist of the Canal Zone Biological Area when it was established in 1923 by the U.S. National Research Council. The area, on Barro Colorado Island in Gatun Lake, has become a center for the study of tropical life and attracts scientists from throughout the world. It was taken over by the Smithsonian Institution in 1946. While building the area into a top center in its field, Dr. Zetek also gained renown for his own findings and was recognized as a leading authority on termites.

Rickover's Blueprint for Better Schools

EXTENSION OF REMARKS

OF

HON. KEN HECHLER

OF WEST VIRGINIA

IN THE HOUSE OF REPRESENTATIVES

Wednesday, March 2, 1960

Mr. HECHLER. Mr. Speaker, at probably no other time in American history has our Nation taken such a penetrating look at its schools. Contribut-

ing immensely to this national debate has been Vice Adm. Hyman Rickover, whose genius at cutting through dense, bureaucratic fog is well known.

Several prominent educators have criticized Admiral Rickover's views. But I am sure the good admiral would not want anyone to swallow his views without careful examination and debate. In this way Admiral Rickover is making an invaluable contribution to our schools. He is encouraging both educators and laymen to examine their assumptions about education and to evaluate their local school systems.

Another example of Admiral Rickover's contribution to the national debate on education appeared in the nationally circulated *American Weekly*, on February 28, 1960:

THE ANGRY ADMIRAL'S PLAN

(By Frances Leighton)

(Hyman Rickover, father of the atomic sub, warns that Russia's educational system is better than ours—and tells what we have to do to build brains for survival in this superscientific age.)

Vice Adm. Hyman Rickover of the U.S. Navy is seriously concerned about America's educational system. He feels that Russia is swiftly moving ahead of us in the sciences and the professions and that time is running out on our chances of catching up.

His consuming interest in education began when he headed the American team that gave the world its first atomic submarine, the *Nautilus*—and found that men with the educational know-how for nuclear power development simply weren't readily available.

He set out to find the reasons why, and came up with some startling facts:

Though our schools had admittedly always been behind northern and western Europe in genuine education, we'd had one tremendous advantage: Our high schools were free and graduated more students than European countries; but, now, Rickover discovered, the situation has changed. All advanced European countries have free education up to 18 years of age. What's more, European colleges are cheaper, and in Russia not only is college free, but students are paid room and board and given pocket money besides.

He found that Russian children graduated at 17 from a 10-year school, do as well by the record as our most talented children after 2 years in college; that in algebra and physics they reach a level achieved by only a small percentage of college entrants here; that by 1961 Soviet graduations are expected to be 60 percent larger than those in the United States.

"The real race we are in," he said, "is a technological race—to see whose educational system best prepares youth for the world of modern science—the communistic or the democratic?"

"What are we to do?"

The admiral, in his blunt, realistic fashion, answered his own question:

"We have no choice. The time has come for a crash program in education. Let's put aside pride and prejudice and stop quibbling about the usurping of States' rights and the cutting of tax dollars and start thinking about our children. Let's pass on to them the knowledge and wisdom of the past."

"The important obligation of Congress is to get into this educational problem, to find out the real truth, and to take steps to remedy the real defects."

And then he set forth the following 10 points he considers essential as a guiding code for the revitalization of education in America:

"1. Lengthen the school year. Only in America do children have such a short school term. All other children go to school 6 days a week, 10 months a year. They are in classrooms 240 days or more as compared with 180 days for American children. American children spend too many years in the lower schools. Surely we could do in 10 years the work we now stretch to 12 years of schooling."

"2. Decide that the primary function of the school is to educate the mind. The home and the church are the places to train our youngsters to be social creatures and the school should be free to concentrate on developing their minds. A vast amount of marginal stuff that clutters our school schedules is of questionable use. Such training ought never to be substituted for the real business of schools, which is to instruct children in basic subjects that will give them a better comprehension of the world they live in."

"3. Cut out emphasis on competitive sports and increase the physical fitness of all children. We have all but eliminated competition from education and transferred the competitive feeling to school sports. Interscholastic and intercollegiate games in which only a handful of star athletes take part are an American phenomena, unknown elsewhere."

"Physical education in Russia and the rest of Europe is centered on developing the body of each child. A study of European children, shortly after World War II, showed that, despite the war and years of inadequate nourishment, the European children were healthier than our own youngsters."

"4. Toughen the curriculum and reduce electives. I think our curriculum should eliminate all the soft courses and get back to a hard-core basic standard. The Russian student graduating from the 10-year school must pass an examination in seven subjects—Russian language and literature, a foreign language, algebra, geometry, physics, chemistry and history—a much broader field of knowledge than our college board achievement tests."

Our own snap courses may shortchange our children for the future. They will have to compete in a world so improved educationally that we cannot afford to stand still. It takes a long time to produce highly educated professional men. If we don't do this through our educational system we will inevitably be outstripped by Russia."

I am particularly disturbed by our concept of electives for school children. Here we have minors whom we carefully protect under our law because we know they cannot judge wisely and may therefore harm themselves if we let them decide important matters themselves; yet we let these same minors choose the subjects they wish to study in school—to make decisions which will influence them for the rest of their lives."

In the United States it is quite possible that, left to his own devices, a potentially talented child may squander his best learning years on easy know-how courses which require no homework but which earn him the same credit toward a high school diploma as academic subjects."

"5. Set national standards of education: Not all our children are alike. Unbelievably, our high school diploma tells us nothing about the scholastic achievements of its possessor. We made our mistake in downgrading the curriculum until it met the lowest levels of competence instead of setting up different types of secondary schools for different types of students."

In European countries there are three kinds of diplomas. The British have the O, the A, and the S Certificates, standing for "Ordinary," "Advanced Level," and "Scholarship Level." On the Continent the final examinations are usually set up by a body composed of eminent scholars and laymen.

To me there is nothing more important than to change our educational system so that it will provide the best possible education for every child: slow, average and talented.

I believe the single most important thing that needs to be done is the creation of a body to set national standards. The Federal Government should set standards for education. That would give parents a norm—a yardstick to measure what their children should learn and have learned in school."

"6. Grant Federal aid to education: It seems to me we give too much weight to the fact that education is not mentioned in the Constitution. Isn't the honest labeling of educational diplomas as important as honest labeling of drugs? We regulate what goes into people's mouths, why can't we recommend what should go into their heads?"

Every boy and girl in this country, regardless of social status, should have the same opportunity for a good education. The dollars spent on education are the cheapest, with the greatest return. The waste of money on missiles and other technical projects may be laid to inadequately educated people. Why are Members of Congress willing to appropriate large sums of money for things which they are not sure will succeed, but hesitate to help education when the return on the investment is certain and great."

"7. Cut the cost of college education: In Russia, Britain and France every able student can go to a university at no cost to his family and scholarships are based on tests—special exams are given at 11 or 12, and 17 or 18 to determine who should pursue a university education and who should advance in other fields of endeavor."

We have the curious situation that it actually costs more in the United States to become a professional man than in most of the European democracies. There is much evidence that the education dollar buys less good schooling in the United States than in any country in the world."

Congress must determine to what extent we should help worthy college students. I am not saying we should go so far as to pay students to go to college as they do in Russia, but I do believe we should at least help the student working his way through college to the extent that he can make his educational costs tax deductible."

"8. Find additional incentives for getting more of our capable students to college: Somehow we must convince our children that their future depends on their becoming really educated. Today military power is almost wholly a matter of technology and this in turn depends on well-educated brain power. By 1961 Russia will have about 2 million scientists and engineers—20 percent more than we will have. In one way Russia's low standard of living—about one-third of ours—gives her the advantage in this matter of incentive."

A child in Russia will work his head off to get to college and raise his standard of living. He cannot take over his dad's business as he can here and have readymade success."

"9. Change our basic attitude toward teachers: How can we have proper respect for our schoolteachers in America if we see them forced to earn extra money operating checkout counters in grocery stores and working at other part-time jobs? Our best teachers leave the profession for industry."

The teaching profession should be the most noble in the land. What is the use of sending children to college if we don't have properly qualified teachers to teach them? And why don't we have qualified teachers? Simply because of low salaries. The highest paid man in Russia is the head of the Academy of Sciences. He gets the equivalent of \$50,000. A university professor in Russia is

paid the same as the head of a large industrial organization.

One way I feel that the Federal Government can aid education is in direct aid to teachers.

"10. Start teaching languages: In Russia today, 50 percent of the students going to secondary schools are being taught English—about 10 million Russians are studying English. By comparison, a few thousand Americans are studying Russian."

I am not advocating that we adopt the Russian political system or anyone else's. I am merely urging that we look around and see what others are doing and not delude ourselves. We must not again say that the Russians do nothing well. And for a long time we assumed they were so far behind us scientifically we did not bother to translate their technical reports. Yet they've orbited the heaviest object into space.

As a hopeful note to show that we are waking up to the world around us, I cite a recent story about the PTA members of 28 Fairfax, Va., schools who have voted to have foreign languages incorporated into the regular curriculum for elementary and intermediate schools. They ask that language study start in the third grade.

If we are to keep our position in the world today and to influence people in international relations, we must become a multilingual people. One reason that Russia has gotten so far with other nations is that she has taken the trouble to learn to communicate with them in their native tongue.

Can we afford to do less?

Full Granaries—Empty Pockets

EXTENSION OF REMARKS

OF

HON. DONALD F. MCGINLEY

OF NEBRASKA

IN THE HOUSE OF REPRESENTATIVES

Thursday, February 25, 1960

Mr. MCGINLEY. Mr. Speaker, we often hear the charge that the farm program is keeping the "inefficient" operator on the farm. And we have heard statements from people who point to the bumper crops of the past 2 years as proof of the prosperity of the farmer.

I feel that neither statement is correct.

In the first place, 5 million people have left the farm in the past 10 years. This terrific depopulation has taken a toll of the marginal farmer. Unless this trend is slowed, the corporation farm will become a part of our economy by necessity. With the rather large numbers of unemployed people with us, we must give careful consideration as to the possibility that good efficient farmers are being driven from the land where they should be kept to provide food for the future.

The fallacy of the "good crops mean prosperous farmers" theory also has many proofs. One of the finest documentations of the status of the farmers came to me in a letter from M. W. Dunlap, a banker at Douglas, Nebr. Like many smalltown bankers, Mr. Dunlap also assists farmers in making out their income tax returns. The community of Douglas in eastern Nebraska is familiar to me, although it is not in my congressional district, because it is the locality of the birthplace of my father.

It is a good agriculture area where diversified farming is most common with traditionally a relatively high percentage of farmers carrying on substantial livestock operations. The Douglas community has for the past 2 years had better than average crops.

The only distress that is present is in the falling incomes of the farmers. Mr. Dunlap wrote to me that he has completed 200 income tax schedules for the year, 141 of which were for farmers. He has sent a tabulation of the results. In considering the information, it is important that the investment of the farmer be considered. The exceptional \$5,100 net income is not the farmer's pay for his labor. It is his return on his labor, his farm machinery, and his land.

Mr. Dunlap, in his letter to me, points out the danger to the entire economy of the Nation if this basic industry which is a \$40 billion annual consumer market and which is the No. 1 customer of the petroleum industry, an extensive market for steel goods, and so forth, continues to suffer further.

Mr. Speaker, I would like to insert at this point the table which Mr. Dunlap has made up of the results of his service in income tax schedules preparation. Be assured that there are no gimmicks in this picture. It is a true cross section of an average eastern Nebraska agriculture community:

Gross income	
19-----	Less than \$1,000.
27-----	Between \$1,000 and \$2,000.
22-----	Between \$2,000 and \$3,000.
20-----	Between \$3,000 and \$4,000.
10-----	Between \$4,000 and \$5,000.
10-----	Between \$5,000 and \$6,000.
31-----	\$6,000 and over.
Net income	
42-----	Net loss.
30-----	Less than \$500.
19-----	Between \$500 and \$1,000.
13-----	Between \$1,000 and \$1,500.
8-----	Between \$1,500 and \$2,000.
6-----	Between \$2,000 and \$2,500.
1-----	Between \$2,500 and \$3,000.
8-----	Between \$3,000 and \$3,500.
5-----	Between \$3,500 and \$4,000.
1-----	Between \$4,000 and \$4,500.
4-----	Between \$4,500 and \$5,000.
1-----	\$5,100.

Staying Ahead of the Soviet Union in the Competition for Survival—We've Got To Care

EXTENSION OF REMARKS

OF

HON. SAMUEL S. STRATTON

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Tuesday, March 1, 1960

Mr. STRATTON. Mr. Speaker, the 1960 Olympics have come and gone. As they close up the arena at Squaw Valley and the competitors make their way back to their home countries, many a thoughtful American is pausing to ask why it is that the United States came out such a long way behind the Soviet Union in the final scoring. Not only did the Soviet

Union win the 1960 winter Olympics, but they won it by gaining more than twice as many points as their nearest opponent. And this fact is all the more startling when we realize that until 4 years ago the Soviet Union had never won any kind of medal in winter Olympic competition. I know that some observers will say that the Olympics do not represent team competition but only individual competition, and others may say that the winter Olympics are not really important; let the Russians win them anyway. And yet at a time when there is the most profound kind of competition between the Soviet and American ways of life, the tremendous Russian progress in this field of athletics in a few short years cannot help but be noticed throughout the world and cannot help but be interpreted as perhaps another straw in the wind in this vital struggle.

In that connection, Mr. Speaker, I was particularly interested in an article which appeared yesterday in the Washington Post written by Bill Furlong, of the Chicago Daily News Service. Mr. Furlong, writing from Squaw Valley, makes this blunt statement:

The Russians won the winter Olympics for the same reason they're winning the race in space—because they're eager and we're not. Of all the reasons, the last is the most important. The other three can be overcome—but only after the last one is overcome.

Mr. Speaker, does this not look like the same thing that we seem to be running into also in the race for space and the construction of superior military power? Have we Americans indeed lost the desire to excel? Have we lost the old competitive spirit? Is it true that in space and in the race for military superiority and in the competition to produce the best educated engineering and scientific brains, just as in the competition for gold medals in the winter Olympics, "they're eager and we're not"?

Fortunately, Mr. Speaker, there is one bright spot on the horizon, and that is the performance of the American Olympic hockey team. As Mr. Furlong puts it—

It also was determination which led to the U.S. success in hockey—for by all odds, both Canada and Russia had better talent and better teams. Yet our players wanted so much to win that they swept over superior opponents.

I submit, Mr. Speaker, that the same must hold true in our competition with the Soviet Union in other fields as well. To stay ahead we must first of all want very badly to stay ahead. In all of our talk about our technological improvement and our industrial might, let us not forget that the most important quality of all is the determination to stay ahead and win.

The concluding sentence of Mr. Furlong's article applies not just to the winter Olympics, but to the whole gamut of the desperate competition between American freedom and Russian communism in which we find ourselves today: "All it takes is to care enough to win."

The article follows:

IN OLYMPICS, AS IN SPACE, EAGER RUSSIANS TAKE GREAT PRIDE IN DEFEATING CAPITALISTIC NATIONS

(By Bill Furlong)

SQUAW VALLEY, CALIF., February 29.—Why did we lose?

Why did the Russians romp away with winter Olympic honors and the United States finish far behind?

The reasons:

The United States as a whole is not interested in winter sports. Our preference is to go south to Florida, not to engage in the vigorous sports of the northlands. The Russians, on the other hand, have made a point of engaging in winter sports—largely because it is, like Canada, a north country.

Even for those athletes interested in winter sports, the training season is short—2 or 3 months at the most. By way of contrast, the training season for nations like Russia and Canada is 5 months or more.

We ignored certain events, such as cross-country skiing, particularly for women. The Russians "loaded up" in those events—and the medals they won in those events count just as much as the ones in the prominent events.

The Russians are interested in winning any contest with capitalistic nations. Thus the Russians won the winter Olympics for the same reason they're winning the race in space—because they're eager and we're not.

Of all the reasons, the last is the most important. The other three can be overcome—but only after the last one is overcome.

The Russians showed the way. Until 4 years ago, they had never won any type of medal in winter Olympics competition.

Then in 1956—after being blanked for 32 years—they captured 14 medals, including 5 gold medals.

That was no accident. The Russians went about it with great calculations and skill. They have the natural resources: (1) a huge population inured to the rigors of the far north, and (2) an extended training period.

The Soviet Government merely provided the opportunities to work on winter sports.

An example: There are 32 Olympic-sized speed-skating rinks in Moscow alone.

There is only one in the United States—here at Squaw Valley (and it may eventually be closed or torn up).

"They have 10 rinks for really good skaters in Moscow and 10 more for mediocre skaters and the rest for beginners," says Eddie Rudolph, a speed skater on the U.S. Olympic team.

The result: A series of Russian victories in speed skating—and a worldwide trend toward the Russian style of skating.

"It is more designed for speed skating, while the American style is a little bit more like hockey skating," explains Eugen Grishin, the Russians' top speed skater.

The U.S.S.R. also shrewdly loaded up on the events ignored by the United States. We had virtually no entrants in the two women's cross-country skiing events (the 10-KM race and the 3 x 5 KM relay race).

The Russians had many entries—including several of world championship caliber. We had a poor team in the biathlon. Russia had a number of skilled entrants.

The combination of shrewdness and determination catapulted Russia to the front.

Determination was a significant factor—even to the United States. "We worked hard and we wanted to win," says Grishin.

It also was determination which led to the U.S. success in hockey—for by all odds, both Canada and Russia had better talent and better teams.

Yet our players seemed so much to win that they swept over superior opponents.

There is hope for the future. We're improving in speed skating.

All it takes is to care enough to win.

We're Accepting Communist Policies To Share the Earth and Share the Moon

EXTENSION OF REMARKS

OF

HON. THOR C. TOLLEFSON

OF WASHINGTON

IN THE HOUSE OF REPRESENTATIVES

Tuesday, February 23, 1960

Mr. TOLLEFSON. Mr. Speaker, under leave to extend my remarks I wish to insert in the RECORD a copy of an article written by Mr. Holmes Alexander and published in the New Orleans States-Item on December 15, 1959, entitled "We're Accepting Communist Policies To Share the Earth and Share the Moon."

WE'RE ACCEPTING COMMUNIST POLICIES TO SHARE THE EARTH AND SHARE THE MOON

WASHINGTON.—"It's going to be a while yet," said C. L. Closelooker, the research man, "before I throw my hat in the air for the 12-nation Antarctica treaty."

Mr. Closelooker ought not be such a spoilsport. Practically everybody in Washington seems to favor the treaty, which amounts to an international quitclaim on the 5 million square mile continent. He ought to be like practically everybody else.

"Maybe so," said Closelooker, who insists upon a close look at these things. "When Khrushchev was in Washington, he took the same big-hearted, scientific, socialistic viewpoint about the moon—it belongs to everybody, which means that it belongs to nobody. But I can't find anything in the American Constitution where it comes out for 'share the world'."

Well, the trouble was that Mr. Closelooker didn't have the scientific spirit of Christmas—that is, the spirit of the International Geophysical Year. Was there ever such global giving as this treaty? There are seven free world nations—Argentina, Australia, Britain, Chile, France, New Zealand and Norway—which have staked specific claims in Antarctica. Four other free world nations—the United States, South Africa, Belgium and Japan—were participants in IGY. Then, of course, there's Russia.

"That's the way I see it, too," said Closelooker. "The 11 free world nations are pooling their interests with one Communist nation. Maybe it's all in the IGY spirit, but it just doesn't seem a very good way to contain the growth of communism or to spread the cause of freedom."

But the South Pole land mass, which is twice the size of the United States, becomes the first continent ever to be dedicated wholly to peaceful, scientific purposes. The President has called the agreement "a significant advance toward the goal of a peaceful world." The New York Times agrees with those who call this treaty a model for other international accords.

"That's what bothers me," said Closelooker, a man who is never stamped by popular excitement. "Should the U.S. Senate ratify this treaty, we will have a dandy model for settling international disputes over Berlin, Formosa, the Panama Canal, the Caribbean sea, the Sino-Indian borderland—in fact, everywhere that the interests of the free world clash with those of communism. By establishing the 'share everything' ratio at 11 to 1, by freezing all free world claims, and by socializing whenever there is any doubt as to ownership, we will have a formula over which the Red nations would never dream of going to war. Why should they?"

But Mr. Closelooker didn't understand. The United States has spent many millions

supporting South Pole expeditions before and during IGY and since October has flown 28 American newsmen, 1 U.S. Senator, numerous scientists and VIP's to Antarctica, yet never have we made any official territorial claims.

"Well, why haven't we done so?" demanded Closelooker stubbornly. "I have before me a 1954 magazine article by the late Rear Adm. Richard Byrd, who asks: 'Are We Losing a Continent?' Since 1951, under two Presidents, Representative TOLLEFSON, Republican, of Washington, has been introducing a joint resolution for our declaration of sovereignty over certain areas of Antarctica which rightfully belong to the United States."

And nothing has been done? "Nothing," said Closelooker. "From reading the exchange between Representative TOLLEFSON and the White House, I can see why. Congress won't claim territory unless advised to do so by the administration. And the administration won't make a claim unless instructed to do so by Congress."

U.S. Proposal on Law of Sea Sovereignty Is Fishery Giveaway

EXTENSION OF REMARKS

OF

HON. THOMAS M. PELLY

OF WASHINGTON

IN THE HOUSE OF REPRESENTATIVES

Thursday, February 25, 1960

Mr. PELLY. Mr. Speaker, under date of February 12, 1960, there appeared a news item in the Japan Times, I am informed, which has to do with the forthcoming Geneva International Conference on the Law of the Sea.

In a dispatch from Seoul, Korea, an American was quoted after meeting with Republic of Korea President Syngman Rhee to the effect that the Korean leader seems to agree with the U.S. proposal for a 6-mile territorial waters limit with an additional 6-mile fishery limit.

My point is, Mr. Speaker, that our State Department keeps indicating to me that the United States has not publicly or privately jeopardized our historic fishery rights by support of compromise proposals.

Now the U.S. official quoted in the Japan Times was Arthur Dean, chief U.S. delegate to the Geneva meeting which is to be held by 86 nations starting March 12, 1960. So when Mr. Dean tells reporters, as he did, "I think Rhee seems to agree with the U.S. proposal," perhaps it is proof as I have been saying that the United States has been lining up votes for a compromise.

Anyone who knows about our Pacific Northwest fishery will recognize that the U.S. proposal sells out completely the American fishermen of the west coast who have historically fished off the 3-mile limit of British Columbia. Our bottom fish industry has no other place to fish.

Our officials seem more interested in eliminating a major cause of friction between Japan and Korea than to protect our own interests.

It appears that the United Nations-sponsored meeting may agree on new

zones of sovereignty. If the fishing zone is extended, the only hope for the Puget Sound and Washington State fishermen will be the Senate and its refusal to approve the Geneva Treaty.

The U.S. proposal in fishing sovereignty is an international giveaway.

Jet Costs Fly High

EXTENSION OF REMARKS

OF

HON. ALFRED E. SANTANGELO

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Wednesday, March 2, 1960

Mr. SANTANGELO. Mr. Speaker, an article "Costs Soar on Estimates of Air Alert" appearing in the New York Herald Tribune on February 22, 1960, under the byline of Allen M. Smythe. In view of our keen interest in getting a dollars value for every dollar spent in our defense program, I believe that Mr. Smythe's article will prove interesting and information. The author, Allen M. Smythe, brings out some interesting facts on the increasing expense to the taxpayers of any airborne alert of our military bombers.

The hesitancy of Pentagon officials to release costs on jet engines raises some questions in my mind. Do the large engine builders have accounting systems that show the exact toolings, research, overhead, and production costs of these engines? Have Pentagon officials asked for such a breakdown of costs? Do defense changes and modifications raise the costs unnecessarily high? What became of the plans to unify the buying and to standardize the size of jet engines?

The sudden and emotional appeals to Congress to hurry and approve enormous funds for an airborne alert is in a familiar pattern. These appeals, like the recurring visits of Russian submarines to this side of the Atlantic, are remarkably well timed with the hearings on defense appropriations. We now have a 30-minute ground alert at many of our air bases. In recent articles and speeches, defense experts have stated that any enemy attack by liquid-fueled ballistic missiles would cover a period of several hours. If so, the enemy would expect unacceptable damage from our retaliatory forces.

In the report of July 8, 1957, of the House Armed Services Committee on aircraft engine costs a contract for J-57 jet engines at \$390,000 is recorded. For the larger J-75 a price of \$575,000 was paid. The author was very restrained in his comparison of prices. According to my computations there have been several contracts in which jet engines have cost over 10 times their weight in silver.

The article reads:

COSTS SOAR ON ESTIMATES OF AIR ALERT—BILLIONS NEEDED FOR JET ENGINES

(By Allen M. Smythe)

Recent discussion of the need of an airborne alert for the Nation's eight-engined heavy B-52 bombers could result in the

purchase of thousands of extra jet engines that cost five times their weight in silver. To this would be added at least 30 percent for parts if operations were held in ideal weather and other normal conditions. For Arctic or desert use the parts could add 120 percent to the original cost.

Budget-minded legislators were aghast when they heard estimates of hundreds of millions of dollars for partial alerts. Recent cutbacks in military aircraft have sharply reduced the building of jet engines and have substantially raised the price. Where purchases were once made in thousands they are now made in hundreds. Increased material and modification costs would tend to hold prices at the present levels even if additional engines are ordered.

The trend in weapons toward missiles has left only two major builders of military jet engines, General Electric and Pratt & Whitney. The latter has only about one-half the military business of 3 years ago. Curtis-Wright, Allison and Westinghouse are no longer important factors in the industry.

JET FIGURES HIDDEN

Over protests from the public relations sections of both the Navy and Air Force, procurement officials refused to release exact figures on present prices paid for jet engines. Although unclassified, they claimed it would violate the "proprietary rights" of the manufacturers. They claimed that releasing the complicated prices would cause "misunderstanding and controversy" as the airlines are charged higher prices. The airlines denied this and stated they paid for no development costs and bought or rented powerplants below the cost to the services.

The B-52 bomber requires 8 mounted J-57 engines plus 8 spares plus parts for the 11 engines. The J-57, built by Pratt & Whitney and under Navy management comes in three main models: the all-steel, the titanium and the recently developed turbofan. It was learned that these models cost the taxpayers approximately \$200,000, \$270,000 and \$350,000. Any airborne alert will require extra KV-135's, the aerial refueler of B-52, which mounts four all-steel J-57's with one extra spare.

The B-58 medium bomber which might participate in an airborne alert is propelled by four J-79 jet engines. This new lightweight engine, made by General Electric, is under Air Force management. Its production contract, reported to call for a target price of \$260,000, has been cut back and final price negotiations at above \$400,000 are expected.

Pratt & Whitney also builds the J-58 and J-75 engines under Navy contracts. The J-57, now 6 years old, is approaching obsolescence. Vice Adm. E. W. Clepton, Chief of the Office of Naval Materiel, states that the development cost of the J-57 was over \$400 million. If all costs are included, any jet engine, he says, will cost a half billion dollars.

MANAGES PRATT & WHITNEY PLANT

The Navy keeps management of the Pratt & Whitney factory because of the volume of contracts it issues. The multiengine bombers and tankers of the Air Force use thousands of these engines bought by the Navy. Six years ago the Air Force asked for control of engine building at Pratt & Whitney.

After being turned down, the Air Force persuaded the Ford Motor Co. to tool a large Federal tank factory in South Chicago for J-57 and J-75 production. A reported \$400 million was spent to make the plant capable of outproducing the rest of the world. The first production contract for J-57's ran over \$500,000 per engine. It is now a standby plant.

Some Pentagon officials believe the Air Force could save by reopening this plant for an airborne alert. Others would give the

Air Force control of Pratt & Whitney regardless of any alert. The Navy disagrees.

Ex-Secretary Charles "Engine" Wilson succeeded in cutting down the number of models of jet engines but not cost. A credulous Congress criticizes but obtains no results. Congressman GERALD FORD, Republican of Michigan, member of the powerful Appropriations Committee, pointed out recently that the Pentagon spends more for small parts of these engines than the cost of a new automobile engine. Fellow members of his group speak of them as "jeweled power plants" and "gold-plated jets."

A Family System of Agriculture

EXTENSION OF REMARKS

OF

HON. ROBERT W. LEVERING

OF OHIO

IN THE HOUSE OF REPRESENTATIVES

Wednesday, March 2, 1960

Mr. LEVERING. Mr. Speaker, I think the time has come when we should realize that Government cannot dictate the policies and programs for our Nation's farmers, that rather it should be the role of Congress to provide through enabling legislation flexible guidelines which will permit those engaged in agriculture, commodity by commodity, to determine their own destinies at the local level. In other words let producers at the grassroots develop a program of their own choosing.

It is agreed, Mr. Speaker, on both sides of the political fence that American agriculture is in real trouble, that because this is true our whole economy is threatened. Small farmers are literally battling for survival. I heartily agree with those who claim that unless the devastating trend under the existing program is not reversed and replaced by a bold new approach to the farm problem, we will soon see throughout the land monopolistic control of the farming industry which will result in a situation where subsidies paid to farmers will appear as nothing compared to the higher prices paid by the housewife for food and clothing.

Mr. Speaker, I believe that within the framework of the bill H.R. 10362 which I recently introduced along with a number of my colleagues, an enabling act, will offer farmers the opportunity to adopt a program of their own in a cooperative effort to achieve a balance of supply and demand—all within the spirit of the Agricultural Marketing Agreement Act at a minimum cost to the Government. No doubt there are corrections and amendments to be made in the bill, and I am sure they will be made in the course of hearings before the Committee on Agriculture as we listen to the various producers who have peculiar knowledge of the problems involved on their specific commodity.

I am confident, Mr. Speaker, that this bill would operate in a tremendous savings to taxpayers particularly as it positively prohibits further acquisition and storage of commodities by the Government and provides for an already disposal of stocks on hand, and in view

of the reasonable limitations placed on the amount any one producer could receive. I am also confident that the income of family farmers would be improved under this legislation and that it would assure adequate food and fiber to our consumers at reasonable prices.

Mr. Speaker, under leave to extend my remarks in the RECORD, I include an editorial dated February 25, 1960 from the Farmer's Hub, a fine newspaper published at Millersburg, Ohio in my congressional district, which I am glad to say endorses the idea of a self help program for our farmers as provided in H.R. 10362.

The editorial follows:

A FAMILY SYSTEM OF AGRICULTURE

"To perpetuate the family system of agriculture against all forms of collectivism; to stop further accumulation of burdensome surpluses and to dispose of Government stocks now on hand within a reasonable time" is the purpose of a new farm bill introduced in Congress on February 10 by Congressman ROBERT W. LEVERING of the 17th District.

Congressman LEVERING said that the Government is now spending \$1½ million daily for surplus grain storage and has \$9½ million worth of surplus grain on hand. His bill, LEVERING estimates, would provide a program costing not more than \$500 million annually as compared with the \$5 billion annual cost under the present farm program.

LEVERING's proposal is to let the bona fide farmers of each State elect committeemen who would meet in a national conference and decide on programs for commodities which the Secretary of Agriculture had determined would be in surplus for the ensuing year. The national farmers committee would then determine on one of several "control" programs.

Choice would be offered between direct payments with limits on production, on marketing agreements similar to the milk marketing plan; on paid minimum prices or some other plan appearing best. LEVERING would limit payments to any one individual to not more than \$5,000.

The Levering bill is a direct answer to President Eisenhower's challenge to the Congress to write its own "sound farm program".

Indus River Project

EXTENSION OF REMARKS

OF

HON. CHESTER E. MERROW

OF NEW HAMPSHIRE

IN THE HOUSE OF REPRESENTATIVES

Monday, February 29, 1960

Mr. MERROW. Mr. Speaker, under leave to extend my remarks in the Appendix of the RECORD, I include an editorial from the New York Times, of March 2, 1960, entitled "Indus River Project."

INDUS RIVER PROJECT

A billion-dollar enterprise that would improve the lot of 50 million people and help Indian and Pakistan to fortify their growing sense of common destiny in the face of the Communist menace has come a long step nearer realization with the announcement by the World Bank that six nations stand ready to join in financing the Indus River project. This project, developed by the World Bank,

calls for equitable sharing of the waters of the Indus River system between the two nations for both irrigation and hydroelectric power for the economic development of one of the greatest river basins in the world.

The nations prepared to participate in this enterprise, which in size and in the number of people affected exceeds the Soviet-financed Aswan Dam for the Nile basin, are the United States, Britain, Canada, Australia, New Zealand, and West Germany. Together with the World Bank they would provide more than half of the funds needed, partly in grants, partly in loans, with the United States contributing by far the largest share.

The actual start of the project now depends on a final water sharing agreement between Indian and Pakistan. But since accord has already been reached in principle and on many of the details involved, the final agreement that has been 6 years in the making is now expected during the next 2 months. India and Pakistan have already settled most of the border and financial disputes that arose between them from the partition of the Indian subcontinent, and agreement on the Indus River would cap a progressive rapprochement that should also facilitate solution of the last remaining conflict over Kashmir, where much of the Indus River system originates.

One must assume that growing realization of a common interest in the project provides the real basis for the agreement—a basis that is necessary if the project is to flourish in the future. But there is no doubt that Chinese Communist pressure on both countries contributed to it, with the result that Communist China appears to be playing the same role in uniting India and Pakistan that Soviet Russia played in uniting the West.

Education and Civil Rights

EXTENSION OF REMARKS

OF

HON. CHESTER BOWLES

OF CONNECTICUT

IN THE HOUSE OF REPRESENTATIVES

Tuesday, March 1, 1960

Mr. BOWLES. Mr. Speaker, in the years since the Supreme Court's school desegregation decision, no domestic question of greater importance has faced the American people than education and civil rights. Despite the crucial importance of leadership on this sensitive issue, such leadership on a national level has been largely missing.

An exception, a major instance where leadership has been given, is in the hearings and the report of the Commission on Civil Rights. While its major recommendations lie in the field of voting rights, the Commission's activities have also been highly important in the field of education.

As a member of the legal staff of the Commission, Mr. Harris Wofford, Jr., now associate professor at Notre Dame Law School, is in an excellent and unusual position to report on Education and Civil Rights. He did so on November 12, 1959, at the Indiana Conference of Higher Education. Mr. Wofford's widespread reputation for competence, objectivity, and reliability lend particular substance to what he has to say. Under leave to extend my remarks, I include his speech as follows:

EDUCATION AND CIVIL RIGHTS

(By Harris Wofford, Jr., associate professor, Notre Dame Law School)

Perhaps as educators the last thing you really want to hear about is education. But recently in Chicago I gave a report on the Commission's findings and recommendations in its primary field of study, the investigation of sworn complaints that citizens are being denied the right to vote by reason of their color or race. There I made the case that this is the primary field for Congressional action and for large-scale, hard-hitting Federal enforcement.

As you may know, the Commission appointed by the President consisted of three members from the North, and three from the South. The three southern members were conservatives widely respected in their region, and at least two of them were on the record as segregationists. But they were all also lawyers and public servants—John Battle had been Governor of Virginia; Doyle Carlton, Governor of Florida; and Dean Storey of Southern Methodist University Law School had served on the Hoover Commission as well as having been president of the American Bar Association. So when complaints were finally submitted to the Commission, these men had no doubt about their professional and public duty and the Commission unanimously voted to conduct full field investigations and then to hold a public hearing in Montgomery, Ala. And having heard the sworn testimony and studied registration records disclosed to the Commission under court order, they joined in a unanimous finding of facts on the various ways qualified Negroes were being denied the right to vote in a number of counties. Later, in the report submitted in September to the President and Congress, they unanimously joined in four recommendations designed to strengthen the Federal Government's power to protect the right to vote. And two of the three southern members joined in the far-reaching recommendation that in cases of discriminatory denial of the right to vote the President should be empowered to appoint temporary Federal registrars to register for Federal elections citizens qualified under State law applied without discrimination.

That five of the six Commissioners could agree on such a recommendation is evidence to me that this is the place on the civil rights front where the largest advance can now be made, where the greatest efforts at Federal enforcement should be concentrated. If progress on this front can be made in the next few years in enabling Negroes to vote in the deep southern areas where they are denied that right, then later further progress can be expected on other civil rights fronts in that region.

But there is not much that people in Indiana can do about voting rights in the South. In passing, though, I should report that the Commission's Indiana State Advisory Committee, headed by Jack Scott, the former mayor of South Bend, reported that there are no Negro residents in 30 of the State's 92 counties, and that in some Indiana communities there have been signs advising "Niggers don't let the sun go down on you here." I don't know whether such signs are now in existence, but our Indiana advisory committee noted that "if one cannot establish residence in one-third of the State, he cannot meet the qualifications for voting," and concluded that in this way in parts of Indiana the Negro "is being deprived of his right to vote by indirection."

There is another subject the Commission studied—discrimination in housing—which does have considerable pertinence to Indiana, as to all States and cities. But I am going to report on that in South Bend next week. So that leaves me tonight with the third field of Commission study—school desegregation.

A RELUCTANT IMAGINATION

It was with something like this hesitancy that the Commission itself approached the subject of education. By the act of Congress the Commission was specifically directed to investigate alleged denials of the right to vote. The act also instructed the Commission to study and collect information and make recommendations concerning other denials of the equal protection of the laws under the Constitution. As Senator EASTLAND said, in opposing the act, the equal-protection-of-the-laws provision in the 14th amendment means what the Supreme Court has interpreted it to mean, and since the Court has applied the provision in many fields the Commission's duties were "as broad as the desires of the Commission." The Commission's scope, said Senator THURMOND, "was limited only by the imagination of the Commission and its staff."

The trouble was that at least three of the six members of the Commission had no desire whatsoever to take up the hot potato of desegregation. They wanted to focus on the right to vote, on which southern practice was mixed but most southern opinion, at least openly, conceded that all qualified citizens should be able to vote. But they recognized that Congress had given them a duty to study other denials of equal protection and it did not take much imagination for the Commission's legal staff to report that the most urgent and the most important matter of equal protection, as well as the most controversial, was the problem of desegregation that had been brought to a head by the Supreme Court's reinterpretation of the equal protection clause as applied to compulsory separation of the races in public schools.

Moreover, the Commission could not dodge the subject on the ground that some other agency of Government was handling it. Particular cases were of course before the Federal courts, and the Commission decided not to intervene in those situations. But the judiciary was clearly in need of help. The President had not publicly and defiantly said: Earl Warren has made his decision, now let him enforce it—as Andrew Jackson reportedly said of John Marshall. But the President had taken a largely hands-off position, except for a brief effort at mediation with Governor Faubus followed by the resort to force at Little Rock. Repeatedly the President refused to say whether he thought the decision was right or wrong. At one press conference he said he had not even disclosed his opinion on the subject to his wife.

Nor was the Department of Justice doing anything much more than following the court cases and standing ready to restore law and order when violence occurred in any particular situation. In 1957 the administration had asked Congress to give the Attorney General power actually to initiate desegregation suits. This so-called part III of the proposed civil rights bill would have permitted the Government to plan an overall strategy for desegregation and to take the initiative in advancing it through the courts instead of leaving the pace and the course of desegregation to be set by private litigants, mainly the NAACP. But the administration soon withdrew its support of part III on the ground that this would only further agitate white southern tempers at a time when a cooling-off period was required.

ABDICATING BY THE EXECUTIVE

Now let me give you a final, almost incredible, example of the general lack of planning or action by the executive branch. In surveying what already had been done in this field, the Commission's staff discovered that the Office of Education in the Department of Health, Education, and Welfare—where we had gone expecting to find at least the essential statistical information—had

ceased collecting any information about the racial composition of public schools and had done so on principle. This was HEW's rather unique response to the Supreme Court's decision. Since the Court had held that racial discrimination had no place in the field of public education, the Office of Education decided that information about continuing racial discrimination had no place in its program.

This is about like a police department ceasing to collect information on homicides because murder had been declared illegal, or like a hospital ceasing to receive patients with a certain disease because a cure had been found. When the Court said that the Constitution was colorblind, it could hardly have expected that this would be read to mean that the executive branch of the Government would colorblind itself. Rather, I am sure, the Court must have expected that the executive branch would do everything in its power to face and help meet the large and serious problems of transition resulting from the school decision. It is, after all, the President who is sworn, and the executive branch that exists, to see that the laws are faithfully executed—not the courts.

So the Commission on Civil Rights, an independent agency established by the Congress and the President in the executive branch of the Government, with no power to do anything but study and make recommendations, decided reluctantly to see if it could make a contribution to this part of the American dilemma. Actually, its members were better qualified to do this than anything else in the field of civil rights. For four of the six members were educators: Two college presidents, Father Hesburgh of Notre Dame, and Chairman Hannah of Michigan State University; and two members were deans of law schools, Vice Chairman Storey of Southern Methodist, and Dean Johnson of Howard University.

CULTIVATING OUR NEUROSIS

By taking up this divisive subject the Commission was following the old psychiatric principle of cultivating your neurosis. It sought to turn the weakness of the Commission—its built-in 3-to-3 regional division—into a strongpoint. For the deep disagreement between the North and the white South on this issue means that the great due process of our Constitution, the process by which we govern ourselves, is still at work and is still necessary. The Court has spoken and the law of the land is now clear. And in a republic, as Justice Brandeis says, the law "is the potent, the omnipresent teacher" that "teaches the whole people." But teaching takes time, as I am beginning to learn, now having taught a first-year class for 2 months. Or as the Commission stated in its report, "there remains the enduring American problem of obtaining the consent of the governed." An official dialogue by men of stature, representing the differing viewpoints, might, we hoped, make a contribution to the national process of persuasion that is the grand design of the Constitution.

Let me assure you that it was a dialogue that took place. Governor Battle of Virginia told the President when he accepted appointment that he would represent the strong southern viewpoint. The white South, by the way, generally appeared to be well satisfied with the composition of the Commission. Senator RUSSELL said he considered it to be "one of the ablest Commissions which has been designated around Washington in my time." The Senator is not satisfied with the outcome, but the subsequent dissatisfaction of the white South may also be part of the process of persuasion.

NO SOCIOLOGISTS WANTED

At first the predictable stalemate in the Commission generated frustration through-

out the staff. When the staff proposed that the Commission meet with a group of carefully selected experts on the problem of desegregation—educators, historians, political scientists and sociologists—the Commission said no, it did not want to risk giving any ground for having it said that the Commission had been brainwashed by schoolmen, and especially not by sociologists. When, in somewhat perverse fashion, the staff later actually proposed employing a particular sociologist, the Commission made it clear that it was not going to repeat the mistake of the Supreme Court. The southern members of the Commission were too well aware of the distortion and magnification in the public eye of Justice Warren's one ill-fated footnote in which Gunnar Myrdal's classic study of the "American Dilemma" was cited by the Court, along with several articles by sociologists or psychologists showing how segregation injures Negro children. In fact, we were later cautioned against even referring to Myrdal in any manner in the final report, and particularly not in a footnote. Perhaps the Commission was wise to shy away from sociologists and to place its whole reliance on lawyers; at least, as lawyers, we on the legal staff were not too dismayed by the decision. But prudence doesn't always pay. In the CONGRESSIONAL RECORD I read with some delight the attack on the Commission's report by Senator EASTLAND who noted triumphantly that Myrdal was not even mentioned. Senator EASTLAND added: "My conclusion is that the U.S. Supreme Court has more courage than did the Civil Rights Commission."

When I say that the Commission said no, I do not mean that every member took that position. But during most of its work the Commission proceeded by a kind of Quaker rule of unanimity, or I might better call it the Calhoun principle of the concurrent majority. In this case at least it proved to be a relatively good procedure. A premature resort to majority voting would have ended all prospects of the rule of reason and might have merely meant a deadlock.

THE NASHVILLE CONFERENCE

As it was, the Commission proceeded carefully. It decided to hold a hearing or conference of officials from school systems that had experienced some measure of desegregation since the Supreme Court decision. Superintendents of schools, principals, or members of school boards came to the 2-day conference from 12 States and the District of Columbia. They came from rural school districts, small towns, cities of medium size, and large cities. They included all the border States and the Southern States of Arkansas, North Carolina, Tennessee, and Texas. Significantly, the conference was held in Nashville, Tenn., the city that had adopted the grade-a-year desegregation plan, beginning with the first grade and including a voluntary transfer provision under which a student in a racial minority in his neighborhood school could ask to be transferred to a school where his race was in a majority.

At first Nashville school officials were decidedly cool to our coming there, but at the end of the conference the superintendent of schools Mr. Oliver invited the Commission to come back, saying it had been a great and valuable experience. Mr. Oliver said: "This is the first opportunity that I have had to sit down with a group of fellow men and listen to what they have to say and find out what they think and how they are dealing with this problem." For those of us listening to the testimony and the questioning of each participant the most encouraging development was the way the initial discomfort turned into a kind of competitive cooperativeness.

As they exchanged and compared experiences and discussed the varieties of plans and problems, there emerged a feeling that each of these districts was a pilot plant. For better or worse, these were the available models for desegregation, and I think the participants went home with more of a spirit of pioneering in a great common venture, and with less of a sense of isolation.

WHAT THE COMMISSION LEARNED

For the Commission all of the testimony was instructive and much of it was deeply moving. The courage of some of these men, struggling to save public education against a wave of community hysteria; the inventiveness of some, in devising gradual plans that overcame much of the community opposition; the lessons that were learned by all are recorded in the published transcript of this Nashville conference. Much of it is included in the full 600-page report of the Commission. Enough is included in the 200-page abridgment to convey the spirit of modest hope which most of us took home from Nashville. I think it is part of what led Governor Battle to say of his whole Commission experience that he "learned a whole lot."

The two main facts that emerged from the Nashville conference, and from the staff's other studies in this field, facts which the Commission unanimously found in its report, are: first, that with enlightened community leadership school officials can adopt reasonable, manageable desegregation plans that fit differing local conditions, and that, as the Commission found, "A variety of plans have proved to be successful. * * *"; and second, that desegregation need mean no lowering of school standards. The Commission unanimously found that "In many instances desegregation has been used by the local community as the occasion to raise its educational standards." In district after district officials testified that they had finally been forced to face problems that had been too long neglected, and that as a result remedial programs have been adopted for the handicapped, who include a considerable portion of the Negro children, and advanced programs have been established for gifted students, among whom are a not inconsiderable number of Negroes, too.

WHAT THE COMMISSION RECOMMENDED

From all of this the only substantial recommendation that the Commission agreed upon was that the Commission on Civil Rights be authorized "to serve as a clearinghouse to collect and make available to States and to local communities information concerning programs and procedures used by school districts to comply with the Supreme Court mandate either voluntarily or by court order, including data as to the known effects of the programs on the quality of education and the cost thereof"—and further that the Commission be authorized "to establish an advisory and conciliation service to assist local school officials in developing plans designed to meet constitutional requirements and local conditions; and to mediate and conciliate, upon request, disputes as to proposed plans and their implementation."

The idea of a center for technical assistance in desegregation has been proposed in various forms by both the administration and by congressional champions of civil rights such as Senator PAUL DOUGLAS, and the idea of a mediation service in this field was proposed in the last session by LYNDON JOHNSON. It may be that the fact that the Commission, with its three southern members, unanimously joined in making this recommendation to Congress, and that the Commission is already in existence, so that no new agency has to be created, will result

in affirmative congressional action on this in the next session. I hope so.

A CONDITION ON FEDERAL AID

I should mention that the three northern members of the Commission made an additional proposal affecting your domain to which the southerners took strong exception. They proposed that all Federal aid to higher education be conditioned upon the agreement of recipient institutions to admit all qualified students without regard to their race. With more than \$2 billion a year of Federal funds going for educational purposes and to educational institutions, the three northern commissioners—all university men themselves—felt that an attestation of nondiscrimination should be required by the Federal Government, so that the Government would not be aiding and abetting the violation of the public policy established by the Constitution. While the withholding of Federal funds from any secondary and elementary school would be complicated by and might run counter to the Court's policy of gradual desegregation, the Court has not applied the all deliberate speed formula to higher education but has required the immediate admission of qualified Negroes to such institutions. Therefore, these three Commissioners proposed that the Federal Government, by Executive order, apply a similar policy in its distribution of Federal funds.

UNANIMOUS STATEMENT OF THE PROBLEM

Your opinion on the wisdom of so conditioning Federal grants to higher education would be interesting. But more important perhaps than any of these particular proposals or recommendations was the agreement of all six Commissioners on a joint statement of the problem. The "two fundamental premises" which the Commission adopted were:

"(1) The American system of public education must be preserved without impairment because an educated citizenry is the mainstay of the Republic * * * and;

"(2) The constitutional right to be free from compulsory segregation in public education can be and must be realized, for this is a government of law, and the Constitution as interpreted by the Supreme Court is the supreme law of the land."

"The problem, therefore," said the Commission, "is how to comply with the Supreme Court decision while preserving and even improving public education. The ultimate choice of each State is between finding reasonable ways of ending compulsory segregation in its schools and abandoning its system of free public education."

Little enough to say—and yet it was a shock to the white South, an educating shock, I hope, that three strong southerners would agree to say it. One reason it is important to have this said is that the President of the United States has not himself said it, or said it yet with any clarity or conviction. Nor has Congress in any way acted to affirm its support of the Court's new interpretation of the 14th amendment, although the 14th amendment specifically states that "The Congress shall have power to enforce, by appropriate legislation, the provisions of this article."

THE ROLE OF THE PRESIDENT

The Commission found that community leadership was a precondition for successful desegregation. I would add that national leadership by the President and by the Congress is another precondition, and one that has also been missing on this problem, and most of all I would say, leadership by the President. For everyone knows that Congress is split on this issue, but it does not follow that the President should be of two minds and be similarly paralyzed. Yet what

has there been between the platitudes and the bayonets?

The Commission did not say this. But it did say that to eliminate discrimination "some dramatic and creative intervention by the leaders of our national life is necessary." And between the lines of the Commission's report is the answer to what seems to me to be the impasse in the President's mind on this problem. I would appeal from the President to the President on this ground. He says that this is a problem rooted in the minds and hearts of men. But he also has shown in Little Rock that he will carry out his duty to enforce the new law of the land even with bayonets if necessary. It would seem that according to the President's own logic if he is to "take care that the laws be faithfully executed" then he must give the leadership required to change the minds and hearts of the people of the white South.

"Time is essential in resolving any great and difficult problem, and more time will be required to solve this one," as the Commission said. But, paraphrasing Justice Frankfurter, the Commission added that "it is not time alone that helps, but the constructive use of time." "Law," reported the Commission to the President and Congress, "must be inventive, creative, and educational." So you see I am back to Justice Brandeis' opinion that the U.S. Government "is the potent, the omnipresent teacher" in our public life.

MEDIATION AND SYMBOLIC ACTION

Having raised this issue, I suppose I should illustrate the kind of inventive, creative, and educational action that might give substance to the platitudes and make bayonets unnecessary. Mediation is part of what I mean. Some agency like the Commission should have been working at this since 1954. Mediation on the highest level, conducted in part by the President personally, should have gone on persistently and should be going on today. Immediately following the Court's decision, when much of the South's response was one of anticipated compliance, the President might well have called together the southern Governors and stated the problem in about the terms that the Commission's report now 5 years later—5 years too late—states it. The possibilities for very gradual, even token compliance initially, should have been spelled out, along with the drastic Federal enforcement powers that would be used if necessary, and the chaos that would come from no compliance. This case should have been taken to the people and even now, with the Commission's report in hand, it should be taken to the people. No one is in a better position to reach the people than the President of the United States. And his actions can speak louder than his words. Not only should the whole executive branch be directed to act consistently with and in imaginative support of the Court's decision, but the President's own symbolic actions can reach and move the hearts of people. Even in the last hour at Little Rock I would rather have seen him personally go to accompany those nine Negro children into school, and make a personal appeal to the students and their parents and the Nation, rather than fly in the paratroopers. This is an age when symbolic actions are required to penetrate the maze of mass communications and the complications of modern life. Symbolic action is the language that heads of state and leaders of people must use to be effective on great issues. Gandhi demonstrated this in Africa and in India. The President, in a sense, is doing this in regard to world peace through the current exchange of visits with Khrushchev. This, the most important domestic problem, also requires his direct personal intervention.

THE MASSIVE DEMORALIZATION

But I do not want to end on such a high level, or leave the focus entirely on the South. What makes this problem so great and so general is not the white resistance but, as the Commission's report states, the massive demoralization of a substantial part of the Negro population both North and South—and soon, over half of Negro Americans will live in the North. As the Commission says, "This is the legacy of generations of slavery, discrimination, and second-class citizenship." But history aside, it is causing a present crisis—I should say, compounding the crisis—in the public schools of the great northern cities, and it is confronting the higher education of Negroes with a heavy challenge in addition to that facing American higher education generally.

On this problem the Commission's report throws little light. In its housing study in northern cities the Commission found the dark facts of increasing de facto school segregation resulting from residential segregation and from the exodus of whites from neighborhoods or schools in which Negroes begin to predominate. One witness in Chicago cast what seemed to me a glimmer of light. Excellence was the key to integration, he suggested. The "way to insure the success of an integrated school is to make that school a great educational institution," he said. The "superb mathematics teacher at Hyde Park High School does more for integration," he said, "than a ton and a half of human relations experts."

THE CRISIS OF AMERICAN EDUCATION

But I do not want to rest on a note you have been hearing or sounding yourselves for a long time. Let me try a more direct connection. The demoralization of the American Negro will be ended, and he will find himself, when his sights are lifted to the world of opportunity and challenge awaiting him in the second half of the 20th century. He, like the white southerner—among others—has a skin disease, or more accurately, fears he has one. Part of the remedy is ending the discrimination that is afflicting him. But another part of the remedy must be taking his mind off his own skin and turning it to the larger questions and possibilities. I realize that I am just giving a definition of the task of education, and especially of higher education. But perhaps because of his more acute educational crisis the American Negro may give a lift to all of American education. For he must leap over the old inadequacies and literally shoot for the moon. The Negro engineer of rocketry, the Negro atomic physicist, the Negro lawyer or political scientist or economist or sociologist who is trained to meet the new problems of this century will find plenty of jobs awaiting him. The old trades are full of vested interests arrayed against him. But the new world of automation and atomic energy, of economic development and social revolution, of the rise of the colored continents of Asia and Africa, of global competition by differing ideologies, economies, and technologies—this new world is waiting for the American Negro who is educated for it.

The high school, college, or university that has a curriculum designed for this new world will be successfully integrated because it will have raised its sights from the partial domestic problem of integration that is vexing us to the whole great integration going on throughout the world. In other words, if we can discover how to end the demoralization of the American Negro we will know how to end the general American demoralization that is holding us back from playing our full part in this fast-moving century. If the American Negro can find himself, as a first-class citizen of the world, then there is hope for us all.

Ukrainian Independence Day

EXTENSION OF REMARKS

OF

HON. EDWARD A. GARMATZ

OF MARYLAND

IN THE HOUSE OF REPRESENTATIVES

Wednesday, March 2, 1960

Mr. GARMATZ. Mr. Speaker, even though the words "independence" and "freedom" are meaningless when they are used in reference to the captive nations under Russian domination, it is still a good thing for us to observe anniversaries of such days as Ukrainian Independence Day, which was commemorated on January 24.

Such days provide an excellent opportunity to remind ourselves of the high cost of freedom, the need for constant vigilance on the part of every citizen of every free nation, if their countries are to remain free and independent, and the fact that we must continue to explore every possibility of helping the captive nations regain their freedom. They also give us an opportunity to strengthen the faith and hope of these enslaved peoples.

On January 24 Ukrainians of Maryland observed the 42d anniversary of Ukrainian National Independence with a large rally in Baltimore. Those present adopted a memorandum which I wish to bring to the attention of the Members of the House, as follows:

MEMORANDUM PREPARED BY THE UKRAINIAN CONGRESS COMMITTEE OF AMERICA, MARYLAND CHAPTER, ON THE OCCASION OF COMMEMORATING THE 42d ANNIVERSARY OF THE JANUARY 22, 1918, PROCLAMATION OF UKRAINIAN INDEPENDENCE

The following memorandum has been adopted by the Americans of Ukrainian descent of Maryland on the observance held on January 24, 1960 at YWCA, Patterson Park Avenue, Baltimore, Md.:

"A. INTRODUCTION

"We, the delegates and representatives of the Ukrainian American organizations, who are organized in the Baltimore chapter of the Ukrainian Congress Committee of America, have assembled on this historical day of January 22, 1918, proclamation of Ukrainian national independence, to discuss and deliberate problems which have a direct bearing upon us, as citizens of this great and democratic Republic, the United States of America.

"The Ukrainian Congress Committee of America, which is sponsoring this 42d commemorating anniversary celebration on January 22, 1918, is a national American organization representing 55 major national Ukrainian American organizations, which embrace several hundred local organizations and societies, such as veterans' posts, fraternal lodges, youth and women's organizations, social, culture, and sport associations, as well as several political clubs and groups. It has over 115 branches which in the aggregate operate in more than 30 States of the Union. The UCCA is a member of the All-American Conference to combat Communism, of the Conference of Americans of Central and Eastern European Descent (CACEED), and of the American Conference for the Liberation of the Non-Russian Nations of the U.S.S.R.

"Its two publications, the Ukrainian Quarterly and the Ukrainian Bulletin, are valued as highly specialized reviews, and are read by many U.S. legislators, various U.S. gov-

ernmental agencies, and press at large, as well as by many foreign governments which are interested in the plight of the enslaved non-Russian nations of the U.S.S.R.

"Founded in 1940, the Ukrainian Congress Committee of America speaks for at least 1,500,000 American citizens of Ukrainian background and origin. In the past and at the present time it has been a staunch advocate of the liberation of the Ukrainian people, as well as the other non-Russian peoples enslaved by Moscow. It opposes any and all appeasement of the Kremlin, and advocates a wholehearted, unstinting support of the enslaved non-Russian nations of the U.S.S.R. It supported the peaceful policy of liberation as announced by President Eisenhower in 1959—Captive Nations Week.

"President Harry S. Truman in the past, and President Dwight D. Eisenhower, in recent years, have lauded the Ukrainian Congress Committee of America for its loyal and patriotic work for America and for the courageous support and assistance it has extended to the enslaved Ukrainian nation, which fights on for its freedom and independence. Conversely, the Soviet press and Soviet officials have bitterly denounced the Ukrainian Congress Committee of America, castigating it as a 'tool of Wall Street and American imperialists.'

"B. UKRAINE

"The Achilles heel of the Soviet Russian Empire

"When the revolution in Russia broke out in 1917, and at the moment that the Russian Czarist Empire was undergoing a transformation into a Russian Communist empire, Ukraine threw off its oppressors and proclaimed the reestablishment of Ukrainian statehood on January 22, 1918, in Kiev, capital of Ukraine.

"Ukraine's example was followed by other nations enslaved by Moscow, who also broke away from the Russian Empire to form a group of independent, sovereign states. In this manner, the Russian Empire was dismembered and for some time Russia was rendered impotent. This factor saved Western Europe from Russian Communist aggression immediately following World War I.

"However, the Russian Communists had the military advantage. They threw up a successful political smokescreen, which succeeded due to the sympathy of the Western World with the idea of saving the 'Indivisible Russian Empire' and the West's failure to comprehend the national liberation movements within the former czarist prison of nations. As a result, after a 3-year war lasting from 1917 to 1920, Communist Moscow reconquered Ukraine and all but a few of the other nations which had liberated themselves from Russian domination. The only successful exceptions were Poland, the Baltic countries of Lithuania, Estonia, and Latvia, and Finland. The Russian Empire was reconstituted as the Union of Soviet Socialist Republics. Under a hypocritical constitution, the individual republics were granted sovereign rights, but in reality they became absolute captives of Moscow.

"This enslavement of nations was effected through the instrumentality of the totalitarian Communist dictatorship, whose power was centralized in Moscow in the hands of the hierarchy of the Russian Communist Party.

"Having established its totalitarian dictatorship in Ukraine, the Russian Communists proceeded to execute their policies of maximum plunder and exploitation of the Ukraine nation.

"To carry out these policies, a bloody terror, without precedent in human history, was instituted. Mass genocide and large-scale deportations to forced labor camps in the northern and eastern regions of the U.S.S.R. implemented this program.

"The ultimate objective of all these measures was the total destruction of the Ukrainians as a nation. Thus, on a grander scale, the Russian Communists followed the trail blazed by Czar Peter I. Many millions of Ukrainians were murdered, and many millions more were deported to a slow death in Russian concentration camps.

"During World War II, the Ukrainians replied to this Russian terror and genocide by boycotting the Soviet defense effort and by armed insurrection against Moscow.

"The Ukrainian Insurgent Army (UPA) was formed. Other enslaved peoples of the U.S.S.R. followed this lead, and as a result the Russians found themselves at the brink of disaster.

"However, the U.S.S.R. was saved from internal disintegration by the vandalic policies of the Hitlerite Germany toward the enslaved non-Russian nations in the U.S.S.R. As a result, the Ukrainian Insurgent Army was compelled to fight on two fronts—against both the Russians and the Germans, without any assistance from the West, which was allied with Russia. At the same time, the Russians received tremendous assistance from the West, both militarily and in the form of vast stores of supplies. This alone saved the tottering Russian war machine from destruction. Then, far-reaching political concessions were made to the Russians by the Western Allies. Thus were the Russians saved from the total defeat and the dismemberment of their Empire into its constituent national parts. And thus was it made possible for the Russians to enslave many more free nations of Central and Eastern Europe and Asia.

"As a consequence of World War II, Russia was able to impose its Communist totalitarian slave system upon one-third of the world's population.

"As a result of this territorial expansion, and great industrial growth, the direct outcome of wartime conquest and peacetime subversion, the Russians have become a great military power and are now prepared to turn their strength against the still free West, their sole surviving enemy.

"Therefore, just as the enslavement of Ukraine by czarist Moscow 250 years ago was the springboard for the growth of Russia as a world power, and just as the resubjugation of Ukraine by Moscow in 1920 became the basis for the creation of a new form of Russian imperialism, the U.S.S.R. the reoccupation of Ukraine by Moscow in 1944 and 1945 was the beginning of another period of Soviet Russian expansion to such a degree that Russia now menaces the entire free world. In all these instances, the resistance of Ukraine to Russian enslavement, and Ukraine's struggle for national independence, formed the first line of defense of the Western World, its culture and civilization, against barbaric, imperialistic Moscow.

"The history of Ukraine's enslavement comes as a gruesome sample of Moscow's enslavement of other nations. History illustrates that the aim and methods of Moscow have never changed and were always directed toward establishment of a world empire.

"This program has been perpetuated throughout all of Moscow's history, beginning with Muscovy and continuing into the present Soviet era. Russia has always pursued an unlimited expansionist policy with the ultimate goal, the domination of the world. Moscow has ever aspired to become a 'Third Rome,' Russian policy has distinguished itself by broken treaties, subversion, fraud and falsification, with military aggression as an instrument of this policy. Throughout Russian history, power has always been centralized in totalitarian Moscow.

"Bloody terror and genocide were always a planned part of the program, and indispensable for the survival of this system.

"However, the Western World does not appear to understand the full scope and character of the Russian imperialist menace. Nor does it comprehend that Ukraine and the other non-Russian nations of the U.S.S.R. are the West's first line of defense against Moscow.

"Traditionally, the West has always lent support to the myth of an indivisible Russian Empire. Even today, the frightful peril which the U.S.S.R. constitutes to the West is analyzed only from the social-political standpoint of international communism. International communism is just a disguise for old fashioned, historic Russian imperialism. Unfortunately, in the United States, there are still many so-called Russian experts who are blind disciples of the discredited theory of an 'indivisible mother Russia,' and who continue to be hostile to the liberation of Ukraine and the other captive nations, and who shudder at the prospect of dismembering the Russian empire and giving freedom to the enslaved peoples.

"We American Ukrainians in the United States of America call upon the entire free world to heed in a timely manner this mortal danger from Russian Communist imperialism, to understand the tradition and unwavering objectives of this system which dates back to the days of Peter I.

"We call the attention of the U.S. Government and the free world at large to the fact, that this Russian Communist empire is being held together solely by a web of terrible terror. The enslaved nations within this empire are the natural allies of the free world in its struggle against Russian imperialism. This struggle can be won by the free world only if this alliance is firmly cemented.

"The battle between communism and the free world will be won or lost on psychological issues and not by the mobilization of military forces and techniques, which, with their ghastly potentialities, automatically act as deterrent against an armed conflict on a large scale. The rumbling of hydrogen bomb explosions, the beeping of the Sputniks and the explorers—these are but the boisterous accompaniments to the battle being fought for human souls, wishes, and hopes.

"Ukraine, with its territory and natural resources, has always been the source of the Russian empire's strength through much of its history. But the Ukrainian people have nurtured a centuries-old hatred of their Russian oppressors and at every opportunity have fought imperialist Moscow. This makes Ukraine the logical starting point for the events that will ultimately bring about the ruination of the Russian Communist Empire. Ukraine has always been in the forefront of the struggle of all nations held captive by Moscow.

"Ukraine will prove to be the West's major ally if the West supports her aspirations for national independence and the right of the Ukrainian population to guide its own destiny following the dismemberment of the Muscovite prison of nations, the U.S.S.R.

"Ukraine has fought Moscow continuously since 1709, with no outside aid except for a brief alliance with Sweden. During this time, the nations of the world have vainly sought to coexist with Russia. Today the free world is attempting to buy peace through negotiations with Moscow, little realizing that it is toying with catastrophe. The more prolonged the negotiations, the greater the danger.

"Treaties, conferences, and negotiations with Moscow lead to a dead-end street. Instead, the West must ally itself with the cause of the captive nations within the U.S.S.R. and elsewhere, who possess an explosive potential greater than any nuclear weapon yet developed.

"Khrushchev has given the West his definition of coexistence. For the West, this definition is synonymous with catastrophe. The only alternative is a well planned and executed program of liberation. Only through such a program will it be possible to ultimately eliminate the threat posed by the Union of Soviet Socialist Republics and to secure peace and freedom for all people. The struggle of the non-Russian peoples, among whom the Ukrainian are the most numerous and most determined, is vitally important to the entire free world and particularly to our own United States, now the unchallenged leader of the free world.

"Our President, the Senate and the House of Representatives have expressed their concern and sympathy to all the captive nations by enacting the Captive Nations Week Resolution.

"The 42d anniversary of the proclamation of Ukrainian independence is the most fitting and appropriate occasion to repeat and make known to the world once again that Ukraine and the other so-called Union Republics of the Soviet Union have been imprisoned in the Soviet Russian prison of nations for the longest time and that they fully deserve to be liberated in the interest of peace, justice and security of the whole peace-loving peoples, and primarily in the interest of the United States of America.

"All moral and material forces should be put in motion in order to help the Ukrainian national elements to keep alive their unconquered spirit, to prove by deeds that the Ukraine is not forgotten and that she stands equal in the thoughts of freemen with all other captive nations. This could be done by openly demanding her full sovereignty and by acknowledging her equality in the family of free nations.

"Above all, it is high necessity to understand finally that the Ukrainian question is not an internal problem of the Russian nation or state which was yesterday called Tsardom and today Soviet Union.

"Ukrainian Congress Committee of America, Maryland Chapter: Klemens B. Babiak, William Tatchyn, Stanley Stelmach, Anatole B. Bulawka, Theodore Caryk, Andrew Rad, John Rad, Walter Stelmach, Walter Romanowsky."

Also, I would like to include my remarks, prepared for delivery on that occasion:

I am indeed grateful for the honor and privilege of having been invited to join with the members of the Maryland branch of the Ukrainian Congress of America and your other distinguished guests on the occasion of the 42d anniversary of Ukrainian national independence, which has been officially proclaimed by the Governor of our State and the mayor of our city.

We meet today with mixed emotions: First, to acknowledge our gratitude to Almighty God and to those freedom-loving people of the world that 42 years ago the Ukrainian people achieved their national independence. At the same time, we fully realize that the time has not yet come for an anniversary observance of total rejoicing because we know only too well that the yoke of oppression still exists for the people of the Ukraine under communistic domination—that the struggle continues and there is the need for each and every one to reassert and renew his efforts as well as encourage one another to work for the regaining of the independence proclaimed in 1918 at Kiev.

We know the Ukrainians have borne the yoke of the Kremlin longer than all other groups that are bent beneath its crushing weight—biding their time with smoldering patience, against the day of liberation which will surely come.

We know that despite every effort to suppress it, the yearning for liberty is unquenchable among Ukrainians and that tyranny has only served to stimulate it rather than stifle it.

Among those whose freedom has been suppressed by Russian Imperialism, none give their present masters and overlords greater cause for apprehension than the 45 million Ukrainians, who today comprise the largest non-Russian nation behind the Iron Curtain and the second largest non-Russian nation in central and eastern Europe.

Ukrainians have suffered more than any of the several scores of oppressed national groups in the Soviet Union—in concentration camps—slave labor camps—in prison—and in the desolate Siberian wilderness.

But we take courage in the fact that these brave people are spiritually and physically endowed with the necessary strength and fortitude to withstand the tyranny to which they are still subjected.

In the end, truth and justice will prevail—that is our hope, that is our prayer—and God willing, it will be so.

And when that day comes, the Ukrainians of Baltimore will have two great reasons to give thanks as you so nobly did just this past Thanksgiving Day. You will not only be pilgrims of the 20th century, but patriots of the 20th century as well.

In conclusion, as your Representative in the Congress of the United States and as your fellow American, let me assure you that this beloved country of ours has not and will not abandon her interest in the needs and welfare of the freedom-loving peoples of central Europe. We will carry on with every means at our disposal the efforts to resist further aggression and to lead the way toward the liberation of oppressed peoples everywhere.

Labeling Packages of Detergents

EXTENSION OF REMARKS

OF

HON. CATHERINE MAY

OF WASHINGTON

IN THE HOUSE OF REPRESENTATIVES

Wednesday, March 2, 1960

Mrs. MAY. Mr. Speaker, since placing my remarks in the RECORD yesterday regarding the tragic death of the little girl in Wishram, Wash., who swallowed some dishwasher detergent, I have gained some further information which I would like to bring to the attention of the Members of Congress, as well as to the attention of parents in our country.

I have talked with officials of the Federal Trade Commission about its responsibility in this matter of labeling containers of dishwasher detergents, and I have learned that the Federal Trade Commission has no authority—no authority at all—to require that such detergents be labeled with any kind of label—neither one listing the contents, nor one calling attention to the dangerous properties of these products. The Commission only has such authority in the cases of products which are dangerous in normal use.

Further, I have learned that there is no agency of Government which does have such authority.

In investigating further, Mr. Speaker, I have found that there is legislation pending in the Congress, introduced last March in the Senate by Senators MAG-

NUSON and BUSH, S. 1283, and introduced in the House by Congressman ROBERTS, H.R. 5260, which would require labeling of packages of hazardous substances intended or suitable for household use. I have been advised that this bill would cover these electric dishwasher detergents. It is also my understanding that the Senate Interstate and Foreign Commerce Committee is about to report the Senate bill with a favorable recommendation. This bill would place responsibility in the Secretary of Health, Education, and Welfare for determining the hazardous substances and for requiring proper labeling of packages. I want to call the attention of the Members to these bills in the hope that congressional support for the legislation will become so great that the bill will be passed during this session. I want to urge that remedial action be taken by the Congress to prevent another such tragic circumstance as the death of this little girl.

Also, Mr. Speaker, since putting my statement in the RECORD yesterday, I have received several calls asking for clarification of the type of dishwashing detergent which caused this tragic death. The product involved was one of the specially prepared detergents for use in electric dishwashing machines.

Tax Rate Reform

EXTENSION OF REMARKS

OF

HON. HOWARD H. BAKER

OF TENNESSEE

IN THE HOUSE OF REPRESENTATIVES

Wednesday, March 2, 1960

Mr. BAKER. Mr. Speaker, on January 21, 1959, my distinguished colleague on the Committee on Ways and Means, the Honorable A. S. HERLONG, JR., and I joined in cosponsoring legislation, H.R. 3000 and H.R. 3001, designed to provide long-overdue reform of our onerous income tax rate structure which has had such a stifling effect on the development and growth of our free enterprise economy.

This legislation would provide across-the-board tax rate reduction so that the maximum surtax rate applicable to individual and corporate incomes would be 42 percent. Under this legislative proposal the Federal Government would no longer be a majority partner in the private economic undertakings of our citizens.

Recently my esteemed committee colleague, the Honorable THOMAS B. CURTIS, addressed the 10th annual midyear conference of the Tax Executives Institute meeting in Washington, D.C. During the course of his remarks Mr. CURTIS advocated a downward adjustment of maximum individual and corporate taxes to a level of below 50 percent. My able colleague from Missouri has very wisely directed public attention to the damaging economic consequences that flow from the rate schedules and substantive provisions of our present Federal tax structure.

As a prominent member of the Committee on Ways and Means and the ranking Republican on the Joint Economic Committee, TOM CURTIS has gained a reputation as one of our Nation's leading authorities on tax law and economic policy. His well-considered observations before the Tax Executives Institute reflect the validity of that deserved reputation.

Mr. CURTIS' remarks before the membership of the Tax Executives Institute should be required reading on the part of every American citizen. I will include Mr. CURTIS' remarks at this point in the RECORD:

REMARKS OF THE HONORABLE THOMAS B. CURTIS BEFORE THE TAX EXECUTIVES INSTITUTE MIDYEAR CONFERENCE FEBRUARY 15, 1960

President Waychoff, distinguished guests, and members of the Tax Executives Institute, it is a pleasure for me to attend this banquet meeting of your 10th annual mid-year conference. I have long been aware of the TEI membership's competence in tax matters; I am also now personally aware of the quality of your very kind hospitality.

At the outset I would like to acknowledge the commendable job your managing director, James C. Rivers, has done in arranging this meeting. His capable work in connection with your conference is consistent with the splendid job he did as one of the top officials of the Internal Revenue Service and does currently as the fellow in charge of your national headquarters.

I come to you from a series of Lincoln Day dinners in the Midwest section of our country. Those meetings were more partisan than I presume you would have me be tonight. While the political tenor of those Lincoln meetings might be somewhat different from what is expected now, I earnestly submit to you that the fundamental objective of the Lincoln Day meetings is not too different from our interest tonight, namely, responsible citizenship. The difference is that tonight we place special emphasis on tax considerations.

I regret that I could not be present last night to hear the address of that distinguished American and my good friend, Dr. Raymond J. Saulnier. As Chairman of the President's Council of Economic Advisers, he is doing outstanding work in behalf of less government bureaucracy and for a more vital free enterprise society. Because I did not hear Steve's talk last night and because I know from personal experience that he and I think a good deal alike in terms of economic philosophy and tax policy, there is some danger that I will allude to matters previously covered by him. I hope I will not impose repetition on you.

In presenting some observations on taxes I might begin by observing that man's greatest progress since his historical beginning has not been in the area of tax policy.

Taxation dates back to the beginnings of civilization. As organized society came into being, taxes were a concomitant phenomena necessary to the support of governing institutions and the government services rendered. Five thousand years ago in the dynasty era in Egypt we now find archeological evidences of tax collectors, tax rolls, and tax structures which were necessary to the financing of public endeavors. History is fraught with instances of wars and rebellions waged because of tax burdens. Indeed, we all recall the stirring words of that Revolutionary patriot James Otis to the effect that taxation without representation was tyranny. The remark of this patriot has prompted some current-day wags to speculate what that great American might have

said about taxation with representation in the light of present experience.

Tonight I would talk about some convictions I have in regard to tax policy and then end on the note of what seems to be in prospect in the tax legislative area this year. This suggests an ambitious undertaking, but I promise to be brief.

Justice Cardozo once said with respect to our colonial Founding Fathers that they "knew more about ways of taxation than some of their descendants seem to be willing to concede." The last 170 years, and certainly the period of the last 40 years cannot be regarded as years of marked improvement in what our Founding Fathers wrought in the way of tax policy. We have piled tax on tax and compounded substantive complexity in our endeavors to meet the insatiable demands for spending by the various echelons of government. We have now reached the point where Federal, State, and local governments spend approximately one-third of our net national product. This simple but shocking statistic demonstrates the distance we have gone toward socializing the economic endeavors of our citizens.

Our Nation's present day tax structure is too much an area where angels fear to tread. In saying this I do not mean to impugn the expertise of you tax executives. I am saying instead that even with your experience I know you are daily confronted with uncertainties and imponderables. I refer, for example, to the matter of the Gordian knot of taxation—deduction, depreciation, or disallowance. This might be termed the 3-D dilemma of taxation.

The present day malaise in the area of taxes can be attributed in large measure to the fact that tax policy decisions were made by default rather than with considered deliberateness because we pursued the course of expediency when in reality we should have been dealing with tax issues with courage and forthrightness. The Congress, the Treasury, and even the courts have devoted the last 40 years to too much preoccupation with revenue raising considerations. We have had insufficient concern with the economic implications of our shortsighted tax endeavors. We have in effect proved that taxes can thwart economic growth instead of establishing the principle that sound tax policy can contribute to achieving the kind of nation we seek.

I do not mean to be an alarmist or hypercritical; I do mean to stress my deep conviction that tax policy not only can but urgently should be better than it is.

Well before the formal pronouncements of Adam Smith, it was recognized that the most powerful motivation for productive economic activity is the incentive of economic gain—namely, profits. In the United States and in other industrialized nations of the free world we have disregarded that basic principle by the establishment of unconscionably oppressive progression in tax rates; a progression that constitutes a departure from anything that can honestly be passed off as recognition of ability to pay. We have been persuaded to this departure from sound tax policy by the partisan demagog who have extolled mediocrity and have placed an anchor on individual initiative.

We have been more vigilant in closing tax loopholes as they have appeared than we have been in alleviating tax hardships. We have adopted incentive features in our tax structure in behalf of social and philanthropic groups in our policy; we have been indifferent to the need for maintaining strong and vital incentives for risk-taking economic endeavors.

This enumeration of neglect and avoidance of responsibility has had its price. Taxes have become one of the predominant factors in the making of economic decisions with the result that we have uneconomic decisions and less good utilization of re-

sources. Another price that we have paid stems from the role taxation has had on capital accumulation and investment. One of the basic elements in a directly free enterprise system is the freedom of entry into industry. Yet, the problem of accumulating capital under our present tax system and the uncertainty of retained reward for risk taking is discouraging to the new entrepreneur and gives an advantage to the established business.

I have referred to the principle of taxation according to ability to pay. This proposition is predicated on the philosophy that the equitable distribution of the incidence of tax could be effected by relating tax liability to income. Section 61 of the Internal Revenue Code adopts the language of the 16th amendment to our Constitution and says that gross income means all income from whatever source derived. The code sections preceding section 61 and the sections following section 61 are largely devoted to dealing with exceptions to that comprehensive rule.

Some people have justified the steep progression in our rate structure on the grounds that these exceptions and special privileges make necessary such progression in the interest of tax equity. It is my belief that such a contention is placing the cart before the horse. It is the steep progression that has caused the clamor for special tax treatment.

I also submit that the existence of fairness in a tax system does not depend upon progression or upon the differentiation in tax liability between people who are differently situated. Instead, fairness depends on whether there is reasonable equality of treatment of the people who are similarly situated. I do not mean to imply by this observation that I have joined the ranks of those who advocate sweeping elimination of some of the fully warranted special treatments in the substantive provisions of our Federal tax law. I am merely demonstrating the fact that progression of itself does not produce fairness.

With respect to the wisdom or lack thereof in the various proposals that have been made for broadening the tax base I would point out that another essential element of fairness in the tax structure is that a tax system must not impair incentives to work and incentives to keep one's property working. The national wealth requires that our citizens, our productive assets, and our savings be put to rewarding economic purpose in our free enterprise society. We cannot as a Nation be rich and lazy at the same time.

In the past three decades we have been prone to deprive the economic doers in our society of proper incentives and this has been conducive to the channeling of our assets into outlets that are not productive. Our tax system accords exemption from income taxation or accords other preferential treatment to certain types of bond investments. The funds from such investment may be used for good purpose but they cannot be characterized as risk undertakings. Our estate and inheritance taxes encourage the utilization of trusts to hold property which too often is removed from the area of risk investment. We have the phenomenon of tremendous growth in pension plans. Another factor weighing against the involvement of capital in risk endeavors is the need for liquidity to pay death taxes. These tax inducements away from risk undertaking have tended to deprive our economy of the incentives to invest; the basic factors of economic productivity are less persuasive with our citizens than are tax considerations.

In criticizing deficiencies in our tax structure, I necessarily assume an obligation to propose remedies.

Commenting first on our rate structure, I assert that it is politically immoral and fiscally uneconomic for our Federal Government to take more than 49 percent of any dollar of income earned by a taxpayer. The much discussed need for achieving and maintaining a high rate of economic growth warrants our having the courage of our convictions and utilizing our future economic growth to finance a downward adjustment of maximum individual and corporate taxes to a level below 50 percent.

Turning to the substantive provisions of our tax structure, I believe that the economic incentives to growth through the endeavors of our free enterprise society, as distinguished from Government enterprise, must be stimulated. We must measure up to the challenge of our potential not only to successfully meet the competition of International Communism but also to make our Nation a better place in which to live for all our citizens. Examples of tax changes that would contribute to these objectives would be a further liberalization of depreciation allowances, and in this connection should certainly be included a realistic revision of our antiquated bulletin F. We must ease the impact of double taxation wherever it exists and we must seek to assure that all income is taxed at least once in the year in which it is earned.

An important change that should be made in our tax structure in the interest of scientific and technological advancement is the allowance of a tax credit for endeavors in the area of basic research. I have introduced legislation, H.R. 4797, which would stimulate greater basic research endeavor on the part of the private segment of our economy and thereby place less responsibility on the Federal bureaucracy for such endeavors. I am personally convinced that greater results can be achieved in basic research under the auspices of free enterprise than can be attained under the aegis of Government enterprise.

I have necessarily touched briefly on only a few of the more important and more urgent needs of tax reform. The responsibility for bringing about meaningful tax reform is one that must be shared by every American citizen seeking not personal gain but instead patriotic progress. This is an undertaking in which the members of TEI acting in their individual capacities as business executives must have a leading part. By working at this urgent task with diligence and with selfless dedication you can do much to assure the attainment of these ends.

Earlier in my remarks I promised you some observations in regard to what I believe the prospects are for tax legislation in this 2d session of the 86th Congress. Because of political conventions to be held in July, this year Congress will engage in, I hope, a relatively short session. That likelihood makes it doubtful that any major changes in our Federal tax structure will be undertaken by the Committee on Ways and Means although with respect to particular areas of the Internal Revenue Code it is likely that some action will be taken.

As most of you know, the House of Representatives has already acted favorably on a bill reported by the Ways and Means Committee, H.R. 9662, making technical revisions in subchapter J, concerning the income taxation of estates and trusts, and subchapter K, concerning the taxation of partners and partnerships. It is my expectation that this legislation will be enacted into law this year.

Legislation pertaining to subchapter C is likely to be reported by the Committee on Ways and Means. I am not going to undertake to delineate in any way the changes that might be made in this very difficult area but such legislation will deal with only limited aspects of the problems involved. These changes will embody many of the recommendations of the subchapter C ad-

visory group and they will be directed toward the closing of some loopholes; the alleviation of some hardships; and most hopefully of all, the ending of the very great confusion arising from the attribution rules contained in section 318 of the Code.

Before July 1, 1960, the Congress will act on legislation extending the corporate rate for another year at its present level of 52 percent and similarly extending most, if not all, of those excises that are scheduled to be reduced on July 1, 1960.

I do not anticipate any changes in the taxes used for financing the Federal aid highway program in 1960, but point out to you that a report is due from the Commerce Department on highway user cost allocations by January 1961. It is my belief that this study will be used as the basis for finding solutions to our highway financing needs over the life of the current highway development program which is projected through the early part of the next decade.

The Committee on Ways and Means has completed its action on H.R. 5 dealing with the income taxation on foreign income. This legislation originally was designed to make rather sweeping changes with respect to the tax treatment of income derived from abroad. As approved by the Committee on Ways and Means, H.R. 5 has been very significantly watered down. The deferral concept is retained in the establishment of a foreign business corporation and in addition section 367 of the code is made inapplicable to transfers of assets within the activities of the foreign business corporation. Grossing up of the foreign tax credit is applied to the foreign business corporation. Without expressing a prejudgment of the propriety of the grossing-up requirement, I would state my conviction that if this concept becomes a part of our Federal tax law in this limited area, it will be used as a precedent for the extension of the grossing-up principle to other types of foreign operations. It is my personal belief that before provision was made for grossing up the committee should have accorded interested persons an opportunity to express their views on this point in public hearings. I am not sure that H.R. 5 as it is presently constituted will pass the House of Representatives, but if it does the effort will probably be made to expand the scope and character of H.R. 5 during Senate deliberations on this legislation.

Another bill of interest dealing with the taxation of foreign income is H.R. 10087 which provide an election to a taxpayer to utilize an overall limitation instead of a per country limitation with respect to the foreign tax credit. This bill has been reported by the Committee on Ways and Means and will likely pass the House of Representatives in the near future.

Action may also be likely in the area of cooperative income. The change, if any, will be modest in scope and will probably be in the direction of remedying the avoidance feature created by the Carpenter line of decisions.

In addition to these tax changes that I have enumerated, it is probable that the Committee on Ways and Means will also act on certain bills of very limited application during the consideration of what is referred to as Members' bills. I will not at this time undertake the very speculative and inconclusive task of suggesting to you what the subject matter of those bills might be.

Because of the pendency of the Connelton case before the Supreme Court involving the cut-off point on sewer pipe clay and the implications the Supreme Court's action on this case will have in other depletion areas, I do not believe that the Committee on Ways and Means will take action on legislation making any major change in the natural resources provisions of our tax law.

You will notice that I have so far referred to the fact that the Committee on Ways and Means will or will not take a certain action. I have done this deliberately. Much more uncertain is what may occur in the Senate of the United States. You are well aware of efforts made last year that almost met with legislative success to repeal the 4 percent dividend received credit. This amendment was approved by the Senate and was deleted at the last minute in conference. I foresee a continuation of endeavors in the Senate to repeal this section, to make the restricted stock option provisions more stringent, to tighten up on capital gains, to reduce the depletion allowance, and to make other changes in our tax structure. For the most part these efforts will be made in order to lend an alleged aura of fiscal responsibility to liberal spending schemes by claiming that such schemes are being financed through the claimed added revenue that would be raised. This real prospect of a frontal attack on our free enterprise economy demands the utmost vigilance and active opposition of all of us who believe in our traditional American way of life.

In recent months there has been a great deal of interest in and publicity about tax reform that holds out to the public the tax platitudes of simplicity, improved fairness, and less onerous tax rates. These discussions have been predicated on the proposition that by broadening the tax base we will achieve the objectives of simplicity, fairness, and lower rates.

I do not believe that these objectives will be attained in 1960. Such an endeavor is of necessity a long-range project and such basic changes will not occur in this Congress. Therefore, it is realistic to note that the outcome of the election to occur this November will have an important bearing on the long-range tax outlook.

I would close this discussion of taxation by referring to the fact that the majority of our tax problems are attributable to problems created by the spending proclivities that have been rampant in our Nation over the last three decades. We have unfortunately given a very thorough testing to the mistaken notion that the Government can spend the taxpayer's dollar better than the taxpayer can. In the six Federal budgets that have been prepared since fiscal year 1955, which constituted the low point in Federal spending in the last decade, we find that total spending has aggregated an increase of \$59.1 billion over the 1955 level. In these succeeding 6 years if we had been successful in keeping the level of expenditures at the 1955 level, we would today have had a total of almost \$60 billion that could have been used over the intervening period for tax reduction and debt reduction.

Our spending policies have not only produced mounting indebtedness in three decades, but they have also injected inflexibility in tax policy. In the interest of at least a semblance of fiscal responsibility in the short run, we have foregone tax adjustments that are vitally and urgently needed. The advocates of the "affluent society" through Government spending supported by higher tax revenues have had too much influence in determining our tax policy.

If we are to prevail in our endeavors to maintain international preeminence and achieve a greater measure of national vitality, we must reject the advocates of the economy regimentors. We must pay meaningful heed to the requirements of increased availability of investment capital balanced with greater consumption capacity by our growing population through increased productivity of our private economy. These are matters on which it is urgent that we as individual citizens and as members of the business community must have strong convictions and we must practice those convictions if we would avoid the conviction of our practices.

tions if we would avoid the conviction of our practices.

At the beginning of my talk I forewarned you that I have come from a series of Lincoln Day speeches. I have to this point, I believe, demonstrated admirable restraint in forbearing from reference to timely Lincoln. I will breach that forbearance in the form of a benediction and paraphrase a remark Mr. Lincoln made in February 1860, just 100 years ago, to the effect that in tax policy let us have faith that right makes might, and in that faith, let us to the end dare to do our duty as we understand it.

National Issues of 1960

EXTENSION OF REMARKS OF

HON. HERMAN TOLL

OF PENNSYLVANIA

IN THE HOUSE OF REPRESENTATIVES

Wednesday, March 2, 1960

MR. TOLL. Mr. Speaker, it was my privilege on Wednesday evening, January 6, 1960, to be the speaker at an interesting meeting in Philadelphia sponsored by the Citizenship Clearing House. A number of local institutions participated, including the University of Pennsylvania, Temple University, Beaver College, Chestnut Hill College, Drexel Institute of Technology, and Ursinus College participated. La Salle College was the host.

My remarks on that occasion were as follows:

Dr. Courtney, Commissioner Osser, distinguished representatives of both great political parties in the field of government, and students of government, I am glad to have the opportunity to be the alternate speaker this evening, in view of the necessary absence of Congressman WILLIAM J. GREEN, JR., the Democratic city chairman. Mr. Green must remain in Washington because he is a member of the Democratic study group, which is now meeting, and because of his membership on the powerful Ways and Means Committee, which is also the Committee on Committees of the House of Representatives, which handles committee assignments.

I am also aware of the presence of some of the outstanding political leaders of the Democratic Party in Philadelphia, who could easily qualify as principal speakers. My good fortune stems from the nature of the topic, which relates to my work as a member of the congressional delegation from Philadelphia. The president of the City Council of Philadelphia, the Honorable James H. J. Tate, has submitted a memorandum relating to the city program for the use of the students gathered here, and the Honorable Charles A. Weiner, Democratic floor leader in the Pennsylvania State Senate, has likewise submitted a memorandum on State issues.

A great opportunity is today available for political leaders to advance programs for the next decade which all Americans should consider and which the future public servants and political leaders should study. This meeting presents leaders of our two great political parties who are serving the citizens in various levels of public office and students of government who will be the public servants and officeholders of the future. What greater forum can be obtained for the serious consideration of governmental objectives which the officeholder of today sub-

mits to the possible officeholder of tomorrow?

We stand on the threshold of a new era: an era wherein we can turn our thoughts and energies to building a Nation in which the people of the country can reap the benefits of an expanding economy of plenty and achieve security for an entire lifetime. New technology and new scientific discoveries make possible this economy of abundance, with a higher standard of living and work opportunity for all. Building for the common welfare will require a fundamental change in orientation of Government. An opportunity to establish and support a program to bring about a new approach to a new decade, a policy to promote the general welfare of all people.

The two party system opens the avenues for bold new measures and policies to all who are interested in development of good government which will provide the greatest advantages to the people of our country. Those who present the policies and philosophy of the great Democratic Party which is today leading the city of Philadelphia and the Commonwealth of Pennsylvania to a brilliant future, are glad to have the opportunity of sharing with you students of government who have gathered to consider the presentations which may have a tremendous effect on the America of the next decade.

The Democratic Party appeals to the greatest number of citizens because it advocates good government at all levels, city, State, and National. Mediocrity has never been accepted as the ideal in America, yet it does seem that there are many today who accept it, and in the name of "middle-of-the-road" would have us believe that we cannot separate between good and bad, hot and cold, and fish and fowl in politics. Not everyone, however, has been misled by the more or less open and approved efforts to reduce public life and personalities. The people of the country must look to the Democratic Party to provide national goals and a program to meet the difficult problems of the next decade.

LET US CONSIDER THE EDUCATIONAL PROGRAM

From a national viewpoint the really big question confronting our people today is how to produce enough persons competent to overcome the Soviet lead in the vital fields of science and technology. The educational problem is one of greatest concern to all persons interested in the survival of our country. It does not extend merely to the cost of education and the consequent request for scholarships and loans, but also to the matter of admissions and the shortage of classrooms and qualified teachers. Our country's determination to equal Soviet achievements and to respond to the prodigious efforts of educators has resulted in a greater number of students than ever before. But the cost of education has also increased and Federal aid is one of the solutions to the problem. The necessity of educating our youth in a stronger program is so essential in competing with the Soviet system and so vital to the security of our country that it rates consideration in the budget for national defense.

The future of our cities is an issue

The United States is fast becoming a Nation of city dwellers. In the last 10 years, a million people have left the farms and rural areas, while 30 million more people have crowded into cities, towns, and suburban areas. Thanks to modern machinery and scientific methods, fewer farmers are now able to feed millions more people, and pile up enormous surpluses at the same time. The Democratic Party recognizes that the concentration of people in the cities of our country is a normal development in view of our industrial and commercial enterprise. The future of our country lies in

the continued progress and improvement of cities, large and small. The great cities of Pennsylvania are in need of Federal support to overcome many problems. The leading cities of Philadelphia and Pittsburgh have shown what can be done on a local and State level in building and developing the metropolis of the future where people can work and live in comfort and security. But complete accomplishment of the programs to fully develop the potentials of cities requires Federal help. Transportation problems can only be solved by Federal contributions. People who live on the perimeters of cities seek to get in to work and out to their residences with a maximum of speed and safety. The suburban areas of our large cities now number millions of residents. Mass transportation financing and other plans to provide the vital needs of movement are urgent in the program of supporting our city life.

The development of our cities can only continue by the replacement of blighted areas, by new housing construction and proper planning for the future. Urban renewal and development have been the subjects of national consideration but they must be extended and advanced, remove blight as quickly as possible and establish new areas for living to increase the facilities of the communities which are so vital in the maintenance of our great industrial centers.

Our cities need Federal help to develop the hospital and medical services which have been established in the great educational centers and in the general communities. There are many installations which are Government owned which can be used by our cities when not needed for national emergencies. These should be owned by our cities and used by our Government in times of need. The highway program to provide suitable and safe ingress and egress to our cities needs Federal support for proper development. America is a country on wheels and mobility has always been a great factor in the development of our strength and progress.

The foreign policy issue

In the field of foreign policy the most important problem relates to disarmament and the control of nuclear weapons. A determined effort must be made to control the production and testing of nuclear weapons on a worldwide basis leading to every possible method which can be advanced for reduction in manufacture of arms consistent with suitable and careful inspection devices leading to worldwide conformity with the program.

Negotiations and conferences with other nations leading to achievement of world peace should be continued and encouraged subject to our support of existing treaties and the United Nations Organization.

The worldwide bases established by our country do not constitute a sufficient defense line in view of the development of the nuclear weapons and missiles. It is therefore urgent that our military and defense establishments reconsider our position and methods of defense in order to devise a more effective system in the light of current conditions and changes in weapons now available to our opponent in case of conflict.

Gen. Maxwell D. Taylor published a very recent book called "The Uncertain Trumpet." In this morning's newspaper George Fielding Elliot calls it a frightening and a timely book. Permit me to read you a few short paragraphs of the review.

"For here, at the outset of an election year, we find an officer who has been Chief of Staff of the Army and a member of the Joint Chiefs of Staff during 4 years of the present administration, and has laid down those high responsibilities only a few months ago, telling us with solemn conviction and with much supporting evidence that our present ability to deter the Soviet

Union from launching a nuclear attack on this country is declining so rapidly that the Nation faces a serious crisis commencing in 1961."

"Chillingly reminiscent of Sir Winston Churchill's narrative of British refusal to face reality in the 1930's is General Taylor's account of his plea to the National Security Council in 1958.

He was speaking on this occasion, by previous agreement, for the Navy and Marine Corps as well as for the Army, and with the implied approval of Secretary of State John Foster Dulles."

"Yet the outcome was a memorandum to the services from Secretary of Defense McElroy stating 'that there had been no changes in the international situation to warrant any significant revision in national security policy'—which was followed by really frantic attempts to compel the dissenting Chiefs of Staff to give public support to a budget based on this assertion."

"This 'should be done now, before another annual budget projects past mistakes even farther into the future.' The change will be expensive; but, the general warns, 'there is no living with communism as an inferior.'"

Is there any excuse for this situation? Can this attitude of the administration be hung on the altar of inflation?

Labor and management issue

The problems presented by the growth and management of unions should not be solved in a punitive manner so as to retard and restrict their development. The amendments which have recently been added to the Taft-Hartley law were the result of a massive lobbying and pressure campaign on Congress for government regulation of unions and their power to win higher wages and working conditions. The organization of workers has been a major factor in the progress and strength of our country and every avenue of cooperation between management and labor should be encouraged in order to develop a harmonious relationship in which both can operate. This will improve the conditions under which our country can forge ahead in its development and progress.

The executive department and the Congress should encourage programs for production and employment based upon a sufficient use of our manpower, skills and technology. The Congress should enact legislation consistent with the program of progress and development which can reasonably be achieved under peacetime conditions. The Employment Act of 1946 contains provisions which can further such objectives.

Civil rights

The principles of equality and equal opportunity in education, employment, housing and other fields must be supported if we are to establish a stronger democracy in which all people can honestly be included. The laws leading in this direction should be respected and supported and the Supreme Court's efforts to interpret the principles of law in favor of such action should not be counteracted by legislation which will hamper the program for equal rights which will make our country an example of equality and justice in the world.

Once democracy is achieved in the South, that area will cease to be a sanctuary for runaway plants seeking sweatshop open shop conditions.

Social security

In a broad sense the problems of the retired worker, the aged citizen and the youth can be included in the field of social security. Disability or death of a worker endangers the life and security of the dependent. The older citizen should be able to live in health and comfort. The youth of our country, which is our greatest asset, should be helped

in avoiding pitfalls and in proper development. Expansion of social security benefits for the worker and the aged should receive serious consideration from Congress. The youth who is tempted in his development should be protected from conditions which will affect his proper growth and future. Legislation to drive out filth literature and programs to develop our youth in their training and occupational needs should be considered.

Economic future will certainly be an issue

The future of our country lies in the development of our productive power in the next decade. There should be an overall plan for revisions of our tax structure to place more purchasing power in the hands of low-income families. Our Federal outlays for resource development, public assistance for the needs of our people should be increased. Efforts should continue toward building the institutional devices for the needed governmental and business cooperation which will improve public economic policies.

This does not mean that our party advocates a spendthrift Government. A steady increase in Government spending and even more so in private spending are essential parts of an overall policy to build our national strength. We are lagging in primary military strength, science education, and many other things. This is not because we lack the material potential to do much better. It is because we are not trying hard enough to marshal these potentials.

There is an erroneous belief that our economy cannot afford to do more. We are still trying to protect our economy by scaling down our demands upon it in accord with its relatively low actual rate of performance. It is obvious that we could afford what we have, if we lifted our economy's actual performance closer to its great potentials.

Our gross national product in the decade of the fifties could not reach \$500 billion. In 1959 it was less than \$480 billion. This was approximately the volume of all goods and services produced in a year. This included all our products, agricultural and industrial, the schools, roads, and hospitals built, the defense weapons made, and all services performed for compensation by everybody.

In the next decade we can reach an economy of more than 600 billion. But this will depend upon the vigor and wisdom of our policies and programs. By full use of our tremendous and ever-increasing productive power, we can do more than meet our national security needs. We can also achieve so much plenty at home, and add so much to plenty elsewhere, that the economic problem of shortages of important things might be virtually ended here and reduced to manageable proportions overseas.

This is the outlook and policy which invites our efforts in the next decade. This is the opportunity which a forward-looking citizenry can seize and follow with great vigor and likelihood of success. This is the challenge which will make greater the America of the future.

in Congress, and the American people, an article by my good friend and colleague, the Honorable WATER MOELLER.

Under leave to extend my remarks in the RECORD, I am including this article which appeared in the February 1960 issue of This Day magazine:

How Much God Is There In Government?

(By Congressman WALTER MOELLER of Ohio)

The answer to the question in the title of this article is probably that there is as much God in government as there is God in the hearts of the American people. We can say this in America whereas it cannot necessarily be said of more than a few other nations in the world, for we are as close to being a "government of the people, by the people, and for the people" as has ever existed on the face of God's earth.

Certainly it cannot be said of the godless government of Communist Russia, where God still lives in the hearts of millions of people despite every effort to root Him out. Far less could it be said of Poland, for another example, where a devout people are subjected to the merciless whims of an atheistic regime, leavened only by the more or less powerful influence that the Roman Catholic Church and its followers can still bring to bear.

How much God there is in the hearts of the American people reflects the quantity and quality of God, or of religious motivation, in the policies and practices of government, arriving eventually at an answer to the corollary question, "How much God is there in America?"

The people who make up our Government, who determine its policies, who pass its laws, who administer its daily operations, and who pass judgment in the courts on our crimes and on the constitutionality of our laws, are, in a large sense, a cross section of the greater population. It is true that there is something at least slightly extraordinary about them, or they would not be in Government. In the cases of a President, a Supreme Court Justice, or even a Member of Congress, there is usually something more than slightly extraordinary before such a position may be achieved. This extraordinariness, however, is not usually of the kind that makes them either more or less religious than the average individual. Thus it is fair to say that where God is concerned, He moves the man in government to about the same extent that He moves the man in the street.

From this we make the assumption that government, as far as its moral or religious composition is concerned, and as far as its net worth godwise is concerned, is no more or less than a summing up of net worth of the individuals who make up government.

There is, however, no human brain, nor combination of brains, nor electronic computer which can exactly assess these individual godly net worths. We have no unit of measurement upon which to rely, for God and His impact upon the minds and hearts and actions of men is not to be measured in pounds or inches, but is simply a weightless and boundless evidencing of the eternal Spirit evoked by Jesus Christ when He said, "Before Abraham was, I am."

For this reason we must turn to the external evidences we can find to substantiate or disprove the existence of God in our Government, such as the moral qualities of the laws which govern us, the mercy and the justice with which these laws are administered, and in the public acts and the private reputations of the men and women who form the Government of the United States.

As I write this, the Congress of the United States has just finished writing legislation to control the corruption and the racketeering which has dominated certain aspects of the American labor movement. Here in microcosmic form we may examine the in-

fluence of God and the Godlikeness of the motives which have touched the legislative processes since America began. Here we have an issue which is as close to Godlikeness confronting godlessness as any we are likely to find. Here we have not only the problem of individual sin, but also the problem of a great social and moral issue involving the conscience of mankind. How did we as legislators and as Christians, Jews, or freethinkers react?

Brought to bear upon us were the most powerful forces in American political and economic life. Groups representing labor and capital, the two great and often divergent economic powers, were there. Political leaders from our two great parties wielded every stratagem available to them. Cleavages developed within the parties, based on a combination of geographical and philosophical differences.

Some individuals faced the problem with a strictly practical weighing of the possibilities of political gain or loss.

Others, and I think the majority, devoted themselves to prayerful thought and to close examination of the social and moral issues involved.

Examination of the debates on this legislation discloses that many Members, for example, called attention to some passage from the Scriptures or to some generally accepted moral truth to bolster their arguments, thus indicating that the Congress is not oblivious to what Holy Scripture says, and that our legislators often do rise above their own material interests and those of their party or their constituents to a higher spiritual level.

Many may quarrel with the terms of the new law. Many have questioned the motives of those who stood on either side of the issue. Yet it is my honest belief that the new result was a clear justification of our democratic processes and of our reliance upon our legislators to permit the hand of God to guide them in the performance of their duty to Him and to the people of the United States whom they are elected to serve.

Let me turn for a moment to the morals and the mores of those who make up the Government of the United States. From my personal experiences up to this time, I am convinced that there is a basic structure composed of deeply honest and sincerely devout religious-minded people upon which the frivolous and the at times sinful is only a facade, more evident to the undiscriminating eye than the solid foundation to which it has attached itself. Further, as we reach positions of real importance among those who exert a significant influence upon public policy and its administration, the moral stature of the individual grows with few exceptions.

On Capitol Hill and elsewhere in our Nation's Capital there are prayer breakfast and luncheon groups which meet at regular intervals and discuss their responsibilities and the issues of the day in terms of religious values. I have attended some of these gatherings, and while I am unable to accept all the conclusions reached, each time I came away with the conviction that the search was made for the divine will, and that the door opened for the presence of God in the deliberations.

It is commendable to know that in the U.S. Capitol, just off the rotunda, is a Prayer Room where men and women of every faith visit daily and renew in prayer and meditation their private and public oaths of devotion to God and country. Further, each of the Houses of Congress has its fully appointed Chaplain and each session of the Senate and of the House is opened with prayer.

It is by these things and by many other signs that I have come to accept the fact that the majority of the men and women in our Government do have a very definite

How Much God Is There in Government?

EXTENSION OF REMARKS

OF

HON. JAMES G. FULTON

OF PENNSYLVANIA

IN THE HOUSE OF REPRESENTATIVES

Monday, February 29, 1960

Mr. FULTON. Mr. Speaker, I am calling to the attention of my colleagues

religious influence in their lives which motivates them as they, amid all human weakness, endeavor to enact just and equitable laws for the land.

In Government, as elsewhere, the number who say, "Thus saith the Lord," and that His will must be advanced, is always too few. It raises a challenge for Christian men and women to make service in the Government their ambition. For true it remains also to this day: "Evil triumphs when good men fail to speak."

Clean Elections Bill

EXTENSION OF REMARKS

OF

HON. JAMES M. QUIGLEY

OF PENNSYLVANIA

IN THE HOUSE OF REPRESENTATIVES

Wednesday, March 2, 1960

Mr. QUIGLEY. Mr. Speaker, one of the big unfinished pieces of business pending before this body is the Senate-passed clean elections bill. There can be no question that the Senate of the United States confounded its critics and covered itself with a certain amount of glory when it passed this strong, effective and realistic measure a little over a month ago. By the same token there will be little question that the House of Representatives has failed itself and the American people should we adjourn this year without taking action on this important measure.

We hear so much these days about "Payola," the need for higher ethical standards in business, in unions and in Government. How can we dare sit in judgment on our fellow citizens if we publicly demonstrate an unwillingness to make certain that we ourselves are completely above suspicion in our own chosen field of endeavor: politics.

Mr. Speaker, I join with all of my colleagues, and particularly my colleague from Arizona who has long been conspicuous in his efforts on behalf of an effective, clean election law, to urge that this House face up to its responsibility in this field and to report out of committee and enact into law a meaningful Federal election law.

Mr. Speaker, I ask permission to include an editorial from the February 1 issue of the Harrisburg News on this subject. The editorial follows:

A CLEAN ELECTIONS LAW? THERE'S HOPE, BUT NOT MUCH

For a brief period last week there was reason to hope that Congress was finally going to face up to a realistic reshaping of the laws controlling contributions and expenditures in Federal election campaigns.

The clean elections bill passed the Senate and went to the House. There it ran head-on into the familiar political facts of life. A goodly proportion of the House membership, including the chairman of the committee to which the bill was referred, had different ideas of what is realistic.

The provisions of the bill are almost punitive and a clear violation of States rights, said Representative OMAR BURLESON, Democrat, of Texas, who heads up the House Administration Committee.

Representative BURLESON and many of his fellow southerners are particularly piqued by the fact that the controls outlined in the bill would apply to primary as well as general elections. In the Democratic South the primaries are usually the whole show.

Then, too, there are the politicians in both parties and from every section of the country who don't mind at all the gimmicks and tricks that campaign committees constantly use to evade the old election laws. Bring up to date committee spending limits and put an enforceable lid on contributions? That's getting a bit too realistic for some of the political pros. They'd just as soon keep the lid loose and keep the campaign committees multiplying. In this way there is really no control on contributions or on spending, and present law is meaningless.

The bill, as the Senate passed it, is a good one. It should become law if for no other reason than that expressed by Representative STEWART L. UDALL, Democrat, of Arizona: "In my opinion, nothing has done more to put a cloud of distrust over politics and politicians than our antiquated and unrealistic election laws."

RECORD OFFICE AT THE CAPITOL

An office for the CONGRESSIONAL RECORD, with Mr. Raymond F. Noyes in charge, is located in Statuary Hall, House wing, where orders will be received for subscriptions to the Record at \$1.50 per month or for single copies at 1 cent for eight pages (minimum charge of 3 cents). Also, orders from Members of Congress to purchase reprints from the Record should be processed through this office.

GOVERNMENT PUBLICATIONS FOR SALE

Additional copies of Government publications are offered for sale to the public by the Superintendent of Documents, Government Printing Office, Washington 25, D.C., at cost thereof as determined by the Public Printer plus 50 percent: *Provided*, That a discount of not to exceed 25 percent may be allowed to authorized bookdealers and quantity pur-

chasers, but such printing shall not interfere with the prompt execution of work for the Government. The Superintendent of Documents shall prescribe the terms and conditions under which he may authorize the resale of Government publications by bookdealers, and he may designate any Government officer his agent for the sale of Government publications under such regulations as shall be agreed upon by the Superintendent of Documents and the head of the respective department or establishment of the Government (U.S. Code, title 44, sec. 72a, Supp. 2).

LAWS RELATIVE TO THE PRINTING OF DOCUMENTS

Either House may order the printing of a document not already provided for by law, but only when the same shall be accompanied by an estimate from the Public Printer as to the probable cost thereof. Any executive department, bureau, board, or independent office of the Government submitting reports or documents in response to inquiries from Congress shall submit therewith an estimate of the probable cost of printing the usual number. Nothing in this section relating to estimates shall apply to reports or documents not exceeding 50 pages (U.S. Code, title 44, sec. 140, p. 1938).

Resolutions for printing extra copies, when presented to either House, shall be referred immediately to the Committee on House Administration of the House of Representatives or the Committee on Rules and Administration of the Senate, who, in making their report, shall give the probable cost of the proposed printing upon the estimate of the Public Printer, and no extra copies shall be printed before such committee has reported (U.S. Code, title 44, sec. 133, p. 1937).

PRINTING OF CONGRESSIONAL RECORD EXTRACTS

It shall be lawful for the Public Printer to print and deliver upon the order of any Senator, Representative, or Delegate, extracts from the CONGRESSIONAL RECORD, the person ordering the same paying the cost thereof (U.S. Code, title 44, sec. 185, p. 1942).

CHANGE OF RESIDENCE

Senators, Representatives, and Delegates who have changed their residences will please give information thereof to the Government Printing Office, that their addresses may be correctly given in the Record.

CONGRESSIONAL DIRECTORY

The Public Printer, under the direction of the Joint Committee on Printing, may print for sale, at a price sufficient to reimburse the expenses of such printing, the current Congressional Directory. No sale shall be made on credit (U.S. Code, title 44, sec. 150, p. 1939).

Appendix

Government and the Arts: An Interview With Howard Lindsay, Distinguished Dramatist

EXTENSION OF REMARKS OF

HON. FRANK THOMPSON, JR.

OF NEW JERSEY

IN THE HOUSE OF REPRESENTATIVES

Wednesday, February 17, 1960

Mr. THOMPSON of New Jersey. Mr. Speaker, there has been in recent years a very real growth of interest in the fine arts both in the Federal Government and in the State and local governments as well, we are told by Howard Lindsay, well-known dramatist.

The Congress has been studying the matter of a Federal Advisory Council on the Arts, as recommended several times by President Eisenhower, and this legislation will be favorably reported in the near future by the House Education and Labor Committee, and the Senate Education Subcommittee.

The New York State Senate passed within the last few days legislation to establish a New York State arts council, and legislation for similar purposes—based, however, and more soundly, on the establishment of an educational and cultural commission in the New Jersey State Department of Education—has been introduced in the New Jersey State Assembly by my friend and colleague, Assemblyman Charles Farrington, of Princeton, N.J.

Such an educational and cultural commission has been repeatedly urged by Dr. Mason W. Gross, president of Rutgers University, the State university of New Jersey. Dr. Gross declares such a commission is of the utmost importance to assist and advise New Jersey in its quest for significant educational and cultural goals. It is a certainty that New Jersey's educational, cultural, business, and civic leaders are as aware of the rich financial dividends such an educational and cultural commission would provide New Jersey as are their counterparts in New York State who are working for the New York State Art Commission. What is needed in New Jersey is more of the kind of informed and dedicated leaders who are leading the successful fight for this art legislation in New York State, particularly men of the caliber of Howard Lindsay, Dr. Howard Hanson, Harold Weston, Lloyd Goodrich and others.

Here in the Nation's Capital Senator JAMES E. MURRAY and Senator MICHAEL J. MANSFIELD have sponsored significant cultural legislation to preserve from destruction historic and beautiful Lafayette Park across Pennsylvania Avenue from the White House. Also to be preserved, under the terms of the

Murray-Mansfield plan are the Dolly Madison House, the Benjamin Tayloe House, the Commodore Stephen Decatur House, and the old Belasco Theater.

I include here as part of my remarks several items which illuminate the subject which I have been discussing, including an excerpt from a recent interview with the distinguished American author and dramatist, Howard Lindsay, which was broadcast over radio station WYNC, New York City:

[From the Washington Post, Feb. 21, 1960]

FINAL CURTAIN

A fine old theatrical relic and the graceful home where Dolly Madison once lived now appear doomed by the General Service Administration's latest plans to "improve" Lafayette Square. Only those with hearts of ice could be wholly unmoved by the impending change. The Belasco Theater, second only to the National in local eminence, once carried such lustrous names on its playbills as Sarah Bernhardt, Mrs. Fiske and DeWolf Hopper. During its years as a USO center, it basked in a brief Indian summer before the Treasury Department turned its velvet-and-gold interior into a vault for Disbursement Office records. And now the shade of L. Stoddard Taylor, the Belasco's last manager, will surely sigh at the news that his 65-year-old stage will soon make way for a Court of Claims given to more prosaic drama.

No less poignant is the fate of the Dolly Madison House a few doors up on H Street. The second oldest private dwelling on the square (Decatur House is older), and once the home of the Cosmos Club, the house is celebrated as the place where Dolly Madison spent the years of her widowhood. It is a house rich in associations on a square limned in history. A catalog of those who have lived around the park evokes the Republic's heroic days: Daniel Webster, William H. Seward, John Hay, Henry Adams, James G. Blaine, Henry Clay, Charles Sumner, Roger B. Taney, Gideon Welles, Stephen Decatur and John Randolph of Roanoke.

Long ago, the decision should have been made to preserve the residential character which predominated around the square until World War I. The opportunity has been thoughtlessly thrown away. The GSA is preparing to raze most of Jackson Place to make way for a monolithic office building; the AFL-CIO was permitted to build a headquarters mosque that towers grotesquely over St. John's Church; and now one of the city's choicest locations will be awarded to the Court of Claims. Even at this late date some hard questions ought to be raised about whether a courthouse would make the most appropriate use of such a desirable site.

With a little more foresight, the square could have remained as a pleasant patch of the past—with a refurbished Belasco serving, perhaps, as a repertory theater. The chance has long since gone, and our grandchildren may well reproach us for failing as guardians of a heritage worth saving.

GENERAL FEDERATION OF WOMEN'S CLUBS.

Washington, D.C., March 2, 1960.

SENATOR JAMES E. MURRAY,
New Senate Office Building,
Washington, D.C.

DEAR SENATOR MURRAY: I want to take this opportunity to congratulate you and

to express the appreciation of the clubwomen of the General Federation of Women's Clubs for your courageous efforts to save the historical monuments of our country, particularly your latest effort to preserve the Dolly Madison House, the Tayloe House, and the Belasco Theater on Lafayette Square near the White House.

The General Federation of Women's Clubs were very enthusiastic in their efforts to restore Independence Hall in Philadelphia where the Government is spending millions to restore that national monument for the benefit of not only this generation but also for future ones. The General Federation of Women's Clubs spearheaded the program for restoration of Independence Hall and I want to assure you that this organization will support your efforts to save the historic buildings on Lafayette Square in our Nation's Capital. We feel this will be a national shrine, not just another historic spot in the District of Columbia.

May I suggest that we believe the people interested in saving these particular buildings should have an opportunity to make public statements regarding their desire. We urge you to have hearings by the proper Senate committee. We know that the House did not hold hearings when they considered the request that the site of the above-mentioned buildings be used for the construction of a District Claims Court.

Again let me tell you that as good patriotic Americans the members of the General Federation of Women's Clubs appreciate your efforts and will support you in trying to get your bill passed so as to save these historic monuments.

Most sincerely,

MISS CHLOE GIFFORD,
President.

S. 3128

A bill to designate as national historic sites Lafayette Square and certain buildings in the vicinity thereof, in the city of Washington, District of Columbia, and for other purposes

Be it enacted by the Senate and House of Representatives of the United States of America in Congress assembled, That Lafayette Square, the buildings known as the Dolly Madison House, located at 1520 H Street Northwest, the Benjamin Taylor House, located at 21 Madison Place Northwest, and the Decatur House, located at the northwest corner of H Street and Jackson Place Northwest, Washington, District of Columbia, are hereby designated national historic sites. Hereafter, so much of the property as may be in Federal ownership shall be administered by the Secretary of the Interior, pursuant to the Act of August 25, 1916 (39 Stat. 535), as amended, and in accordance with the purposes of the Act of August 21, 1935 (49 Stat. 666).

SEC. 2. The old Belasco Theater on Lafayette Square shall be transferred to the Department of the Interior, to be administered by the Secretary of the Interior as a municipal art center for the Nation's Capital. The Secretary of the Interior is authorized and directed to restore the old Belasco Theater to a condition at least equal to its condition at the time it was acquired by the Federal Government. The District of Columbia Recreation Department shall assist the Department of the Interior in the restoration and management of the old Belasco Theater as a municipal art center.

THE CITY OF NEW YORK
MUNICIPAL BROADCASTING SYSTEM,
New York, N. Y., February 19, 1960.

Congressman FRANK THOMPSON, Jr.,
House Office Building, Washington, D.C.

DEAR CONGRESSMAN: Harold Weston has told us of your interest in one of WNYC's programs—"International Interview"—where Mr. Howard Lindsay was the guest and where he discussed governmental activities on the arts, as well as the proposed New York State Arts Council.

This program, which is one of a regular series presented by WNYC with the cooperation of the Foreign Press Association, has a very respectable sized audience. We are enclosing herewith a transcript of the program on which Mr. Lindsay participated and which was broadcast on WNYC at 6 p.m. on February 19.

We would be delighted if you saw fit to have this inserted in the CONGRESSIONAL RECORD.

Sincerely yours,

SEYMOUR N. SIEGEL,
Director.

INTERNATIONAL INTERVIEW—BROADCAST ON
WNYC AND WNYC-FM, FEBRUARY 19, 1960

Mr. ROUSSEAU, Your city station, in cooperation with the Foreign Press Association, presents another "International Interview." Here, now, to open this evening's transcribed program is our Moderator, Seymour N. Siegel, Director of Radio Communications for New York.

Mr. SIEGEL. How do you do, ladies and gentlemen, in cooperation with the Foreign Press Association, we present "International Interview." Our guest in tonight's "International Interview" is Howard Lindsay, dramatist, actor, producer. Mr. Lindsay has been the author or coauthor of more than 20 plays and he has been associated with Russell Crouse and Rodgers and Hammerstein in writing "The Sound of Music." He has written "Call Me Madam!" also with Russell Crouse and Irving Berlin. He has had something to do with the writing of "The State of the Union" and, of course, he is best known with having had something to do with writing "Life with Father." He also created the part of "Father" in "Life with Father." As a producer, he offered "A Slight Case of Murder" written by himself and Damon Runyon. He has coproduced with Russell Crouse "Arsenic and Old Lace," "The Hasty Heart," "Detective Story" and many others. What's important, too, is that he is the fifth president of the Players Club. Many of you may know that the first four presidents were Edwin Booth, Joseph Jefferson, John Drew and Walter Hampden. He is the past president of The Authors League of America. He is the vice president of the Dramatists Guild. He is chairman of the board of the new dramatists committee. He is the chairman of the National Council on the Arts and Government. And a very interesting item—he is vice chairman of the committee for modern courts here in New York State. In any event, here to interview Mr. Lindsay, are correspondents of The Foreign Press Association who will now introduce themselves.

Mr. LEISTIKOW. I'm Gunnar Leistikow, correspondent for 10 Scandinavian newspapers.

Mr. ROHDEN. I'm Mak Rohden, representing the "Wiener Zeitung" in Vienna, Austria.

Mr. STEINITZ. My name is Hans Steinitz, correspondent of "Der Bund" in Berne, Switzerland.

Mr. STEINITZ. Mr. Lindsay, we come to the issue of what help and assistance a government on all levels—Federal, State, and city—can and ought to give, or not give, to a theater activity. Coming from Europe where this is a matter, of course, as you know, I have always been struck in all these years in

my being stationed in this country to what extent it is denied to various government levels to intervene in cultural activities, sometimes with the argument that the Federal setup interdicts or forbids the Federal level to be active which in all other countries with the Federal setup, in Canada also, in Africa or Switzerland, or Germany, or others as well. It does not hold good because there all levels participate and here, under the argument of the Federal separation of power, no government level interferes in the theater with the result, of course, that the theater has been compelled to become a commercial venture and going as you said, I quote your own words, "the lazy path of successful stories." I know that there are endeavors and plans afoot to change that and to do something about it. Could you tell us about some of them, especially as I believe you have a hand in some of them yourself.

Mr. LINDSAY. I am not sure entirely that we understand each other, Mr. Steinitz. There is nothing that forbids the government from interesting itself in the theater, supporting the theater, subsidizing the theater. It is not in our tradition, and you are quite right about that. We have had no experience in it and, as a matter of fact, I think the government on the whole in this country has been for a great many years, although this is no longer entirely true, rather suspicious of the artist. They have not regarded the artist as a very sensible and sane man. He is a bit of a dreamer and someone rather impractical, and so they rather shied away from any association with the artist. However, there has been of late a very great quickening in the interest of the government, both Federal and in the States, and in a great many municipalities in the arts, not entirely in the theater, but in some places solely in the theater. A good example of that would be the fact that Governor Rockefeller in his speech to the present legislature called for the establishment of an arts council in New York State, and a bill has been introduced to implement that. He proposes that there will be a council of 15 men appointed by the Governor with the consent of the senate (I don't mean men—it could be men and women—15 people) who will make a study of the field and report back to the legislature recommendations of the ways that the State could promote interest in drama, dance, opera, painting, music, and the other arts. That's very encouraging. New York City, of course, is the cultural center of this country. Now, it doesn't need this. This is for the benefit, I think, of New York State and that will mean that other places in the State outside of New York City, will receive more theater, hear more music, will see more exhibition of pictures.

Mr. STEINITZ. Would that arts council, sir, have a budget of its own enabling it to become active, or would it just be somebody to pull from the sidelines or encourage from the sidelines?

Mr. LINDSAY. Now, the first budget which presumes to cover only the original survey and recommendations is for \$50,000 a year. That, I think is a—in present times with the high taxes that we are paying—I think that is a rather generous and bold request, and I think possibly at the beginning that would be certainly enough. Now, this does not presume that we are later going to ask the government of New York State for subsidies. This is not in our tradition, but we might ask them for enough what is called in this country "pump priming." Do you know what "pump priming" is? You pour water down a pump in order to start it going, and that small amount of water that you pour down gives you a great flow of water when the pump has been primed. This interest in the arts is very necessary because of the amount of leisure time the American has today, the short work week, and all of the aids to the

housewife to cut down her work, also the realization that a whole man needs an interest in the arts, needs training of his emotions, his taste, and it gives him greater relish for living, and it's very heartening that the Governor has done this and, of course, all of us who are interested in the arts are extremely hopeful that this bill will pass, and that the citizens will be interested enough to get behind it.

Students Look for Chance To Exchange Ideas

EXTENSION OF REMARKS

OF

HON. ALEXANDER WILEY

OF WISCONSIN

IN THE SENATE OF THE UNITED STATES

Thursday, March 3, 1960

Mr. WILEY. Mr. President, the shape of the future may well be determined not by guns, bombs, and bullets—if war can be averted—but by constructive ideas—the creative, imaginative process through which new things—once dreams and visions—are transformed into reality to create a better life for mankind.

Around the globe today, barrier after barrier to exchange of ideas are either being torn down or hurdled.

The exposure of more people to more ideas—of their own and other lands—will, I believe, create a richer, more inspiring reservoir of cultural, informational, intellectual, scientific, and practical ideas for promoting a better life.

Particularly, mass media—radio, television, publications, and others—as well as more people-to-people contacts—are creating new channels for the interflow of knowledge.

Today, in our universities we find a growing number of students searching with zealous intellectual curiosity into the ways of life of peoples in other lands.

Recently, the Milwaukee Journal carried an informative article by Peggy Daum, entitled "Students Look for Chance To Exchange Ideas." The article reveals many of the ways in which the youth of the world, through educational institutions, are seeking and finding new and different ideas not only to satisfy their curiosity, but to enrich their lives. Reflecting the kind of idea exchange which is essential if the people of the world are ultimately to understand each other and live in peace.

I ask unanimous consent to have the article printed in the Appendix of the RECORD.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

STUDENTS LOOK FOR CHANCE TO EXCHANGE IDEAS—STUDYING ABROAD CARRIES OPPORTUNITY, RESPONSIBILITY, COLLEGE PANELS SHOW

(By Peggy Daum)

College students from the United States and foreign countries, meeting at Alverno College last weekend, took a careful look at themselves in order to understand one another better.

What they found is a need for greater opportunity to exchange the ideas they all are willing to give and receive.

Dr. Yu-Min Chou, a native of Formosa and an economics instructor at the University of Wisconsin, Milwaukee, summed up the idea by referring to Kipling's much quoted line: "They say, 'East is East, and West is West, and never the twain shall meet,' but here we do," he observed. It is in actually meeting with one another that students can try to appreciate why people on the other side think the way they do, he said.

Dr. Chou was one of three faculty members and four students participating in panel discussions of what the international student and the American student have to offer each other in the world of cultural values and in the world of student life. A presentation of instrumental music, dance, and song demonstrated what students can exchange in the world of the arts.

The program, cosponsored by the international relations clubs of Cardinal Stritch, Mount Mary and Alverno Colleges, was held in observance of Pax Romana Day, Sunday. Pax Romana is an international organization of Catholic college students.

TRADITIONS ABANDONED HERE

Representing America in a discussion of cultural values, Eugene Woelfel, instructor in mechanical engineering at UWM and a former president of the International Students Club at Marquette University, noted that the United States has the characteristic culture or stage of advancement which it now enjoys because its early settlers were "an amalgam of many nationalities who didn't adhere to any traditions. They weren't bound to old traditions," he observed, "because they came here for a new life."

Since there was no necessity to do things as their grandfathers had, Americans progressed until "we have achieved material maturity but haven't reached a state of intellectual maturity."

This intellectual maturity could be lacking, Woelfel said, either because it was lost when Americans' forefathers broke with tradition or because material progress emphasized the young and the strong to the neglect of the wise and of authority. "The young and the strong do not respect their elders," he noted.

POSSESSIONS TO EXCHANGE

In the light of these characteristics of American culture, Woelfel enumerated three possessions which American students can offer to people from other nations: Technical knowledge which has provided the leisure time great thinkers said is necessary to develop the higher faculties; an encouraging and fostering of new ideas, showing the advantage of progress to tradition-bound countries; a sense of tolerance, equality, and happiness.

From the foreign student, he said, Americans can also learn three things: An appreciation of intellectual and esthetic values, particularly from the Europeans; an insistence on the preservation of one's own culture, particularly from Asians and Africans who don't want to be slaves to the capitals of Europe; a deeper understanding of the intellectual faculties, of wisdom, and an appreciation of the role it plays in all men's lives.

SEES CONFLICTS ARISE

Speaking for Asia, Dr. Chou, himself a student until last fall, approached the exchange of cultural values from a visiting student's point of view.

"Because cultural heritage causes people from different lands to react differently to the same things, conflicts arise when they are together," he observed.

But although students come from diverse backgrounds, they do have one thing in common: All are interested in improving world conditions, in learning how to live together in harmony, he said.

Eliminating the conflicts, then, is a matter of learning "not so much what we can exchange but how we can exchange with each other."

The "how" of reaching mutual understanding, he said, is the exchange of ideas in direct contact. If this direct contact is lacking, communications can give an image which leads to bias.

There is good opportunity for this direct and personal approach in American schools, Dr. Chou told his student audience. Special treatment is nice, but the foreign student doesn't particularly like it, he said.

"He wants to belong to the gang, to be included in coffee breaks between classes, in dormitory bull sessions. He wants to get together and talk in a situation where there can be a frank exchange of ideas."

Some foreign students, he noted, tend to forget their cultural heritage, but most do not.

"And they're interested in learning about American cultural heritage and appreciating it, or they wouldn't be studying in this country."

EUROPEAN SPOKESMAN

Dr. Isidoro Montiel, professor of modern languages at Marquette University and a former professor at the University of Madrid, noted the period of rapid change and challenge which nations entered following World War II.

New technological demands will undoubtedly be met, but in doing so, he cautioned, the world of cultural values must be preserved and realized fully.

"The major objectives are a transmission of cultural heritage and a further development of intellectual, emotional, spiritual, and philosophical potentialities of the individual so each one can fulfill his own destiny and contribute to the realization of the values of a free society."

Dr. Montiel listed 13 values which he considered worthwhile for students to exchange. They included these ideas:

The twofold duty of a student in another country is to learn and to inform. "Curiosity and talkativeness are Americans' secret weapons," he said. The Spanish student has to know more than bullfights, the American more than cowboys and Hollywood movies.

"A student should recognize the unique worth and dignity of his own personality and individuality, but he must also establish an attitude of exemplarity. The foreign student must never become a traitor to his religion, culture, home, and traditions."

A mutual understanding and social communication on spiritual, intellectual, and cultural levels provides the most effective way to solve problems and exchange important developments, he said.

"The students should want to see the foreign country and its people not with the eyes of the tourist but with the unlimited purpose to comprehend it in its totality, including its individuality and strangeness."

The student abroad should have optimism and hope for the future, what in this country is called the American dream, Dr. Montiel concluded.

STUDENTS COMPARE LIFE

Students representing Africa, America, Asia and Europe noted the differing effects student life in their countries has upon themselves and the world around them.

Raphael Wanguo, a Marquette University student from Kenya, noted that college life rates more attention and the college student is a more important part of the population in this country than he is in Africa.

"In many African countries college life is a new thing and in some the colleges are few," he said, citing the example of two schools, one a junior college, serving all of East Africa.

Because the student body is a very small and unimportant part of the population, the impact of its activities is not felt much beyond the college itself. Student activity, particularly political activity, is strictly regulated by college authorities, he said.

"Many people are ready and willing to get rid of foreign rule but the student is even more ready and willing," he observed. "Western missionaries have taught him about democracy and high standards of living . . . but while he remains in school the African student cannot argue his case or make himself understood."

TAKE ACTIVE POLITICAL ROLE

Maria Teresa Ungson, a graduate student at Marquette, indicated the situation is quite different in the Philippines.

Because almost everyone goes to college, there is a large student population, she pointed out. The students participate in school activities like those here, but perhaps the most powerful student organization in the Catholic country, she said, is called Student Catholic Action. Another branch is an active alumni group.

When the truth about the Communists who almost overran the country in 1948, came to light, she said, it turned out that most of the Communist leaders were students. "To counteract the Communists, SCA adopted their cell technique, working with small groups of people, and have had success since taking over the method."

Today, Miss Ungson observed, students continue to have great influence upon the political life of the Philippines. "Once the students are behind a candidate, he's in business," she put it.

She cited cases of student rallies and student lobbying which affected national legislation.

In comparison students in the Netherlands are quite unconcerned about politics, observed Anton de Witte, also a graduate student at Marquette University.

While the situation in his homeland is far from typical of the rest of Europe, the quietness of political life explains why there are no student political groups, he said.

Students are not counseled as to where to go to school, what to take, how to apply for scholarships, and so forth, he noted. The small percentage which goes to 6 years of university work does so on its own advice.

Because the secondary education is harder than it is here, the graduate entering college at 18 is a more mature student, he added.

ECONOMIC DIFFERENCE

A more serious differentiation, he said, develops between the students who support themselves by working and those who are supported by their parents. Those in the latter group usually belong to an organization called the Student Union, a sort of lone fraternity.

Sports do not hold the dominant place they do on American campuses, de Witte said. Debating is the most popular activity.

"A member of the debating team has the status of an all-American football player," he said, making note of an academic difference.

Kathy Kilkenny of Delavan, Wis., a student at Mount Mary College, described the myriad activities and interest groups available to the American student who goes to school for the benefit of campus life and, incidentally (Miss Kilkenny made it almost an aside), attends classes.

"He soon learns it's not grade 13 in high school, however," she pointed out, "but a place where he's to learn how to learn, and he won't get anywhere unless he grows up."

He learns about government, not by taking an active part in politics, as Filipino students do, but by participating in student political organizations, she said.

The American student, she said, is "in a hurry to get educated, get out, get married,

get a job, and make a place for himself in this uncertain world. Most of all, he wants to be safe.

"The intelligent man or woman who finds out what education means has grown up."

Lawmaker on Hoffa Purge List Defends Vote on Labor Bill

EXTENSION OF REMARKS

OF

HON. CHARLES B. HOEVEN

OF IOWA

IN THE HOUSE OF REPRESENTATIVES

Thursday, March 3, 1960

Mr. HOEVEN. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following article by our colleague, Hon. THOMAS B. CURTIS, of Missouri, which appeared in the Des Moines Register of February 29, 1960:

(By THOMAS B. CURTIS)

(The author of the following article, a Republican, has been a Member of the House of Representatives for 10 years. His district is one of the strongholds of the Teamsters Union.)

WASHINGTON, D.C.—Fifty-six Congressmen have been marked for political purge by James Hoffa, general president of the International Brotherhood of Teamsters.

I am one of those Congressmen, representing St. Louis County and South St. Louis, home of Harold Gibbons, Teamster executive vice president, and Sidney Zagri, director of Hoffa's purge campaign.

Most of us on the Hoffa purge list will run in the November 8, 1960, elections. Forty of us have banded together in the committee to reelect Hoffa-threatened Congressmen to offer a solid front to the threats of Hoffa and to delineate a choice for our citizens:

Shall Hoffa or the American voters have the final voice in choosing a Congress?

HOW THEY GOT ON THE LIST

To "qualify" for the Hoffa purge list a Congressman had to (1) have voted for the Landrum-Griffin Labor-Management Reform Act and (2) have won an election victory in 1958 by less than a 5-percent majority.

Fifty-three Republicans and two Democrats made the list in this way. The 56th, Representative WILLIAM AYRES, of Akron, Ohio, despite his convincing 36,000-vote victory in 1958, was marked for purge because of his membership on the House-Senate conference committee which drafted the final version of the law.

The purge campaign is based on the fallacy that the act is union busting and that those who supported it are antilabor.

This is untrue. The 56 named, plus 173 other House members who supported the Landrum-Griffin bill, did so to curb abuses in the labor-management field revealed to the Congress and to the public. As its name plainly states, the law aims at the unscrupulous employer as well as the unscrupulous labor leader.

Since most of the abuses exposed were perpetrated by Hoffa and his close associates, it is clear why they were angry at the Congress for protecting the public interest and the rights of working men and women.

RIGHT-TO-WORK PROPOSALS OPPOSED

Propaganda opposed to the Landrum-Griffin Labor-Management Reform Act characterizes those who voted for it as either blind in their disregard of labor or servile in yielding to the pressures of big business. I object to this attack on the motives and integrity of Congress.

Had I any reason to feel that the law was a vindictive assault on the labor movement,

as it has been called by its opponents, I would have voted, worked, and spoken against it, just as I have from 1954 to the present against the right-to-work proposals that have been presented in Missouri during that time.

There is nothing in this law requiring the overwhelming majority of properly run unions to do anything which they were not previously doing nor to prevent them from doing anything that they were.

Response to the creation of the Committee to Reelect Hoffa-Threatened Congressmen has been spontaneous, widespread, and encouraging. Civic leaders, editors, and commentators have commended the committee's formation.

RESPONSE FROM MANY PEOPLE

Many people throughout the Nation have responded. Letters are flowing into the House Office Building offices of the temporary committee cochairmen, Representatives AYRES and CARROLL KEARNS, of Pennsylvania. These letters offer voluntary services and money to offset Hoffa's huge slush fund, his main weapon for waging political war.

The public response has highlighted the Hoffa purge list as on honor roll on which my colleagues and I are all proud to be named.

Surely no one wishes to deny Mr. Hoffa his right to engage in political activity. To flourish, our system of government requires a maximum of political activity and our committee would not strip anyone—an individual, organization, union, or corporation—of his legitimate right of political advocacy.

We do not condemn Hoffa for his exercise of this right; rather we commend him. We urge, however, that our citizens also exercise their rights in this field and prevent a special interest from usurping the powers of the public at large.

This is the only way to counter the Hoffa purge. The hundreds of thousands of interested, thinking citizens who refuse to let their rights be snatched away by a special interest group must act.

Those who cared enough to demand the Landrum-Griffin labor-management reform act by an unprecedented deluge of mail, those who resent the threats of a bully can help. To show this interest they must support those Congressmen Hoffa would purge.

A WAY FOR POPULAR PARTICIPATION

We honestly believe we are right. We were right to work for a law curbing a small but dangerous element in labor leadership that has perverted the movement for personal power.

We are right in banding together against the purge of a well-heeled special interest. We are opening the way for popular participation in a drive that will show it is not Hoffa, but the voters, the American people, who will name their Members of Congress next November 8.

This is the crux: do the voters endorse our action or do they not?

If those who agree with us do not register their convictions at the polls, then we are doomed to the purge Hoffa has decreed.

Have no doubts, Hoffa with his huge slush fund for this purge will succeed unless the people rise and prove that they are the true rulers under our form of government.

Federal-State Relationships

EXTENSION OF REMARKS

OF

HON. E. L. BARTLETT

OF ALASKA

IN THE SENATE OF THE UNITED STATES

Thursday, March 3, 1960

Mr. BARTLETT. Mr. President, I ask unanimous consent to have printed in

the Appendix a press statement issued by the New York State Commission Against Discrimination, SCAD. The statement makes reference to correspondence between the State Department and myself, which I initiated to clarify the position of the Department in a matter of primary concern to State officials. In the course of this correspondence, it became clear that the Department was not seeking to inject itself into the State matter, which involved the application of the New York law against discrimination.

There being no objection, the statement was ordered to be printed in the RECORD, as follows:

STATE COMMISSION AGAINST

DISCRIMINATION,

New York, N.Y., November 26, 1959.

Commissioner Elmer A. Carter, chairman of the State Commission Against Discrimination, announced today that the State agency has determined not to appeal a decision of Supreme Court Justice Henry Epstein which, last July 15, reversed a SCAD ruling which had granted an exemption to the Arabian American Oil Co. under which it was permitted to make preemployment inquiries as to religion for jobs in Saudi Arabia.

Commissioner Carter said that the decision not to appeal Judge Epstein's ruling was based upon recent information that tended to show that the U.S. State Department's attitude in the matter has undergone changes since 1956 when the original SCAD ruling was upheld. The original ruling was made in 1950 and subsequently sustained in 1956 by SCAD on the basis of representations by the State Department that a bona fide occupational qualification for Aramco's operations was in the best interest of the country.

Legal questions raised by Judge Epstein in his decision will be presumably resolved in an independent appeal from the decision now being undertaken by Aramco, Commissioner Carter said.

Elks Name Nine to John Brown Gallery of Fame

EXTENSION OF REMARKS

OF

HON. B. CARROLL REECE

OF TENNESSEE

IN THE HOUSE OF REPRESENTATIVES

Thursday, March 3, 1960

Mr. REECE of Tennessee. Mr. Speaker, on January 28 the Negro Elks National Education for Citizenship Banquet was held in Washington at the National Press Club. It was sponsored by the department of education under the leadership of one of my Tennessee constituents, Lt. George W. Lee, the grand commissioner of education of this great order that boasts of a membership of over 500,000 in the United States and many of the islands of the sea. The order is ably led by Robert H. Johnson of Philadelphia, the grand exalted ruler, with a woman's auxiliary headed by Mrs. Nettie Carter Jackson, of New York City, the grand daughter ruler.

Merit awards were given to:

Mrs. Christine Ray Davis, staff director, Committee on Government Operations, House of Representatives. For overcoming obstacles of race and sex and striding unerringly into a position of unusual responsibility.

B. CARROLL REECE, Congressman from Tennessee, for a long and distinguished career marked by unselfish devotion to his people, a heroic stand for freedom for all citizens under trying circumstances, and service to war veterans.

E. Frederic Morrow, administrative officer for special projects group, Executive Office of the President of the United States. For bringing excellence, enthusiasm, and restraint to the pinnacle of the Negro's climb in the elastic field of government and for laying the stepping stones upon which Negro youth may aspire to tread.

PAUL DOUGLAS, Senator, State of Illinois, for constant and unwavering devotion to the cause of freedom of all people and for setting a standard of excellence for the corps of elected officials of the United States.

Val J. Washington, director of minorities, Republican National Committee, for demonstrating a type of leadership in a great political party which serves to radiate to Negro America an inspiration to great achievement.

Lt. Col. Daniel James, Jr., air staff officer, directorate of operations, the Pentagon. For heroic leadership as a flight commander in World War II which led to a top level assignment in the Pentagon and extraordinary achievement in the service of his country.

Simeon S. Booker, Jr., chief of the Washington bureau, Johnson Publication. For unusual perception in the sensitive field of journalism which has brought to thousands a vital understanding of the Nation's processes of self-government.

A. Philip Randolph, international President, Brotherhood of Sleeping Car Porters. For standing stalwart as the laborer's advance guard and fighting gallantly against any odds toward the achievement of full equality and uncompromising dignity for the workingman.

KENNETH B. KEATING, Senator, State of New York. For devoted and dedicated service to the United States as Congressman and Senator from New York and for providing our Nation with an enviable brand of leadership in one of its most trying periods.

It is fitting that this great occasion should be recognized, it primed the wells of enthusiasm and stirred the pride of all the people strikingly devoted to our country and its great history.

The junior Senator from New York and I have not at all times agreed on matters that touched upon the delicate and extremely complex human relations question, but we are in full agreement on the deep admiration of the Elks' scholarship program. Many are not aware of the Elks' accomplishments in providing scholarships in American, Canadian, and Mexican colleges and universities for young men and women.

Since World War I, this organization has provided some 900 scholarships at a cost of \$1,500,000. Currently it has 46 youths getting higher education in some of the best schools, and during the past year it has been carrying on a campaign, under the direction of its grand commissioner of education, the capable George W. Lee, of Memphis, to raise

\$100,000. The campaign will end in August at the Chicago Grand Lodge where scholarships in large number will be handed out.

This remarkable self-help effort is a good example of what Negroes can do for themselves under intelligent leadership without relying upon others for alms. It is something of which all of us should be proud, and certainly no other Negro group has even approached it.

The progress of any group is gaged by the proportion of educated people in its midst who are equipped to avail themselves of the opportunities presented; ignorant, uneducated people can have all the civil rights there are and still not advance themselves very much.

Under unanimous consent I include Senator KEATING's address and the one delivered by A. Philip Randolph, vice president of the AFL-CIO, to be printed in the Appendix of the RECORD:

CIVIL RIGHTS LEGISLATION—A CHALLENGE FOR 1960

(Address by Senator KENNETH B. KEATING, Republican, of New York, at a banquet given by the I.B.P.O.E. of W., upon the occasion of receiving a Merit Award at the National Press Club in Washington, D.C., January 28, 1960)

Thank you very much for this great honor. I shall deeply treasure this merit award, and it will occupy a prominent place in my Senate office. I know personally of the dedication to freedom and justice and of the outstanding courage and integrity of the others you have tonight singled out for this recognition. I am very proud to have been joined with this distinguished group of Americans to receive your award.

I want to discuss with you tonight one of the most important problems before this session of Congress—the urgent need for new civil rights laws.

The present civil rights situation in the country—despite much progress in recent years—is deplorable. The constitutional dream of equal justice and equal opportunity for all Americans has been shattered by a lynching, by scores of school and church bombings, by mob action against children seeking a proper education. Groups such as yours multiplied a thousand times in assemblies across the Nation can justly cry out for action against these shocking betrayals of our democratic heritage.

I believe that no American's liberty is safe unless the liberty of all Americans is protected. There can be no second-class citizenship under our Constitution. There can be no differences in the rights of men created in the image of God.

Throughout my career in Congress, I have fought to strengthen the civil liberties of the people of America. Discrimination against any American because of his race, religion, or national origin is abhorrent to me. It is an ugly, evil practice. My love for my country, my pride in its heritage, my complete devotion to its democratic ideals, compel me to struggle against those who would undermine our freedoms. The lynching mobs, the bomb throwers, the hatemongers are worse than ordinary criminals. These men betray America. In every sense, they are subversives who would destroy our laws and violate the most sacred principles of our precious Republic.

It has been almost 6 years since the Supreme Court's decision declaring school segregation unconstitutional. Yet, in five States—Alabama, Georgia, Louisiana, Mississippi, and South Carolina—not a single Negro child has been admitted to an all-white public school. At the same time, thousands of children, white and colored, have been deprived of all schooling for periods ranging up

to several months. Other thousands of schoolchildren have been forced to use inadequate makeshift facilities. It has been estimated that over 1 million pupil days of schooling have been wasted just in the last 2 years.

The extremists have resorted to every kind of device to frustrate compliance with the law of the land. In some States, a rash of pupil placement laws have been enacted, in others automatic school closing statutes, and in still others a system of allegedly private schools supported by State funds has been instituted.

Can you imagine all of this frantic activity to keep a colored child from sitting next to a white child in a classroom? The children are the immediate innocent victims of a blind prejudice nurtured by years of unremedied, unequal treatment of Negroes. But the whole country ultimately suffers from this madness. We need a better educated America to meet the challenges of our age. American children forced to get their lessons in makeshift schoolrooms in buildings with inadequate facilities will not readily develop into the top scientists and other leaders of the future. The antics of the die-hard segregationists in the South are a blow to our hopes for these youngsters.

Despite some progress in these last 5 years, due in no small measure to the efforts of the NAACP, and the optimism I have that we can improve these conditions, I am frankly alarmed at the damage already done in this area. We have the right to be impatient about the slow progress in carrying out the Supreme Court's ruling. I do not intend to sit back and watch the Court's mandate die of old age.

It has been more than 2 years since passage of the Civil Rights Act of 1957—the most far-reaching provisions of which dealt with the enforcement of voting rights. Yet where do we stand in the field of voting rights today? Here are some facts from the report of the Commission on Civil Rights issued in September 1959—the second anniversary of the 1957 act.

In many Southern States, less than 25 percent of the eligible nonwhite residents are registered to vote.

In Mississippi, less than 4 percent of the 41 percent of the voting age population which is Negro, is registered to vote. In 14 counties in Mississippi with a Negro population of voting age of over 50,000, not a single Negro was registered.

Are these incredible figures the result of indifference on the part of Negro citizens in the South? Let's look again to the report of the Commission for the answer:

A Negro minister in Florida who suggested from the pulpit that Negroes should register and vote was subsequently denied a small bank loan despite the fact he had a highly solvent co-signer.

Negro citizens in Sunflower County, Miss., in which only 114 out of 18,949 voting age Negroes are registered, stated that when they tried to register they were turned away. A Negro public school principal in Charleston, Miss., which is in Tallahatchie County, Miss., in which not one of 9,235 voting age Negroes is registered, testified that he tried to register 16 times, twice a year, for 8 years. Every time the registrar simply told him he could not register.

There are many, many other similar illustrations of flagrant denials of the right to vote to Negro citizens in the South. Many of these Americans actually were fearful of recounting their experiences to Commission investigators because of fears for their physical and economic well-being. One Negro man in Florida, told an investigator that he refused to be interviewed, "because they would bomb my (business) out of existence if I ever talked with you." Can anyone dispute the deterrent effect of such fears on Americans who want to exercise their citi-

zanship rights? These facts should make us all a little bit ashamed, because what they add up to is proof that a part of America is unable to participate in our democratic way of life.

I pledge to work unceasingly in this session of Congress for measures which will guarantee equal opportunity to all Americans. I will not settle for promises, phony assurances, or weak proposals on any of these issues. We had too many of these in the last session of Congress. In a bill introduced by the majority leader, it was actually proposed that these hard won legal rights be made subject to conciliation; that the whole subject be treated like another form of collective bargaining. Well, I hope we never reach the stage in this country when the judgments of a court or the requirements of a law are made subject to review by a director of a conciliation service. The recognition and enforcement of a person's civil rights it not a subject to be bargained about.

Now what do I mean by effective civil rights legislation? First of all, I mean a bill which will deter lynching for all time by providing a discretionary death penalty for deprivations of civil rights resulting in the murder of the victim. Under the present law, a person who, under color of law, deprives a citizen of his civil rights, can be imprisoned for not more than a year no matter what injury results. These penalties obviously are inadequate in lynching cases and must be increased. We cannot allow another Charles Mack Parker case to go unremedied.

Secondly, I believe it is essential that we enact legislation to give the Attorney General the right to prosecute civil actions in all cases involving denials of equal protection of the laws and not just in voting cases. This power is needed particularly in school cases. The NAACP has done a magnificent job, but the Government has its own responsibilities in this area. This was part III of the 1957 act as it passed the House of Representatives. I am now more convinced than ever as to the merits of this provision.

I have never been able to understand the deep hostility with which this provision is viewed by some Members of the Congress. Under a host of Federal statutes the whole weight of the Federal Government, including the legal resources of the Department of Justice, are made available to enforce Federal laws which certainly are no more significant to our national welfare than the provisions of the Constitution involved in equal protection cases.

The FCC, for example, will argue a case all the way up to the Supreme Court to defend the granting of a license to a broadcaster or a rate increase to the telephone company. The NLRB will exhaust every available remedy for the benefit of an employee whom it finds has been subjected to antiunion discrimination by his employer or coercion by his union. The ICC will defend shippers from unfair rate charges without any investigation of the ability of the shipper to prosecute his own claim. In all these cases, there is a public interest in the enforcement of the law which we have agreed, without too much controversy, makes it appropriate for the Federal Government to intervene. Is there any less public interest in enforcement of the law most important to our country, the Constitution?

But even enactment of an antilynching law and the grant of authority to the Attorney General to bring civil injunctive suits would not do the whole job.

We also need a law to guaranty prompt relief to otherwise qualified citizens who are being denied their right to vote by reason of race, color, religion or national origin. The appointment of temporary registrars has been suggested as an administrative remedy for these cases. Just 2 days ago,

the Attorney General, after conference with the President, submitted a new proposal under which the courts would appoint U.S. voting referees. I shall favor whichever procedure appears to me, after hearings, to promise the most effective relief to the victims of State voting deprivations. The registrar proposal may have some advantages, but the Attorney General's proposal has the distinct merit of being applicable to voting as well as registration and is more closely related to the existing framework for prosecuting such cases. Actually there is no reason to consider these proposals mutually exclusive. We may need both as an administrative and judicial remedy to do the whole job. The best solution may be a dual approach, and I am now drafting a new bill which will combine the best features in both proposals.

Experience with the Kaspers and Faubuses in Little Rock and other cities shows a need for a Federal law to punish those interfering by force with court orders in school cases. The deplorable rash of bombings of schools, churches and synagogues, and homes in the past several years shows the need for a Federal antibombing law. The difficulties with which the Department of Justice and Civil Rights Commission have been faced in obtaining documentary material needed to evaluate cases and policies in this field shows a need for Federal laws requiring the preservation of voting records under court process if necessary. The difficulties which local school boards have had in attempting to carry out, on a voluntary basis, desegregation plans show a need for a Federal grant-in-aid program to help local communities carry out such programs. The impact on the children of servicemen in areas in which the schools have been closed in defiance of Federal law, shows the need for authority to provide extra educational facilities for these innocent victims of community desegregation controversies. And there is no justification for not acting on the President's request to give his Commission on Nondiscrimination Under Government Contracts, full statutory authority.

These are the outlines of a program which would justify the name, civil rights. If these proposals sound far reaching, it is only because so much needs to be done. In light of the facts they are in reality very moderate steps for furthering the liberty and equal opportunity of all our citizens.

It will be a hard struggle to get this kind of program enacted in this session of Congress. Members of Congress in key positions in the House and Senate will be trying to block our efforts. A filibuster will have to be overcome. But there is no finer mission for the energies of Americans. I pledge my complete dedication to the task. With your help and encouragement, we can succeed.

ADDRESS BY A. PHILIP RANDOLPH AT THE NATIONAL EDUCATION FOR CITIZENSHIP BANQUET OF I.B.P.O.E.W., NATIONAL PRESS CLUB, WASHINGTON, D.C., JANUARY 28, 1960

My dear friends, first of all permit me to say that I am honored for the privilege to share in this occasion.

We are here because Negroes are not yet fully free. Negroes are not yet fully free because the Civil War revolution was never completed. The Civil War revolution was never fully completed because the new industrial and financial rulers of the North considered it unnecessary since the Union had been saved.

Because of the fact that we are in the midst of a crisis in the civil rights revolution now underway, it is well for us to look back to note and evaluate the crisis which followed the close of the Civil War revolution, during which time the major rights of Negroes were systematically nullified and virtually cast into the ashcan of history.

It is important to point out that in every crisis there are two major forces: (1) Danger; (2) opportunity.

There is always danger that the cause may be lost and there is opportunity that it may be won. Whether it be lost or won depends primarily upon the policy and action adopted and carried on by the people who have a stake in the cause of freedom and human justice.

As another example of political indifference and unconcern we have the hideous experience of a brutal murder in Mississippi, with the killers identified, their premeditation and conspiracy known in full detail, but neither State nor Federal Governments able even to punish them for disorderly conduct. An utter and complete breakdown of law disgraces the Nation, terrorizes its citizens, and neither party has yet proposed that a Federal antilynch law be enacted.

The list could be extended. The heart of civil rights legislation, section 3, still remains in a congressional pigeonhole. An FEPC law to extend economic opportunity and security for Negroes is still another forgotten bill.

Why have reactionary forces been able to frustrate, delay, and obstruct not only these urgently needed laws but the enforcement of the Supreme Court decisions of 1954 as well?

The answer is simple. This tragic condition proceeds from the fact that the leaders of nations do not act from motives of pure justice. Instead, they seek to maintain a peaceful balance amongst the contending forces that comprise the nation. No group knows this better than southern reactionaries and their northern allies. They have always employed the technique of creating confusion and diversions, with the object of damaging the peaceful pursuits of government and the social order. Their object is to compel the liberal forces to submit if they want a peaceful and quiet community. Tragically, liberal forces have submitted in their quest for an end to disruption.

The pattern of reaction since Reconstruction days has been based on these factors:

1. The Government and the liberals speak of justice and progress but more profoundly desire internal peace.
2. The Government and liberals finally yield to the demands of those most capable of creating maximum pressures and social discord.
3. That Negroes are not capable of creating counter pressures that can be more forceful and embarrassing to Government than those reaction create.

To state the condition suggests its solution. Our task is to find the nonviolent ways to bring direct and powerful pressure to bear upon Government, offsetting and countering the pressure of reaction.

We cannot permit the Nation to seek a false social serenity by sacrificing the human rights and needs of millions of its citizens. We must make it clear that we will not permit such a false peace to exist but will create and conduct a wide variety of actions constantly, so that social calm will not prevail until our demands have been met.

We must make it clear that if reaction can win by creating discord in the community, peace cannot be found by abandoning our rights to reaction because we shall not be quiet, polite, or content until justice is firmly in our hands.

We must make it clear that democracy cannot be mutilated while we sit passively, silently, and submissively.

To this end, I intend to call for marches on the political conventions of both major parties, Democratic and Republican. The Negro people must stand up before these conventions and say to the Nation and the world, "We want to be free now."

The concrete demands and just grievances of the Negro people presented as they march before these conventions is a weapon that will circle the globe as a moral missile.

Such a project, the first of its kind in American political history, will mobilize the power and resistance within the people and will demonstrate that the Negro is aware that he holds the balance of power in many key States. It will give the parties and candidates clear warning that we intend to use our ballots to support only those forces that will take a firm and unequivocal stand for justice now.

Our marching will furnish clear warning that if rash promises are not kept we will march again and again to State capitals and to the Nation's Capital.

We are challenged to demonstrate that when we are contemptuously brushed aside we will retaliate. We are challenged to prove that when political leaders and parties yield to reactionary pressures we, too, have the will, the determination, and the capacity to inflict penalties politically. We are challenged to prove that Negro interests cannot be dismissed or ignored with impunity.

We can meet these challenges by marching at the conventions to declare to the Nation and the world that we shall never, never relax our pressure until full freedom is won.

The University of the Air FAA Center

EXTENSION OF REMARKS

OF

HON. A. S. MIKE MONRONEY

OF OKLAHOMA

IN THE SENATE OF THE UNITED STATES

Thursday, March 3, 1960

Mr. MONRONEY. Mr. President, Oklahoma City and Oklahoma generally are especially interested in the Federal Aviation Agency because the great FAA aeronautical center is located at Will Rogers Field. A sprawling jet-age campus there accommodates FAA's schools in air safety and air traffic control and other FAA operations. Temporary headquarters have been set up at nearby Norman, Okla., for the agency's new Civil Aeromedical Center.

Oklahoma's pride in the FAA Center and in the achievements of our very able Federal Aviation Administrator, Gen. Elwood R. "Pete" Quesada is made very clear in an editorial from the Oklahoma City Times of February 23, 1960.

I want to add my own praise for the great accomplishments of the center and for the admirable leadership of Pete Quesada.

I ask unanimous consent to have printed in the Appendix of the RECORD the Oklahoma City Times editorial.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

ANSWERS AT OKLAHOMA CITY

"Pete" Quesada, head of the Federal Aviation Agency, is pictured in a recent magazine story as a "temperamental, mail-fisted, blunt-talking ex-fighter pilot," but he is getting such fine results out of the newly created Agency that he has disarmed most criticism.

Oklahoma City has special interest in his administration, not only because he is well known in the city but because the FAA facility at Will Rogers Field is the second largest concentration of FAA employees in the world, and is expected to be the largest.

The most significant aspect of Quesada's

dynamic leadership in FAA is that this Agency is making a head-on attack on the most tragic problems in aviation, such as the recent rash of air disasters, with symptoms of internal bombing, and the accidents involving seemingly inexcusable midair collisions which have occurred from time to time over the years.

The sudden coming of the jet age has made the problems infinitely more difficult, and the fantastically increasing air traffic would make the barriers seem almost insurmountable except to men of courage, know-how and imagination.

A dozen planes take off and land every minute at the 567 U.S. airports, and those airlines alone carry 152,300 passengers more than 2,200,000 miles a day, zigzagging in all directions.

The old CAA and CAB performed well during their tenures, but it soon became evident that a comprehensive, airtight control was essential, so FAA was designed to replace them and streamline the problem into workable proportions.

When "Pete" Quesada began operations he naturally incurred some friction, including that furnished by air pilots organizations. However, he turned up examples of practices which were too easygoing for the modern age. For instance a Boeing 707 started into a near fatal dive while the pilot was out of his cockpit pleasantly chatting with the passengers. A fatal accident with 15 lives lost was revealed, in which it was found that the captain had not taken the required medical examination for 3½ years, was 2 months overdue on the required proficiency test, and was therefore legally unqualified to fly. The company records for which he was responsible were falsified to conceal these facts.

Quesada says that between 50 and 52 percent of our air accidents are attributable to human error, and this is much larger than any other single cause.

The first method of guarding against accidents is to improve cockpit discipline and airplane maintenance. The fundamental requirement is that a pilot must remain in his cockpit during flight.

Other criteria of proper conduct have to do with making an instrument approach to an airport in bad weather. The pilot must have in front of him the procedure that is applicable to that particular airport, with regard to the "fix," with altitude implications.

One of the newly promulgated regulations has to do with the age of pilots.

While of course it is true that some people age faster than others, it is obvious even to the layman that there is need for fairly rigid standards, with arbitrary age limitations, otherwise favoritism would be charged.

The health factor is being properly stressed at the Oklahoma City installation. Temporary quarters for this study are in the south Navy Base at Norman, about 20 miles south of Oklahoma City.

The foregoing angles give only an indication of the vast importance and scope of FAA. Quesada has a brilliant record of achievement to back him up. In Congress he has been greatly aided by Senator Mike MONRONEY.

Censorship by Taxation

EXTENSION OF REMARKS

OF

HON. HALE BOGGS

OF LOUISIANA

IN THE HOUSE OF REPRESENTATIVES

Thursday, February 11, 1960

Mr. BOGGS. Mr. Speaker, the right of the people to petition the Congress

of the United States is as old as the Constitution itself.

Today the scope and pace of our activity in Congress and other legislative bodies is such that infinite care must be exercised to prevent our being insulated from public opinion as we legislate for the good of all of our people.

To hamper by any means, insidious or unintentional, the open and candid expression of opinion by our people at the forums provided by the Constitution would undermine the Democratic processes by which we remain free.

The economic system under which we live today is shaped by political action through legislation.

A union member, a business owner, a stockholder, a customer, each in his or her own economic capacity has a vital interest in our activity as Members of Congress.

Therefore, Mr. Speaker, on May 14, 1959, I introduced H.R. 7123, a bill to amend section 162, the "Ordinary and Necessary," business expense section of the Internal Revenue Code of 1954.

My bill, H.R. 7123, would amend section 162 of the Internal Revenue Code, which permits tax deductions for "Ordinary and Necessary" business expenses, by adding this short paragraph, which reads:

Expenses lawfully incurred in supporting or opposing or otherwise influencing legislation in the Congress or in a States legislature or in the legislative body of a county or other local governmental agencies or in any submission of proposed legislation to the voters, shall be allowed as proper deductions from gross income.

The reason for this legislation is quite simple and the urgent need for it arises from the fact that present internal revenue service regulations very likely may prevent such tax deductions to the great detriment of our Democratic process. This regulation provides that expenditures related to a business or the production of income are nonallowable for tax purposes if for "lobbying purposes, for the promotion or defeat of legislation including the support of or opposition to any candidate for public office, or for carrying on propaganda including advertising, related to any of the foregoing purposes."

Within the Government itself is a huge and highly active body of protagonists for one cause or another, for one legislative act or another.

Silenced by restrictions, no facet of our economy can carry on a trade or business on a basis of equality with those working the other side of the street.

The Internal Revenue Service regulation at issue, unless clarified by congressional action, very likely may prevent tax deductions of such expenditures related to a business, or payments to a union organization, or business association.

Carried to its ultimate conclusion, a purchaser of advertising in a newspaper or magazine, a local chamber of commerce, a trade association, national, State, or local education and civic or voters groups all may be denied the right of professional and political activity or expression of views which is and must remain the sinews of our democratic way of life.

Mr. Speaker, no tax law, or administrative interpretations should be permitted to stand that would impair the ability to communicate freely to all sections of the public or elected representatives, views on legislation affecting the economic lives of our citizens, either through advertising, membership in an organization, distribution of literature or any other form of lawful communication.

If we dilute the right of our citizens to petition for good laws by punitive taxation we deny them the right of self-protection from damaging and destructive legislative action.

We cannot legislate in a vacuum.

Individuals, unions, companies, and associations should have their legal rights protected in communicating with the Government or the public without being labeled "propagandists."

We cannot, Mr. Speaker, compel in justice our taxpayers to defray the whole cost of governmental pressures for legislation without a compensating business tax reduction to offset the costs which they must incur in their own defense against policies with which they disagree, or may affect their rights to do business or stay in business.

It is all very well for some to say tax sanctions imposed on communicating with Members of Congress, either directly or indirectly, do not abridge first amendment rights, but simply makes the cost of such activities nondeductible for tax purposes. However, those who hold these views, if they be practical men, realize that the imposition of punitive taxes is one of the most effective deterrents to the exercise of the constitutional rights of every citizen to freely express his views. The free expression of views can hardly be deemed as against public policy.

This same conclusion was reached by the U.S. Supreme Court in *Speiser v. Randall*, decided in 1958 and found at 357 U.S. 513. In this case the Court said in part as follows:

It is settled that speech can be effectively limited by the exercise of the taxing power . . . the denial of a tax exemption for engaging in certain speech necessarily will have the effect of coercing the claimants to refrain from the prescribed speech.

On December 29, 1959, the Internal Revenue Service, after full notice and 2 days of public hearings, in which there was wide participation, issued these final regulations governing the deductibility of ordinary and necessary business expenses, incurred in activities connected with the promotion or defeat of legislation, directly or indirectly. Regardless of whether the activity takes place in Congress, a State legislature, a town council, or whether the issue has by referendum or initiative petition been put squarely up to the people to legislate. In addition, this regulation would make nondeductible, in part at least, dues paid to a labor organization or a trade association if such organization or association engages in any of the named but undefined activities.

Lastly, the regulation would make suspect as "propaganda" any advertisement or similar public expression of views

which an Internal Revenue agent may decide is in some way connected with the promotion or defeat of legislation. To be suspect, an advertisement would not have to mention a specific bill, or even deal with any specific matter then pending before the Congress or a State or local legislative body. Similarly, any editorial expression by a newspaper or other public communications media relating to affairs of Government could be deemed "propaganda" with resulting tax consequences.

Still another anomalous situation has arisen in connection with a representative of a business, business association, or a labor organization voluntarily appearing before a committee of the Congress or other legislative body. Under the Federal regulation of lobbying act, passed by Congress in 1946, mere appearances before a congressional committee are exempted from the registration and reporting provisions of the act. However, under the new IRS regulation the expenditures incurred in such appearance may not be a proper tax deduction even though the company or organization paying the expenses of such witness have a direct and vital economic interest in the subject being considered by the committee. This could inhibit and dry up express viewpoints and put out of action legitimate organizations contributing much to our economic and moral well-being.

At hearings before the Internal Revenue Service, some 45 organizations, including the three major labor organizations, appeared to protest the regulation. In addition, more than 150 other groups filed statements objecting to this invasion of their right to petition and express their views on matters governmental.

The Internal Revenue Service tried to do a thorough and conscientious job in issuing this regulation. Without the benefit of precise guidelines laid down by the Congress in this field, they have been very seriously handicapped in arriving at a fair and equitable solution.

Concern over this problem has been brought about by the ever-increasing involvement of all levels of government in the daily activities of each and every citizen, of each and every State, of each and every country, school district, town and city in our great country. Because of this growing governmental involvement, every citizen feels it more and more necessary to petition his Government and his Representatives in connection with many of his business or livelihood problems. To add to his already almost overwhelming problems by denying him some modicum of tax relief for expenditures he has made in attempting to gain help in the solution of these problems or the economic survival of his business is manifestly unfair, undemocratic, and punitive.

So that my colleagues will have no misunderstanding, the application of this Internal Revenue Service regulation is of little or no significance as a revenue-raising device. This has been acknowledged by high officials of both the Internal Revenue Service and the Treasury Department. What is involved

is punitive taxation on certain activities which are highly necessary to out-sound democratic processes. When the right of free and continuous access of all of the people to their elected Representatives is hindered or stopped because of punitive and unintended tax regulations controlling business expenditures, then legislative clarification is imperative.

Without precise and definite guidelines laid down by Congress, the Treasury Department will find it impossible to achieve a fair, nondiscriminatory, permanent administrative solution to this vexing and growing problem.

The purpose of the revenue laws is to derive money to support the Government and pay for required public services. Tax laws should not be utilized for penalizing any taxpayer who lawfully wishes to express his views on legislative problems.

It is for these reasons that I introduced H.R. 7123 and urge my colleagues in Congress to give this bill their urgent support and sponsorship on a thoroughly nonpartisan basis.

Delhi Tech Forums—A Unique Method of Building Effective Citizenship

EXTENSION OF REMARKS

OF

HON. JACOB K. JAVITS

OF NEW YORK

IN THE SENATE OF THE UNITED STATES

Thursday, March 3, 1960

Mr. JAVITS. Mr. President, on Thursday, February 25, 1960, His Excellency William M. Q. Halm, Ambassador of Ghana to the United States, visited the campus of the State University Agricultural and Technical Institute at Delhi, N.Y., to participate in an educational event of unusual merit. The General Education Division of Delhi Tech, with the cooperation of the student union, is sponsoring a forum series on "World Trouble Spots and the United States," during the course of which the Ambassadors of Ceylon, Ghana, Pakistan, Israel, and the United Arab Republic will present their views on regional problems and spell out the role they believe the United States should play in their respective regions.

The unique feature of the Delhi Tech forums is the opportunity given to each Ambassador to spend considerable time meeting informally with small groups of students enrolled in the international relations and economics courses at the college. Each Ambassador also addresses a large audience of faculty, students, and area residents.

Meeting with foreign ambassadors provides Delhi Tech students with an opportunity to exchange ideas, develop insight, and gain an understanding of the attitudes and values of people the world over. This person-to-person approach to the study of international relations encourages students to critically analyze and examine facts before formulating opinions on the vital foreign policy questions of the day. In a

democracy such as ours, an informed public opinion is vital, since the objectives of United States foreign policy must have the approval of our citizens.

My purpose in calling attention to one of the instructional techniques used at Delhi Tech is to point up my belief that our colleges and universities must continue to provide our young people, in ever-increasing measure, with the theoretical and practical intellectual tools essential to informed and intelligent citizenship. The State University Agricultural and Technical Institute at Delhi is making a notable contribution to the pursuit of effective citizenship.

Mr. President, I ask unanimous consent to have printed in the Appendix of the Record the excerpted address of His Excellency William M. Q. Halm, Ambassador of Ghana to the United States on "The Obligations and Reasonable Demands on the United States by Africa." This address was delivered to the third Delhi Tech forum on Thursday, February 25, 1960. Ambassador Halm was introduced by Prof. Edmund Clark of the college faculty.

There being no objection, the address was ordered to be printed in the Record, as follows:

What has happened in Ghana since 1957 is symbolic of what is yet to happen in other parts of Africa, despite the many diversities of that continent.

First of all, what is this development that gives coherence and similarity to this great continent with a territory four times the size of the United States inhabited by no less than 220 million people of various races? It is simply this—the assertion by Africans of their right to the basic human values that have given motivation to the whole of human history—freedom, enlightenment, development, dignity. Whether in west or east Africa, north, central, or south Africa, the struggle which has sparked off the conflagration, to some a symbol of hope, to others a sign of despair, is simply the struggle for these human values. We see this struggle in Africa as a universal historical process. It is the same struggle that propelled Britain from Roman colonization, through the Norman conquest, through Magna Carta, the bill of rights, and the reform bill to the statute of Westminster. It is the same spirit that produced the Mazzinis and Garibaldis of Italy, Kemal Ataturk of Turkey, and the Founding Fathers who established this great Republic of yours.

But in Africa this historical process has long been denied its natural fulfillment because of considerations based on race. The African, it is alleged, is primitive because he is African; he has no history or civilization because he is African; his intelligence quotient is zero because he is black; he is content with what he has, does not complain because he is black; he cannot govern himself because he is African; he is alleged to be the victim of superstition and the terrors of nature and therefore the legitimate objective of missionary zealots, commercial adventures, and colonizing imperialists, always to be kept alive with just so much food, shelter, perhaps clothing; the unwanted servant of a powerful master race made more powerful by technological progress erroneously identified with civilization.

What the critics failed to emphasize was the long record of history and enlightenment behind many of these African states: Egypt has had an uninterrupted civilization for more than 6,000 years. The history of Carthage and its relation to the history of

Rome is well known to Latin scholars. In the Middle Ages the great Negro empires of Songhai, Melee (now called Mali) and Ghana flourished in the Niger basin at a time of historical darkness in Europe. They had seats of learning at Sankore and Timbuctoo to which men came from Europe in search of learning. They had a well-organized society with an aristocracy founded on intellect and culture, fine architectural forms, music, and dancing. In our own Ghana, long before the white man came, we had developed advanced forms of social, political, and religious life which so surprised the Europeans with their basic democratic content, that it was made the basis for a long time of the so-called system of indirect rule in which process they destroyed the democratic basis of it and paved the way to some of our present problems. Further south in the Rhodesias, the ruins of Zimbabwe have been recognized as relics of a high form of Bantu civilization before the white man came. But there is always almost pathological reluctance on the part of some Europeans, as Professor Dike, of Nigeria, says, even when presented with the evidence to accept the fact of African civilization and culture.

I have prefaced my talk with the foregoing remarks because of the vital emotional part Africa's past has played in the independence movement, because much of this movement is regarded not as the dawn of something new but the restoration of an ancient heritage which was temporarily lost, a recovery of our dignity, culture, value, and self-development—qualities which Africans think they cannot secure now till they have secured the key which is freedom. Thus the great dictum by the Ghana Prime Minister which echoes now all over Africa, "Seek ye first the political kingdom and all other things shall be added unto you." This is what makes 1960 the "magic year of African destiny." How do we see the position and obligations of the United States from such a background?

Let me describe first of all what image the United States has traditionally presented to Africa. Africans have seen and dealt with a number of white nationalities. Having been subjected for such a long time by the Europeans they have perhaps been in a better position to judge accurately the temperaments and attitudes of these nationals better than most. Your Frenchman comes in and straightaway proceeds to create a little French elite wedded to French logic and French ideas of liberty, fraternity and equality. He mixes intimately with this class and leaves the rest to stew in what he regards as their strange mysteries and practices.

Your Englishman comes in, imperially sporting a cane and wearing a khaki helmet, is condescendingly courteous to the local dignitaries, says how very interesting the practices of Africa are, withdraws into the aloof settlement of an English lord on his estate, leaving the practices to develop, but how he cannot say. The German stamps everything with teutonic order and regimented progress willy nilly.

Your American comes in, goes everywhere, anytime, enjoying it all, but damning everything and everybody. This is, of course, on the people-to-people level, but nevertheless diplomatic and official relations too have thrown up the modern character known as the "Ugly American."

However, there is another image of American which is more important for Africa. There is probably not a single educated African who is not familiar with American history. Although most of us come to American history via British Empire history, when we study the War of American Independence or "The great Rebellion" as the British choose to call it, we soon come to know the

truth and admire the anticolonial nature of your independence movement. We see George Washington as the great leader he was, a nationalist at heart and not a partisan in politics. We learn by heart the great principles enunciated by Jefferson and the other Founding Fathers and feel the heart-throb which these noble words evoke: "We hold these truths to be self-evident—that all men are created equal; that they are endowed by their Creator with certain inalienable rights; that among these are life, liberty and the pursuit of happiness." We remember Washington's "Farewell Address" in which he warned the people earnestly against parties "with particular reference to the founding of them on geographical denominations" because of "the baleful effects of the spirit of party generally." We learn of the period of strain on the unity of your nation which precipitated the Civil War and the conclusion we come to after all this study about the position of this country is * * * "Here is a great country whose history, constitutional development and national political philosophy will make it sympathetic to the present struggle for freedom in Africa."

This political position of the United States in the World today as we see it is further reinforced by the great material wealth and power which it possesses. American science and technology, wedded to rugged individualism has created in this country what is probably the highest standard of living in the world. You have a total national product of some \$485 billion and a per capita income of some \$1,180 as compared with Ghana's \$194 and an average of \$120 for the whole of Africa. While I do not consider it to be my legitimate function to tell you what the position and obligations of the United States should be, I think it is necessary for you to learn what Africa's hopes and expectations are and what we think prevent the fulfillment of these hopes and expectations from America.

As I have said the priority No. 1 struggle in Africa today is a struggle for independence all over the continent. Any power which advances the success of this struggle will be seen as the friend of Africa. Any power which does less than this will appear otherwise in African eyes. Can such a position and obligation be assumed clearly and definitely by the United States? So far the evidence points to the negative. True, the United States, has, even if belatedly, hailed the independence of new nations in Africa. Ghana was recognized by the United States without any difficulty; so was the Sudan. There was, however, a dragging of feet with regard to Guinea, an example which typifies the main difficulty of the United States in this respect—its position in the cold war.

The United States as leader of the so-called Western Powers, is engaged in an ideological conflict with the East under the Soviet Union. Because of the need which the United States feels of the alliance of these Western Powers it is handicapped in its capability of declaring its support for the colonial territories held by these metropolitan powers in Africa. This compromises the United States very greatly in the eyes of Africa. Even on the ideological level, the United States is forced into strange bed-fellows, for who can honestly say that Spain, Portugal, France, and Belgium, to mention a few, are democratic countries, in the sense in which Americans say they understand it, and who can say that the colonial policies of these countries in Africa are democratic? What is it that prevents the United States from coming definitely to the side of freedom in the present struggle which is taking place in the Central African Federation, Kenya, the Union of South Africa, and Portuguese territories?

The present impression created by America is that it has no African policy even if it

has an African Division at the State Department because it persists in looking at Africa through the eyes of either London, Paris, Brussels, or Moscow. Whatever independence has been achieved in Africa has been achieved by Africans themselves without help from outside. On this political level, therefore, although the obligation of the United States is clear to us, there is not likely to be any reasonable demand that can be made by Africa upon the United States, in view of its known position in the cold war.

There could, however, be in the United Nations a field in which the United States could exert pressure generally on the metropolitan powers in debates or questions involving racial discrimination and human rights. But there is a far more important field politically in which the position of the United States places certain obligations upon it and upon which reasonable demands could be made by Africa on the United States. It is this. Most of the emerging nations usually emerge with a very strong one-party system of government which appears to yield more power than Americans are willing to understand. In Guinea, for example, there is only one party. In Ghana there are two parties but the Government Party is firmly entrenched. Americans (not the American Government) are apt to jump to the conclusion from this that there is dictatorship in the country.

Africa has the right to remind Americans of their own early history, in this respect. Washington did not consider himself a party man and even advised against party politics. Lincoln had to fight the South in order to impose the Constitution upon that part of the country and thus preserve the Union. It was not for nothing that these two American patriots did what they did. In the same way it must be recognized that these African nations have peculiar problems in preserving unity which often call for drastic legislation in the interest of national unity and the preservation, indeed, of their newly won independence itself. Nationalist movements and revolutionary movements are often an amalgam of various forces which on the attainment of the immediate objective, tend to want to knock each other out. Knocking each other out is a risky thing for a new nation and must therefore be prevented at the cost of anything else. The first task of any government is to govern.

Secondly, the forms of democracy must not be confused with the content of democracy. There is great democracy in Ghana today, even if we do not have the forms you are used to in America. Moreover, democracy is not a static thing. There are many intelligent people today who would deny that you have democracy in America. All life is a series of social change, and political experiments must be seen in their overall objective rather than their immediate forms only. Institutions are the products of society and as such different societies will produce different institutions. In judging and criticizing these young nations, therefore, we expect your tolerance, understanding, even sympathy, not sweeping generalization and condemnation.

So much for the political demands that Africa can make upon the United States. What are the economic demands which it can reasonably make? This is very important, because it is probably here that the United States is in a position to redress the balance of its political balance sheet with Africa. The purpose of all independence movements in Africa is not political independence per se. It is to win this as an instrument to be used in fostering rapid economic development which will yield fruits in the form of higher standards of living for the people in their lifetime.

The fact of poverty which is so characteristic of Africa does not stem from a poverty of resources so much as a poverty in development, our lack of technical know-how, and lack of capital. The degree of prevalence of one or the other of these varies from country to country. Lack of capital, which is basic, is due to the low income caused by low productivity in these countries. The circle is vicious because low incomes never generate sufficient savings to produce the requisite level of capital necessary to assure further growth in the economy.

Taking the question of capital formation alone, how much is needed at all? A United Nations special committee formed to examine this question estimated this at \$19 billion a year, of which \$5.2 billion was estimated as domestic savings. But it was estimated that the rate at which such capital could be absorbed would be \$2.5 to \$3.5 billion a year for all the underdeveloped territories. Mr. Paul Hoffman, the Executive Director of the United Nations Special Fund, has estimated \$40 billion for the next decade, or \$4 billion a year. Of the \$3 billion currently being invested in foreign economic aid, the United States has been contributing approximately \$1.5 billion in pure economic aid as opposed to military aid. If this rate continues for the next 10 years, the total would be \$15 billion. The U.S. share of the additional \$30 billion in investment needed would be approximately \$15 billion, making a total U.S. investment for the decade of \$30 billion.

Last year, of \$1,476,321,000 of U.S. economic aid, only \$72,925,000 was sent to Africa, less than was sent to Europe, South Asia, Near East, or Far East. While we recognize the obligations of the United States to other parts of the world, surely a larger part of this could be channeled to Africa.

There are moreover certain principles which must be observed in making such capital available to Africa:

1. It must generate self-sustaining growth and must not be looked upon as indefinite.
2. It must be examined irrespective of cold war considerations or strategic value.
3. It must be flexible and not limited only to bankable projects. Thus formal principles of credit-worthiness and capacity to repay should not stand in the way of necessary, but perhaps not economically paying projects.
4. It must involve governmental planning and coordination of a kind and scale not properly appreciated by the American mind.

These principles are likely to be required by most African nations because of their neutralist outlook on international affairs and the special requirements of these territories. If the United States can reorient its traditional attitudes regarding the primacy of private investment over Government investment say through the Export-Import Bank, and Development Loan Fund, this would go a long way towards meeting a reasonable demand and need.

This is necessary because in many of these territories the preconditions which would attract private capital do not exist. In Ghana alone we have since 1951 spent as much as \$328 million out of our own resources creating such infrastructure at the same time as social services. We have embarked on a 5-year development plan costing as much as \$678 million. The capital side alone is great but the infrastructure is still needed. It is so with many other countries in the area. Thus the needs of this area are twofold: (1) Capital assistance and (2) the establishment of the infrastructure to sustain such provision of capital. In these two fields we think reasonable demands can be made by this area on the United States.

In solving the first problem, the United States will perforce have to work within the framework of a development plan prepared by the receiving country. This at once poses a problem for the United States. You are wedded to the economic philosophy of private enterprise. Your great wealth and progress have by and large been created by the individual enterprise of individual Americans motivated solely by considerations of profit. In the emerging nations of Africa though such a business class exists, it does not exist in the strength, numbers, and resources that can assure further development. Ruled by a progressive elite who have tasted the benefits and amenities of 20th century civilization, these nations are committed to pulling up from scratch their millions of citizens whose lives have been cramped by the nonavailability of the good things of life. The United States will have to step in and pick certain basic development projects of the countries concerned and help those countries to build their projects which may be a hotel, an airport, a railway, a network of roads, a harbor, or a power project like the Volta River project we contemplate in Ghana. This is what the IDA is intended to do when it starts operating under the World Bank.

Since capital itself will flourish best only in conditions of political stability, efficient administration, managerial and technical know-how, and organizational capacity, technical assistance will assume as large a place as capital assistance as described above. This is what in effect the ICA and the special fund of the United Nations are trying to do with the limited resources at their disposal. Their present contribution is far too small for the gigantic needs of the areas they serve. The provision of experts in the technological, engineering, scientific, agricultural, and health fields, not only to carry out specific assignments, but to train others on the spot who can train many more of their countrymen in these modern techniques which alone can service incoming capital. Thus the building of research laboratories and training institutes in these areas, will be a reasonable demand on this country. Thirdly, surveys of natural resources of those underdeveloped territories will be a vital need of these areas. These are services America can provide because we know you have the know-how and the experts who can multiply these skills abroad.

I do not wish to give you the impression that these things are not being done at the present time. They are being done, but the motive, method, scale, and adequacy of these various programs are extremely questionable. From the last report of the ICA, you will find that Africa received the smallest portion of the Development Loan Fund and the second smallest of technical cooperation. Much of the foreign aid of this country went into defense support. Now we do not question the type of national priorities which the United States has set itself. We for our part, as President Sekou Touré said plainly, recognize as valid only the division of the world into the rich and the poor; the developed and the underdeveloped; any help from any part of the world that helps in bridging this gap of plenty and poverty without compromising our political sovereignty will be acceptable. Perhaps the whole question of the development of underdeveloped areas must be unified under an international control, to remove entirely the dangerous political element. This is a task for the giving nations to solve, not ours; and we expect the United States and the Soviet Union to undertake such a task. In the present world with its bilateral, multilateral, and international agencies we shall seek wherever we can get.

Canal Zone Sovereignty: New York Panama Canal Society Resolution

EXTENSION OF REMARKS

OF

HON. DANIEL J. FLOOD

OF PENNSYLVANIA

IN THE HOUSE OF REPRESENTATIVES

Thursday, March 3, 1960

Mr. FLOOD. Mr. Speaker, for many months radical agitations aimed at wresting control of the Panama Canal have mounted. Culminating on November 3 and 28, 1959, in attempted mob invasions of the Canal Zone that had to be repelled with force, our failure to assert our just rights at Panama have made our country a laughing stock of the world.

Unfortunately, important elements of the press, such as Foreign Affairs and the Washington Post, have failed to present the true issues. The result has been that large numbers of our citizens are not informed as they should be and, for a time, the ideas of pro-Communist forces have had unrestricted play in the mass media.

Notwithstanding the obvious blackout of news on the Panama Canal situation, informed elements in the country have made themselves felt in the form of resolutions to the Congress and letters to its Members.

The latest organization to pass such a resolution was the New York Society of the Panama Canal of which Col. John J. Fitzpatrick is Secretary-treasurer.

The resolution follows:

To Hon. DANIEL J. FLOOD, Member of Congress:

The New York Society of the Panama Canal has made and adopted the following resolutions:

"Whereas article II of the Hay-Bunau-Varilla Treaty of 1903 provides:

"The Republic of Panama grants to the United States in perpetuity the use, occupation and control of a zone of land and land under water for the construction, maintenance, operation, sanitation, and protection of said canal of the width of 10 miles extending to the distance of 5 miles on each side of the centerline of the route of the canal to be constructed, with the proviso that the cities of Panama and Colon and the harbors adjacent to said cities, shall not be included within this grant); and

"Whereas article III of said treaty provides further:

"The Republic of Panama grants to the United States all the rights, power, and authority within the zone mentioned and described in article II of this agreement, and within the limits of all auxiliary lands and waters mentioned and described in said article II, which the United States would possess and exercise if it were the sovereign of the territory within which said lands and waters are located, to the entire exclusion of the exercise by the Republic of Panama of any such sovereign rights, power, or authority"; and

"Whereas the United States, pursuant to said treaty, expended approximately 400 millions of dollars in the construction of the contemplated canal and also expended the lives of hundreds of its citizens during the construction period; and

"Whereas the United States paved the streets of the cities of Panama and Colon and constructed water and sewerage systems

in both of said cities at its own cost and expense despite the fact that both of said cities are expressly excluded by said treaty from the control of the United States; and

"Whereas the United States has meticulously performed its obligations under the said treaty and the treaties amendatory thereof; and

"Whereas recent events in Panama indicate clearly that the Republic of Panama, urged on by agitators, Communists, and political candidates, has evidenced an intent to repudiate the Hay-Bunau-Varilla Treaty and the treaties amendatory thereof: Now, therefore, be it

"Resolved by the New York Society of the Panama Canal, a voluntary association of men who participated in the construction of the Panama Canal, That the State Department of the United States is hereby urged to advise the Republic of Panama in no uncertain terms that the United States has lived up to its treaty obligations and that it expects the Government of the Republic of Panama to do likewise; and be it further

"Resolved, That in the event the State Department of the United States fails to take appropriate action to safeguard the treaty rights of the United States in and to the Panama Canal that the Congress of the United States be urged to take appropriate action by concurrent resolution or resolutions, couched in no uncertain terms, that the United States does not propose to yield any part of its treaty rights; and be it further

"Resolved, That copies of these resolutions be sent to the Secretary of State and to the appropriate congressional committees having jurisdiction over Panama Canal affairs."

Respectfully,

JOHN J. FITZPATRICK,

Secretary-Treasurer.

Perspective on Air Safety Problems and Programs of the Federal Aviation Agency

EXTENSION OF REMARKS

OF

HON. JENNINGS RANDOLPH

OF WEST VIRGINIA

IN THE SENATE OF THE UNITED STATES

Thursday, March 3, 1960

Mr. RANDOLPH. Mr. President, the recent constructive hearings of the Subcommittee on Aviation, chaired by our able colleague, the Senator from Oklahoma [Mr. MONRONEY], have brought into focus the problems of air safety in our changing and growing general pattern of civil aviation with emphasis on air transport operations.

My attention has been directed to an editorial, "Perspective on Safety" in the magazine Aviation Week, February 8, 1960.

Robert Hotz has authored this viewpoint on the work of the Federal Aviation Agency under the administration of Elwood R. Quesada.

Mr. President, I am in accord with the thinking expressed by Mr. Hotz that "the immediate problem is to push modernization of navigation, traffic control and airport facilities as fast as possible, and to develop an effective industry-Government relationship that will keep pushing toward this goal," and I also commend to my colleagues other

provocative and praiseworthy comment in this editorial.

I request that the Aviation Week editorial be printed in the Appendix of the RECORD.

There being no objection the editorial was ordered to be printed in the RECORD, as follows:

PERSPECTIVE ON SAFETY

(By Robert Hotz)

Senate hearings conducted by Senator MONRONEY's Subcommittee on Aviation have provided a good perspective on the air safety problems facing civil aviation, particularly the air transport industry. One of the main considerations of the Senate group has been to explore the efficacy of the Federal Aviation Act which created the Federal Aviation Agency a little more than a year ago. It is certainly appropriate to review the operations of this agency to determine whether it has produced the results that this legislation was aimed at.

It is pretty clear from the testimony of most witnesses appearing before the Monroney subcommittee that, while there are many minor differences of opinion on how the Federal Aviation Agency should function, there is general agreement that the act has stood its initial test of time, and the FAA is roaring down the right track.

Biggest criticism of FAA has been of the speed and alleged arbitrariness of its rule-making procedures. There has been an acute need for accelerating the prolonged and often pointless debates that made the old rule-making process so ineffective and kept it so far behind the current operational problem of aviation. We can understand the feeling of urgency that has stimulated Elwood R. "Pete" Quesada, the FAA Administrator, to compress this rulemaking cycle. We can also sympathize with his impatience at having to listen to the shrill and monotonous tirades of special interest pleaders who infest Washington and use the headlines they gain attacking FAA to impress the dues-paying members of their respective special groups.

However, it is apparent that whatever the validity and justice of its case, FAA would do well to provide for more informal and public discussion of its proposed rules rather than adhering strictly to the letter of administrative procedures. It is also evident that, while "Pete" Quesada needed to throw the book at violators of air safety regulations without fear or favor to establish the fact that he meant business, some of his subordinates have carried this intent beyond reasonable grounds in some instances and have descended to a nit picking and over-legalistic approach to safety enforcement.

There can be no sympathy from the public or air transport industry for the type pilot behavior cited by "Pete" Quesada in his testimony before Senator MONRONEY's group. FAA must continue to prosecute this type of irresponsible, willful violator with all the vigor at its command. The Air Line Pilots Association and other pilot groups must support this type of safety enforcement or lose their effectiveness as legitimate spokesmen for the majority of pilots who have a most sincere interest and the biggest stake in safety achievements.

Nobody believes that pilots who slept with their feet on the radar, barred FAA inspectors from the cockpit or flew into a mountainside in broad daylight are typical of the majority of airline pilots. But they are typical of an irresponsible minority who must be combed from the aid by concerted action, beginning with company qualification programs and supported by FAA as a last resort.

Airline top management too must devote considerably more attention to its safety problems and provide more support for its operations' people in their clashes with comptrollers over the admittedly high cost

of many safety contributions. FAA safety regulations are aimed at providing minimum standards, and some airlines have been consistently ahead of FAA in adopting new safety devices, such as airborne radar, and in exceeding FAA requirements in such areas as copilot qualification and the retirement of obsolete equipment. Airline operations' personnel have been more acutely conscious of safety problems as they arise and are vigorous in their attack on them. But all too often, they fall short of achieving their goals because of top management indifference or misunderstanding.

Airlines will find their mailboxes containing less FAA violation notices if they do an increasingly better job of policing their own backyards. Virtually everybody testifying before Senator MONROE's group agreed on the major unsolved safety problems facing aviation in traffic control and terminal facilities. As we have pointed out so often, the current FAA leadership cannot be held accountable for this deplorable lag in developing, financing, and installing a modern electronic navigation and traffic control system and high intensity lights. This is the area that needs concerted effort by all elements of aviation, including Senator MONROE's group and their legislative colleagues in both the House and Senate.

This is the area where, without effective action today, the safety problems of tomorrow are certain to be compounded. We are getting a little impatient with the monotonous criticism of FAA Administrator Quesada as a "one man show" and "dictator." For it is in this vital area of trying to make up for the precious time lost by a series of "nomad" CAA administrators, who fumbled and bungled these vital programs, that the first year of the FAA has required the vigorous drive displayed by "Pete" Quesada to overcome the inertia of the broad-seated bureaucrats.

We earnestly hope he can instill more of his vigor into the lower tiers of FAA leadership that he will leave behind him when he retires. There is little profit for anybody in the aviation business in continuing the special interest sniping that has muddled the Washington aviation scene in recent years. Real safety achievements do not come from regulations or legal proceedings. They can be achieved only by a genuine spirit aimed at topnotch performance all down the line.

The immediate problem is to push modernization of navigation, traffic control, and airport facilities as fast as possible and to develop an effective industry-Government relationship that will keep pushing toward this goal long after the current FAA leadership has retired.

Eradication and Control of Saltcedars in the Streams of the Nation

EXTENSION OF REMARKS
OF

HON. THOMAS G. MORRIS

OF NEW MEXICO

IN THE HOUSE OF REPRESENTATIVES

Thursday, March 3, 1960

Mr. MORRIS of New Mexico. Mr. Speaker, I have introduced a resolution providing for a program of research and experimentation toward the eradication and control of worthless saltcedars in the streams of the Nation. Our extremely limited water resources, particularly in the Western States, are being drained needlessly of an estimated 25 million acre-feet annually by these water-consuming growths.

All of us have been greatly concerned for many years regarding the tremendous wastage of water, as well as damage caused, through failure to provide proper dams and reservoirs on our rivers. Great progress has been made in that direction through the dedication of our legislators to the development of adequate controls. However, it is well realized much remains to be done in this area and businessmen and civic leaders are cooperating to the fullest extent in urging and planning action for the protection of one of our most valuable national assets, our water resources.

During the last Congress, legislation was enacted to determine methods for conversion of brackish and saline water into usable quality. This step has resulted in extensive research by the Interior Department Office of Saline Water which has produced experimental methods for converting nonpalatable water into a quality acceptable for human consumption and utilization. Some progress has been made since that program was inaugurated and their is great hope for future benefits to be derived from these methods of research.

The present Congress is continuing those efforts to provide all possible aids for increasing beneficial supplies of water. As a matter of fact, I presented some of this same information to the Senate Select Committee on National Water Resources when it held hearings in Albuquerque last fall. It is my understanding that the great interest expressed in this subject in Albuquerque was duplicated in all cities where this committee held hearings. Therefore, it is quite evident that the citizens of the various States recognize and are concerned over the problem of water supplies.

My own State, New Mexico, has suffered and continues to suffer economically from its shortage of water resources. In the few irrigated areas of the State, it has been well proven that New Mexico can rank with other outstanding States of the Nation in agricultural production—if there is adequate water. Not only is agriculture limited by such aridness but industrial expansion in the State is held to a minimum because large corporations hesitate to locate their facilities in an area which has a history of continuing water shortages.

It is for these many reasons that I urge passage of the resolution I have introduced. Through its provisions, the Department of Agriculture in cooperation with the Bureau of Reclamation, U.S. Geological Survey, as well as State and local water authorities, will conduct a 5-year study of the development of tamarisks and similar phreatophytes. This program will include research into the botanical, hydrological, and climatological factors influencing the growth of saltcedars. As a result of that research, it is hoped economical methods will be developed for eradicating and controlling their growth.

To my knowledge, only limited research in this field has been carried on previously. In 1951, phreatophytes were removed from 35 miles of the Rio

Grande near Elephant Butte Reservoir in New Mexico with resultant saving of 200,000 acre-feet of water in the following 5-year period. Therefore, we know the eradication of saltcedars will salvage a great deal of water each year. The real problem is how we can do it as economically as possible. Previous attempts to control saltcedars have consisted of mowing the extensive growths as well as spraying them. However, in addition to being extremely expensive these methods proved to be complete failures. Even though the plants were cut, their seeds were strewn into the rivers and spread rapidly.

Although the greatest concentration of these parasites now exists in the Western States, they spread at a fantastic rate and present a real threat to water resources in much of the rest of the United States.

Because I believe my resolution represents the first real and constructive step toward an adequate research program into the control of saltcedars, I urge favorable action upon it as soon as possible.

Equal Rights Amendment

EXTENSION OF REMARKS
OF

HON. E. L. BARTLETT

OF ALASKA

IN THE SENATE OF THE UNITED STATES

Thursday, March 3, 1960

Mr. BARTLETT. Mr. President, I am pleased to present a letter from my friend and constituent, Mrs. Gara Lyon, of Anchorage, Alaska, on the subject of the equal rights amendment, and ask unanimous consent to have it inserted in the Appendix of the Record.

There being no objection, the letter was ordered to be printed in the Record as follows:

FEBRUARY 16, 1960.

Senator E. L. BOB BARTLETT,
Senator from Alaska,
Senate Office Building,
Washington, D.C.

DEAR SENATOR BARTLETT: I note by the Seattle paper of Sunday, February 14, that the equal rights amendment has been unanimously approved by the Senate Judiciary Committee and is now pending before the Senate.

I daresay that it is unnecessary to urge you to vote for this but I am making the request in any event. I sincerely feel in this day and age when so much is made over civil rights this is long overdue.

The Business & Professional Women's Clubs, the only nonclassified club open to all business and professional women, have long endorsed this bill. You may perhaps recall that our club was against the change in the social security law which lowered the retirement age for women to 62 for two reasons. First, since women are outliving men at the present time, at least, we felt it was not realistic and also that women not legally trained would be misled into believing they would get full benefits at an earlier age, merely by virtue of belonging to the female sex. In talking with quite a number lately I have found that some have been so misled.

I thoroughly disagree with Alice Leopold of the Women's Bureau that women would thereby lose legislation designed to preserve

their creative function. I can see no more reason for that than the repeal of any other legislation designed to protect certain classes of workers in many fields.

With reference to the social security law I would like to make one comment on equality. As you know many, many women operate small businesses, the writer among them, and in so doing we are required to pay into the social security fund with no matching funds from an employer.

It is all my hard earned money and I have to pay it in whether or no. Then, in the name of justice, why should not my husband be able to draw on that if I should die, whether he was dependent upon me and whether or not I was currently covered at the time, if I had full coverage.

If I could take the same money and put it into an annuity I could designate any residual beneficiary I pleased. If there are any equal rights in such a discriminatory law I fail to observe them.

It is quite possible that an equal rights amendment would not cure this situation and that it might take special legislation aimed at this particular law but I merely cite that as one example of inequities now existing. Of course, many states have glaring examples. Even our beloved Alaska has one or two, though our laws are far superior to average.

Any help you can give us in this matter will, I know, be deeply appreciated by the workingwomen of this country.

Very truly yours,

Mrs. GARA H. LYON.

American Legion Program for Rehabilitation and Economic Welfare of Veterans and Their Dependents

EXTENSION OF REMARKS

OF

HON. OLIN E. TEAGUE

OF TEXAS

IN THE HOUSE OF REPRESENTATIVES

Wednesday, March 2, 1960

Mr. TEAGUE of Texas. Mr. Speaker, under leave to extend my remarks, I include the fine statement of the national commander of the American Legion, Martin B. McKneally, before the House Veterans' Affairs Committee. I commend this statement to the Members.

STATEMENT BY MARTIN B. MCKNEALLY, NATIONAL COMMANDER, THE AMERICAN LEGION, BEFORE THE HOUSE VETERANS' AFFAIRS COMMITTEE, TUESDAY, MARCH 1, 1960

On behalf of the American Legion I deeply appreciate this opportunity to appear before your distinguished committee for the purpose of presenting the 1960 program of the American Legion for the rehabilitation and economic welfare of veterans and their dependents. The national commander of the American Legion has no assignment of greater importance.

To share this privilege and responsibility I have with me today many members of the American Legion and the American Legion Auxiliary. From every State, they are in Washington to participate in the 37th Annual National Rehabilitation Conference of the American Legion. The conference will commence this afternoon and continue through Friday noon, at the Statler-Hilton Hotel.

The purpose of the conference is to provide a forum in which community, State, and national representatives of the American Legion, together with the responsible Government officials, might discuss prob-

lems encountered in the day-to-day administration of veterans' benefits and services; and, seek solutions acceptable to all concerned.

We are aware of your busy schedule but we would be greatly honored if any of you could find time to attend one or more sessions of the conference and join with us in our discussions.

Many of those who accompany me this morning are already well known to members of your committee. I do wish to introduce to you the young man on my left, however. He is Robert H. Hazen, of Portland, Oreg., chairman of our national economic Commission. I am sure the gentleman on my right needs no special introduction. As chairman of the American Legion National Rehabilitation Commission, Bob McCurdy, of Pasadena, Calif., is often referred to as "Mr. Rehabilitation." He has long been a leader in the American Legion's fight for the rights of the disabled, while continuing to insist upon programs and principles that are fair both to the veterans concerned and to the taxpayers of this country.

The American Legion is fortunate to have men of such caliber, ability, and understanding as Bob McCurdy and Bob Hazen devote so much of their personal time and effort to the cause of veterans and their dependent survivors.

The American Legion realizes its good fortune in its association, in connection with its responsibilities to the veterans of three wars, with the members of this committee, and takes this opportunity to salute the members of the committee for their courage, wisdom, and objectivity. It need not be observed that in all of your progressive and splendid enactments in behalf of the cause of veterans the spirit which characterized your committee has been one of nonpartisanship. No higher praise can come to such a group.

The American Legion recognizes that the able chairman of this committee has worked hard and to great effect in curing the weaknesses and correcting the defects and integrating the law with reference to veterans matters. The American Legion is deeply grateful to him for his interest in the disabled veteran, and lauds him as a great contributor to the welfare of the veteran, and by that means the welfare of our country.

The American Legion notes with sorrow the passing of Congressman Stephen V. Carter, of Iowa, and wishes the record of this meeting to show its regret. Congressman Carter, although his membership on this committee was for a short period of time only, demonstrated a keen interest in the needs of veterans.

For the accomplishment of our legislative program on behalf of veterans, we are dependent upon the members of your committee and our other friends in Congress. Needless to say, our proposals will only be as effective as they are sound. Therefore, just as we solicit your help in translating our thoughts into law, we invite your counsel and advice.

We want you to feel free to utilize our channels of communication and service. Every veteran in America is within reach of some service officer of the American Legion. Our service network forms a very effective medium for both the dissemination and the gathering of information. It is a well-seasoned sounding board for the testing of new ideas in veterans' affairs.

Those with me today are but a portion of the thousands of individuals who are in daily touch with the Nation's veterans, largely on a volunteer basis, in the name of the American Legion. They see and talk with the men, women, and children whose lives have been vastly improved; whose sufferings have been alleviated; and whose talents have been utilized for the good of

the country, as a result of the laws over which your committee has primary responsibility. They also see cases that need additional help; help that can come only in the form of new legislation, or revitalized and liberalized existing legislation.

It is this latter group of cases that gives rise to our legislative program. Relief-seeking resolutions, adopted in community posts of the American Legion, are channeled upward to department and national conventions. Only those with merit become a part of the program that we bring to your committee for consideration.

The current rehabilitation and economic legislative program includes resolutions adopted as early as our 1958 national convention. To save your time, I shall speak only to those resolutions that have been added to the program since my predecessor, Preston B. Moore, of Oklahoma, appeared before you 1 year ago.

A full listing of all resolutions forming a part of our current program is attached to my statement. At the appropriate time, Mr. Miles D. Kennedy, director of our legislative division, and other staff officials, will be happy to present the views of the American Legion on specific legislation concerning these resolutions.

With your permission, I shall cover what I deem to be the more pressing and vital of these issues by subject categories.

SERVICE-CONNECTED COMPENSATION

The American Legion believes it is appropriate to grant increases in the rates of disability and death compensation.

The monthly rates of disability compensation were last increased effective October 1, 1957, at which time the amount for total disability was raised by slightly more than 24 percent; whereas, the amounts for ratings less than total were raised approximately 10 percent.

Since 1957, practically all other forms of pay and allowances over which Congress has control have been increased, including civil and military salaries and retirement pay, railroad retirement, and social security benefits.

The rates of death compensation have not been increased since 1954. It is true that many widows, children, and dependent parents did receive higher awards beginning January 1, 1957, by switching to rates of dependency and indemnity compensation under the Servicemen's and Veterans' Survivor Benefits Act. But those who were not in a position to take advantage of that act should hardly be expected to continue indefinitely at death compensation rates without a cost-of-living increase.

The Bureau of Labor Statistics announced only last Thursday that the Consumer Price Index for January was 125.4, only two-tenths of a point down from its alltime high of last November. For those veterans and widows who must rely on their VA compensation check, this index might more realistically be described as a "survival index."

The American Legion also believes it necessary to reestablish balance in the compensation program by making the amounts payable for the several disability evaluations accurately reflect the degree of disability; and, by providing additional amounts for veterans with dependents when rated less than 50 percent in degree on the same basis as for those rated at 50 percent and above.

The rates of disability compensation were first thrown out of balance in 1952 when the amounts payable for ratings of 50 percent and above were increased by 15 percent; whereas, amounts for ratings below 50 percent were increased by only 5 percent. Subsequent legislation has further distorted the relationship between one rating and another insofar as the respective amounts of compensation are concerned. For example, the

amount of compensation today for a 90-percent disability rating is not 90 percent of the amount payable for total disability; rather, it is less than 80 percent of this amount.

Disparity in the amount of compensation payable, as compared with the percentage evaluation, tends to defeat the principle upon which the rating schedule is based. The schedular ratings are intended, insofar as possible, to reflect the average impairment in earning capacity due to the various kinds and degrees of disability. The amount of compensation payable for a given percentage evaluation should bear the same relation to total compensation as the percentage bears to 100 percent disability. The degree and the dollars should coincide.

It is understood that your committee has had the matter of disability ratings and compensation under study for some time. It is hoped that your investigations will culminate in upward adjustments of compensation during this session of Congress.

We also are aware that the Veterans' Administration is conducting related studies, possibly with a view to making major modifications in the rating schedule. It would appear that the impetus for such studies derives from certain recommendations which were contained in the report of the Bradley Commission.

The philosophy underlying these recommendations is in opposition to that held by the American Legion. In particular, the Bradley Commission recommendations relative to the VA rating schedule seem to stem from considerations of economy rather than justice. Such recommendations would eliminate most if not all of the 10- and 20-percent ratings. They would put in jeopardy the average-impairment principle. In addition, the time-tested extra-schedular statutory awards would be discarded for new and vague norms for disability evaluations.

We are confident your committee will provide opportunity for a full hearing on any legislative proposals to modify the VA rating schedule.

VA HOSPITAL AND MEDICAL PROGRAM

American Legion service officers and field representatives continue to report that VA hospital managers are experiencing difficulty in operating at maximum capacity under their inpatient and outpatient fund allocations. For this reason, we are inclined to question the adequacy of the President's 1961 budget requests in these sensitive areas. The amounts are considerably short of what are considered necessary by the operating services.

We feel sure that you will do what you can to prevent any reductions in the proposed VA budget on the part of the Congress.

It is gratifying to see that the budget will include funds to commence construction of the badly needed replacement hospitals at Martinez, Calif., Cleveland, Ohio, and Washington, D.C., plus additional amounts to launch the 12-year modernization program. The American Legion acknowledges with deep gratitude the part played by your committee in bringing to pass this essential effort to prevent further deterioration of the hospital facilities.

I bring to your attention that the VA hospital system is facing a crisis of another kind, and one which will also require your most earnest interest. I refer to the rapidly advancing number of patients who are chronically ill, yet have received maximum hospital benefits. The VA is experiencing great difficulty in placing such individuals in satisfactory non-VA institutions. As the veteran population grows older this problem will be magnified greatly. Steps must be taken forthwith to arrive at an acceptable solution.

This matter has deeply concerned the American Legion for some time. We have concluded that the VA must be provided with new authority to cope with the situation. In recent hearings before your Subcommittee on Hospitals, staff representatives of our national rehabilitation commission presented a proposal based on a resolution adopted last fall by the national executive committee of the Legion.

We ask that the Congress grant the VA authority to construct convalescent cottages on the grounds of five widely scattered hospitals in order to conduct a pilot study of ways and means to meet the impending crush of cases. It is suggested that selected patients be discharged to such cottages for appropriate medical supervision and nursing care.

Such a proposal could have many far-reaching beneficial effects. It would release an otherwise occupied hospital bed for use by a veteran requiring active treatment. It would lengthen the time for which the 125,000 authorized bed level might adequately serve our basic hospital needs. It would provide ideal opportunities for research in geriatrics without tying up more expensive hospital beds.

More important, however, it could well lead to solutions for dealing with the great bulk of cases yet to come. In the meantime, the VA would be continuing its efforts to rehabilitate all patients of this type, with a view to restoring their capacity for independent living.

The addition of convalescent cottages should make for a more balanced hospital community. Administrative details relative to the transfer of a patient from a hospital bed to a cottage, or back again as required, should be held to a minimum. We visualize that the buildings should be as homelike as possible; that is, they should avoid both the appearance and atmosphere of an institutional setting.

Regardless of the details, we deem it essential that steps be taken soon to meet this threatening issue. I respectfully urge your serious consideration of our proposal.

LIFE INSURANCE PROGRAM

The American Legion believes that the life insurance contract rights of otherwise eligible World War II and Korean conflict veterans should be reopened for a limited time. When the right to apply for amounts or additional amounts of national service life insurance was removed, many veterans were prevented from securing the desired protection because of personal circumstances.

It would be simple justice to make the coverage available to them, if only for a short time. We suggest a 1-year period following date of approval of the enabling legislation in which the veterans concerned might apply. It is agreed that the administrative cost on insurance so issued should be borne by the policyholders.

ADMINISTRATION OF BENEFITS

The American Legion supports the maintenance of not less than one VA regional office in each State, and opposes the closing of any office that, by reason of its location, provides the necessary services with a minimum of inconvenience to the veterans in the affected area. We further oppose any curtailment of VA services through workload consolidations.

We view with a great deal of concern the reported reduction of contact offices. It is difficult to understand the rationale which says that this will lead to greater efficiency. It is my belief that internal efficiency of the Veterans' Administration is not the ultimate thing to be desired. In all these matters the concern is for service to the veteran, and that only. Not even the desire for internal efficiency must be allowed to interfere with that. Such a rationale defeats the purpose

for which the American people demanded that the Veterans' Administration be ordained.

LOAN GUARANTEE PROGRAM

The American Legion believes that the loan guarantee program for World War II veterans should be extended for 2 additional years; and, that the program for both World War II and Korean conflict veterans should be revitalized by taking steps to insure the renewed and continued flow of private investment into GI home loans.

The World War II program is scheduled to end this coming July 25. We ask that it be continued to July 25, 1962. We further ask that the Administrator of Veterans' Affairs be provided with the same authority to regulate the interest rate on GI loans as the Federal Housing Administration Commissioner now exercises over FHA loans.

PENSION PROGRAM

The American Legion has no current resolution seeking amendment of the new pension law. The 1959 national convention went on record in support of H.R. 7650, the bill introduced by your chairman that became Public Law 86-211.

This action by the convention was based upon the same reasons that our organization, under the leadership of the then commander, had earlier supported your committee in the development of the legislation. The numbers of needy veterans and dependents to be benefited, as estimated by the Veterans' Administration, made it imperative that we do so even though we had requested rates higher than those contained in the bill.

Our national staff and our department service officials are carefully scrutinizing the interpretations placed on the terms of the law by the Veterans' Administration, with particular regard for the more controversial features such as the counting of a spouse's income and the corpus of estate test. Likewise, we are interested in the procedural instructions for implementing the law. This will be a major topic of discussion during this week's rehabilitation conference.

When the law takes effect next July 1, it will closely observe its impact on the pension program as a whole as well as on individual cases. Naturally, we are very curious as to whether the VA's predictions as to numbers and percentages of cases to be favorably affected will be borne out in practice, since these figures played such a large part in our decision to support the legislation. It is important to note that the President's 1961 budget request to service the new law is \$285 million; whereas, the first-year cost estimate had originally been placed at \$308 million.

Surely, by the time of our national convention next October, we should have more concrete data both as to the law's effect and its possible defects.

While this completes my brief résumé of the major aspects of the Legion's 1960 legislative program for veterans, I should like to say a few words about some related and equally important issues.

The American Legion is not unmindful of the high cost of veterans' benefits; and, it is obvious that many of our current resolutions would require additional expenditures of public funds. We have pointed out, however, that the cost of veterans' readjustment and rehabilitation programs is in reality a delayed cost of conducting war. We have likewise called attention to the fact that the annual Federal expenditures for veterans' programs, expressed as a percentage of our yearly gross national product, have remained almost constant for close to three-quarters of a century even though the veteran population has fluctuated widely in that time.

Further, we sincerely believe that so long as the principles upon which our veteran programs are based remain sound, the cost will never be out of keeping with the Nation's ability to pay.

Those who, on grounds of false economy, seek to destroy veterans' benefit programs, discover upon investigation that the underlying principles are unassailable. Failing to find fault with principles, they turn the attack on the veterans themselves. By this strategy, they hope to undermine public support of the benefit programs.

Thus, they spread misconceptions as to the nature and cost of benefit programs; they magnify and distort minor issues out of all proportion to their statistical and monetary importance. They attempt to disparage the significance of the sacrifices made by servicemen in time of war; to discredit the time-honored axiom that a special status accrues to those citizens who have borne arms in time of national peril; and, most wretched of all, to cast doubt upon the very patriotism of veterans.

This attack is the more curious inasmuch as recognition of the honorable and special status of the Nation's veterans is an act of patriotism in itself. Obviously, veterans are no less patriotic today than when they made themselves available for unlimited service in time of war.

We are certain that all members of your committee share this view, and that you deplore these unjust attacks upon our veteran population as much as does the American Legion.

Six Hundred Honor Mayor Zeidler at Testimonial Dinner

EXTENSION OF REMARKS OF

HON. ALEXANDER WILEY

OF WISCONSIN

IN THE SENATE OF THE UNITED STATES
Thursday, March 3, 1960

Mr. WILEY. Mr. President, we recognize that progress in rural and urban communities throughout the country depend, to a large degree, upon many things, including, first, effective, forward-looking leadership; and second, broad citizen support for progress; third, availability and proper utilization of human and natural resources.

Recently, 600 citizens of Milwaukee, Wis.—one of our great U.S. cities, and an increasingly important port on America's fourth seacoast—honored Mayor Frank P. Zeidler at a testimonial dinner.

The citizens, including public officials, labor, business, civic leaders, and Mr. and Mrs. Average Citizen, gathered to pay tribute to Mayor Zeidler for his 12 years of dedicated service to the fine community of Milwaukee.

During the testimonial dinner, Mayor Zeidler was presented with an award by the Fraternal Order of Eagles for outstanding public service; a citation from the Milwaukee chapter of the Sigma Delta Chi, an outstanding national professional journalistic fraternity; and other recognitions, as well as expressions of warm appreciation from his fellow citizens.

Over the years, I have been privileged to work with Mayor Zeidler on a great many projects of interest to Milwaukee. In each of these endeavors, I have found Frank to be a dedicated public servant, deeply devoted to fulfilling the needs of the community as he saw them.

Reflecting the esteem of fellow citizens for the modern-day leadership which Mayor Zeidler provided the community, I ask unanimous consent to have an article by John K. Kole, published in the Milwaukee Journal, printed in the Appendix of the RECORD.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

ZEIDLER'S LEADERSHIP IS PRAISED AT TESTIMONIAL ATTENDED BY 600—WORK IS LAUDED AS SOURCE OF INSPIRATION TO MAYORS OF MANY OTHER CITIES

(By John W. Kole)

Frank P. Zeidler, mayor of Milwaukee for 12 years, was honored Monday night by his fellow citizens.

More than 600 persons representing all segments of the community—public officials, labor, business and other civic leaders, plus scores of plain, ordinary citizens—paid tribute to Zeidler at a testimonial dinner at the Eagles club.

Zeidler, 47, has been Milwaukee's mayor since 1948. He decided last October not to seek a fourth 4-year term this spring after his doctor warned that the continued strain of the office could harm his health.

The community sentiment was expressed in huge letters over the speaker's table: "Best Wishes Frank."

Joseph E. Dillon, mayor of St. Paul, Minn., said of Zeidler:

"His leadership in Milwaukee, in this metropolitan area, in the State of Wisconsin—and, yes, throughout the entire country—has been a deep source of knowledge, of inspiration and of challenge to me and to many other mayors in many cities."

CITIZENS' HELP PRAISED

District Judge Robert W. Hansen, acting as toastmaster, said Zeidler "epitomizes to many, many people personal integrity and a willingness to stand up and be counted for a cause that is a lost cause."

When Zeidler spoke late in the program, he spent almost as much time praising the thousands of citizens who had helped him during his administrations as the dinner speakers had spent praising him.

For more than 30 minutes he ticked off names of persons, city bureaus and departments and civic boards, commissions and organizations.

FATHER INTRODUCED

He started with him family, telling the audience that his wife, Agnes, five daughters and a son had been extremely understanding in putting up with his being away from home so much. All were guests at the dinner.

He called his father, Michael W., a barber, "the sage of 16th Street, who had raised three or four generations of Marquette students." Michael Zeidler had been introduced earlier by Hansen as the only man in the history of Milwaukee who has had two sons as mayor.

(Frank Zeidler's brother, Carl, was mayor from 1940 to 1942 before he was lost at sea while serving in the navy in World War II.)

After he had finished with his long list of personal tributes, Zeidler said:

"I owe so much to all of you I cannot remember it all."

Zeidler was given the Fraternal Order of Eagles first Fiorello La Guardia award for outstanding service in public administration.

Given in honor of the late mayor of New York City, it was presented by Arthur S. Ehrmann, editor of the national Eagles publication. Ehrmann was one of 14 who ran against Zeidler in the 1948 mayoral primary.

The mayor was visibly moved by another award, a bronze plaque inscribed in Braille from the Badger Association of the Blind, a

statewide organization of blind persons that promotes the welfare of the visually handicapped.

It was presented by Louis Seidita, of 2610 North Farwell Avenue, a blind man who operates the concession stand in the new municipal building. For many years Seidita operated a stand in the city hall.

IN EVERY SENSE A LEADER

Seidita praised Zeidler: "He is in every sense a leader, a leader who has shown profound concern for persons from all walks of life. We are greatly indebted to him for his constant regard for our welfare and his encouragement of our increased participation in the life of the community."

The association operates the Badger Home for the Blind, 912 North Hawley Road.

DINNER ONE OF TWO

Zeidler also received a citation from the Milwaukee chapter of Sigma Delta Chi, national professional journalistic fraternity, praising his continuing opposition to news suppression.

"What else would you expect from the son of a barber?" Zeidler said. "Before there were newspapers, there were barbershops."

The dinner, one of two planned in Zeidler's honor, was sponsored by a committee of civic leaders headed by Richard S. Falk, assistant to the president and secretary of the Falk Corp.

Resolution Adopted by the Lithuanian-American Council of Ansonia, Conn.

EXTENSION OF REMARKS OF

HON. JOHN S. MONAGAN

OF CONNECTICUT

IN THE HOUSE OF REPRESENTATIVES
Thursday, March 3, 1960

Mr. MONAGAN. Mr. Speaker, under leave to extend my remarks, I append herewith a statesmanlike resolution of the Lithuanian-American Council of Ansonia, Conn.:

Resolution unanimously adopted at a mass meeting of Americans of Lithuanian descent of the city of Ansonia, sponsored by the Ansonia Lithuanian-American Council, and held February 28, 1960, at St. Anthony's Hall to commemorate the 42d anniversary of the declaration of independence of Lithuania:

"Whereas in 1940 the Kremlin rulers, in conspiracy with Hitlerite Germany and in brutal violation of international law, invaded Lithuania and, against the will of the Lithuanian people, annexed her to the Soviet Union;

"Whereas the people of Lithuania have been and still are suppressed by the most cruel means of the Communist dictatorship—her culture is distorted, her industry and agriculture ruined, her youth by thousands every year deported to the remote virgin lands of the vast Soviet Union; and

"Whereas the Soviet dictatorship constantly strives to extend its rule over new territories in Europe, Asia, and in Africa, ultimately seeking world domination: Therefore be it

"Resolved, That this gathering of loyal Americans of Lithuanian descent of the Greater Ansonia area, call upon the Government of the United States to stand firm against the expansion of Communist imperialism and do all in its power to prevent further spreading of communism in the free world; be it further

"Resolved, That this mass gathering urges the Government of the United States not to trust the Soviet braggings about the peace-

ful coexistence between East and West, and to be cautious with the Kremlin leaders when dealing with them at the forthcoming summit conference; and finally, be it

Resolved, That this meeting asks the Government of the United States to refrain from signing any new treaties with the Soviet Union until the latter agrees to restore freedom and sovereign rights to Lithuanian people and to other enslaved European nations."

ANSONIA LITHUANIAN-AMERICAN
COUNCIL.

STANLEY BUJANAUSKAS,

President.

OLGA SAVITSKAS,

Secretary.

Dated February 28, 1960.

Expert Backing for a Federal Department To Deal With Urban Problems

EXTENSION OF REMARKS

OF

HON. KENNETH B. KEATING

OF NEW YORK

IN THE SENATE OF THE UNITED STATES

Thursday, March 3, 1960

Mr. KEATING. Mr. President, Dr. William L. C. Wheaton recently penned a provocative and interesting article about the idea of establishing a Cabinet-level department to deal with the problems of America's urban residents. Dr. Wheaton is president of the National Housing Conference and director of the Institute for Urban Studies at the University of Pennsylvania. He is therefore uniquely qualified to give expert testimony on this subject.

In this recent article, which appeared in the December 1959 issue of the *National Civic Review*, Dr. Wheaton says:

Because of the economic importance of cities, their political importance and social importance, we believe they deserve representation along with other major groups in the Cabinet of the President. Only when they secure that representation will the needs of urban areas be reflected in national policy.

Mr. President, as sponsor of S. 2397, to provide for the creation of a Department of Urbiculture, I am glad to have this informed backing for this idea. I am hopeful Congress will soon respond to the need for urban representation in the highest councils of our Federal Government. I ask unanimous consent that Dr. Wheaton's article be printed in the Appendix of the Record.

There being no objection the article was ordered to be printed in the Record, as follows:

A NEW CABINET POST?—DEPARTMENT OF URBAN DEVELOPMENT WITH ITS HEAD A WHITE HOUSE SPOKESMAN, CLAIMED AS URGENT NEED

(By William L. C. Wheaton, president of the National Housing Conference, director of the Institute for Urban Studies at the University of Pennsylvania, and professor of city planning at that institution. This article is Dr. Wheaton's address before the National Conference on Government of the National Municipal League, Springfield, Mass., November 18, 1959.)

Two-thirds of the American people now live in urban areas. During the next 20 to 25 years our population will increase by 100

million people. Virtually all this population growth will occur on the suburban fringes of metropolitan areas. At that time, 80 percent of our population will become urbanized, leaving only 20 percent in farm and rural nonfarm areas. Already more than three-fourths of our economic wealth and productive capacity is concentrated in cities comprising less than 3 percent of our land area. These cities are our greatest source of economic and military strength. Our national welfare is dependent upon their continued efficiency as instruments of production in our economy.

Despite these unchallenged facts, urban areas continue to be grossly underrepresented in State legislatures and in Congress. They are taxed heavily to pay the costs of governmental services to others and receive no corresponding benefits in return for their tax contributions. Urban people are willing to continue to carry their fair share of the costs of government. But we can no longer close our eyes to the fact that the tax drain on cities is impairing their ability to remain efficient wealth producers. Unless they can obtain the funds they need to modernize transportation systems, rebuild blighted areas, clear slums, invigorate declining industrial districts, educate and provide for the health of their children, American cities may decline in efficiency and be unable to carry the huge tax loads for defense and aids to other areas which they have done in the past.

Traditional goals of reapportionment and fairer legislative representation are essential to the long-range welfare of urban areas, but this will be a long and tortuous process, one unlikely to be completed in the foreseeable future. In their search for fairer representation, urban areas also have recognized that the center of power in our society has shifted in this century from the State governments to the National Government and from the legislative bodies to the executive. Certainly the last session of Congress demonstrated the overwhelming power of the executive branch of the Federal Government. Indeed some form of representation in the executive branch may be almost as important as reapportionment, for it is in the White House that many of the most important decisions regarding our society are made.

Even the most cursory examination of the organization of the Federal Government reveals a considerable imbalance in Federal administrative structure. The farmers, now comprising less than 20 million people, are represented by an enormously powerful Agriculture Department offering a vast array of services. Business is represented at the Cabinet table by a Secretary of Commerce, who ostensibly represents several million business firms and who works hard for some of them. Our 15 or 20 million organized workers are supposed to have representation in the Department of Labor. The Western States, containing but a fraction of the population, are represented by the Department of the Interior. The Cabinet, in short, consists largely of representatives of minority groups, special interests or special programs. Each of these had its historical justification and any reasonably objective review would demonstrate that each contributed in a major way to the advancement of American civilization.

But our urban areas are not represented at the Cabinet table and our Federal programs, as a consequence, are ludicrously inadequate in facing urban problems. Failure to face or deal with the problem of civil defense is an example. Failure to face or deal with the problem of mass transit in cities is another example. Recurring conflicts between highway and urban renewal programs and our inability to launch a mass housing program that will help cities are other illustrations. We do not even have any Federal program of research which is developing a

systematic body of knowledge on urban problems.

The Department of Agriculture can tell us what crops are planted on almost every acre of ground in every county in every season of the year for the last quarter century. No Federal agency has any data on urban land use of any sort. The urban land is worth much more than the farm land and holds 5 times as many people and produces far more wealth. We know precisely how many farm buildings there are in the United States, but we have no data on the number of factory buildings. We spend more money on research on potatoes than we do on urban economics. We spend 20 or 30 times as much money on farm housing research as we spend on urban housing research.

Now let us review the proposals which have been made to give greater recognition to our urban areas in the Federal administrative structure. Twenty-two years ago, the President's Committee on Administrative Management called attention to these needs and urged that the Bureau of the Budget assume responsibility for the coordination of policies affecting urban areas. At the same time, the committee urged field level coordination of Federal administrative agencies so as to reduce conflicts between Federal programs. In the same year, the National Resources Committee urged establishment of a program of urban research in the Federal Government and the establishment of a coordinator of urban policies. It also urged a thorough examination of the impact of tax and fiscal policies on urban and other areas. Now it would appear that 22 years provides ample time for the test of an idea, or should we wait for another 22 years?

As recently as 3 years ago we saw a revival of the coordinator idea. Indeed, we have had at least three coordinators charged with some responsibility in this area—Gov. Howard Pyle, Robert E. Merriam, and Gen. John Stewart Bragdon—and we are all familiar with the results. I suggest that the history of Federal administration amply demonstrates the utter failure of coordinators as a means for solving major long-range problems.

The second class of suggestion is that there should be an interdepartmental committee on urban affairs. This dodge has produced some of the most spectacular failures in Federal administrative history, as our experience with river basin committees, civil defense, the National Housing Council, and others amply demonstrates. It seems there can be no argument that interdepartmental coordinating committees provide a forum for discussion between bureaucrats guaranteed to produce no significant change in policy or other effective action. This is not to say that they are not useful means for administrative coordination, merely that they are not very helpful in resolving national policy issues.

Finally, there are proposals for the reorganization of Federal departmental structure. Here I believe history is instructive and shows a persistent need for a Federal Department of Urban Development and Housing. The President's Committee on Administrative Management of 1937 recommended establishment of two new Federal departments—one dealing with social security and another dealing with public works. In subsequent years the Security Agency was established first as an agency and later as the present Department of Health, Education, and Welfare.

The Department of Public Works was not established. Instead, these functions were divided between a newly created Federal Works Agency and a newly created Federal Loan Agency. In the war years, the necessity for concentrating on war housing resulted in another reorganization which combined some works and some loan functions in the National Housing Agency and transferred remaining loan functions to the De-

partment of Commerce. During the post-war years, the remaining functions of the Federal Works Agency were transferred to the Housing and Home Finance Agency or other Federal departments, so that the present Housing and Home Finance Agency contains many of the elements originally proposed for a Department of Public Works and later placed in the Federal Works Agency or the Federal Loan Agency. Under the acid test of 20 years of trial and error, the Housing Agency has proven to be a viable package of Federal programs, while the works and loan concepts have been tried and found wanting.

If we examine the Housing Agency we find that it is no longer a housing agency. It contains programs of housing and urban renewal and I remind you that 20 percent of urban renewal in the future can be the renewal of commercial and industrial areas. It contains the operating remains of the shelf of public works ideas. It contains the Bureau of Community Facilities with a program of aids to local community facilities and public works, and for many years served the building and planning functions of Federal education and health programs. The Housing Agency administers a program of grants for local, county, and State planning assistance and assorted other functions, all affecting the development of urban areas. Indeed, the only major development aids of the Federal Government to urban areas which are not now contained in the Housing Agency appear to be urban roads and highways and aids for school buildings and hospitals, to the extent that we have such programs.

In short, I would contend that the Housing and Home Finance Agency has already become a department of urban development and housing in all but name and prestige. The HHFA has a budget and staff which exceeds that of some Federal departments so that, on grounds of size as well as permanence, departmental status would appear to be justified.

Of the arguments against a Federal department dealing with urban problems, only one appears to have any substance. This is the contention that a department of urban affairs would be a monster embracing most of the activities of the Federal Government. Indeed, that would be the case if we were to try to consolidate in one department all Federal programs dealing in any way with urban areas. We would then have within such a department a division of labor, a division of business, a division of health, education and welfare, a division of conservation, and so on. This argues persuasively against a department dealing with all urban affairs.

The same objections cannot be raised against a department of urban development and housing. During the next 20 years, urban development problems will be the most urgent ones facing our cities and towns. During these years, they must accommodate a population roughly double their present figure. They will be obsessed with the problems of providing housing and community facilities and with the problems of financing this enormous development. The crucial problems of future cities will be framed by the development activities of the next generation.

It is sometimes argued that a department organized on geographic grounds cannot embrace all the problems encompassed in its particular area. This is true of all Federal departments. The Agriculture Department, primarily serving agricultural areas, is also concerned with the marketing of agricultural products in urban areas. It deals with local produce markets and with international trade in agricultural products. Similarly, a Federal Department of Urban Development and Housing, while concentrating on urban areas, might have some programs of aid to

other areas, while some other departments conduct programs of aid to urban people.

The primary reason for a Federal Department of Urban Development, however, is to secure a seat at the bargaining table for our urban communities. Decisions are made in the White House. Urban areas are not represented there today. They cannot be adequately represented by persons who do not command the national prestige, influence, and power characteristic of department heads. In Washington, unfortunately, the flaming sword of truth is a poor substitute for the broad ax of influence. In Washington, influence is largely measured by prestige, payrolls, and budgets, and only a Cabinet officer commanding ample amounts of these can represent urban people. A department representing cities would have this influence and it would have the ability to represent all urban interests at the Cabinet level, something no coordinator can ever have.

Further on this point, if you will examine the Cabinet officers of the last 25 years, you will be struck by the scarcity of former mayors in the President's Cabinet. There have been a few, but only when a mayor has first gone on to be a governor or a Senator has he achieved Cabinet status. This is a grievous deficiency in our national political affairs—our richest seed bed for political leadership, the cities and towns of our country, has been seriously neglected in national affairs. Surely no one can bring a more vivid experience of the needs of American society to Washington than one who has been mayor of one of our great cities.

Eight years ago, the National Housing Conference recommended to Congress the establishment of a Department of Housing and Urban Development. In subsequent years, this recommendation has secured the support of the A.F. of L.-CIO, American Municipal Association, U.S. Conference of Mayors, and the many civic, religious and patriotic organizations which have played an active role in the development of housing and urban renewal legislation.

We believe fervently that our cities are now overwhelmingly the most important aspect of American life and that the political leadership of American communities has a far more profound understanding of the problems of 20th century America than any other group of political leaders. Because of the economic importance of cities, their political importance and their social importance, we believe they deserve representation along with other major groups in the Cabinet of the President. Only when they secure that representation will be needs of urban areas be reflected in national policy.

Recent Events in the Dominican Republic

EXTENSION OF REMARKS

OF

HON. ADAM C. POWELL

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Thursday, March 3, 1960

Mr. POWELL. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following letter:

INSTITUTE OF INTERNATIONAL
LABOR RESEARCH, INC.,
New York, N.Y.

HON. JOHN C. DREIER,
Ambassador to the Organization of American States, U.S. State Department, Washington, D.C.

DEAR MR. AMBASSADOR: American public opinion is shocked and revolted by the recent events in the Dominican Republic. The Trujillo dictatorship has unleashed a cam-

paign of terror against the Dominican people which, according to reports reaching us, has assumed mass proportions. Thousands of innocent people have been thrown into prisons and their lives are in grave danger. If our Western civilization and the ideals for which it stands are to survive, we cannot accept in silence this brutal act of extermination carried out against our brother Dominicans.

We are aware that the Council of the Organization of American States has recently considered a resolution to condemn Trujillo's brutalities, and that the question has been referred to the Peace Committee.

However, in view of the grave situation that exists in the Dominican Republic, despite Trujillo's claim that he has crushed all opposition, we urge the members of the Organization of American States to establish at once an ad hoc committee which would bring to bear the moral force of democracy and human decency to safeguard the human rights of the helpless Dominican people. The situation in the Dominican Republic not only threatens the lives of innocent men and women but also endangers the peace of this hemisphere.

Again, we respectfully suggest that appropriate means be provided to enable the Organization of American States to intervene urgently and effectively, within the spirit of its charter and within the OAS decisions reached in Santiago de Chile in 1959.

Sincerely yours,

NORMAN THOMAS,
Chairman.

Washington, Lincoln, and Edison

EXTENSION OF REMARKS

OF

HON. JOHN H. RAY

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Thursday, March 3, 1960

Mr. RAY. Mr. Speaker, I am glad to place in the RECORD the following address by George E. Stringfellow before the Kiwanis Club of Staten Island, N.Y., on February 11, 1960, the anniversary of the birth of Thomas A. Edison:

Thank you, fellow Kiwanians, for your invitation to address you on Edison's birthday. This is the third time you have asked me to speak to your club. I am complimented by your invitation for a repeat performance.

Each of the 12 months in our calendar year is important. However, I think that February is one of the most important in that Washington, Lincoln, and Edison were born in February.

It was in February that Washington said, "Labor to keep alive in your breast that little spark of celestial fire called conscience."

It was in February that Lincoln said, "Let us have faith that right makes right and in that faith, let us dare to do our duty as we understand it."

I shall mention briefly the philosophy of Washington and Lincoln and will deal more extensively with Edison, with whom it was my privilege to have been a daily business associate during the last decade of his long and productive life.

GEORGE WASHINGTON

George Washington was born February 22, 1732—228 years ago. Washington looked after the welfare of our country as a father looks after his child. He fought for and helped make our country grow strong. He guided it when it was young and gave leadership in developing the greatest form of gov-

ernment, in the words of Gladstone, "Ever stricken off in a given time by the brain and purpose of man."

No man in the history of the world did more for his country than Washington did for ours. He and his associates gave us a system of government which provides investors, producers, and consumers with freedom of choice and freedom of opportunity. Nowhere in the world do men enjoy as much freedom and as high a living standard as we, thanks to Washington's courage and wisdom. Washington truly earned the imperishable title of "Father of His Country."

Our forefathers bequeathed to us a system in which the productive facilities of the Nation are owned by the people instead of the Government. Our benefactors gave us a system of government that recognizes the dignity of the individual and encourages high moral and ethical standards. They gave us a system of government born of the principle that all men have the right to pursue happiness and to enjoy the blessings of liberty.

Our forefathers gave us a system of government which provides everyone an opportunity to make the most of what he has and rewards him according to his ability. They did not subscribe to the philosophy that government owes everyone a living.

Our forefathers glorified the individual, not the state, as the Communists do. They worked like Trojans to build a strong America and they roared like lions to establish and maintain freedom. They had granite in their character and iron in their backbones. They kept government the servant of the people and so must we, if we are to remain free men, and thus be worthy of our great heritage.

ABRAHAM LINCOLN

Abraham Lincoln was born on February 12, 1809—151 years ago tomorrow. He was one of the world's truly great men. He will live always in the minds and hearts of people everywhere. In his memorable Gettysburg Address and in other speeches and writings, Lincoln expressed his belief in the American people and in our system of government. He never lost touch with the people and millions knew him for what he was, "Honest Abe."

Lincoln held the Nation together in the trying 1860's and thus preserved the system of government which made it possible for Edison and others to contribute not only to the progress of our country, but to the betterment of the world.

THOMAS A. EDISON

Thomas A. Edison was born on February 11, 1847, and today we celebrate the 113th anniversary of that great event.

It is generally recognized that Edison was the world's greatest inventor. How, you may ask, did Edison, a poor boy, raise the money to build and equip his research laboratory and staff it with capable assistants.

Edison raised the money by the sweat of his brow and the exercise of his fertile brain. Edison received no subsidy from his government, as is all too often the case today.

Edison was known as the "Genius of Menlo Park." He was asked on one occasion to define "genius." He replied, "Genius is 95 percent perspiration and 5 percent inspiration."

One of Edison's first major inventions was the Universal Stock Ticker, which he sold for \$40,000. He used much of the proceeds from the sale to build, equip and staff his laboratory.

Edison believed in and practiced the four basic principles of management: (1) plan, (2) organize, (3) delegate, (4) supervise.

Edison's favorite invention, the phonograph, was patented February 19, 1877. It was the most original of his 1,100-odd inventions. Having conceived the idea of recording and reproducing sound, Edison sketched

his idea on a scrap of yellow paper and handed it to John Kruesi, one of his assistants, with instructions, "Kruesi, make this."

A few days later Kruesi handed the inventor a queer-looking contraption. Edison wrapped a sheet of tinfoil around the cylinder of the device and, as he turned the crank that revolved the cylinder, he spoke these historic words, "Mary had a little lamb," into a brass horn attached to a recorder riding on the tinfoil. As Edison reversed the operation of the contraption, he heard those words repeated and thus was born sound recording and reproduction as we know it today.

Edison's most widely known and used invention is the incandescent lamp which illuminates the world. As you perhaps know, radio and television are predicated upon the principle of the incandescent lamp.

If Edison had lived under a Communist state, it would have been necessary for him to have gone to the "Bureau of New Ideas of the Division of Engineering of the Office of Social Improvement" to obtain essential commodities with which to experiment in his efforts to produce the electric light and his 1,100 other inventions. It would have been necessary for Edison to have revealed his educational qualifications to the Communist bureaucrat. Having none, Edison would doubtless have been denied the use of materials for his experiments and thus we would have been deprived of the electric light and the other great inventions which Edison's genius and industry produced which have enriched the world.

If Washington and his associates had not given us our system of government, if Lincoln had not held that Government together in its most trying period, it is safe to assume that Edison would not have made his great contribution to civilization.

Ours is a great system of government. It is our duty and our responsibility as citizens to keep it intact as it was passed on to us by our wise benefactors.

If we heed the advice of Washington and Lincoln in matters of government and if we emulate Edison's industry, integrity, and initiative, the future of America will be beyond man's comprehension.

"America," said Ralph Waldo Emerson, one of the wisest of Americans, "is another name for opportunity. Her whole history appears like a last effort of divine providence in behalf of the human race."

Ohio to Lake Canal Planned

EXTENSION OF REMARKS

OF

HON. WAYNE L. HAYS

OF OHIO

IN THE HOUSE OF REPRESENTATIVES

Thursday, March 3, 1960

Mr. HAYS. Mr. Speaker, under leave to extend my remarks in the RECORD, I include an article from the Steubenville (Ohio) Jeffersonian entitled "Tunal Is Not a Dream" describing a plan for an underground canal from Lake Erie to the Ohio River:

TUNAL IS NOT A DREAM

A bold and dramatic plan for an underground canal from Lake Erie to the Ohio River may bring another industrial revolution to 14 mid-America States—affecting 20 million people.

Ernest Humphrey of Geneva, Ohio, who is the creator of "tunal" (a combination of the words tunnel and canal), has spent the last 20 years working out the engineering plans along with T. L. White, a nationally renowned engineer who helped design the New York

aqueduct which is longer and nearly as big as tunal.

Tunal will provide an 87 mile canal from the Ashtabula area to the East Liverpool area. The channels would provide two lanes of water, each 13 feet wide and 18 feet deep filled to a depth of 8 feet, moving at a speed of 5 miles per hour.

MID-AMERICA AFFECTED

This plan would connect mid-America with foreign ports for all kinds of freight, both to and from, and eliminate high costs of transportation. More particularly, Tunal will be a boon to the steel industry in the Ohio Valley and Greater Pittsburgh areas because it will allow cheap shipments of iron ore from Canada—and offset the movement of the industry to locate in the Chicago area where the ore is now being shipped to meet with another important ingredient of steel and coal. The significance to the steel industry is graphically portrayed on the next page of this informative reprint.

An almost unlimited number of barges could ply the canal. The barges are designed to be 10 feet wide, 50 feet long and 9 feet deep and displace 3,000 cubic feet when loaded. Forty small pumps would keep the water moving evenly and no locks, dams or complicated equipment would be involved. Openings every 4 miles will provide access to the barges.

FINANCIALLY FEASIBLE

Humphrey points out that tunal, costing \$200 million to construct is far cheaper than the \$3 billion suggested for the overland canal. He adds that excavations for tunal will be actually less than the freeway in Ashtabula County, Ohio. In order to make a level flow of water on top of the ground, Humphrey says, considerably more dirt would need to be excavated.

As for competition with other modes of transportation, Humphrey estimates that a ton of freight could be hauled for 50 cents as opposed to the present rate of \$3.44 on the railroad, besides the savings of time by tunal. Moreover, Humphrey says that tunal can handle all types of freight unlike the limitations imposed on the belt line and the proposed pipe line to the Lake Erie area.

Humphrey even has economy figured into the excavations, claiming that the dirt can be used as fill for the lake-sewer highway. The shale from excavations could be sold to potteries, he adds.

At the rate of 50 cents per ton he figures tunal would gross \$900,000 daily at a cost of \$1,000 for operation.

CANAL NOT NEW

Similar canals have been used in Europe for years. The New York aqueduct which carries water to the city of New York is big enough to drive a truck through and is longer than tunal, Humphrey points out.

Humphrey got the idea in 1939 when he read an article suggesting an overland canal to the Ohio River from Lake Erie. Since that time, the designer has spent the past 20 years perfecting the plan to include engineering outlays.

Thomas G. Masaryk, "Champion of Liberty"

EXTENSION OF REMARKS

OF

HON. D. R. (BILLY) MATTHEWS

OF FLORIDA

IN THE HOUSE OF REPRESENTATIVES

Thursday, March 3, 1960

Mr. MATTHEWS. Mr. Speaker, March 7 marks the 110th birthday anni-

versary of one of the world's great champions of liberty. I refer to Thomas G. Masaryk, founded and first President of Czechoslovakia. Though that nation now sadly finds itself under the heels of a ruthless tyranny, the flame of liberty ignited by Masaryk long ago is still aglow. A special stamp commemorating the birthdate of this great statesman is not only a fitting testimonial to his contributions to freedom but will serve as a reminder to the people of Masaryk's benign nation and others throughout the world that the causes for which he stood remain an inspiration to liberty-loving peoples everywhere, and that freedom, though seemingly crushed in Czechoslovakia, Hungary, Poland, Rumania, and other countries, will rise again.

Monopoly Is Stifling Invention and Innovation in American Business

EXTENSION OF REMARKS

OF

HON. DAVID S. KING

OF UTAH

IN THE HOUSE OF REPRESENTATIVES

Thursday, March 3, 1960

Mr. KING of Utah. Mr. Speaker, since many Congressmen have a deep interest in small business and the difficulties which now beset this vital segment of the American economy, I wish to share with them a letter which I received recently from Edward Wimmer of Cincinnati. An expert in this field, Mr. Wimmer is vice president of the National Federation of Independent Business. He also writes a weekly column on business problems for the Cincinnati Enquirer. His letter shows that bigness is not only crushing small and independent business and stifling competition, but also is stifling invention and innovation. His letter follows:

DEAR CONGRESSMAN KING: I congratulate you in having a part in the hearings conducted by the Patents Subcommittee of the House Committee on Science and Astronautics, for the purpose of determining some of the difficulties encountered by small businessmen and other individuals, in the field of invention and innovation.

The day of the Ben Franklins, the Fords, Firestones, the Marconis, and Bells, who made their greatest discoveries in basement laboratories and leaking lofts, and who, from the most humble beginnings, saw their discoveries revolutionize human affairs, are probably gone forever.

To mourn their going, or to lament that we now live in a world almost lost to the man of small means who makes a new discovery, but who is unable to breathe his own life into its development, will get us nowhere. What we need to do, I think, is to fully explore the reasons for this unhealthy situation, and hope that some measure of light may be thrown on why the average man feels he has no chance to develop his inventions or to profit from them.

Even in our colleges, the attitude of youth is that invention and innovation should be left to big business, because, as most young people will say, "Big business has the brains, the laboratories, and the money." How many young people can we find today who are thinking of better ways of doing things? And, to be realistic, what would happen to

the small man or the youth seeking an audience with big business for risk capital to launch a new or improved product?

As to investment capital, consider the report that less than 1 percent of the huge loan funds of the big insurance companies went to companies with less than \$100 million in assets, and ask any stockbroker or investment banker if he is interested in promoting a new stock for any new enterprise of small beginnings.

We all know that the fundamental aim of patent laws is to stimulate invention by rewarding inventors. I believe there has been a miscarriage of this end objective due to a miscarriage of our antimonopoly laws. Consider, also, the oft repeated charge that big corporations have bought up thousands of inventions, only to put them on the shelf. The inventor was poorly paid and the consumer may have been deprived of tremendous gains, but what do we know about this situation?

During the early years of our country and, in fact, right up to the decade before the big chains and corporate combines began to take over, new adding machines, radios, soap powders, refrigerators, vacuum cleaners, washing machines, and literally hundreds of thousands of other innovations and inventions found ready marketing capital, and the smaller merchants over the Nation would take on anything new and give it a chance to win public acceptance.

Giantism in manufacturing and distribution has changed the whole area of hope for the small innovator or inventor, and the result has been not only a drying up of initiative but a swift disappearance of risk capital in all its forms.

Our tax laws, of course, are responsible to a great extent for this drying up process. High interest rates make their contribution, and there is the labor union problem and other factors entering the picture, but, in my humble opinion, no study of the hardships faced by the man with an invention can arrive at any fruitful conclusion unless the main problem—too much bigness—is faced up to.

We have heard the harrowing tales about the small inventor who exhausted himself trying to prove that he had a patentable product or improvement on existing products, and how in the end he sold out to some big business that later "made a killing" on his discovery. * * * These tales are told so often that they have contributed greatly to the aforesaid attitude of American youth.

Our contention, therefore, has been that the Government should make risk capital invested in inventions or in new businesses at least partially tax free, with profits the first few years equally protected. If something like this isn't done, there will be no available capital for the beginners in any field.

At this writing there are some 35 commercial banks with nearly \$70 billion in deposits, which is 34 percent of all bank deposits in the United States. Twenty mutual savings banks have 37 percent of all savings bank deposits. Twenty life insurance companies hold 77 percent of total life insurance assets, and 20 investment trusts control 67 percent of the assets in that field. The pension funds are now building up tremendous investment pools, and imagine anyone approaching these institutions for money to market a new invention on a limited basis.

It ought to be clear that on one hand the big chainstore systems are merging and wiping out their smaller competitors, narrowing the market for new innovations by men of small means, while on the other hand the Government knocks out the smalls and narrows the market by loading small businesses with such burdensome reports, and burdensome taxes and regulations that only the strongest business can survive.

Therefore, isn't the problem of opening markets and protecting discoverers of new

things and innovations, a question of what to do about the growing power concentrated in fewer and fewer hands? Or, if all this pregnancy of giantism is as good as its advocates say, would it not be desirable to make the monopoly complete?

When we look back only a few years, we find that the first radio, washing machine, adding machine, typewriter, or almost any other invention that became a great part of our way of life, had its beginning with small people. That most of the really big discoveries in the field of invention originated in humble surroundings. We are well aware that men of means were constantly on the lookout for new things, new ideas that contained a possibility of profit, but now these men of wealth say that fortunes have to be spent in developing new products, and "what have you got when the Government gets through."

Free, competitive, independent enterprise is the core of the free market system, and it is the core of the problem of reopening the areas of invention and innovation to oncoming generations. If the hearings held by the Patents Subcommittee of the House Committee on Science and Astronautics can throw light on the need for more ways to rekindle the inventive spirit that made our Nation the envy of the world, it will render a real service to the future.

In conclusion, I would like to add that no committee of Congress can overlook the destructive effect loss-leader selling has had upon the decisions of smaller companies to introduce a new product, nor how loss-leader selling has retarded improvements in older, well-known products. Risk takers will say: "Sure, it's a good idea. It would sell, but we'd no more than get it on the market when some cut-throat would offer it at cost and down would go our distribution."

Would We Trade Capabilities With Russia?

EXTENSION OF REMARKS

OF

HON. BOB WILSON

OF CALIFORNIA

IN THE HOUSE OF REPRESENTATIVES

Thursday, March 3, 1960

Mr. WILSON. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following article from "Battle Line," Republican National Committee, volume 4, No. 16, March 3, 1960:

WOULD WE TRADE CAPABILITIES WITH RUSSIA?

The Democratic Party, uniting in destructive criticism of the United States as "second rate" to Russia militarily, apparently would be willing to "swap" what we have for what the Soviet Union has.

What would the Democrats be giving away in such a hypothetical situation? On February 21, President Eisenhower outlined our defense posture and gave this powerful and accurate description of our military capability:

"This is a force not unduly dependent upon any one weapon or any one service, not subject to elimination by sudden attack, buttressed by an industrial system unmatched on earth, and unhesitatingly supported by a vigorous people determined to remain free. Strategically, it is far better situated than any force that could be brought to bear against us.

"As we have strengthened these defenses, we have helped to bolster our own and free world security by assisting in arming 42

other nations—our associates in the defense of the free world."

If we traded with the Soviet Union—exchanging our defense capabilities for theirs and trading our strategic situation for theirs—here is an outline of the position the United States would be in:

ICBM's: If we traded places with Russia, we would have an operational ICBM but so would our enemy. In a few years, we might be able to have a few more first-generation ICBM's—if we made such a decision. But, in the meantime, the enemy would be successfully developing second-generation ICBM's and submarine missiles, more flexible and more reliable, and these would be moving into the enemy arsenal by the time we could achieve a mathematical superiority in first-generation ICBM's.

Jet bomber: If we traded places with Russia, we would be faced with a nuclear bomber force 4 to 5 times larger than our own, and our continent would lie almost defenseless against it. The enemy bomber force, also carrying missiles, could fly from a hundred bases, from all directions, at once—and its forward bases would be in such nearby places as Venezuela, Newfoundland, Puerto Rico, Bermuda, Central America, Hawaii, and Alaska. We would have nothing comparable.

Naval forces: If we traded places with Russia, a few hundred miles off our coasts would be cruising enemy naval forces, with aircraft carriers capable of launching nuclear bombers, and missiles. We would have nothing comparable. In a few months, joining this enemy naval capability would be the awesome Polaris submarines each with 16 ICBM's. We would have nothing comparable.

Forward bases: If we traded places with Russia, we would be faced with the power of thousands of fighter aircraft, bombers, tactical missiles, pilotless aircraft, and IRBM's at dozens of bases scattered throughout nearby Canada, Mexico, and the Caribbean Islands. We would have nothing comparable.

Air defense: If we traded places with Russia, we would have our few ground-to-air missile defenses clustered around a few metropolitan centers, and elsewhere would have to rely on obsolete antiaircraft guns. The enemy, in contrast, would have a worldwide system of radar warnings, a powerful all-weather fleet of jet interceptors, substantial ground-to-air missile bases, and promising development of anti-missile missiles.

Ground forces: If we traded places with Russia, we would face a quarter of a million nuclear-armed enemy troops in Mexico and Canada and these would be allied with large and powerful forces of other nations in our own hemisphere. We would need large ground forces to defend our borders, maintain internal security, and maintain our domination of a restless satellite empire. We would have none of our troops at forward bases close to our major enemy.

Collective security: If we traded places with Russia, in contrast to our tinderbox of satellite nations subdued by military dictatorship, the enemy allies, all freemen, would be banded together in collective organizations and treaties which would ring us with about 250 strategically located bases for planes and nuclear missiles in addition to ground forces.

National economy: If we traded places with Russia, except for a few dramatic exceptions, our economy would be of Civil War era. Our population would be concentrated in one-half of the country and we would be offering bonuses for settlement of the other half. Fifty percent of our labor force would be engaged in agriculture.

To make the economy of the United States equal to that of Russia, here is what would have to be done:

We would have to, among other things, get rid of three-fifths of our steel capacity, two-thirds of our hydroelectric capacity, two-thirds of our petroleum capacity, over half of our aluminum production, 90 percent of our natural gas production, two-thirds of our copper production, 95 percent of our electric motor output. We would have to tear up 14 of every 15 miles of paved highway, get rid of 19 of every 20 autos and trucks, tear up 2 of every 3 miles of railroad track, get rid of 60 percent of our railroad freight cars, sink 8 out of every 9 merchant ships.

Standard of living: To make ours equal with Russia, we would have to do these things, among others: destroy 80 percent of our housing, destroy 80 million TV sets, destroy 9 of every 10 telephones and radio sets, reduce passenger cars to our 1915 level, cut meat consumption by 60 percent.

What reasonable person would join the Democrats in believing that "Russia is best" and the United States "second rate"?

One Hundred and Tenth Anniversary of the Birth of Thomas Garrigue Masaryk

EXTENSION OF REMARKS

OF

HON. ADAM C. POWELL

OF NEW YORK.

IN THE HOUSE OF REPRESENTATIVES

Thursday, March 3, 1960

Mr. POWELL. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following letter:

COUNCIL OF FREE CZECHOSLOVAKIA,
Washington, D.C., February 22, 1960.

DEAR CONGRESSMAN POWELL: The silenced Czechoslovak people in the homeland are not permitted by their communist oppressors to celebrate publicly the 110th anniversary of the birth of their beloved President Liberator Thomas Garrigue Masaryk, March 7, 1850.

The Council of Free Czechoslovakia speaking on behalf of the captive people take the liberty to ask you to remind the American public of Masaryk's greatness.

The more the free world must resist the onrush of totalitarian forces, the more Thomas Garrigue Masaryk, first president of the Czechoslovak Republic, begins to stand up as one of the greatest thinkers and statesmen of this century. For Masaryk considered democracy the only form of government worthy of the dignity of the modern free man. His whole life was spent in fighting for the idea of democracy. He took issue with the teachings of Marx, he denounced Bolshevism; and the volunteer army of the Czechoslovak Legionnaires, whose commander-in-chief he was, was the first army that stood up with arms to the Bolshevik expansion already in 1918. In his "Making of a State" Thomas G. Masaryk clearly analyzed all perils of democracy and outlined the way for mankind to prevent its downfall. Throughout his three terms as President of the Czechoslovak Republic, the founding of which was largely attributed to his efforts, he continued as democracy's strongest champion. T. G. Masaryk was the first statesman to propagate the unification of Czechs and Slovaks in a common state. After he went abroad to organize the Czechoslovak liberation movement—in cooperation with Milan Rastislav Štefánik and Edward Beneš—he succeeded to convince the Allied governments to endorse the setting up Czechoslovakia, a Re-

public of Czechs, Slovaks and Carpatho-Russians. (These last joined the united movement of making a new state voluntarily later.) As a result Czechoslovakia became a flourishing island of peace in a world tossed about by disorders and revolutions.

Exactly 40 years have elapsed since Czechoslovakia, headed by President Masaryk, inaugurated its new democratic constitution. It was altogether a modern constitution which encompassed and guaranteed all basic freedoms. Its preamble purposely paraphrased the preamble of the Constitution of the United States to demonstrate the ideological proximity of the two nations.

Thomas G. Masaryk lived by the ideals so dear to every American since he was inspired both in the struggle for his nation's independence and in his function as President by the ideas of Jefferson and Lincoln. In his radio message to the American people, the 87-year-old Masaryk said: "Czechoslovakia proudly accepts the ideals of Washington, Lincoln, and Wilson. Let others find a solution to their own problems, but let us not allow them to touch our most important treasures: freedom of soul, freedom of word, and freedom of race." This was 6 months before his death and a year and a half before Czechoslovakia ceased to be a free republic, losing its hard-acquired liberty.

Thomas G. Masaryk, then, lived by the ideals which are so close to all Americans and which have made the United States big and powerful. His wife Charlotte, a great support to him in times of hardship, was an American. Small wonder, then, that Masaryk once upon a time called America his second homeland. In issuing of the Thomas G. Masaryk "Champion of Liberty" postage stamps commemorating the 110th anniversary of his birth, the United States is reminded that it is paying tribute not only to a great philosopher, statesman, and human being, but also to one of its closest and most devoted friends.

The Council of Free Czechoslovakia thanks you sincerely for anything you will deem appropriate to commemorate the great Czechoslovak educator and scientist, the intrepid fighter for liberty and truth, the great statesman and architect of democracy, the founder of the Czechoslovak Republic and propagator of the federating of Europe and the free world.

Very sincerely yours,

Dr. JURAJ SLÁVIK,
Vice Chairman, Executive Committee.
Dr. PETR ZENKLI,
Chairman, Executive Committee.

Industries Principally Responsible for Heavy Unemployment in Distressed Labor Markets

EXTENSION OF REMARKS

OF

HON. DANIEL J. FLOOD

OF PENNSYLVANIA

IN THE HOUSE OF REPRESENTATIVES

Thursday, March 3, 1960

Mr. FLOOD. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following two fact sheets compiled by the Area Employment Expansion Committee, 99 University Place, New York City, which point up the need for enactment by Congress in this session of area redevelopment legislation now pending before the House Rules Committee, such legislation having passed the Senate last year:

AREA EMPLOYMENT EXPANSION COMMITTEE, NEW YORK, N.Y.

FACT SHEET No. 42.—Industries principally responsible for heavy unemployment in distressed labor markets (November 1959)

Distressed labor market	Industry principally responsible for heavy unemployment	Distressed labor market	Industry principally responsible for heavy unemployment
CONNECTICUT		NORTH CAROLINA	
Small:		Major: Durham	Tobacco, textiles.
Ansonia	Brass.	Small:	
Bristol	Brass, clocks, and watches.	Fayetteville	Textiles, military installation.
Danielson	Textiles.	Hendersonville	No year-round employment.
Norwich	Do.	Kinston	Textiles, construction, tobacco.
Thompsonville	Do.	Lumberton	Textiles.
MAINE		Mount Airy	Do.
Major: Portland	Metal.	Rockingham-Hamlet	Do.
Small:		Rocky Mount	Tobacco processing, agriculture, textiles.
Biddeford-Sanford	Textiles, textile machinery.	Rutherfordton-Forest City	Textiles.
Lewiston-Auburn	Textiles, shoes.	Wilson	Tobacco.
Very small:		SOUTH CAROLINA	
Oahls	Pulpwood, sardines, lack of year-round jobs.	Small: Hampton	Underdeveloped area.
Eastport	Do.	VIRGINIA	
MASSACHUSETTS		Major: Roanoke	Synthetic fiber, railroad repair shops.
Major:		Small:	
Brockton	Shoes.	Big Stone Gap-Appalachia	Coal mining.
Fall River, Mass.-R.I.	Textiles.	Richlands-Bluefield	Do.
Lawrence	Do.	Carroll and Grayson	Lumber textiles.
Lowell	Do.	WEST VIRGINIA	
New Bedford	Do.	Major:	
Springfield-Holyoke	Ordinance, air conditioning.	Charleston	Coal mining.
Small:		Huntington-Ashland, W. Va.-Ky.-Ohio	Railroad repair shops, machinery, stone and glass products, defense industries.
Newburyport	Shoes.	Wheeling, W. Va., Steubenville, Ohio	Coal mining, pottery and glass products.
North Adams	Textiles, electrical equipment.	Small:	
Webster-Southbridge	Textiles.	Beckley	Coal mining.
Very small:		Bluefield	Do.
Clinton	Abrasive, metal.	Clarksburg	Do.
Gloucester	Food processing.	Fairmont	Do.
Great Barrington	Textiles.	Logan	Do.
Plymouth	Lack of year-round jobs.	Martinsburg	Metals.
Hyannis	Do.	Morgantown	Coal mining.
RHODE ISLAND		Parkersburg	Chemical.
Major: Providence	Textiles.	Point Pleasant-Gallipolis, W. Va.-Ohio	Synthetic fibers, coal mining.
VERMONT		Ronceverte-White Sulphur Springs	Lack of year-round job opportunities, coal mining.
Very small: St. Johnsbury	Lumber and timber products.	Welch	Coal mining.
NEW JERSEY		ALABAMA	
Major:		Major: Birmingham	Mining and railroad equipment.
Atlantic City	Lack of year-round jobs.	Small:	
Trenton	Metal.	Anniston	Military establishment, iron foundries, textiles, lumber.
Small:		Florence-Sheffield	Leather, textiles, chemical.
Bridgeton	Dredging, apparel, textiles.	Gadsden	Textiles.
Long Branch	Apparel, lack of year-round jobs.	Jasper	Coal mining.
Very small: Wildwood	Growth in labor force exceeds economic growth.	Talladega	Textiles, ordnance.
NEW YORK		KENTUCKY	
Major:		Major: Louisville, Ky.-Ind.	Household appliance, ordnance, chemicals.
Buffalo	Auto and aircraft.	Small:	
Utica-Rome	Textiles, aircraft, and machinery.	Corbin	Coal mining, railroads, lumber.
Small:		Hazard	Coal mining.
Amsterdam	Carpet.	Madisonville	Do.
Auburn	Machinery, textiles.	Small:	
Elmira	Machinery, electrical equipment.	Middlesboro-Harlan	Do.
Gloversville	Gloves.	Morehead-Grayson	Railroad repair shops, clay refractories.
Jamestown-Dunkirk	Railroads, furniture.	Paintsville-Prestonburg	Coal mining.
Newburgh-Middletown-Beacon	Apparel, textiles.	Pikeville-Williamson	Do.
Plattsburgh	Mining, construction.	LOUISIANA	
Wellsville	Oil refining.	Small: Opelousas	Underdeveloped.
PENNSYLVANIA		MISSISSIPPI	
Major:		Small: Biloxi-Gulfport	Food processing and construction.
Altoona	Railroad repair shops.	TENNESSEE	
Erie	Refrigerators, freezers, and air conditioners.	Major: Chattanooga, Tenn.-Ga.	Textiles, iron foundries.
Johnstown	Bituminous coal mining.	Small: La Follette-Jellico-Tazewell	Coal mining.
Pittsburgh	Coal mining, machinery.	OKLAHOMA	
Scranton	Anthracite coal mining.	Small:	
Wilkes-Barre-Hazleton	Anthracite coal mining, textiles.	Ardmore	Oil well drilling and military installation.
Small:		McAlester	Coal mining, military installation.
Berwick-Bloomsburg	Railroad equipment.	Muskogee	Chemicals (military).
Butler	Railroad equipment, limestone quarries.	Okmulgee-Henryetta	Mining, stone, clay and glass products.
Clearfield-DuBois	Coal mining, railroads, stone, clay, and glass products.	TEXAS	
Indiana	Coal mining.	Major: Beaumont-Port Arthur	Oil drilling and refining, machinery and equipment.
Kittanning-Ford City	Coal mining, limestone quarries.	Small:	
Lewiston	Synthetic fiber, iron and steel forgings, railroads, and clay products.	Galveston-Texas City	Chemical and petroleum products.
Meadville	Slide fastener and electrical machinery.	Laredo	Antimony and Federal installation.
New Castle	Machinery.	Texarkana, Texas-Ark.	Ordnance, military installation.
Oil City-Franklin-Titusville	Oil-refining equipment and primary metals.	Karnes City	
Pottsville	Anthracite coal mining.	ILLINOIS	
St. Mary's	Electrical machinery.	Small:	
Sayre-Athens-Towanda	Railroad repair shops, machinery.	Centralla	Nonferrous metals, shoes.
Sunbury-Shamokin-Mount Carmel	Coal mining, railroad equipment, textiles.	Harrisburg	Coal, fluorspar mining, nonferrous metals.
Williamsport	Textiles and automobile.	Herrin-Murphysboro-West Frankfort	Coal mining and radio.
FLORIDA		Mount Carmel-Olney	Coal mining and petroleum refining.
Very small: Apalachicola	Commercial fishing.	Mount Vernon	Railroad cars.
MARYLAND			
Small:			
Cumberland, Md.-W. Va.	Textiles, mining and railroad repair shops.		
Cambridge	Food processing.		
Hagerstown	Aircraft.		
Garrett	Mining.		
Very small:			
Crisfield	Food processing.		
Elkton	Ordnance, automobiles.

Gettysburg Battlefield**EXTENSION OF REMARKS**

OF

HON. IVOR D. FENTON

OF PENNSYLVANIA

IN THE HOUSE OF REPRESENTATIVES

Thursday, March 3, 1960

Mr. FENTON. Mr. Speaker, under leave to extend my remarks in the Appendix of the RECORD I include an editorial appearing in the Sunbury Daily Item, of Sunbury, Pa., on February 19 last, as follows:

Gettysburg battlefield holds a secure place in American history, but with one of its important segments slated for sale, word comes from Washington that funds allocated by Congress to acquire additional land have been spent elsewhere. The reason given is that failure of local authorities to enact zoning regulations ruled out purchase of the desired property by the National Park Service. As a result the \$450,000 allocated for this purpose was committed to the acquisition of additional land at Manassas (Bull Run) battlefield.

Commercialism has been permitted to become rife on the Gettysburg Battlefield which has far more than its quota of souvenir stands, hotdog palaces, auto junkyards, motels, and housing developments. Now with the land on which the first day's fighting in the battle which turned the tide of the Civil War available to any fast-buck operator, diversion of funds intended to protect this world shrine from further encroachment is attributed to dillydallying on the part of small-time officials. To what extent buckpassing is involved in this impasse cannot in fairness be stated. It should be entirely obvious, however, that Congress and the National Park Service have obligations to the people in the matter of preserving this hallowed ground. A request now before Congress for \$400,000 for further purchase of Civil War battlefield land in the fiscal year beginning July 1 may be meaningless in halting another serious incursion of commercialism, but Gettysburg merits serious and special consideration.

Mr. Speaker, as a member of the Interior Appropriations Subcommittee that has heard considerable testimony on this subject I would like to clarify the situation by pointing out that the 1961 appropriation bill for the Department of the Interior and related agencies, as it passed the House on February 16, included provision of the full budget request of \$400,000 for the continued acquisition of Civil War battlefield lands by the National Park Service. In recommending this appropriation, which included \$200,000 for acquisition of lands at Gettysburg, the Committee on Appropriations felt it expedient to continue the same stipulations placed upon acquiring such lands by the House and Senate last year to the effect that these funds should not be spent by the Department of the Interior until such time as adequate zoning laws were developed by local authorities to prevent commercial development and that the funds should not be used to acquire the Adams County Poor Farm.

As general background to this subject, it must be realized that the Federal Government now owns and maintains 18,000 acres of Civil War battlefield lands, including 2,800 acres at Gettys-

burg. The cost to the Federal taxpayers of acquiring these lands, with the accompanying requirement of roads, buildings, utilities, etc., is evidenced by the fact that at Gettysburg alone the Government has spent over \$3 million during the last 10 years. The Park Service plan of last year was that during the next 4 years an additional \$5 million worth of land be acquired at Civil War battlefield sites. This included a proposal to acquire an additional 691 acres at Gettysburg at an estimated cost of \$2,415,000. With such large expenditures involved, I believe that the general public now will appreciate the necessity to assure that future acquisitions are protected from commercial development on adjacent properties. If not, we have the never-ending problem that one purchase necessitates still another purchase as we move on down the street.

The action of the House of Representatives this year in providing the funds and continuing the provision requiring adequate local zoning is in line with the testimony received by the committee during its hearings. The net effect of such testimony was that the committee not necessarily open its pocketbook, but rather that it keep an open mind on this subject until local authorities have had an opportunity to do something about the problem.

Current efforts along three lines, if successful, should solve the problems at Gettysburg. First, local authorities are now working toward the adoption of necessary zoning regulations. Second, the Gettysburg Battlefield Preservation Association has been organized and is proceeding with a nationwide fundraising campaign which should provide significant revenues to be used for acquiring additional lands. Third, under consideration is a possible exchange plan which would permit the National Park Service to swap some of the present property owned by the Federal Government for property such as that in Adams County which is of greater historical significance. Although certain legal complications must be overcome, these do not appear insurmountable.

No Deterrent Gap in Our Defenses**EXTENSION OF REMARKS**

OF

HON. THOMAS B. CURTIS

OF MISSOURI

IN THE HOUSE OF REPRESENTATIVES

Thursday, March 3, 1960

Mr. CURTIS of Missouri. Mr. Speaker, under leave to extend my remarks in the RECORD, I desire to include the main excerpt from the address of Hon. Robert K. Gray, secretary to the Cabinet, before the Missouri Association of Republicans at St. Louis, Mo., on Saturday, February 13, 1960, which deals with our military defense:

No army, political or military, wisely goes into battle without an appraisal of its enemies and the issues involved. With peace, progress, and prosperity at hand, it is obvious that the Democrats are going to have

to center their guns on other issues. In the brief time that remains for our discussion tonight, let us meet head on the issue to which they have been giving most attention in the recent press—the defenses of America and the so-called missile gap.

Having devoted a lifetime to military planning and national defense, having led the Allied Forces in the liberation of Europe, as a former Chairman of the Joint Chiefs of Staff at home and as former commander of SHAPE overseas, it is easy to see why Dwight Eisenhower puts the highest emphasis on our national security and the preservation of the American way of life. It is easy to see why he considers defense needs before he considers any other when preparing his national budget, for America can afford what she must afford for her security.

It is interesting to note that in the years following World War II when the Russians were getting their headstart in the missile field, the Democratic administration, until its last year in office, never spent so much as a million dollars for research and production in this area. In fact, your Republican administration is spending 10 times as much each day on ballistic missile programs as was spent in all of fiscal year 1952.

To cover the embarrassment at having left America at the starting gate for 6 years, Democrats would now have us pour money and men into crash programs which would accomplish only the disruption of the sound and orderly existing missile programs on which our skilled research and development manpower is being taxed to the fullest.

Despite their talk of gloom and doom and during the period when they have raised congressional appropriations on domestic issues by many billions of dollars, it is significant to note that the President's budget requests for major military appropriations have not been significantly changed in the last several years. This seems clear evidence that the Democrats appreciate the complete adequacy of the Eisenhower defense budget, and that when making their dire predictions they are really more political than perturbed.

If these debates over America's preparedness were motivated by sincere conviction they would be excusable. To beat false drums for political purposes, however, is costly to a democracy which depends upon an informed public for its greatest strength.

To start a war of aggression is completely against our American principles. America's defense arsenal has been built to protect our Nation and her allies from attack and to present to those who might consider war against us the prospect of total annihilation in exchange for their folly.

Our military needs, both strategic and tactical, are different from the Soviets. The weapons in our arsenal, both in kind and number, must be tailored to our needs and not to theirs. We arm ourselves for a different purpose. Our intentions and our policies are as different as our geography. A perfect case in point is the intercontinental ballistic missile controversy now raging in the Nation's Capital. From Russia's standpoint, full emphasis on intercontinental ballistic missiles makes sense. This is one of the few ways she can reach America, a target thousands of miles from the borders of the Iron Curtain countries. On the other hand, Russia's coast is flanked by our allies; Norway on the west, Turkey on the south, and Japan on the east. From these vantage points, intermediate-range ballistic missiles are just as effective. You obtain no greater explosive power from a bomb dropped on a military target just because it traveled thousands of miles to reach its destination.

We gain nothing by this numbers' game the Democrats would have us play—this insistence that we have as many marbles of the same color in our bag as the perspective enemy has in his. It is ironic, isn't it, that the party that claims that we Republicans worry too much about the arithmetic

of budget balances, apparently would have us substitute the adding machine for judgment when it comes to providing for the Nation's defense.

This Nation has now in being over 1,500 SAC bombers, each of them capable of carrying a bomb scores of times more powerful than the bomb which destroyed Hiroshima. We have over a 1,000 B-47's, again each of them capable of carrying a bomb hundreds of times more powerful than the one that destroyed Hiroshima.

With the same capability, we have several hundred B-52's. We have 15 carriers, each with 50 planes, each plane capable again of carrying nuclear weapons hundreds of times as powerful as those which brought complete destruction to Japanese cities in World War II. We have several squadrons of Thor intermediate ballistic missiles located in England and Jupiter intermediate range ballistic missiles located in Italy. We have hundreds of tactical bombers based in Western Europe and the Far East. And before this year is out, we will have the Polaris submarines with their 1,200-mile range capable of reaching 90 percent of the industry and people of the Soviet Union. We have in our American arsenal today the horrible, terrible ability of creating thousands of Hiroshimas. It is not saber rattling to say that the Soviets know that the United States has the ability, right now, in being, to destroy the Soviet Union. Make no mistake about this. No aggressor today can knock out the deterrent striking power of America and her allies.

The important thing to be noted by politicians in America and by America's enemies wherever they may be is that there is no deterrent gap in our country's defense arsenal.

Those who preach the false doctrine that America is unprepared because she has not assembled the identical weapons of aggressor nations, endanger the very country they profess to save, in at least four ways. First, they run the risk of creating a defeatist attitude in America. This would be bad if it were justified; it is wholly unforgivable since it is not. Second, they shake the faith of our allies in the strength of America. Third, their talk of weakness influences uncommitted nations and fourth, if they are too persistent, they may eventually convince one of Russia's parochial generals that these phrophets of gloom are right, that we are indeed weak, and thereby entice the Soviets to make the horrendous, horrible mistake of beginning World War III.

It is time for politicians for the sake of pet projects and political fortunes to stop selling America short. We are a first-rate country with a first-rate military strength and with a first-rate economy . . . thanks to our Republican President, backed by a handful of determined Republicans and their joint efforts to distinguish in this country between the desired and the truly necessary.

As a party, what the Democrats have been up to in the past 7 years marks more clearly than ever before one basic difference between our two organizations. It is best illustrated by a table, which was printed in the CONGRESSIONAL RECORD at the close of the last session, and which listed 20 big spending bills introduced in the House and another 20 introduced in the Senate, together with their estimated cost. Every one of these "wild blue yonder" proposals was sponsored by a congressional Democrat. You may find this hard to believe but the grand total of this shopping list came to over \$326 billion over an average period of only 5 years. This amount is \$30 billion more than the entire national debt today.

Now make no mistake. Many of these proposals include improvements we would all welcome for America, but not at the expense of destroying our American tradition of personal initiative, and our national solvency.

As a party we stress the importance of faith in the individual, restrained Government leadership, and determination to guard against the growth of power in Washington. In simple terms, I believe the basic difference between our two parties is this: both parties want more and more, better and better things for America and for Americans. But we Republicans recognize that only a socialistic form of government attempts to provide these services from a Federal bureaucracy. In a democracy, free-spirited citizens have traditionally proved their ability to provide these improvements less expensively for themselves.

To state it one more way, we Republicans believe the current do-it-yourself craze can be wisely applied to many of the demands we Americans make on our Government.

Many support this philosophy and yet call themselves Democrats. And I must say that if, by family tradition or personal habit, a man prefers to call himself a Democrat, he will get no quarrel from me if he supports our party's philosophy and backs its candidates.

As we Republicans face this election basking in a party unity which does credit to us all, it would be easy to sympathize with the harangues of the Democrats, to forgive their name calling, and to overlook tactics as obvious as a mustache drawn on the Mona Lisa.

But we have a job to do. As responsible Republicans we must present the facts to our fellow citizens less interested or less informed. If you and I and our fellow Republicans do our part in the coming campaign and put across to the voter the image of our party—that image found in the composite of its platform, its record, its incumbents, and its candidates, then all of us can mark this 1960 in red ink on our calendars for it will be a great year for our cause.

Action Is the Need, Not Words

EXTENSION OF REMARKS

OF

HON. THOMAS N. DOWNING

OF VIRGINIA

IN THE HOUSE OF REPRESENTATIVES

Thursday, March 3, 1960

Mr. DOWNING. Mr. Speaker, in the Journal of Commerce for Friday, February 5, 1960, there appears an article which has just been brought to my attention. It clearly sets forth the need for some realistic thinking concerning the future of our merchant marine. I commend the reading of this article to all my colleagues who are interested in this phase of our national defense and commerce.

SHIPPING OUTLOOK—ACTION IS THE NEED, NOT WORDS

(By Stanley Mantrop)

The annual budget message handed down to Congress by the President contains suggestions for an additional study of merchant marine matters. What puzzles us, as well as the shipping industry, is just what this new study is expected to turn up.

Studies of this nature have been going on for years. In fact, one of them, conducted in 1930, resulted in the passage of the 1936 Shipping Act.

This proposed new study like every one which preceded it—and there have been many—turned up only one conclusion. This country needs a strong merchant marine for defense as well as for the country's foreign

commerce. And if the United States is to have a merchant marine it must be subsidized to exist.

The industry feels, and rightly so, that it should have received a better break in the President's budget message. In short, at the very least it should have contained suggestions of a more constructive nature in connection with future policy for the merchant marine.

It could also have shown more determination and greater realism by the Government in facing up to its obligations in relation to the merchant marine.

There is no doubt but that the bulk of the American-flag fleet is fast reaching the obsolescence stage and that steps must be taken to get a major building program underway as quickly as possible. And this takes money—much more than the Government has allocated or proposed in this year's budget.

This year's allocation would provide for financial support for only 14 new ships which is far short of the figure the industry feels it needs to meet the competition it presently faces.

There is merit to the industry's view that the money being proposed in the budget for new construction subsidy payments is far from adequate in view of the industry's claim that at least 300 new ships will be needed shortly to replace this country's overage tonnage.

On the other hand, it must be admitted the industry, in many cases, has been slow in meeting its construction obligations under its contracts. But in all fairness it must be pointed out that the lines must get greater Government support, and be assured of greater economic returns from its present ships before large new sums can be allocated by them for ship replacements.

Each year in the last 10, the Maritime Administration has been unable to obligate all its construction funds even under a modest construction program as that presently being proposed because of the slowness of the subsidized lines to finalize contracts for construction. However, the industry has had little in the way of incentive to make capital expenditures for new construction.

The illusion that the merchant marine can carry on without subsidy as some believe should be dispelled. And no amount of new studies are going to alter this fact.

If the United States wants a merchant marine it will have to be continued under subsidy. And this might very well include the tramp ship fleets if the Government feels they are important to the welfare of the country.

The tramp operators have been rapping at the Government's door for a long time seeking some financial aid in order to exist and something is going to have to be done if this segment of the industry is going to survive.

Nobody will deny, and this includes the Government, that this country's tramp fleet is virtually over the hill and is made up of overage ships. And there is little likelihood the industry is going to be able to replace the ships from the present day financial returns—or lack of them.

There is no doubt but that the shipping industry's plea for a realistic approach to the maritime industry's problems has merit. The time has long since passed when new studies can produce anything new that will solve some of these perplexing problems.

The time has come for the Government to determine whether or not it wants a merchant marine. If it does then steps must be taken to support it to the fullest.

Clearly what is needed is not more words, but more up-to-date competitive merchant vessels capable of serving the United States efficiently in war and in peace.

Socialized Medicine

EXTENSION OF REMARKS

OF

HON. JOHN BELL WILLIAMS

OF MISSISSIPPI

IN THE HOUSE OF REPRESENTATIVES

Thursday, March 3, 1960

Mr. WILLIAMS. Mr. Speaker, the editor of the Jackson (Miss.) State-Times, Oliver Emmerich, has written an excellent editorial on the danger of proposed legislation which may lead to socialized medicine.

I commend this editorial to the membership. It follows:

[From the Jackson (Miss.) State-Times, Feb. 20, 1960]

AGAIN THE CLAMOR IS HEARD FOR SOCIALIZED MEDICINE

(By Oliver Emmerich)

If our system of government were easy to maintain, it would be in force all over the earth.

The high standard of living in countries with freedom of action proves the value of our ideologies.

But people are either too unenlightened as is the case with primitive people or too enslaved politically as is the case with the Iron Curtain countries to enjoy the system which we enjoy.

The trend in America today moves us to ask ourselves, "Do we want the kind of government we have today or do we want to swap it for a different kind of government?"

With this prelude we discuss a proposition which has the elements of popular appeal and also is a part of the system of state socialism—free government medicine for the aged.

Are men inhuman and wicked when they oppose such a thing as free medicine for the aged? People who advocate it say that men are evil if they lend a deaf ear to human misery.

Is President Eisenhower an evil man? He said:

"If the time ever comes when large numbers of our citizens turn primarily to the Government for assistance in what ought to remain a private arrangement between doctor and patient, then we shall all have suffered a great loss . . ."

Even the head of the Department of Health, Education, and Welfare, Secretary Arthur Flemming, said:

"We are convinced that the objective of making adequate medical care reasonably available to our aged population should, so far as possible, be achieved through reliance upon and encouragement of individual and organized voluntary action."

The Farm Bureau is an organization which is close to the rural people of America and seeking to lift the income and living standard of farm people.

The Farm Bureau has long opposed programs which may lead to socialized medicine. The proposal to provide for health care of the aged, whether retired or not, and for survivors entitled to benefits, is a long step in this direction.

We fear the proposition of compulsory health insurance and medical aid for the aged is another step away from the private enterprise system which has done so much for the American people.

In the United States we have such a high standard of living that we subconsciously believe that this standard is worldwide. It is a far cry from that in a country such as India where a man may own a tree and regard its branches and its shade as shelter for his family.

The Baptist Standard, an organ of the Baptist Church, expressed the idea. It said: "Whatever concerns human welfare should concern the Christian churches. Consequently, we have sought to study the proposal (H.R. 4700) closely before voicing an opinion on it. The conclusion is that this could be one of the most far-reaching bills to face the Congress because it could easily be the forerunner of socialized medicine and one more big step toward the total regimentation of American citizens by their own Government."

"Everyone needs hospital insurance, but the National Treasury is not the place to get it. When the Government pays the bill, it will ultimately name the doctor and the hospital."

In Washington again the cry for socialized medicine is on. It failed in previous efforts. Now a new approach is used. This time the goal is sought through a series of steps. Medicine for the aged is one. Compulsory health insurance is another. Meanwhile our American ideology is being tested.

Lithuanian Independence

EXTENSION OF REMARKS

OF

HON. RAY J. MADDEN

OF INDIANA

IN THE HOUSE OF REPRESENTATIVES

Thursday, March 3, 1960

Mr. MADDEN. Mr. Speaker, the following resolution was unanimously adopted at the annual banquet commemorating the 42d anniversary of Lithuanian Independence held in East Chicago, Ind., on Sunday, February 21:

Whereas the peace-loving and progressive Lithuanian Nation, notwithstanding its loyalty to international treaties and agreements, fell victim to unprovoked aggression and military invasion of Soviet Russia; and

Whereas the Lithuanian people are strongly opposed to foreign domination and are determined to restore their freedom and sovereignty which they had rightly and deservedly enjoyed for many centuries in the past; and

Whereas, because of their manifest and unmistakable anti-Communist attitude, the Lithuanian people behind the Iron Curtain, backed by their kinsmen in the free world, represent an active and reliable outpost in the present defense front of the free nations against international communism; and

Whereas the Soviet dictatorship constantly strives to extend its rule over the new territories in Europe, Asia, and Africa and seeks to dominate the whole world: Now, therefore, be it

Resolved, That this gathering appeal to the Government of the United States to respond to the demands of our times by giving wise and coordinated leadership to the troubled world aspiring to peace, justice, and freedom; and be it further

Resolved, That it is our consensus that American leadership in the fight for freedom and peace will be best exerted by inaugurating strong and dynamic policy aimed not only at preventing further expansion of Communist imperialism but also at abolishing the fruits of all past Kremlin aggressions; be it

Resolved, That this meeting asks the Government of the United States to refrain from signing any new treaties with the Soviet Union until the latter agrees to restore freedom and sovereign rights of self-determina-

tion to the Lithuanian people and to other enslaved Eastern European Nations.

ALBERT G. VINICK,
President, Lithuanian American Council.
Rev. PETER CELESIUS,
Secretary, Lithuanian American Council.

The 10th Pennsylvania and the War of 1898

EXTENSION OF REMARKS

OF

HON. THOMAS E. MORGAN

OF PENNSYLVANIA

IN THE HOUSE OF REPRESENTATIVES

Thursday, March 3, 1960

Mr. MORGAN. Mr. Speaker, under unanimous consent, I wish to insert in the pages of the CONGRESSIONAL RECORD some facts concerning the glorious 10th Pennsylvania Volunteers who served in the War with Spain in 1898. My esteemed friend and fellow Pennsylvanian, former Senator Edward Martin, then a youth of 19, served in this regiment and I know I speak for him when I say that it is one of the proudest, fondest memories of a life crowded with service to his State and his country. I may add that Senator Martin has, in his time, served in all grades of the service from buck private to major general; he is the recipient of the Distinguished Service Cross with Oak Leaf Cluster; the Order of the Purple Heart with Oak Leaf Cluster, and the American Legion Distinguished Service Medal. He was placed on the initial general staff eligibility list; he has served his State as auditor general, State treasurer, adjutant general, Governor and finally, Senator of the United States.

As a Pennsylvanian, it seems fitting to me to insert for permanent reference in the CONGRESSIONAL RECORD some of the contemporary press comments on the parade of the 10th Pennsylvanians on September 30, 1899, in New York City in honor of the homecoming of Admiral Dewey from the great victory at Manila.

There are 94 surviving members of the "Fighting 10th" Pennsylvanians. I am sure that all Members of this House and of the Senate will join with me in profound salutation of these heroes of long ago. The statements follow:

The Sun said:

"At the end (of the Pennsylvania line) came the veteran 10th. The men were in khaki trousers, blue flannel shirts and service hats that looked as if they had seen really more service than any hat ought to be called upon to endure. They came in the same attire they wore when they marched abroad the transport at Manila and cheered for the country to which they were returning after their hard service. And they looked veterans and carried themselves like veterans, every man of them. When the admiral caught sight of the 10th's flag he took off his hat and held it down to his side, and he looked at those worn colors as a man looks at that which he loves, and stood so, uncovered and with his face turned toward them, until they had passed under the arch. It was the most impressive sight of an impressive day, for it took the mind away for a moment from the glory of the pageant to the stern work of war of which that glory is

but a symbol, and to the American soldiers who are doing that work under other tattered banners in the Far East.

"It was the reception of the day, by all odds, and there was no let up until the last 10th man has gone by."

The Herald said:

"The 10th Pennsylvania was fresh from Manila, where it had been, its brave colonel and many another, too, and the welcome was a hearty one. The word passed from mouth to mouth, 'Here comes the "Fighting 10th"'" and flags and handkerchiefs fluttered, while a roar of welcome rose and rolled like a great wave down the line of march. The regiment made a splendid appearance. Their shabby campaign-worn uniforms were a change from the spic-and-span splendor of New York's showy attire that on this occasion was mightily appreciated. They marched in the faded blue flannel shirts they wore at Manila, with the brown campaign trousers and leggings, often soiled and faded, and the crowds got afoot on every hand and bawled. They were a splendid lot of men, too, and fitted well their grim, business-looking garb.

"When the color company came along, bearing the battle flag, worn to tatters with use and exposure, the mere skeleton of the Stars and Stripes, enthusiasm burst all bounds. Many remarked that splendid though the reception of the 71st had been, the regiment had missed a great point by appearing on parade in full dress uniform rather than in the rough garb of Saritoga."

The Times said:

"Pennsylvania was represented by some of its best troops, and the appearance of the 10th Regiment of that State, recently returned from Manila, was the signal for tumultuous cheering on every hand. These troops, bronzed and worn with their service in the Philippines, constituted one of the distinctive features of the parade. The torn and stained condition of the buff uniforms told an eloquent tale of service in the field, and the men's faces and hands were almost the same color as their uniforms.

"They looked like veterans, and they marched with the ease and uniformity of veterans. The regimental flag, which the bearer held proudly aloft, was in shreds and begrimed with smoke and powder."

The Tribune said:

"The Governor of Pennsylvania caused the crowd to shout and the admiral's hat to come off again, and good, hardy soldiers the men looked who followed him. And it was when the 10th Regiment of that State, fresh from the Philippines (or, rather, anything but fresh), in flannel shirts and khakis, came past, that the crowd fairly lost its head and hurrahed till it had no voice left. And the American people don't want expansion? Then that stand was occupied by some curious chance collection of foreigners. The admiral's hat was off again. It was curious that the things that pleased the crowd most were always the ones that brought the admiral's hat off his head. The admiral's hat was quite a barometer to American opinion."

The Journal said:

"The Pennsylvanians came, and it was left for the 10th Pennsylvania to harvest the tribute which in these times must fall to the grimed, hard and sunburned and sometimes, fever-whitened fighting man. The tumult which awoke at the sight of them seemed to fall on deaf ears. They strode down the noisy avenue as if they were going to a feast of tack, sowbelly and canned tomatoes, and looked grim about it, as they well might. After Dewey and Admiral Schley, and perhaps Governor Roosevelt and his stunning escort, the honors of the day fell to the dirty men with immobile faces, shaded under worn service hats, who so short a time ago came home from the Philippines."

Public Opinion Poll

EXTENSION OF REMARKS

OF

HON. JOHN E. HENDERSON

OF OHIO

IN THE HOUSE OF REPRESENTATIVES

Thursday, March 3, 1960

Mr. HENDERSON. Mr. Speaker, for the past 5 years, I have made an annual survey of public opinion in the 15th Congressional District of Ohio on important national issues. The response to each of these polls has been, without exception, most gratifying and informative. Its results represent, I believe, an excellent indication of prevailing thinking in southeastern Ohio.

Many of my colleagues here have expressed an interest in this poll and its findings. The questions which are included in the 1960 survey are as follows:

1. Do you believe it advisable that the Federal Government balance its budget and reduce the national debt? Yes ☐ No ☐
2. Are you in favor of providing Federal tax benefits to companies which will employ greater numbers of persons over 50 years of age? Yes ☐ No ☐
3. Do you believe that the Defense Education Act should be changed to eliminate the requirement that students receiving Federal loans take loyalty oaths? Yes ☐ No ☐
4. Would you favor Federal aid for school construction even though it would require tax increases or deficit financing? Yes ☐ No ☐
5. Do you feel that the \$45½ billion requested for defense next year is sufficient for our national security? Yes ☐ No ☐
6. Would you favor granting the President the power to veto parts of appropriation bills passed by Congress in place of the present system requiring his acceptance or veto of entire bills? Yes ☐ No ☐
7. Do you support a temporary increase in the Federal gasoline tax of one-half cent per gallon to pay for the highway construction program? Yes ☐ No ☐
8. Do you favor changes in the Taft-Hartley Act to eliminate the power of States to enact their own right-to-work laws? Yes ☐ No ☐
9. Are you in favor of the United States greatly increasing spending in its program for the exploration of outer space? Yes ☐ No ☐
10. Do you believe Communist China should be admitted to the United Nations? Yes ☐ No ☐
11. Are you in favor of proposals to give up U.S. ownership of the Panama Canal in favor of international control? Yes ☐ No ☐
12. Do you feel that Congress should enact legislation to give the Federal Government greater power in negotiating settlements of prolonged nationwide labor-management disputes? Yes ☐ No ☐
13. Do you support a national fair trade law whereby a manufacturer could require that his product be sold to a consumer for a stated minimum price? Yes ☐ No ☐
14. Do you favor increasing the hourly minimum wage from \$1 to \$1.25? Yes ☐ No ☐
15. Do you favor ending agricultural controls and the termination of price supports? Yes ☐ No ☐
16. Do you favor legislation to provide medical benefits under the social security program financed by an increase in the tax? (Present social security law provides that the combined employee-employer tax will become 9 percent on incomes up to \$4,800 in 1969.) Yes ☐ No ☐

17. Would you favor the Federal Government exercising greater surveillance over practices in radio and TV programs and advertising? Yes ☐ No ☐

18. Do you believe Congress should pass civil rights legislation providing Federal guarantees of individual voting rights in Federal elections? Yes ☐ No ☐

19. Are you in favor of policies which seek to fight inflation through increases on interest rates for installment credit buying? Yes ☐ No ☐

20. Do you feel that the chances for world peace are better today than they were 10 years ago? Yes ☐ No ☐

21. Would you support legislation to provide a Federal pension of \$100 per month for all World War I veterans at age 65? Yes ☐ No ☐

22. Are you in favor of continuing our present policy of purchasing sugar from Cuba at prices higher than those prevailing on the world market? Yes ☐ No ☐

Comparison of Russian and American Education

EXTENSION OF REMARKS

OF

HON. KEN HECHLER

OF WEST VIRGINIA

IN THE HOUSE OF REPRESENTATIVES

Thursday, March 3, 1960

Mr. HECHLER. Mr. Speaker, I would like to present the following report on Russian and American education, which I prepared with the invaluable assistance of Mrs. Margaret Sahlin Malone, of the Education and Public Welfare Division of the Legislative Reference Service. Mrs. Malone, a West Virginian and a former student at the Institute for Russian Studies at Columbia University, is an example of the outstanding West Virginians in many fields of endeavor.

The report follows:

A COMPARISON OF AMERICAN AND RUSSIAN EDUCATION

About a century and a half ago, General Lafayette, a great friend of American freedom and independence, warmly affirmed before our Congress that the United States reflected "on every part of the world the light of a far superior civilization." I wonder how many of us gathered here now has the uneasy feeling that this light may be flickering and dimming in the eyes of many of our friends in other countries. We, ourselves, are beginning to awaken to the fact that there are weaknesses in our civilization which threaten our well-being.

Recently, one of our own countrymen addressed our Congressmen, and the American people, in terms far different from those of Lafayette. He pinpointed a weakness which everyone of us must be concerned about if we are to maintain the superior civilization which is our heritage. I should like to quote a few of the words of Adm. Hyman Rickover, because he posed a problem and a challenge of great significance.

"I could not help wondering," the admiral said, "whether we in this country—privileged as we are to live in a land blessed with every material possession anyone could possibly wish to have—whether we are worthy of the great tradition established over 175 years ago. Are we not neglecting the things of the mind in our near total absorption with comfort and material wealth, with having a good time and with getting by with as little effort as we can? It is this emphasis on a

good time and on avoiding effort which prevents our children from becoming as well educated as children abroad. To become educated takes sustained effort, hard work, excellent instruction by teachers who themselves are excellently educated and who thoroughly know their subjects. Frills, know-how subjects, easy snap courses may seem agreeable to our children today, but they shortchange them for the future. They will have to live in a world where other people are better educated than they. The world outside the United States is being transformed so rapidly and so completely that we cannot afford to stand still. In my opinion we are not adequately planning for the future. Education must be given priority in our scheme of things. Education benefits both the Nation and its individual citizens. It takes a long time to produce highly educated professional men. If we don't take steps now to make sure we do this through our educational system, we will inevitably be bypassed by Russia."

Admiral Rickover, like many others in this country, has compared our educational system with that in the Soviet Union and has found it wanting. It seems painfully apparent that Soviet schools are in many ways doing a better job of training their young people to meet the needs of their society than we are doing to meet the needs of our own.

Soviet schools are not perfect. The Russians do not think so, and there is no reason why we should think so either. Their newspapers often point to what they call shortcomings, which they say must be overcome. They have children who are going to schools which operate on multiple shifts. Some of their textbooks are mediocre, and some of their teachers are, too. Education, though free, is not equally accessible to all. This is especially true of higher education, where the number of students who wish to continue their education is far greater than the number the state is willing to educate. Premier Khrushchev himself has criticized the way the admissions process has been operating. "There are considerable defects," he said, "in the very practice of selecting young people for admission to higher educational institutions. Although there are competitive examinations for admission to higher schools, it must be admitted that frequently it is not enough to pass an examination to enter a higher educational institution." Mr. Khrushchev continued: "There is good reason why young people entering higher educational institutions quite frequently say that after they have won in the admission competition, the competition among the parents begins, and it is this that often settles the matter."

I mention a few of the defects in the Soviet system, and repeat Mr. Khrushchev's words simply to emphasize that it is possible for the Soviet student to be short-changed, too. He doesn't have a corner on the educational market. He does, however, attend school under a system that has virtues we would do well to examine.

Russian school curriculums are, I believe, well designed to meet the needs of a citizen of the modern world. The fact that students in the present 10-year general schools are required to study physics, chemistry, and advanced mathematics means that there is a well-trained corps upon which the universities and institutes can draw in turning out able engineers, scientists, and teachers. Those who do not go on to get a higher education have the training and background to become more knowledgeable and productive workers, and better informed citizens.

I do not believe there can be any question that the Soviet 10-year school curriculum provides for more thorough training in mathematics and science than most of our own schools are offering. Russian students

are required to study mathematics 6 days a week throughout their schooling. Each student who has completed his 10-year education has therefore acquired a thorough grounding in advanced mathematics, and has been exposed to studies that few American students ever become acquainted with. In 1956, for example, only 9.2 percent of our public high school students, who were in the grade where trigonometry is usually taught, were studying that subject. Only 7.6 percent were studying solid geometry. In the Soviet Union, every 10-year school student is required to take these subjects.

The same kind of comparison can be made in the sciences. The Russians believe that all of their young students can benefit from a knowledge of physics and chemistry, and require that they study them. We, far from considering these subjects as requirements, often do not teach them at all. For example, physics is not even offered in 12,000 of our 21,000 high schools.

We in the United States have awakened late in the realization that our country, and our children, are being handicapped by a neglect of foreign language teaching. We know now that we desperately need people who can speak French and German, and Russian, Arabic, and Chinese as well. Yet even the people who have command of one of the familiar Romance languages are few and far between, and the person who knows one of the more esoteric languages is a rarity indeed.

The Russians, on the other hand, begin teaching their children a foreign language when they are in the fifth grade, so that before they complete the secondary school they have had an opportunity to become thoroughly familiar with the language. When they enroll in a university or institute, most of them are required to continue foreign language study in order to pass the foreign language examination given when their academic studies are completed.

This description does not, of course, apply to what we might describe as the Soviet Union's "language elite." There are many Russians who are getting even better language training than that I have just described. In 1956 the Government initiated a new program which has proved overwhelmingly popular among the students and their parents. A number of schools in central Asia have been authorized to start teaching a Near Eastern or Asian language to students in the second grade. The plan is that the children will study the language for several years and then have it as the medium of instruction for all their classes. In this way they will grow up thoroughly at home with one of the world's more difficult languages. This same kind of foreign language program, it should be mentioned, is also being conducted in Moscow and Leningrad.

Items appearing in the Soviet press indicate that the Russians are becoming more and more concerned about teaching their children a foreign language at a very early age. A letter to the editor of *Izvestia*, the official government newspaper, contained the following observation: "The study of a foreign language should begin with the nursery school. Some parents have been organizing groups of preschool children and inviting a person who knows a foreign language to teach them. Isn't it possible to select nursery-school teachers who know a foreign language?" The writer concludes: "This can and must be done."

One of the primary obstacles to improving language training in the United States is the lack of qualified teachers. Since the tremendous emphasis on language training is fairly recent in the Soviet Union, the Russians, too, have this problem. But whereas we are tending to let our language crisis go unresolved, the Russians are taking measures which will assure them of an adequate army of language experts for their schools.

In addition to training thousands of language specialists in the universities and un-specialized pedagogical institutions, they have established a dozen pedagogical institutes of foreign language. These special institutes are designed to provide a highly skilled supply of language teachers to meet the needs of the schools. It should also be noted, I believe, that one of the greatest areas of expansion in all Soviet institutions of higher education has been in foreign language training. The Russians clearly have given language training a high priority rating. And their brilliant scientific achievements have showed us all too clearly what they can accomplish once a goal is set.

In the Soviet Union, the one sure vehicle for success is education. Perhaps it is because of this, rather than an innate love of learning, that the Soviet student is willing to work so hard. But whatever the reason, the fact is that most American students would be appalled at the effort which their counterparts in the Soviet Union put into their studies. Russian students carry a full load of classes 6 days a week. These days are not broken up with study halls and extracurricular activities. The time in school is spent in the classroom, and homework and other pursuits are undertaken after school hours. Many times libraries remain open in the evenings so that students will have access to the books they need.

Because education is considered so important in the Soviet Union, the educator is looked upon with respect, and is compensated accordingly. Compared to American teachers, the teacher in the Soviet general school is poorly paid. But compared to others in the Soviet society, which is a more meaningful basis for comparison, he earns a handsome salary. Beginning teachers are often able to earn salaries equal to those of beginning doctors and engineers, and they are eligible for periodic increases according to length of service.

Persons teaching in universities and institutes are even more generously rewarded. It has been estimated that a Soviet professor earning a typical salary for his rank may make as much as 12 to 15 times the salary of a typical unskilled worker, or 3 to 5 times that of a typical highly skilled worker. Many professors, of course, have salaries far above this range. American professors, who are at the very top of our academic scale, would be stunned at the idea of being paid such high salaries. Even the football coaches do not always do that well.

Speaking again of money, I think we might get some idea of the value the Russians put on education by taking a look at their budget. In 1959, they allocated 94.4 billion rubles to educational and cultural needs. This figure represents 13.5 percent of the total budget. This is an amazingly high figure when you consider the enormous pressure on the Government for development of critical areas of the economy and for defense expenditures. It has been estimated that the Soviet expenditure for general education purposes represents about 8 percent of their gross national product.

We in the United States and in West Virginia, have been rightfully impressed by what we have learned about Soviet education in the last 2 or 3 years. We have learned that the Soviet people, though infinitely poorer than we, have evolved a school system that is turning out young scholars who have received an education which in a number of ways is superior to that which many of our students here have an opportunity to get.

The explanation for the high quality of Soviet schools is no secret. The schools are a potent weapon against us, but they are not based on an unknown formula. I believe that anyone who bothers to read a little about the Soviet system will promptly

conclude that the little Ivans and Olgas of Russia are getting good educations because they, their parents and the State have dedicated themselves to this goal.

Last fall the first official U.S. education mission to the Soviet Union issued a report on its trip, entitled "Soviet Commitment to Education." Shortly thereafter the Christian Science Monitor published an editorial on this report, which I would like to quote to you in part:

"Perhaps Soviet education's greatest asset," the editorial reads, "stems not from methods or mechanics at all, but from what the mission calls the people's 'grand passion' for schooling—a nation intelligent but hitherto largely illiterate for whom the doors of learning have just yesterday been thrown ajar. This is an enormous asset. It can compensate for any number of shortcomings in method, pedagogy, and instructional facilities.

"It can instill the willingness to work hard and long. It can inspire the abler students to pursue their studies higher and higher and attract able teachers to teach them. It can assure that the educators and the educated are rewarded with both money and status."

The editorial concludes: "Not so much state-provided equipment, state-formulated curriculums, or state-set study loads so challenge American education as does this grand passion for schooling."

I frankly wish that we in the United States had a little more of this grand passion for schooling, because if we did—with all our great wealth, our bright, healthy and able youngsters—we could have a society of unequaled strength, wisdom and vigor. The light of a superior civilization that Lafayette applauded would be a bright light, indeed.

With or without this passion, however, there are a number of things we absolutely must do if we are to survive as a democracy in a free world. We must strengthen our study programs. Physics and chemistry must become requirements for all capable students, as must advanced mathematics. Language study should be introduced in the early grades, and should be continued long enough to give the student a mastery of the language. The smattering of high school French or Spanish our boys and girls are now getting is totally insufficient for any useful purpose. Our courses in history and in English literature and grammar must also be expanded and improved. The Russians quote with glee the complaints of our universities that our students cannot even write grammatical sentences. We cannot afford to share their amusement. We have high school students in this country who are unable to identify the names of Hitler or Khrushchev, and who cannot find France on a map. We are only deluding ourselves if we think we can hand these students a high school diploma and call them educated.

If we expect our children to be well taught, we must also see to it that they have an adequate number of well-trained, dedicated teachers. Unfortunately, we are not doing this now. The teacher shortage throughout the country is critical. The situation in West Virginia is almost desperate. A recent study on higher education in the State showed that only a small percentage of the students who receive degrees in education from one of our West Virginia institutions remains in the State to teach. One major reason for this, of course, is the very low salary scale of West Virginia teachers. According to estimates for the last school year, our State ranked 41st in the Nation in average salary paid to classroom teachers. I fear we cannot continue to place such a low value on the services of the men and women who are responsible for educating our young people.

Providing our children with adequate classrooms, equipment and good teachers is

not cheap. But money for education is probably the most rewarding investment we can make. The Russians have learned this lesson. So far we have not. So long as one of our children is sitting in an overcrowded classroom, or is denied the opportunity to learn because of lack of facilities or a teacher, we are doing him and ourselves an irreparable injustice.

Long before the days of the Russian revolution, a great Russian liberal educator, K. K. Ushinsky, observed that the cause of education was "one of the greatest causes of history—a cause on which kingdoms and generations rest." This man was not a Communist. It is a pity, I believe, that his words seem to have had more meaning for the Soviet regime than for our own free country—because I agree, as I am sure you must, that the cause of education is one which will determine our own course of history.

The Pioneer Spirit in Rehabilitation

EXTENSION OF REMARKS

OF

HON. JOHN E. FOGARTY

OF RHODE ISLAND

IN THE HOUSE OF REPRESENTATIVES

Thursday, February 18, 1960

Mr. FOGARTY. Mr. Speaker, under leave to extend my remarks, I include the following address which I delivered before the Research and Demonstration Conference on Vocational Rehabilitation of the Mentally Retarded on February 11, 1960, at Dallas, Tex.:

THE PIONEER SPIRIT IN REHABILITATION
(By JOHN E. FOGARTY, Member of Congress from Rhode Island)

I am particularly glad to be here, for it gives me a warm feeling of participation in the making of rehabilitation history. The fervor of the crusader and the daring of the pioneer are in the spirit that moves our program forward, and it is inspiring to me as a legislator to see some of the ferment of ideas that lead to practical results for rehabilitation and health, based on legislation in whose formulation and enactment I have had some part.

Long before the birth of Christ the Greek historian Thucydides gave us the dictum that history is philosophy learned from examples. There can be no more fitting lyric for the program of vocational rehabilitation than that. We have just entered the stage of building examples of modern rehabilitation methods. As our pioneering projects mature, a more vital and dynamic philosophy of rehabilitation emerges. It is leading to goals that may sound high in casual reading, but we have an aroused people back of us, and the examples and philosophy we are developing will, I am sure, be exciting reading for those who will eventually set down rehabilitation history.

It is my particular pride that I can join you here on especial terms of intimacy with your problems. For more than a dozen years much of my legislative life—and some of my private life, too—has been devoted to the problems of disability. In this work I take great joy. It is satisfying and worthwhile, and more intensely so because of the privilege I have had to bring before Congress, either as chairman of the Health Subcommittee on Appropriations, or as ranking minority member, the annual appropriations for the Department of Health, Education, and Welfare.

The resurgence of interest in the mentally retarded is one of the great satisfactions of our legislative group. We have witnessed

the phenomenal growth of the National Association for Retarded Children and its many affiliates, and we rejoice in their collaborative efforts with other organizations in moving forward against mental retardation. Not only are they effective in their own right, but they are also powerful as a catalytic agent in the efforts of other groups and organizations. They are particularly effective in stimulating the establishment of selected demonstration projects for the mentally retarded, now numbering 21 over the country, to evaluate and to prepare retarded persons for employment.

The vocational rehabilitation program in this country is a prime example of democracy in action. I feel that on all counts it must be the public program closest to the people. When the individual need for public assistance goes beyond monetary requirements, and is complicated by disability of a wage earner or a wife, then the starker aspects of need and dependency rise rapidly. That is where our principal activity now lies, in getting the disabled person back to productive capacity.

It is in additional areas of aid for the disabled that we are projecting new thought. If we in the Congress are to continue to give you people in the active program a roadway to progress, we, too, must pioneer in imaginative ideas and legislative proposals. We must take the broadest possible view of rehabilitation needs, and refine adequate proposals to the point where they can be guides and aids to new areas of rehabilitation.

The emerging new philosophy of rehabilitation has widened our concept of an adequate program. In all conscience we have had to give greater attention to the problems of the aging. We in the Congress, those of you in the Office of Vocational Rehabilitation and the State rehabilitation agencies, a special staff in the Department, plus experts outside these groups, are studying ways to bring special rehabilitation service to the aged, in intensive preparation for the White House Conference on Aging, to be held next January in Washington, D.C., under provisions of a measure introduced some time ago.

From the standpoint of the public rehabilitation program, there are many facets to this planning for the aged. The vocational rehabilitation program is usually defined as a process designed to help disabled persons reach vocational, economic, and health potentials commensurate with their residual abilities—with the avowed purpose of reducing dependency. Yet there are thousands of older persons over the country, clearly unable to gain any vocational or economic benefits from rehabilitation services, yet who could be removed from a state of dependency in institutions, nursing homes, and family circles, through special services that will enable them to care for their daily needs, and give them independent lives free of custodial care or constant attendance.

This is one of the things we have been thinking about in Congress. It is my hope here to give you a viewpoint in a legislative program that would expand rehabilitation into this field, and on others that have been made.

In January of 1959 I introduced a bill in the House—H.R. 1119—which has the broad purpose of providing rehabilitation services to handicapped persons who can be aided in achievement of an ability for independent living, even though they may not be capable of productive employment.

We who support this measure want to launch a new attack on dependency by rehabilitating many such persons to the point where they are capable of self-care. We want to provide the means for public and private workshops and other facilities that will abet these projects, and provide funds that will make this aspect of rehabilitation as flexible as those now in practice. For we continue to believe that dependency is

measured both in dollars and human values, and that independence means a saving of dollars and an increase in self-respect. This is a pioneering action that makes sense to us, and we shall continue to press for legislative action on the bill for independent living.

Our new thought on rehabilitation has put in perspective another category of disability, this time running to the other end of the age scale. There are several millions of persons who suffer from speech and hearing defects which hamper them severely in their efforts to become self-supporting members of their communities. Many of them are children, unable to hear their parents' voices, to hear a song, to whom such things as television and movies are almost meaningless. Others are adults, whose hearing is impaired by war, industrial service, or ear disorders.

Perhaps three-quarters of these with speech and hearing difficulties could be helped greatly and many rehabilitated into employment, if enough speech pathologists, audiologists, and teachers were available to diagnose, train, and teach them.

Today there are about 2,000 certified speech pathologists and audiologists in the Nation. We need 10 times that many. To meet the educational needs of some 30,000 deaf children requires the training of some 500 teachers of the deaf each year. We are presently training less than a third of that number. Some 400 especially trained pathologists and audiologists are graduated each year, against a need for 1,500.

Last August I introduced a bill by which these needs could be met. It provides for grants to public and nonprofit institutions engaged in training teachers of the deaf. It provides for grants to institutions of higher learning for training speech pathologists and audiologists. Within a few years after enactment of such a measure we would not be faced with the distressing statistics that scarcely more than 1 in 5 children of school age who need the attention of a speech correctionist are getting it. The bill would mean not only the filling of a great rehabilitation need, but would also create the opportunity for many young persons to build careers of lasting humanitarian service for themselves.

One cannot be in my position for so long as I, listening to the views and experiences of medical men, of scientists and researchers, and public health experts, without arriving at some deep convictions about public health needs.

Much of the pageant of medical achievement in the United States and over the world has passed before congressional committees on which I have served. And on a recent trip to Europe, where I served as a delegate to the World Health Assembly in Geneva, I had opportunity to see both the substance and the spirit of international cooperation in the health sciences. I spent many hours with the more than 80 delegates from nations within the World Health Organization. I came away with a great awareness of the tremendous needs and opportunities for an intensified program of research that would extend into all aspects of the problems of disease in man, and for a market expansion of these programs which apply today's new knowledge for the improvement of man's health.

There are seven National Institutes of Health just outside Washington at Bethesda, Md., that do a tremendous job of research into cancer, heart, allergic and infectious diseases, dentistry, mental health, arthritis, and metabolic diseases, and neurological diseases, and blindness.

I have had the privilege of actively participating in appropriation actions that have

so dramatically increased funds for enlarging the Institutes, funds that have increased from \$4 million in 1946 to \$400 million in 1960, including, for the same period, a rise in funds for research grants from \$40,000 to \$205 million this year. And, as a corollary, there is provision for \$85 million to train researchers and technicians, so that the burgeoning research program shall not falter for lack of trained workers.

In January of 1958, Senator HILL and I were meeting with some eminent medical men in Washington. We had just listened to the President's message on the state of the Union, in which he said it could well be a world objective to make a more unified effort against such diseases as cancer, heart, and mental illness. The subject came up for discussion in our group. It was at this time that we started talking about an effort to provide U.S. leadership in a program that would in time focus international attention on these and other wreckers and killers of mankind, by lessening the time for world medical knowledge to reach all people.

As a result of many discussions with many persons, Senator HILL and I introduced bills to establish another Institute at Bethesda for international medical research. It would become a storehouse for medical information, and a world clearinghouse for medical advances as they occur. The Senate has passed the measure, which has become known as the health-for-peace bill. The measure introduced in the House is still awaiting action, which I hope will not be long delayed.

In my view, the measure is a worldwide declaration of war against disease and disability, uniting the fight that is carried on individually in every country. It is a clear and unmistakable act of brotherhood, and more than that is within enlightened self-interest.

Perhaps Arnold Toynbee, one of the eminent historians of our time, summed up some of the hopes for the time after this proposal becomes law, when he wrote in the *New York Times* a few years ago, "The 20th century will be chiefly remembered as an age in which human society dared to think of the welfare of the whole human race as a practicable objective."

And Dr. Howard Rusk, in his statement in a hearing on the bill said, "Medicine has never been anything but international. Its history is the most beautiful evidence of internationalism that exists in the world—microbiology came from Holland, bacteriology from France, penicillin from Great Britain, insulin from Canada, cortisone from the United States, sulfonamides from Germany." This is truly an underscoring of the international character of medical progress.

And Miss Mary E. Switzer, Director of the Office of Vocational Rehabilitation, put another aspect of the health-for-peace bill in eloquent language last spring, when she said in a hearing:

"It is my firm belief that a well-planned and well-defined international program in these fields would offer an unparalleled opportunity to advance peace and understanding among mankind."

"There are vast areas of misunderstanding and mistrust among nations today, born primarily of differences in social, economic, and health standards, national mores, and the problems of education and communication. But, in this sea of differences there are islands of quick understanding, honest affection, and mutual trust. One of these is the internationally shared dream of all peoples that the specter of disease and the humiliation of the dependent cripple shall not forever be an inescapable part of their lives."

This is pioneering into medicine and rehabilitation on a world scale. We have positive need for the benefits that such an In-

stitute could bestow. Certainly some of them could be in the area of mental retardation. A new outlook on this disability has developed in the past few years, simply because more is known about it. There is continuing medical and psychiatric research and this country has taken a strong lead in demonstration of the vocational possibilities of the retarded.

There is a wider understanding of the true differences between mental retardation and mental deficiency. Much is made of the fact that mental retardation is hardly ever to be regarded as a static condition. The slowness to learn that is the mark of the retardate is sometimes so susceptible to special education that results have occasionally been outstanding, with some persons going far beyond usual academic limits, after appropriate services.

Since September of 1958 we have had Federal legislation that will be of pronounced significance to the slow learning child. This legislation, which originated in the Senate, and which I supported with all my energy, authorizes the U.S. Commissioner of Education to make grants to institutions of higher learning to help these schools to train professional personnel in the education of the mentally retarded children. When there has been time for this legislation to show tangible results, I am sure we shall see marked improvement in preparing the mentally retarded for fuller participation in the usual activities of life.

You will undoubtedly be interested, too, in some of the research going on with support from the Institute of Neurological Diseases and Blindness. In collaboration with a number of institutions, the Institute is conducting a long-term, nationwide study of 40,000 mothers and children in an attempt to discover the biological causes of retardation and other neurological conditions such as cerebral palsy. It is an attempt to find out what and why things go wrong during pregnancy, childbirth, and early infancy to cause these conditions, and there is hope that medical leads into the causes of retardation will be found.

Certainly one of the end products of the whole battle against the effects of mental retardation is in the activities of you researchers and managers of special projects for the mentally retarded. The projects that have been in operation for enough time to produce some tangible results that can be measured had given training to well over 750 retarded persons by the end of 1959. Ten of the projects were able to estimate that from 20 to 30 percent of those served in their centers will reach employment. A marked increase is looked for in the number of placements in the years ahead, because of the larger number of persons to be served, greater emphasis on placement and a growing amount of experience.

There can be no gainsaying the enthusiasm of this group to venture further into the lesser known aspects of rehabilitation. They carry on what has always been a pioneering effort, for the public program began only 40 years ago. It has grown by trial and experiment, by perseverance and imagination, and by hard work.

The Nation is being rewarded by the rehabilitation of handicapped persons at the rate of more than 80,000 each year. The Federal Government, the State rehabilitation agencies, and the scores of other organizations interested in the welfare of the disabled are tooling up not only for greater numbers but for methods that will reach more categories of the disabled, with services that will give them greater capacity for employment, for independence and the other satisfactions and privileges that all of us hold dear.

Nixon Versus Benson

EXTENSION OF REMARKS

OF

HON. H. R. GROSS

OF IOWA

IN THE HOUSE OF REPRESENTATIVES

Thursday, March 3, 1960

Mr. GROSS. Mr. Speaker, another newspaper, the Waterloo (Iowa) Daily Courier, has abandoned its support of Secretary of Agriculture Ezra Benson. In an editorial in its February 28, 1960, issue the Courier explains why it can no longer support Benson and suggests a course of action for Vice President Nixon, the Republican candidate for the Presidency.

The editorial follows:

NIXON MUST ABANDON BENSON BUT NOT TRY
TO OUTBID DEMOS

Somewhat speculative stories out of Washington last week declared that Vice President Nixon is forming his own advisory committee on farm policy and will not follow the program advocated by Agriculture Secretary Benson.

We believe such a course is inevitable. It is fashionable in some conservative quarters to assume that Benson is everlastingly right from the viewpoint of sound economics, however unpopular his program may be from the political standpoint. But, while the Courier originally held that view, events have forced this newspaper to abandon its support of Benson.

In the first place, his administration of the soil-bank and the crop-storage programs has been inexcusably poor.

In the second place, his program of bribing farmers to support his decontrol program by paying price supports for uncontrolled production has been disastrous for corn. He now proposes the same thing for wheat. We question the ethics of seeking to obtain an objective by deliberately trying to make a situation so bad the public clamor for a change will be irresistible.

In the third place, Benson has simply not developed a realistic plan. He has attempted to wreck all the control features of the previous program; yet he drains the Treasury by paying out subsidies which accomplish nothing in the way of reform. As the Courier has said before, if we're going to spend these billions of dollars on a farm program, let's spend them to buy what we want—a reduction in production. Benson has merely poured out the money without getting anything in return—not even the good will of farmers.

In elaborating a new farm program, however, Nixon runs the hazard of alienating some of the people whose support at the polls would be necessary for his capture of the farm vote. Certainly any kind of direct payment plan, which would make farmers mere employees of the Government, will be furiously resisted in the better agricultural areas of the Midwest. And if Nixon gets into a contest with the Democratic candidate over who is going to promise the most for the farm vote, the Democrat is likely to win.

The answer, we think, lies in a return to and a strengthening of the control features of the pre-Benson price support program. If every possible effort had been made in the last 7 years to make this program work, farmers would be better off today than under the Benson program. It is no cureall; and successively more stringent controls may be needed. A decently enforced soil bank would be a part of such a program.

But a Democratic Congress, with Benson's unwitting support, has managed to make the

South a major competitor with the Midwest in the corn-hog field. This was done by paying supports for cotton and tobacco on restricted acreage while failing to control production on the diverted acres. This feed grain production is additional income for the South which drives down the price of Midwest corn.

Nixon could not win the farm vote with Benson's program. But he can win, we believe, with a sane price support plan and a soil bank that actually takes cropland out of production. The farmers don't want a hand-out and they know that the alternative to stiff production controls is a farm depression. If Nixon will give them some alternative to Benson on the one hand and southern Democratic control of Congress on the other, we believe Midwest farmers will go Republican this year.

Resolution of Connecticut State Labor
Council, AFL-CIO

EXTENSION OF REMARKS

OF

HON. EMILIO Q. DADDARIO

OF CONNECTICUT

IN THE HOUSE OF REPRESENTATIVES

Wednesday, March 2, 1960

Mr. DADDARIO. Mr. Speaker, I request the unanimous consent of the House to enter in the Record the text of a resolution adopted last fall at the annual convention of the Connecticut State Labor Council, AFL-CIO.

The resolution sets forth the position on international trade policy endorsed by the convention. It represents a fair and enlightened stand on an increasingly difficult subject. We have seen, in recent years, the comeback of major industrial nations that had been seriously damaged by the war. Meanwhile, benefiting from a high standard of living, this country has experienced favorable travel and import programs which have increased the national taste for goods made in all parts of the world.

More recently, it has come to be recognized that this competition has had an adverse effect on specific industries. Some have sought relief through new tariff and trade barriers. The State Labor Council recognized that this approach has aspects which could be undesirable for world stability.

Its policy calls for fair labor standards on an international basis. Without seeking to equalize world wage levels, it points out that workers in some nations have not benefited fully from rising income in those areas. It believes, however, that wages and working conditions in exporting industries should fully reflect the productivity and technological advance of the industry and the national economy.

The statement also recognizes that there are specific industries, such as typewriters, stainless steel, and other products which have been sharply affected in employment through foreign competition. I believe these matters deserve consideration and I would urge that any negotiators on multilateral tariff pacts take these facts into account.

Again, I would say that this seems to

me an eminently fair position, typical of the mature and reasoned thought given public issues by Connecticut labor. I hope all Members of the House will find time to weigh its message.

The resolution follows:

RESOLUTION 20

INTERNATIONAL TRADE POLICY

The past several years have seen the economic recovery of many industrial nations of the non-Communist world, in many cases greatly aided by U.S. help in the form of Marshall plan aid, and other forms of economic assistance. As these countries reentered the world market, they have sent more and more products to the U.S. market in direct competition with manufactured goods produced by domestic industries.

In Connecticut the competition offered by many of these products has had an adverse effect on the total business of Connecticut firms, because of the lower prices of the imported products; and some manufacturers have urged unions representing their employees to seek the imposition of higher tariffs or import quotas to limit the amount of competing goods which could be sold in U.S. markets. Among the Connecticut industries which have felt the effects of this import competition are the textile, hat, apparel, flatware, typewriter, sewing machine, brass fabricating, and rubber footwear.

The policy of high protective tariffs has previously been tried and found ineffectual, as late as the 1930's, when the Smoot-Hawley tariff measure succeeded in reducing the volume of imports but also resulted in reciprocal high tariffs in foreign countries. This cut down our substantial export trade to a fraction of its previous volume, thus eliminating additional industry and jobs in this country. The high protective tariff policy was abandoned after the great depression and was followed by the reciprocal trade agreements program.

1. AFL-CIO policy: The American labor movement has vigorously supported the reciprocal trade agreements program from its very inception more than two decades ago. This traditional support was reemphasized in the resolution unanimously adopted at the 1957 convention of the AFL-CIO. The resolution urged extension of the Reciprocal Trade Agreements Act for a period of at least 5 years with reinforcement of the basic goal of the reciprocal trade program, the gradual reduction of barriers to trade without undue hardship to American industries or American workers. The achievement of this goal must be sought, however, in the light of present-day conditions in our own Nation and in the nations allied with us in the common struggle for the preservation of freedom and democracy.

2. Fair labor standards: The labor movement has also long advocated the principle that fair competition in international trade requires fair labor standards in exporting industries. This principle has been given at least some official recognition in recent years.

In its January 1954 report, the President's Commission on Foreign Economic Policy (Randall Commission) stated: "The clearest case of unfair competition is one in which the workers on a particular commodity are paid wages well below accepted standards in the exporting country. In such cases, our negotiators should simply make clear that no tariff concessions will be granted on products made by workers receiving wages which are substandard in the exporting country."

If this is the objective we are seeking, then our course should be to determine tariff policy in accordance with a liberal trade policy, but for those items made in industries where there are unfair labor standards in the exporting countries, existing concessions should be conditional upon sincere efforts in

the exporting country to eliminate unfair labor standards. Failure of the exporting country to take steps to eliminate unfair labor standards should be grounds for withdrawal of the concession.

As a first step, U.S. representatives to the General Agreement on Tariffs and Trade Agency (GATT) should urge acceptance of a clause on fair labor standards in international trade similar to the one proposed in 1953. Toward this end, and in preparation for the multilateral tariff negotiations to take place in 1960, U.S. representatives should ascertain the facts regarding wage levels and working conditions in industries in exporting countries. In such negotiations, specific recognition should be given to the level of labor standards in such industries in any tariff concessions the United States may be prepared to offer.

In making these recommendations, we are fully aware that it is neither desirable nor feasible that wage levels be equalized in all countries. We recognize that the stage of development of a country's economy and the productivity of its industries may limit the level of wages that can be paid. Therefore, it is to be expected that wage differentials will continue to exist, and such disparities should not impede international trade. But we insist that wages and working conditions in exporting industries fully reflect the productivity and technological advance of the industry and the national economy. Substandard wage levels or working conditions are clear evidence of the existence of unfair competition in international trade and should be eliminated as rapidly as possible.

Development of a fair labor standard in international trade will benefit workers and employers in the United States, because it will assure them that they will not be faced by unfair competition from foreign imports based on unduly low wages and labor standards in the exporting country. In the exporting countries themselves, promotion of fair labor standards will contribute significantly to advancement of living standards and economic growth. The people of those countries will find, as we have found in America, that decent wages and decent working conditions promote domestic purchasing power, industrial productivity, and sound economic growth.

We also urge that where it is clearly demonstrated that jobs are being lost by American workers as a result of such imports, consideration be given to the placing of adequate protective tariffs and quotas on typewriters and other products that are affected by foreign imports which now enter this country free and clear of any import duties.

This third constitutional convention of the Connecticut State labor council, AFL-CIO, therefore, goes on record as urging our Representatives in Congress to support most actively the adoption of the policy set forth in this resolution.

The Honor Is Deserved

EXTENSION OF REMARKS OF

HON. CHARLES O. PORTER

OF OREGON

IN THE HOUSE OF REPRESENTATIVES

Wednesday, February 17, 1960

Mr. PORTER. Mr. Speaker, there is pending before the Committee on Armed Services legislation which proposes that the Congress recognize the outstanding humanitarian service in Laos of Dr. Tom Dooley by presenting to him a Congressional Medal of Honor. I think this recognition has been earned a thousand

times over by Dr. Dooley. So do many others.

An excellent editorial supporting this bill, first introduced by my good friend and colleague from Oregon, the Honorable EDITH GREEN, has been written by Publisher Ralph P. Stuller of the Coquille, Oreg., Valley Sentinel. Ralph Stuller wastes no words. He calls Dr. Dooley "a one-man ambassador of America to Asia."

Our country has the capability to lead the world toward peace, freedom and understanding and away from poverty, disease and war. Dr. Dooley has carried our torch to the citizens of a newer nation.

Under leave to extend my remarks in the RECORD I include Ralph Stuller's fine editorial on this subject:

MRS. GREEN'S LEGISLATION

A Congressional Medal of Honor for Dr. Tom Dooley, the most famous young doctor in America, is the purpose of recently introduced legislation by Representative EDITH GREEN of Portland.

Dr. Dooley, a U.S. Navy doctor, who single handedly has done more for the people of Laos than all the State Department bigwigs have done for the rest of the world, is truly a great American.

Operating private hospitals in Laos, Dr. Dooley who also suffers from cancer, has been a one-man ambassador of America to Asia.

Such Americans as Dr. Dooley can stop wars more surely than the scientists who make atom bombs or guided missiles.

Top Seaway Port

EXTENSION OF REMARKS

OF

HON. ROBERT E. COOK

OF OHIO

IN THE HOUSE OF REPRESENTATIVES

Thursday, March 3, 1960

Mr. COOK. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following article from the Ashtabula Star Beacon for Monday, February 22, 1960. Ashtabula Harbor is in the 11th District of Ohio which I have the honor to represent. I am proud to report the Port of Ashtabula is leading all the Great Lakes ports in use of the St. Lawrence Seaway. This achievement certainly speaks well of Ashtabula Port's efforts to make full use of the new "Inland Sea." The results of the port of Ashtabula truly present an aggressive and successful record of the efforts of many people to sell the area's many advantages to the world. The article follows:

ASHTABULA HARBOR TOP SEAWAY PORT

Ashtabula has been spotlighted as the No. 1 St. Lawrence Seaway port in the entire United States.

The 1959 traffic report of the seaway corporation lists 3,876,665 tons of seaway cargo handled at the harbor here during the 1959 navigation season.

Closest competitor to Ashtabula was Chicago, which recorded 2,208,681 tons of seaway traffic during the past year.

Cleveland was fourth in the rating list. The report, prepared by the St. Lawrence Seaway Authority and St. Lawrence Development Corp., said 1,712,329 tons were handled there.

The third-ranking port was Toledo with 1,851,680 tons of seaway traffic during the year.

Seaway tonnage at the Conneaut port during 1959 amounted to only 36,752 tons.

ASHTABULA'S TOTAL TONNAGE

A breakdown of Ashtabula's total tonnage shows 2,236,022 tons of cargo came into the harbor from the seaway. A total of 1,640,643 tons of cargo was exported via the seaway to other American ports and foreign destinations.

In both instances, bulk cargoes made up the majority of each total. This bulk cargo was in the form of coal and iron ore.

An aggregate of 21,131,835 tons of seaway cargo was handled by U.S. ports during the past year. Seaway traffic recorded at Canadian ports during 1959 was 37,815,984 tons.

Canadian leader was the port of Hamilton, Ont. with 6,676,509 tons of seaway traffic. Number two position was occupied by Montreal with 5,581,120 tons.

Seven Islands, recording a total of 4,857,073 tons of seaway traffic, was ranked No. 3.

True Leaders of Labor

EXTENSION OF REMARKS

OF

HON. LEONARD G. WOLF

OF IOWA

IN THE HOUSE OF REPRESENTATIVES

Wednesday, February 3, 1960

Mr. WOLF. Mr. Speaker, in recent months the expression "labor leader" unfortunately has taken on a bad connotation. To many people it has become synonymous with racketeer or crook. I have never felt it fair to condemn a whole group for the sins of a few. Truly there are many fine men in the labor movement.

I take pride in the fact that I have several friends among the labor leaders in the district. Today I received a letter from a good friend of mine, the head of the Clinton, Iowa, Labor Congress, whose name is Joe Rajceovich. I believe that the spirit in this letter is representative of the spirit held by the men who are the true leaders of labor.

I want to congratulate him and commend to you his excellent letter which shows that the things that are important to working people are the problems and fears of all Americans.

I would like to share his excellent letter with the Members of Congress:

Is it wrong to expect reasonable decency for people? Is it wrong to help our senior citizens who have helped to make this country what we now enjoy? Is it wrong to expect Federal legislation to protect those unfortunate enough to be unemployed by establishing legislation for fair, livable compensation? Is it wrong that we ask that fair Federal requirements be met to protect those unfortunate enough to become injured on the job and whose family suffer, too, because of the meager income? Are we being unreasonable in asking that the minimum wage be raised (union members don't need that). Extended coverages to millions who are not covered under the minimum wage certainly deserve consideration and, too, union members don't need. Is labor a selfish-interest group because we ask for decency for people in need? Is complacency displacing ambition and drive in America? Are we so cocksure that we are the best educated and most powerful country in the world? The defeat of the edu-

education and teachers salary bill is something we all should be ashamed of and I sincerely hope that some day we do not regret it. Time, in this day and age, is of the utmost importance. Time is slipping and slipping fast, lets hope we don't wait too long before we realize our mistakes. The chamber of commerce advocates that education is and should be a State and local problem. Perhaps they are right, I really don't know. I do know that people are so very conscious of any thought of any increased taxation for education or for any reason that any bond issue drives have very good chances of being defeated. The end result? Dedication to the teaching profession is becoming a thing of the past. The financial opportunities in business and industry are offering too much of an opportunity and inducement to continue that dedication and we are losing too many good teachers. Are we in labor being selfish in supporting education and decent salaries for teachers? Is it fair that many teachers earn less than the average factory worker? Are we of the labor movement the selfish-interest group to want America to be the most educated and the most powerful country in the world? Will we see the day when "pressure groups" will sincerely work together to make America the real envy of the world.

No, I have no political ambitions but it irks me no end the complacency of too many people in and out of the labor movement. What to do I wish I knew. Thinking back 4 years ago when I first entered the labor picture on a full-time basis I wonder if I would have done the same if I had known then what I know now? It has been a wonderful experience but I really can't help wondering if it is worth all the effort. There appears to be complacency in all walks of life, people just don't seem to care. Let the other guy do it attitude. Time today is so very, very important. We spend far too much time fighting among ourselves. Just think what a wonderful country we would have if all factions would sit down and reasonably, honestly, and sincerely make every effort to make this country the undisputed leader of the world. We all are dreamers of better things, life is so very short, why can't we strive to make it as pleasant as we can because we pass here but once. We can count our many blessings, it could be worse.

I have been a member of the chamber of commerce for approximately 6 years and I cannot fully understand why the chamber's and labor's views are so consistently contrary. Perhaps someday if the opportunity presents itself you may be able to give me the answer. I can in all sincerity state that I am proud to be in the labor movement even though the opposition has burned a lot of midnight oil to turn public opinion against us. The majority of us did not deserve that kind of treatment but nevertheless we have been subject to more than our share of criticism. Time heals all wounds and in time the public will realize that our sincere goals and ambitions are to help the working class of people. God must have loved us, He made so very many of us.

Symbols of Western Unity

EXTENSION OF REMARKS

OF

HON. CHESTER E. MERROW

OF NEW HAMPSHIRE

IN THE HOUSE OF REPRESENTATIVES

Tuesday, February 23, 1960

Mr. MERROW. Mr. Speaker, under leave to extend my remarks in the Appendix of the RECORD, I include an edi-

torial from the New York Times, of March 3, 1960, entitled "Symbols of Western Unity":

SYMBOLS OF WESTERN UNITY

Despite the difficulty of reaching policy agreements among the 15 democratic nations of the North Atlantic alliance, their basic unity in the face of a common menace reasserts itself whenever fundamentals are involved. This is demonstrated again by the latest developments on the political, military, and economic fronts.

Thus, after another hectic debate in the House of Commons, the British Government has been able to score a decisive victory for its expanded defense program based on the two pillars of (1) collective security that includes Germany as a "firm and equal partner," and (2) "massive and terrible retaliation" in case of attack. These are also two of the main pillars of the American defense program.

Somewhat along the same line, as a symbol of collective defense and integration of military forces, General Norstad announces in Paris the impending formation of an integrated multinational task force with both nuclear and conventional armament to act as a fire brigade in a military emergency. The task force will be formed around a nucleus of an American, a British, and a French battalion acting as a unit, but will be expanded to include battalions from other nations. This task force is regarded as the beginning of making NATO itself a nuclear power, with wider and more unified control of atomic weapons. General Norstad's confidence that a solution is being found for the integration of French air defenses within the alliance is another indication of which way the wind is blowing.

Finally, the United States announces that eight NATO countries, plus Japan and representatives of the European Economic Community, will meet in Washington next week to devise ways and means of sharing and increasing aid to the less developed countries. This is in line with the project of a new Atlantic economic organization.

The detailed Western program for the East-West summit meeting is still in the hands of diplomatic working groups. But these developments, to which might be added possible resumption of high-altitude flying to Berlin in preparation for a possible blockade, give promise that any remaining differences will be resolved.

What Paul Harvey Said About Mississippi

EXTENSION OF REMARKS

OF

HON. JOHN BELL WILLIAMS

OF MISSISSIPPI

IN THE HOUSE OF REPRESENTATIVES

Thursday, March 3, 1960

Mr. WILLIAMS. Mr. Speaker, under leave to extend my remarks I include a portion of Mr. Paul Harvey's radio newscast of Thursday, February 4, 1960:

You're carrying a picture of Mississippi around in your mind. Tear it up—throw it away—it doesn't fit any more.

I know where you got that ugly old picture. Hernando de Soto took a walk through here 400 years ago and he was disappointed, too. Looking for gold and he didn't find any. Billions of dollars' worth of black gold just a few feet down under his feet, but he walked right on by.

In 1800 the invention of the cotton gin gave Mississippi a cash crop and the State started to burst into bloom. But before it could, the depression of the 1830's clobbered

this one-crop economy and the prosperity that might have been, wasn't. The State stagnated.

Then, just when the cotton market looked up again, the Un-Civil War broke out and smashed Mississippi again to her knees. And the carpetbagging governmental extravagance that followed kept her there.

Then, the first championship prize fight in history was fought at Mississippi City; John L. Sullivan whipped Paddy Ryan in eight rounds and a new word was added to the dictionary. The word "knockout." But no sooner did the century turn the corner than the boll weevil arrived in the cotton fields and again the whole State went down for the count.

No, it's not strange that you've carried around a distorted picture of Mississippi. A half-starved State with a black eye and a swollen nose and cut and bruised and battered. The stranger thing is that, in such a condition, the State survived at all. But she did.

In the 1920's favorable tax laws encouraged industry to take root and grow, but before it could mature, the 1930's and depression. And then about 20 years ago then-Gov. Hugh White saw the need to balance the State's agriculture and industry. And since then * * *

Well, now, wait a moment. I'm used to hearing from cities that have doubled their populations in the past 10 years. There's a lot of such growth, particularly in the awakening South. But I began to hear from here of expansion so explosive I couldn't believe it. Of the city of Jackson, for example, doubling its population almost every 10 years.

Well sir, I came, I saw, and it's still hard to believe. I was last night with Mayor Allen Thompson—I'll be lunching in a few minutes with Gov. Ross Barnett at the mansion—and between visits with them and with you I'm watching a flower unfold and reseed itself in the Mississippi sunshine. The roots are in oil and industry and agriculture, the petals are paper money. I have not seen this much excitement since I was a boy in the oil boom days in Oklahoma.

In 1900 this town was located on Highway 51 between two Burma Shave signs. Population, 7,000. Today—170,000. And a skyline that looks like something out of tomorrowland.

And hear this—for 9 consecutive months last year—Jackson, Miss., grew faster, economically and industrially, than any other city in the Nation. Some cities campaign for years to get a new industry to move to town. Jackson has been adding a new or expanding an old, industry every 2 weeks. Not one oil well here 20 years ago. Today there are thousands. Mississippi ranks No. 9 among all oil producing States.

And that distorted picture of Mississippi you carry around is deep-shadowed by the preoccupation of the northern press with the misbehavior of a handful of misanthropes, though man for man, there is less per capita crime in Mississippi, than in any of 47 other States. Mississippi is among the three States in our Nation which have the least crime. And this in spite of the phenomenal growth.

You come up fast when you come from behind. Mississippi used to be the poorest State in the Union; it's on its way to being one of the richest. And its bank balance was up another 16 percent last year.

Now then; What's all this zoom going to do to the traditional character of the Southland? I don't know. Already along the once lazy banks of the Pearl River I see feverish construction harnessing her gentle flow, storing it for speedboats, diverting it to industry, converting it to what the world calls progress. And in the haste of the people to keep pace, I think I sense already some less "marshmallow softness" to the so-charming native dialect.

There is yet a "casserole informality" to Mississippi's hospitality. But its southern border already has become an American Riviera. The longest man-made beach in the world lines the gulf, and tourists flocking to this playground may litter the beach with beer cans, bikinis and railroad time-tables.

Yet you can still say, "Let's go fishin'," and most any Mississippian will drop whatever he's doing and go. And the hoopskirts and the steamboats are still here, if only for show. And the mockingbird and magnolia and the magnificent forests that carpet more than half the State. There's still room for growin' and still time for fishin'. So even if we could, nobody would, hold back the dawn.

But that old picture of young Mississippi you've carried for too long now. I thought you should know, that the awkward adolescent, retarded by malnutrition and misfortune, turned out tall and strong after all. And healthy and handsome and wearin' a hair shirt.

Paul Harvey. Good day.

Young People Deny Patriotism Is Vital

EXTENSION OF REMARKS

OF

HON. HAROLD R. COLLIER

OF ILLINOIS

IN THE HOUSE OF REPRESENTATIVES

Tuesday, February 16, 1960

Mr. COLLIER. Mr. Speaker, in a recent survey made of 687 American teenagers, more than 450 answered "No" when they were asked, "Is patriotism an important part of your life?" Eighty-two percent of the same group polled said that sports are more important than patriotism and 88 percent said that dating outranks the importance of patriotism. Ninety percent said clothing is more important.

Those of us who sit in the Congress of the United States are constantly bombarded with requests for voting huge sums of money for everything from "soups to nuts" with the now fashionable justification that we must "maintain pace with Russia" or by some distortion in some cases, "essential to the strength of our national defense." I personally believe that this country and its young people could stand a little shot in the arm of good old fashioned patriotism with its proper evaluation of the blessings of Democracy. I include herewith part of an article which appeared in the Chicago Sun-Times in this regard by Eugene Gilbert, president of the Gilbert Research Co. Reading and rereading it, I find it a bit frightening:

YOUNG PEOPLE DENY PATRIOTISM IS VITAL
(By Eugene Gilbert, president of Gilbert Youth Research Co.)

Something has happened to patriotism among teenagers.

Either the love of country in America's young people has withered in the atmosphere of disillusionment following two wars, or it lies dormant, awaiting some crisis to awaken it.

It seems strange, however, that it could sleep through the recurring jangle of cold war crises. Yet this fact is irrefutable:

More than two-thirds of 687 American teenagers answered "No" when we asked, "Is patriotism an important part of your life?" Ninety-six percent put family before patriotism.

These reactions may be understandable. But 82 percent said patriotism is less important than sports; 88 percent said dating outranks it, and 90 percent said clothing is more important. This attitude is perhaps partially explained by a 13-year-old St. Louis girl, who said: "I just never think about it."

Rose Michael, a 17-year-old Chicago girl who took a stab at explaining it, said: "Patriotism is less important in the average person's life because the United States is so well established." Another Chicago teenager, 19-year-old Norman Lewison, said patriotism is at low ebb among teenagers because they "have little contact with politics and government."

But to John Angus Campbell, 17, of Portland, one of the minority to whom patriotism is important, "democracy is worth preserving."

Unfortunately, few seemed to agree.

We asked this admittedly tough question: "If you could do a great benefit to your country by sacrificing the well-being of a loved one, would you do it?" Only 9 percent said, "Yes."

"Something as artificial as one's nation is never worth that much," said a 19-year-old St. Louis youth.

"I'm selfish," was the candid reply of a 17-year-old Salt Lake City girl. And a 16-year-old Philadelphia girl answered, "I'm a coward."

While they admit they are short on love for their country, the teenagers acknowledge that they are fond of the good life they have here.

Only 17 percent said they would ever consider settling permanently in another country.

Here are some of the reasons given by those who would:

Mary La Willett, 15, Chicago—"If I found a good position." A 19-year-old Hartford (Conn.) boy—"If I found that country more desirable than the United States." Ralph Helft, 16, of Hoosick Falls, N.Y.—"In case of world war III."

Fifty-five percent of the youngsters—more girls than boys—said flag ceremonies and the national anthem stir feelings of respect in them.

"They make you feel you are a part of something," said 17-year-old Sandra Vinyard, of Mount Pleasant, Tex.

Sixty-nine percent of the young people—again more girls than boys—said they are embarrassed if someone with them ridicules patriotic ceremonies.

She is embarrassed, said 13-year-old Sureen Hawkins, of Portland, "because they are criticizing our country."

On the other hand, Paul Girard, 13, of Hartford, Conn., said: "Let them think for themselves."

We also asked: "Do you think patriotism detracts in any way from agreement between different nations?"

Thirty-one percent said yes, 57 percent no, and 12 percent didn't answer.

"National pride is bound to conflict a little," said a 17-year-old Chicago girl. And a 16-year-old Portland girl said patriotism "creates some prejudices."

In retrospect, there is evidence that a 17-year-old Chicago girl knew what she was talking about when she summed up the feeling of American young people toward their country. She said: "People have become too complacent about all the good in the United States."

Comments by Congressman John H. Dent, Dickinson Law School, Carlisle, Pa.

EXTENSION OF REMARKS

OF

HON. JOHN H. DENT

OF PENNSYLVANIA

IN THE HOUSE OF REPRESENTATIVES

Tuesday, February 9, 1960

Mr. DENT. Mr. Speaker, under leave to extend my remarks in the RECORD, I would like to present a speech to be made at Dickinson Law School, Carlisle, Pa., on March 5:

In this day and age the question of the why, the wherefore, and the future of the union movement is the subject of daily discussion and debate.

I believe the first thing to attempt here is to give a logical reason for the existence of unions.

The reasons for trade unionism are threefold. Morally, a free society must allow freedom to all its members. This freedom should only be restricted by the common good of society as a whole. Unions are the means through which workers are able to express their needs as wage earners.

The transgressions of union officials do not detract from the moral necessity and right of unionism. Internal union reform and the force of public opinion will bring desirable changes.

Economically, unions are necessary to enable workers to determine to a reasonable extent the terms and conditions under which they work. Collective action is necessary, for individual effort is often ineffective in a highly industrialized society.

The psychological need for unions is in some respects the most important. Unless workers feel they have an assured means of expressing themselves, harmony in industry and a high level of performance becomes difficult to maintain. Workers readily become frustrated and resentful and a prey to harmful rumors.

Among the most important reasons why workers unionize are to achieve greater security, equal justice and a voice in determining their economic conditions.

However, sound trade unionism benefits management also. When workers' aspirations are reasonably satisfied, a more contented work force normally results. Through unionism, a channel of communication is established between workers and management, and practical cooperation can be developed in connection with such important matters as production and safety.

Is labor justified in promoting interest in unionism among workers? Sometimes management complains that nonunionized workers are satisfied until they are approached by unions during organizing campaigns.

Labor replies that in a free society it has every right to promote its viewpoint. Employers are free to encourage the formation of new companies. Organized labor feels that all workers should share in the benefits of unionism.

It is not fair to charge that wage increases cause inflation. Economic expansion can be inflationary. Arbitrary pricing policies and anticipation of economic developments, as during the Korean war, can cause higher prices.

Furthermore, management always has the right to resist excessive wage demands.

If a wage-inflation problem exists, there is not too much the average local union can do about it. Its wage demands will be governed largely by area or industry standards,

and it has a primary duty to make economic gains for its members.

Effective action, if required, must come at the top, through a "meeting of minds" among the top leaders of industry and labor.

A spirit of mutual understanding will result in good industrial relations. Management must accept unionism and unions must accept management's right to manage. The threat of strikes is definitely lessened through proper understanding.

In a company, definite responsibility for labor relations dealings should be assigned. That does not mean that a person need do nothing else but deal with the union. However, it is only natural for a union to expect to receive proper attention and consideration.

Where it does not appear that definite responsibility for this important matter has been assigned, a union may feel that the problems of its members are being disregarded.

If the demands of the union are really outrageous, it may mean that it has not been given full access to the facts. Both sides must face the facts in their dealings, especially in connection with bargaining and grievances.

If both sides practice real understanding, the union-management relationship can be highly beneficial.

In sequence, then the next question to be answered is: Should Government regulation of unions be increased? The American trade-union movement is the organized conscience of the American people.

No other substantial segment of the population of this country accepts as readily, as conscientiously, as seriously, and with the dedication and determination to discharge its obligations to itself, to its fellow citizens, and to the country as do the American labor unions. Unions blazed trail in the United States for more than a century, every good law, every step of social progress, every equitable economic advance, and every movement toward strengthening and improving the democratic processes of government in the United States has been inspired and brought to fruition because organized workers helped to initiate or fully supported it.

Some specific examples are:

1. The 8-hour day.
2. The free public school system.
3. Woman suffrage.
4. The U.S. Department of Labor.
5. The Pure Food and Drug Act.
6. The elimination of child labor.
7. Elimination of discrimination against women workers, including equal pay for equal work.
8. Premium pay for overtime work.
9. The 5-day workweek.
10. Paid holidays and vacations.
11. Progress in civil rights and in the elimination of employment discrimination.
12. The Wage-Hour Act (including minimum-wage law and 40-hour week).
13. National and State laws protecting women and juvenile workers.
14. Apprenticeship system for training skilled workers.
15. Public power and rural electrification.
16. Social security program and unemployment insurance.
17. Public housing.
18. School construction, increased salaries, and improved working conditions for educators.
19. Improved highways and roads.
20. Safety codes for transportation, construction, mining, and in the home.

These are but a few of organized labor's magnificent contributions to the welfare and security of the workers and to the social and economic progress of the United States. To name them all would require many volumes of many pages of fine print.

At the State and community levels, trade unionists are always found in positions of leadership in movements which are based upon civic, humanitarian, and fair economic motives. Organized labor plays a dominant role in such community projects as community chests and united fund drives, and hospital, school, housing, and library construction planning. Charitable and eleemosynary institutions draw heavily on organized labor for contributions, financial, and otherwise.

In times of war—hot and cold—it is organized labor, with its massive forces of workers who provide the leadership, the manpower, the brains and the skills which furnish the essential logistics so necessary to victory.

This leads into the subject of congressional action such as the Landrum-Griffin bill.

This legislation was the result of the most intensive drive for labor reform ever witnessed in the U.S. Congress.

Sparked by the dramatic, well publicized McClellan committee revelations over a period of months, the demand for so-called reform legislation reached the proportions of an avalanche. Like an avalanche it swept all before it, logic, reasoning, rights, wrongs, facts and justice.

In almost every case when questioned, one of two answers was given to the question, "Why this law?" First and foremost was the statement, "This will get Hoffa and that's what has to be done." Second, the answer was, "I can't win at home unless I vote for a labor bill. I prefer a better bill but I'll take any bill in preference to no bill."

In this atmosphere anything was possible and Congress in the main failed to give the kind of consideration this situation demanded.

One question never answered was asked many times: "If this bill gets rid of Hoffa, do we then repeal the law?"

Let's see what has happened to the labor bill since it passed.

First, the National Labor Relations Board charged with its administration has been issuing rules and regulations some of which are contrary to the letter of the law according to experts in the field. This, of course, is due to the need for political expediency in an election year.

One example is the section dealing with the bond requirements. Much ballyhoo and capital was made out of this section by the promoters of the reform legislation. It was supposed to put a straitjacket on union officers who handled money belonging to union members. The vast majority of Americans, I am sure, had a mental picture of union treasuries being looted by union officials systematically without any protection for the poor dues payer.

What's happened, however, is that the Secretary of Labor has taken a realistic view of the situation and although Congress wrote a bill that would have cost the unions millions of extra dollars under a drastic bonding provision, the Secretary has issued regulations that left the bonding practices practically in tact.

This is true in other features of the new law. Even Congress made some changes in the so-called Bill of Rights for union members embodied in the Kennedy bill when it passed the Senate.

Under the high-sounding title of "Bill of Rights" for union members Congress set out to take away from the majority of the union members all of their rights and to give to the minority rights never intended under our Federal Constitution.

Let's look at a rundown of just what the Landrum-Griffin bill does for or against labor.

Title I: "Bill of Rights of Members of Labor Organizations." This title contains provisions designed to secure reasonable equality among members, freedom of speech, as-

sembly, and the right to sue the organization, as well as protections from arbitrary discipline and arbitrary financial exactions. Union members may enforce these rights by civil suit in Federal court. This title also requires unions to forward a copy of any collective bargaining agreement at request of any member whose rights are affected thereby. This requirement is enforceable by Secretary of Labor in same manner as reporting requirements.

Title II: "Reporting and Disclosure." This title requires labor organizations to adopt a constitution and bylaws and file a copy with the Secretary of Labor, along with specific details as to their procedures for the conduct of internal affairs, and to file annual financial reports containing certain specified information "in such detail as may be necessary accurately to disclose its financial condition and operations."

The act also requires union officers, principal employees, certain employers, and persons providing labor relations consultant services to file reports with respect to certain financial transactions, to reveal conflict of interest dealings of union officers as well as expenditures of employers for the purpose of influencing employees in the exercise of their protected rights with respect to representation. Basic records must be kept for 5 years. Willful violation of title II is made a misdemeanor subject to \$10,000 fine and up to 1 year imprisonment.

Title III: "Trusteeships." This title requires every labor organization which assumes supervisory control over a subordinate body to file a report with the Secretary of Labor within 30 days after assuming such control, and semiannually thereafter. Such report must include, among other things, the reasons for the trusteeship and a complete account of the financial conditions of the subordinate union. The provisions for disclosure, regulations, and compliance of title II are applicable to the reporting provisions of title III, and similar criminal penalties are imposed for willful violations.

Title IV: "Elections and Removal of Officers." The bill requires union elections to be held periodically by secret ballot, that reasonable opportunity be given for the nomination of candidates, for the protection of freedom of choice in voting, for due notice of elections, publication of the results of votes cast by local members, conduct of elections in accordance with the constitution of the union, and preservation of election records. Expenditures of dues money of labor organizations, or of employer contributions to promote the candidacy of any individual is prohibited.

Officers of local unions guilty of serious misconduct may be removed by the members if the Secretary of Labor finds upon application of a member and after a hearing that adequate procedures for removal are not provided in the union's constitution and bylaws, or may be removed in a hearing and vote at the direction of the Federal district court in a suit brought by the Secretary as indicated below.

An election may be challenged by a member who has exhausted internal remedies, or invoked them and received no decision in 3 months.

Title V: "Safeguards for Labor Organizations"—Bonding. The act requires every officer or other official of labor organizations whose property and annual receipts exceeds \$5,000 to be bonded for faithful performance of duty. It prescribes standards for acceptable security companies and prohibits bonding through an agent or with a company in which the union has an interest. Criminal sanctions are imposed for violations. Labor organizations are also prohibited from making loans to their officers or employees in excess of \$2,000.

Barring Communists and criminals from office, the act prohibits Communists and per-

sons convicted of enumerated crimes from serving as union officers, agents, or employees, labor consultants, or officers or employees of employer associations dealing with unions, for five years after (1) termination of membership in the Communist Party, (2) conviction, or (3) imprisonment, unless citizenship rights which may have been lost are restored or unless the Federal Parole Board determines suitability of an ex-convict to serve. Persons convicted of violating reporting provisions of act are banned also from serving in such offices or paid positions.

Title VI: "Miscellaneous—Investigatory Power of Secretary." The act provides the Secretary of Labor with authority to investigate violations of any provision of the act, except title I or amendments made to other statutes, whenever he deems it necessary in order to determine whether any person has violated or is about to violate any such provision.

Extortionate picketing: The act prohibits extortionate picketing for the purposes of extracting money from an employer against his will for the personal enrichment of an individual and makes such conduct a felony under Federal law.

Discipline of union members: The act gives to members a civil right of action against labor organizations for disciplining any such member for exercising rights to which he is entitled and makes it a Federal crime to use force or violence, or the threat thereof, to interfere with the exercise of such rights by union members.

Title VII: "Taft-Hartley Amendments—No Man's Land." The States are permitted to assume jurisdiction over cases involving a labor dispute in which the National Labor Relations Board declines to assert jurisdiction. The Board is prohibited from further narrowing its present jurisdictional standards. Provision is made for delegation of representation matters by the Board to its regional directors.

Voting by economic strikers: The existing prohibition on voting by economic strikers in representation elections is eliminated in any election conducted within 12 months after the commencement of the strike.

Secondary boycotts: Hot cargo; the secondary boycott provisions of the National Labor Relations Act, as amended, are extended to cover direct coercion of employers to cease or agree to cease doing business with another, inducement of individual employees not to work, and the secondary boycott protection of employers is broadened to include railroads, municipalities, and farmers. The amendments permit publicity, other than picketing, for the purpose of advising consumers of disputes, so long as other employees are not induced to refuse services by such conduct.

Hot cargo agreements are prohibited by the bill. However, subcontracting agreements between unions and construction employers relating to work to be done at the site of the construction are excepted from the prohibition, and the prohibitions on the certain secondary boycotts and the hot cargo clause do not apply where jobbers and subcontractors in the apparel and clothing industry are involved.

Organizational and recognition picketing—Organizational and recognition picketing are made an unfair labor practice under certain circumstances, i.e. picketing where another union is lawfully recognized, where an election has been held within the preceding 12 months, or where conducted without a petition being filed within 30 days. Whenever a petition is filed the Board is directed to conduct an election forthwith without regard to other election provisions of the National Labor Relations Act. Publicity picketing which does not induce refusals to perform services by other employees is preserved. The provisions for injunctive relief

in the existing law are extended to violations of the picketing provisions, but employer unfair labor practices of domination or interference with the formation of a union are made defenses against the issuance of injunctions in such picketing cases.

The act permits unions and employers in the building and construction industry to conclude prehire agreements with 7-day union shop provisions. It further permits contractual requirements that employers notify unions of vacancies, unions may refer applicants, and that priority in employment may be given on basis of length of service with employer or in the industry or area. Minimum training or experience qualifications may also be prescribed in such agreements.

Discrimination—Provisions are made in the act for priority of case handling where unfair labor practices involving discrimination in employment because of membership or nonmembership in a union are involved (whether by the employer or union).

Let's look at action now taking place in Congress.

There are three bills occupying the attention of the Labor Committee right now—one dealing with safety, one with wages and hours, and one with picketing.

Without getting into the details, I just want to make this one observation. The more union-management regulation becomes the law of the land, the more Congress will be asked to pass legislation that once was considered the proper sphere of labor-management negotiations.

If unions were as powerful and absolute as some would have us believe, there would be no need for Congress to pass laws prescribing working conditions in a specified industry or a law establishing a minimum wage and maximum hours. The union-management negotiations would establish these standards on a local and industry basis.

Because of the national scope of legislation passed by Congress, many inequities are created when a law has to disregard the basic concept of labor-management relations, that takes into consideration facts peculiar to the issue being negotiated.

However, one of these bills being discussed at this time by our committee deserves more than passing attention because it is the first amendment to the Landrum-Griffin concept of labor-management legislation. This deals with the right of building trades unions to picket a construction project.

This bill would set aside the Denver Building Trades decision. This decision later clarified by the Moore drydock decision restricts pickets on a building project to establishing a picket line under severe restrictions. There are strong arguments made by both sides—the unions and the contractors. When the Landrum-Griffin bill restricted picketing and made employment of strikebreakers common practice in labor disputes, the ability to successfully carry on a strike by an individual craft union at a multiple-employer construction job impossible under the law.

Congress is again being misled by the use of slogans and half truths. Instead of dealing with facts and the provisions of the proposed bill, the whole attack is being made against the term "Secondary Boycott." It is alleged that the right given to a striking union to picket a construction by use of a picket line would be in effect a secondary boycott on nonstriking subcontractors.

The unions argue that if they can't advertise their disagreement with one employer by using a projectwide picket line it gives the employer being struck every avenue to use strikebreakers or workers from other employers on the same job, thereby making the dispute one sided in favor of the employer.

This again shows the difficulties encountered when the National Government

tries to write rules that can't possibly cover all situations that arise in labor disputes.

Simply put this is what the law now allows. Every union other than the building trades can picket every gate, every place of production in any plant or industry, can strike and advertise to all workers that a strike is in progress.

The building trades unions can only picket a certain gate or place of work where the union members were last working before the strike although the construction is one individual project. With the provisions of Landrum-Griffin affecting hot cargo, picket line restrictions and free admission of strikebreakers, the unions argue that their constitutional right to strike in a labor dispute has been ineffective and for all practical purposes, useless.

Whether the right to strike is good or bad has nothing to do with the present proposal. The question to be resolved is whether or not Congress will pass a law reestablishing this right as an effective weapon in a labor-management dispute in the construction field the same as it is in other fields.

Industry contends that projectwide picketing by one or more trades is, indeed, a secondary boycott in that it stops workers not involved in the dispute from going to work across a union picket line.

The practical situation, of course, is that if the struck employer could not employ strikebreakers or workers of other employers to do the jobs of the striking employees the other subcontractors would soon have to stop work anyway because construction jobs are in reality dependent upon each craft or trade doing its work individually, yet jointly.

In closing, let's listen to some words spoken in farewell by a man whose experience covered over half a century in the most turbulent of all labor-management disputes in our lifetime:

"Not only in the coal industry has our organization been strong. The strength of this union has ever been an example for workers wherever situated in our Nation who are struggling to improve their lot. The establishment of widespread collective bargaining in our modern industries has been responsible to a great degree for the high standard of living and culture achieved by all Americans under our flag during the past few decades.

"Too many of our professional and business leaders failed to realize for many years that as the workers in their communities prospered and increased their buying power and their standards of living were raised, so inevitably that progress and that improvement would be shared by the business and professional and clerical interests in that community.

"So, America has finally achieved the highest standard of living that as far as we know has hitherto not existed in any country at any time in known history. There must be a reason that goes beyond what our political representatives may have done, or what our employers have done gratuitously, and that reason, of course, is the collective strength of the great masses of productive workers in our Nation making their influence felt through representatives of their own choosing and through the medium of collective bargaining.

"Can we keep America this way? Are we sure that progress will continue to be made in the face of the existent world problems and world trends and world confusion and expanding world population? That, my friends, is the task that lies ahead for the coming generations in our land, and that is the task that will face the organized labor movement of this country. But the organized labor movement cannot exercise its mass strength or fulfill its own destiny in the face of divided councils and caving and warfare in the ranks of organized labor down

to the lowest bobtail and ragtag local union in any particular craft.

"Private enterprise, as we know it in our country, is more or less on trial in all of the countries in the world except our own. Private enterprise, investment for profit, reward for incentive, doesn't exist in many countries. In countries where it does exist, it is in modified form as compared to our own economic scheme and our own economic arrangements.

"Our economy is not expanding. This is recognized by those who are students of such things. It is not expanding at a rate sufficiently rapid to protect this standard of living here in the face of the rapid expansion of other economies. American goods are increasingly and progressively being undersold in the world market—undersold by goods produced by economies that have been erected in these countries at the expense of the American taxpayer.

"How far do we go with it? Do we impoverish ourselves so that, with all vainglory, we can keep on contributing half of our national income to countries that will drive our goods from the world markets? Do we impoverish ourselves for countries that are only resisting Communist infiltration as long as we hire them in dollars? In reverse English that means that when these countries get to the place where they stand on their own feet they won't take our money, and then they will do as they please.

"The flight of American capital, for instance, is a problem that will attract the attention of this Nation in the years to come. Many of our manufacturers have items suitable for trade in the world markets but are finding it impossible to manufacture their goods in the United States under our standards of wages and living and collateral costs. So they are going abroad and are erecting production plants in foreign countries. One thousand American concerns already have plants that they erected in foreign countries. There they produce articles of trade which they had produced in their own American plants. There they produce articles with money earned under the American flag, under the free enterprise system. They are falling to reinvest under that same flag and under that same system. Many additional American concerns of magnitude in the commercial world are even now considering whether they are going to be forced to withdraw from the world markets or build production plants abroad, where there are low wages and standards of living conditions. There they can manufacture the same articles at less than they can do at home.

"You know, I used to know a baker in a fairly large town. His name was Heine, and he only had one ad. He had it on the highway a mile out of town, a highway that meets the four roads, and all it said was, 'Heine eats his own bread.' But apparently American capital, in part, does not want to eat its own bread. If one carries the arrangement or idea to its logical conclusion, the result will be the reduction of all our volume of trade in foreign countries and the abandonment of manufacturing enterprise here at home. This will augment the unemployment situation, add to the distress of our economy, dry up the source of taxation, until, perhaps, in the end we will not be able to sustain our foreign friends under the standards to which they have been accustomed, because we are destitute ourselves.

"These things are of great concern because they run to the question of whether the coal industry can continue as a vital part of the American economy—as its basic fuel. The coal industry, during the past decade, has made great strides in establishing national leadership, in modernizing its methods of operation and production, in lowering the unit cost of a vital necessity for American commercial purposes. There is a fair chance

that this stupendous effort will bring great economic reward to the investors in the coal industry, to the labor in the coal industry, and to the public at large—which gets a lower unit cost in purchasing this commodity.

"We must, however, maintain this economy of ours in that state of progression necessary to sustain our increasing population. The increase in population is a phenomenon not only in the United States, where 85 percent of our citizens now live in urban communities, increasingly dependent on their day-to-day income and their ability to meet their day-to-day expenses, but also in other countries. The teeming millions of the increased population in those countries are going to continue to overflow the political boundaries and strive with other peoples for the right to continue their existence in the only way they see possible at the time.

"Unless we keep our own Nation strong America cannot contribute for long to the maintenance of world peace against these menacing portents unless we keep our own house in order and unless we keep our own Nation strong. The business of keeping alive, keeping one's family in good health so the children can grow to be men and women is the primary obligation of every citizen. It begins at home. It is even more important than which candidate will get the nomination or be elected next fall. Far more.

"It is time for America to think. Our public debt is beyond all comprehension. Nine billion dollars a year in taxes are collected and paid to the bondholders as interest before a dollar becomes available for the ordinary operation of the Government and our public agencies. Perhaps we can continue expanding the national debt but it is very doubtful that we can do it successfully.

"I merely mention these things as indicative of my thoughts: that the members of labor organizations, as well as all other citizens, have a great obligation upon them in the future; that the work of labor is not finished; that America as a whole cannot grow soft and let the politicians do it all because pages of history are replete with incidents that indicate that the politicians rarely succeed after the confidence of the people has been removed through the lack of efficiency of their public representatives."

These are the words of John L. Lewis, miner, philosopher, American. His union shows what can be done by union-management cooperation without the interference of Congress.

Good Citizenship Needs Vision and Courage

EXTENSION OF REMARKS

OF

HON. J. FLOYD BREEDING

OF KANSAS

IN THE HOUSE OF REPRESENTATIVES

Thursday, March 3, 1960

Mr. BREEDING. Mr. Speaker, the Kansas Federation of Women's Clubs sponsored a citizenship essay contest for high school juniors. The seventh district of the federated clubs consists of 32 counties in western Kansas, and Paul Taylor, of Sterling, won the contest with his essay entitled "Good Citizenship Needs Vision and Courage." Under unanimous consent I would like to bring this essay to the attention of this esteemed body:

GOOD CITIZENSHIP NEEDS VISION AND COURAGE

Collier's Encyclopedia defines citizenship as "the most perfect form of membership in a political community." What does this mean? Membership is the state of being a member and a member is defined as a person belonging to an organized body or society. To be a good member of society one must take an active interest in the welfare of the community. A citizen has certain duties to his town or community. He votes intelligently, helps create public opinion, serves on juries, performs military service, keeps well informed, pays taxes, serves in public offices, and helps in work of political parties.

Courage is defined as confidence to act in accordance with one's convictions. Certainly an individual needs courage to serve on a jury. How can we expect justice when jury members are timid souls who let their opinions be influenced by individuals of importance or by other outside sources? How can a timid person vote intelligently when he lets his vote be controlled by labor or other organizations? A person with sound and intelligent convictions can and should be helpful to more poorly informed citizens; however, this must not extend to the point of domination of those individuals. Military service also requires courage, for the battlefield is no place for the meek individual. Service to one's political party again requires courage in one's convictions. In my opinion political parties are fine, but a person's devotion to one to the point of worship is bad for the country and so is bad for the individual. Service in a public office is a job for an individual who will strive to do his best at all times to serve his fellow citizens in his community. He must have courage to resist the influence of certain corrupt individuals of whom there are frightfully many in our Government.

Vision can be defined as the ability of an individual to look ahead to new horizons, new problems, and to set new goals. Vision of the future as well as a thorough knowledge of the candidate's record is an essential factor in determining the best candidate for a public office. With this knowledge an individual will be able to use his vote to the best advantage. Vision of things to come enables an individual to help less informed people form an intelligent opinion of public affairs. Some people don't realize it, but when a person pays his taxes, he is showing faith in and vision for the future welfare of his community and country. Vision is an invaluable characteristic for a servant of the public. Should public servants lack the ability to look forward to things to come, the results could be disastrous. Going on the assumption that a well-informed citizen is a good citizen, a well-informed citizen can use his vision of things to come to determine whether they will be better or worse. If they should appear to be getting worse he should take advantage of every opportunity which may arise to improve the condition of his community.

The evidence seems to bear out the conclusion that vision and courage are two of the basic factors of good citizenship.

Resolutions of Indiana Council of Churches

EXTENSION OF REMARKS

OF

HON. J. EDWARD ROUSH

OF INDIANA

IN THE HOUSE OF REPRESENTATIVES

Thursday, March 3, 1960

Mr. ROUSH. Mr. Speaker, for the purpose of informing my colleagues of

the views of the Indiana Council of Churches, I am inserting in the RECORD, the resolutions adopted by the assembly of the Indiana Council of Churches on January 15, 1960. Although we may or may not agree with every expression of view, we certainly can appreciate this sincere expression of convictions and can say without reservation that we join them when they say—

That we uphold the right and duty of the churches to study and comment upon the issues of human concern.

The resolutions follow:

RESOLUTION ADOPTED BY THE ASSEMBLY,
INDIANA COUNCIL OF CHURCHES, JANUARY 15,
1960

SECTION I

Whereas freedom of speech is being challenged in some circles; and

Whereas we believe that it is a vital part of our American way of life: Be it

Resolved, That we resist all efforts to discourage full freedom of discussion, that we uphold the right and duty of the churches to study and comment upon issues of human concern, and that we invite full candor on the part of governmental officials and other leaders of opinion in the public exposition of problems and dilemmas affecting the citizens of our State and Nation. In the light of this conviction: Be it further

Resolved—

1. That we urge our churches to help remove all barriers based on racial differences and to eliminate through study, negotiation and legislation discrimination in education, employment, housing, and public accommodations; and that we commend all who are using peaceful means to bring about the end of un-Christian practices in relationships with people whose racial, religious, or national origins differ from those of the majority;

2. That we use every means available to us as Christians to maintain clearly the separation of church and state, especially in cases where groups or individuals are tempted to try to use public tax funds for private schools (this would include the use of public school buildings and the time of public school teachers for released time religious education);

3. That we reaffirm our concerted opposition to all forms of gambling within our State including parimutuel betting and the use of pinball machines and similar devices recently condemned by the prosecutors of Marion and Lake counties;

4. That we call upon our State to join with other States and nations in the elimination of the barbarian practice of capital punishment;

5. That we intend to work unitedly for legislation, including an "implied consent" law, which will help to remove from our highways those who drive while under the influence of alcohol;

6. That we urge the Congress of the United States to outlaw the dangerous and disagreeable practice of serving alcoholic beverages on airlines, and that the airlines be instructed to refuse transportation to persons so clearly under the influence of alcohol as to become a hazard to the safety and comfort of other passengers;

7. That we use our influence as Christians to secure the abolition of the advertising of alcoholic beverages in interstate commerce whether in newspapers, magazines, or on the air waves;

8. That we urge members of our churches to respect Sunday as a day of rest and worship.

SECTION II

Whereas the present development of weapons of destruction makes war hazardous to the very existence of mankind upon the earth; Be it

Resolved—

1. That we commend the President of the United States, other heads of state, and those individuals and organizations who have undertaken international visits and exchange of views as a means to resolve tensions;

2. That we commend those who out of concern for human values are striving to bring about an end to the suicidal arms race and to initiate a program of universal disarmament;

3. That we urge our Government to abstain from further nuclear tests and to renew its efforts to secure the universal abolition of such tests within a framework of international inspection;

4. That we reaffirm our support of the United Nations and its agencies in their efforts to promote peace and understanding in the world and that we encourage our Government to give strong financial and moral backing to this organization and to utilize its good offices in all areas of discord affecting this country;

5. That we commend our U.N. delegation for negotiating treaties to insure the demilitarization of the Antarctic Continent and the peaceful exploration of outer space and urge upon the Congress their ratification forthwith;

6. That we commend and urge support for all religious, governmental, and private agencies and organizations working to bring about the sharing of our agricultural abundance with the needy of the world and we join with others in striving for more adequate machinery to deal with farm surpluses on a world scale.

7. That we continue to urge our Government to separate the humanitarian and military aspects of our mutual assistance program, in order that out of abundance and in love we may minister to the needs of our fellowmen without demanding military concessions which violate the self-respect and sovereignty of other nations;

8. That the rapidly expanding world population makes necessary consideration of means to limit population growth and that both Christian morality and humanitarian sensitivity would lead our Government to share with other nations, when requested, modern technical information concerning conception control and family planning;

9. That, in view of the harmful effects of compulsory military training upon both the morals and morale of our younger citizens and in the light of the opinion of many military leaders that this system is unnecessary and unrealistic in a scientific military age, we urge Congress to reconsider and re-evaluate its position in regard to compulsory military training and service;

10. That we urge our representatives in the United Nations and in Congress to declare that it is a crime for any nation or group to attempt to exterminate another group or nation because of ideology, color or ethnic origin, and that we, therefore, ratify the Genocide Convention; and

11. That we encourage our Government and people to receive in our Nation and communities a fair share of refugees from oppression and war.

12. That we call upon the members of our churches to inform themselves concerning our preparations for chemical, biological, and radiological warfare (CBR); and that we urge all with awakened Christian consciences to protest all preparation by any nation, including our own, to wipe out masses of people by the use of chemical, biological, or radiological weapons.

SECTION III

1. Whereas labor-management disputes vitally affect the public; and

Whereas it is difficult to ascertain the truth in the face of opposed presentations of fact; Be it

Resolved, That we urge both management and labor to enter collective bargaining ne-

gotiations responsibly and with sincerity and that unbiased representatives of the public be included in such negotiations.

2. Whereas the needs of human beings within our State and communities are necessarily a matter of Christian concern: Be it

Resolved, That we urge study by our churches of the adequacy of present public welfare programs and grants including the possibility of cooperation by Indiana with the other States in establishing uniform residence requirements for public assistance.

3. Whereas the Juvenile Court Act provides wisely for emphasis upon rehabilitation rather than punishment of youthful offenders and whereas the law makes possible the waiving to criminal courts of youths over 16 years of age: Be it

Resolved, That we favor maintenance of age 18 as the upper limit for jurisdiction of juvenile courts.

4. Whereas the life of a child untouched by religious teaching is impoverished; and

Whereas legally acceptable programs of weekday religious instruction on released time from the public schools have reached many unchurched boys and girls, and made possible expanded periods of instruction for church related children: Be it

Resolved, That we support the retention of present enabling legislation for weekday religious education classes on released time, and that we seek to develop such classes in conformity with the highest standards of Christian education and in full compliance with State and Federal laws.

5. Whereas faith in God and personal fellowship with Him in prayer have been cornerstones of American life and public policy: Be it

Resolved, That we support the setting aside of a room in the statehouse for private prayer and meditation.

Hon. Matthew Gilroy Receives the Eloy Alfaro Grand Cross and Diploma, in Recognition for His Extraordinary Distinguished Public, Private, Patriotic, Philanthropic Services to Mankind, and in Further Recognition of His Efforts Toward the Establishment of International Peace

EXTENSION OF REMARKS

OF

HON. ROBERT R. BARRY

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Wednesday, February 17, 1960

Mr. BARRY. Mr. Speaker, under leave to extend my remarks, I insert the highlights of the proceedings of the Eloy Alfaro International Foundation of the Republic of Panama, on the occasion of the reception and ceremony, at the Lotos Club, New York City, at which the award was made to Mr. Gilroy. This high honor was bestowed on him in the presence of a very distinguished group of friends of Mr. Gilroy, from all parts of Canada, United States, Ireland, England, and South America by Maj. Gen. Carlos A. Cabrera, chief of the delegation of the Republic of Ecuador to the Inter-American Defense Board in Washington, D.C., and its military attaché.

The invocation was delivered by the Right Reverend Dr. Benjamin C. Eckardt,

President of Philathea College, London, Ontario, and Canadian provost of the foundation.

Mr. Joseph Goldberg, Canadian deputy provost and general chairman, read a cable from the Honorable Olmedo Alfaro, secretary general of the foundation authorizing the ceremony at the Lotos Club and conveying his personal greetings to all the assembled guests. Chairman Goldberg then introduced Dr. John Maurice Keesing, international provost, and famous international barrister, who delivered one of the most balanced and thought-provocative addresses, as follows:

SPEECH OF DR. JOHN M. KEESING ON THE OCCASION OF THE AWARD OF THE CROSS OF THE ELOY ALFARO INTERNATIONAL FOUNDATION AT THE LOTOS CLUB, FEBRUARY 10, 1960

Ever since Dr. Herman Bayern, the American provost of the Eloy Alfaro International Foundation informed me that I was to take part in the award to Mr. Gilroy, I have been giving thought to the opportunity this presented to me to, as we say in the Army, "sound off."

The basic aim of the United States must be the creation of a prosperous and stable family of nations in the Americas. A prosperous and stable Latin America will advance the security of the entire hemisphere, and contribute greatly to the strength and solidarity of the Western World.

In the early 19th century, the great liberator, Simon Bolivar, when speaking of the type of government that was then required for Latin America, stated, "As long as our fellow citizens do not acquire the talents and virtues which distinguish our brothers to the north, a radical democracy, far from being good for us, will bring ruin upon us." This philosophy as expressed by the liberator at that time was, I believe, and as many historians believe, completely true. Gen. Eloy Alfaro, whose memory this international foundation honors, was an avowed disciple of Bolivar; a military man of renown who has been called the Lincoln of Latin America.

The men who are involved in international governmental affairs and business affairs must remember that times are constantly changing, and the rapidity of change is accelerating every day. The countries which compose Latin America today are full partners with the United States. The people of these countries have shown, and are continuously showing, that they have acquired the talents and virtues that the liberator referred to. The gap between the philosophy of the people of North and South America is rapidly disappearing. The people of Latin America has expressed their antipathy to despotic dictatorships, inflation, have expressed a desire for greater industrialization, and wider and more stable markets.

The Americas are fortunate today in having at the heads of Government men who are attempting to lead the growing up of the countries of Latin America. The heads of government of the Argentine, of Brazil, of Colombia, of Chile, and of Venezuela have been recently called by Time magazine, the real builders of Latin America. These men basically are attempting the amelioration of the condition of their countries as rapidly as they believe these changes can be effectively put into practice in their respective countries. They and other Americans realize that countries, like people, must grow and mature, and in so doing suffer the pains of growing.

The statement of international policy when made by officials of governments must be most carefully worded. The time of the statement, the place at which it was made and the reason for the pronouncement must

be carefully considered. Not only must the speechmaker consider these things, but also the reader or listener must view the statement in the light of these three circumstances. When speaking of a sister country of the Americas, the language must be clear. The underlying philosophy of the full partnership of all the countries of the Americas must be one of the guide rules governing the choice of words. A statement of policy must not be so worded that a perusal of it would lead the peoples of Latin America to feel that they have nothing to gain and much to lose by being sucked into the conflicts of the great powers in which they only will be exploited. Only when Latin Americans feel that they have something worth fighting for will isolationism give way to a feeling of identity and equality with the United States in the struggle for a free world.

The entire Latin American area is in the throes of a painful process of social, economic, and political transformation. This movement is only beginning.

The people who make policy in the Government of our country must gear their decisions to the probably great future of Latin America. The Latin American economy is rapidly expanding. Its potential for development in view of its vast untapped resources is of relative importance to this world. The economic growth of this area should double in less than 20 years. We have many inter-American organizations in which the governments of the Americas are in constant consultation and collaboration. This must be continued. Latin Americans must be convinced that in this contest that is going on in the world today, they have a great stake; that the stake of all the Americas is the same, whether it be the United States of America, Ecuador, Canada, Brazil, or any other country in the Americas. All the nations of the Americas are full and equal partners.

Private enterprise of North America must assist in the Latin American development. This assistance must be in such a manner as to discourage the growing belief that the nationalization of resources is the panacea of all economic ills. There must be a close interchange of ideas and awareness of purpose between private business and the governments involved, in order to bring about the potential economic advances of the Latin American countries.

I have placed these remarks before this group because I believe that the men who are here today speak with voices that have the authority of achievement in industry and in public life.

I ask all of you to use your influence and persuasive powers on our governments, and on our industrialists to convince them to view the Latin American affairs with the same eyes that they look upon their affairs at home, in the United States, and in Canada.

I ask for a unanimous advocacy of the principle of full partnership of the American nations.

Dr. Herman A. Bayern, American provost, was then introduced, and set forth at length the achievements and accomplishments of former President Eloy Alfaro, President of Ecuador at the turn of the century, as follows:

FUNDACION INTERNACIONAL ELOY ALFARO, PANAMA, REPUBLICA DE PANAMA, LOTOS CLUB, NEW YORK CITY, WEDNESDAY, FEBRUARY 10

(Speech of Dr. Herman A. Bayern, American provost, representing the foundation, when Matthew Gilroy, Esq., of Canada and Ireland, received the Eloy Alfaro Grand Cross)

Dr. Keesing, members of the clergy, Mr. Gilroy, distinguished guests, and gentlemen, we are gathered here to honor a great humanitarian and philanthropist, Mr. Gilroy,

in recognition of his extraordinary efforts to serve mankind and international peace throughout the civilized world.

This foundation was incorporated by the Legislature of the Republic of Panama in order to perpetuate the memory of Gen. Eloy Alfaro, who was President of Ecuador at the turn of the century. This foundation seeks to promote the political and moral values of the Americas. General Alfaro advanced the cause of his nation by setting up the judicial system, and expanded her schools and colleges and other institutions of learning.

General Alfaro was a soldier, patriot, statesman, and martyr, was a citizen not only of his native Ecuador, but of all the Americas. His personal integrity, his unwavering defense of the principles of truth, justice, and friendship marked about one-quarter of a century of unflagging service to his fellow men which extended way beyond the confines of his own country, Ecuador. He is recognized as the leader of a generation fired with the hope and desire that responsible political action would enhance the prosperity of their country and the welfare of their people.

How the world needs another Alfaro today. History records that 70 years ago, in 1890, there was convened in Washington, the Conference of American States, in which Eloy Alfaro actively participated as a dedicated leader. Subsequently, the Pan American Union developed. Starting that long ago, Eloy Alfaro firmly believed in hemisphere solidarity. One of his major social contributions was to initiate measures for improving the status of the Indians and the downtrodden in his country and freeing them from exploitation.

The record shows that in 1907 he again was the dedicated leader who played a leading part at this International Conference in Mexico City, where the United States and six other Pan-American nations assembled and did discuss and resolve questions relating to the well-being of the American States.

In view of what is taking place in Cuba today, it is important to recall that General Alfaro played a leading part in achieving the liberation of oppressed Latin American nations, and furthering cooperation among the countries of the hemisphere, and restoring peace between the warring nations of the hemisphere when war was threatened. As a matter of historical fact, he welded together the factions of the Cuban Freedom Party in December 1895, 3 years before the Spanish-American War, when he publicly petitioned the Queen of Spain, in a document, demanding Cuban independence.

In view of his achievements and accomplishments, there are monuments in the memory of General Alfaro in almost every capital of the Western Hemisphere. And so today we stand inspired by the immortal Eloy Alfaro. Were he here, some of us would have been associated with him, and if he were alive today he would cooperate with President Eisenhower in his announced visit to Brazil, Argentina, Uruguay, and Chile, between February 23 and March 3, accompanied by Secretary of State Herter, in order to strengthen hemisphere solidarity against the vicious Communist conspiracy.

The philosophy of General Alfaro was based principally on service to his fellow human beings and to the cause and promotion of international peace. The public and private activities of our distinguished guest of honor, Matthew Gilroy, Esq., comes within the framework of this kind of service to humanity. In recognition of this fact, and that he is a great humanitarian and philanthropist, the ruling body of the foundation grants you, Mr. Gilroy, its highest honor—the Eloy Alfaro Grand Cross and Diploma.

You now, my dear Mr. Gilroy, join a goodly company of internationalists, who have been similarly honored in the past. They include President Eisenhower, former

President Truman, General MacArthur, FBI Director J. Edgar Hoover, Governor Rockefeller, General McAuliffe, along with Maj. Gen. Carlos A. Cabrera, who typify the caliber of men who hold this high honor.

It now gives me genuine pleasure to call upon Maj. Gen. Carlos A. Cabrera, who I believe has an important message to deliver to us concerning President Eisenhower's trip to South America this month, to exercise what I know to be a pleasant duty imposed upon him by the board of dignitaries of this foundation to carry out its determination to honor Matthew Gilroy, Esq. General Cabrera.

Dr. Bayern then called upon Maj. Gen. Carlos A. Cabrera to bestow the high honor on the Honorable Matthew Gilroy in a dynamic speech as follows:

FUNDACION INTERNACIONAL ELOY ALFARO, PANAMA, REPUBLICA DE PANAMA, LOTOS CLUB, NEW YORK CITY, WEDNESDAY, FEBRUARY 10 (Presentation speech of Maj. Gen. Carlos A. Cabrera, Chief of the Delegation of the Republic of Ecuador to the Inter-American Defense Board in Washington, D.C., and Its Military Attaché, bestowing Eloy Alfaro Grand Cross and Diploma (Titular de La Cruz de Eloy Alfaro) on Hon. Matthew Gilroy, of Canada and Ireland)

Hon. Matthew Gilroy, I consider it a great privilege to be with you today in this solemn ceremony of friendship, appreciation, and good will. Dr. Herman A. Bayern, whose clear understanding of human nature fomented and practices the virtues that dignify humanity: Liberty, Peace, and Justice. I consider it my pleasant duty to thank Dr. Bayern for having given me this privilege.

In the world today, we have before us an overwhelming task due to the fantastic progress of science. If we do not manage to maintain equal conditions based on true understanding and cooperation of all humanity, we will undoubtedly have to face the consequences of a major cataclysm.

The consequences of which would most certainly be disastrous. We do have rays of hope and optimism when we observe the existence of associations, like the one which has brought us here together, whose members dedicate their time and talent towards helping the needy, the unfortunate, and all those who are in need of spiritual and economical help so as to be able to continue living a life of honesty, hope, and self-respect.

Undoubtedly the "Fundacion Internacional Eloy Alfaro de Panama" has maintained alive the indomitable spirit of Gen. Eloy Alfaro, whose life was dedicated toward bringing about a mutual understanding and cooperation of the Americas, has decided to present to you, Mr. Gilroy, the Eloy Alfaro Grand Cross and Diploma as a recognition of your multiple virtues and work dedicated to the service of international peace.

In this solemn hour, the memory of Eloy Alfaro is honored by the members of the Fundacion Internacional Eloy Alfaro. General Alfaro, the man of the Americas who never faltered in sacrificing his life and so became the standard of the unconquerable striver for the individual liberties of man and humanity. You will from now on, Mr. Gilroy, have with you the image of this illustrious Ecuadorian, a citizen of a small country if we measure greatness or smallness by land measures, but of tremendous size and fortitude when it comes to defending and upholding human liberties.

Today the world has the privilege of having another outstanding general, to whom I want to pay my respects and admiration, a citizen of whom the world is proud and in whom many have placed their hopes of liberty and freedom from fear. The President of the United States of America, General Eisenhower.

We of the Americas hold great hope and optimism in General Eisenhower's trip to South America. We all feel that with his personal encounter with us we will all be able to evaluate and understand each others problems. Understanding, I am sure, is the essential step in obtaining mutual cooperation.

I think, a solid feeling of liberty and democracy will greet him on his trip to the countries of Latin America, that are all willing to cooperate on a basis of integrity and mutual respect, but never by imperialistic or bellicose imposition.

Let us follow the example of Mr. Matthew Gilroy. He who has proved to be a dynamic leader whose intelligence and economical well-being he has dedicated toward helping human beings. Let us all strive toward re-assuring the most noble qualities of a human being: Honesty, morality, and justice. Let us all remember that certain qualities must exist to be able to live in a world in which man may enjoy the liberties so many times quoted. Where neither the fear of tomorrow, nor the imposition of tyrants, who feel they can destroy the lives of children, the aged, the adults, merely because of their whims, will never again cast its dark shadow over our heads. Let us always remember a few words left to us as a priceless heritage by Eloy Alfaro. "There is no redemption without sacrifices; these are the solid bases of progress."

General Cabrera, at the conclusion of his outstanding speech, then conferred the Eloy Alfaro Grand Cross on Mr. Gilroy, assisted by American Provost Herman A. Bayern:

ACCEPTANCE SPEECH OF THE HONORABLE MATTHEW GILROY

Thank you, General Cabrera, your Excellencies, members of the clergy, distinguished guests, ladies and gentlemen, I am overwhelmed with the great honors you have bestowed upon me and at joining such distinguished company. I little thought when I followed the dictates of my conscience that I would one day be so honored amidst such outstanding company from all over the world. Besides Gen. Eloy Alfaro I feel humble but inspired by his example and with the opportunity to help further the aims and objectives of the great international foundation to be of greater service, to my fellow humans, and to international peace.

Among those who have honored me with their presence here today, are members of several faiths, several nations. In this great city there is a living testament to man's desire for harmony and brotherhood, in the shape of the United Nations.

We all here know that it can be achieved, and that it is even more vital at the grassroots level where the need is most important. There is so much need, so many places to start, and so little time. Like me, you are all blessed with much happiness and many true friends. Join me in helping to achieve Eloy Alfaro's aims of having everyone, everywhere, just as fortunate.

Again let me express my appreciation for the award of this signal honor. May God be with you all, always.

I am particularly happy to make note of this special occasion, since it gives me the opportunity to pay tribute to the spirit that made America great. Matthew Gilroy, like our own forefathers, came to North America, and starting from scratch, with little more than coffee money in his pocket, is creating a vigorous mining empire. Unlike most, Mr. Gilroy dedicates his substance, his life, and all his energies to all his fellow humans.

Furthermore, I am delighted to add my tribute because amongst the many distinguished guests from many nations were three of my own leading constituents, Dr. Herman A. Bayern, American Provost; Dr. B. Tully, a distinguished physician from Westchester County; and Mr. Hugh Baxter, a school friend of Mr. Gilroy, who also has made his mark as an American citizen and industrial leader. Unfortunately, urgent duties of State prevented me from participating in this award ceremony.

Mr. Speaker, the award made to the Honorable Matthew Gilroy includes the motto, "Thus one goes to the stars," a most appropriate one in this case. The award reads as follows:

Eloy Alfaro International Foundation—"thus one goes to the stars." Recognizing the special value of the services rendered by the Honorable Matthew Gilroy in support of the objectives of this institution he has been awarded the Cross of Eloy Alfaro International Foundation.

Msgr. John J. Voight, secretary on education for His Eminence Francis Cardinal Spellman, concluded the luncheon with the benediction.

LAWS RELATIVE TO THE PRINTING OF DOCUMENTS

Either House may order the printing of a document not already provided for by law, but only when the same shall be accompanied by an estimate from the Public Printer as to the probable cost thereof. Any executive department, bureau, board, or independent office of the Government submitting reports or documents in response to inquiries from Congress shall submit therewith an estimate of the probable cost of printing the usual number. Nothing in this section relating to estimates shall apply to reports or documents not exceeding 50 pages (U.S. Code, title 44, sec. 140, p. 1938).

Resolutions for printing extra copies, when presented to either House, shall be referred immediately to the Committee on House Administration of the House of Representatives or the Committee on Rules and Administration of the Senate, who, in making their report, shall give the probable cost of the proposed printing upon the estimate of the Public Printer, and no extra copies shall be printed before such committee has reported (U.S. Code, title 44, sec. 133, p. 1937).

GOVERNMENT PUBLICATIONS FOR SALE

Additional copies of Government publications are offered for sale to the public by the Superintendent of Documents, Government Printing Office, Washington 25, D.C., at cost thereof as determined by the Public Printer plus 50 percent: *Provided*, That a discount of not to exceed 25 percent may be allowed to authorized bookdealers and quantity purchasers, but such printing shall not interfere with the prompt execution of work for the Government. The Superintendent of Documents shall prescribe the terms and conditions under which he may authorize the resale of Government publications by bookdealers, and he may designate any Government officer his agent for the sale of Government publications under such regulations as shall be agreed upon by the Superintendent of Documents and the head of the respective department or establishment of the Government (U.S. Code, title 44, sec. 72a, Supp. 2).

Appendix

Young America's Moral Crisis

EXTENSION OF REMARKS

OF

HON. ALEXANDER WILEY

OF WISCONSIN

IN THE SENATE OF THE UNITED STATES

Friday, March 4, 1960

Mr. WILEY. Mr. President, we recognize that the preservation of high standards of morality and integrity among the youth of our country is absolutely essential, if we are to provide the kind of high quality leadership necessary for the future.

First of all, however, I want to make it absolutely clear that I do not believe the picture is as black as some would paint it—that the youth of America are “going to the dogs.”

To the contrary, the vast majority of our young folks are making a real, constructive, creative effort to live right, act right, and perform useful roles in home-and-community life; and to build themselves into adults capable of effectively bearing the responsibility of citizens and leadership in the future.

We realize, of course, that among the minority, there are serious problems to be dealt with, including, among other things, increases in delinquency, crime, and illegitimacy.

As adults, we have the responsibility of setting good examples within our human capabilities.

Secondly, we need to improve the moral climate in which the youth of today are accumulating ideas and knowledge upon which to conduct an adult life.

From time to time, there are analyses of the “whys and wherefores” of conditions in which there is disobedience to the social, legal, moral, and spiritual laws.

Regrettably, however, the analyses often do not go “that extra mile” necessary to find ways and means to provide the high standards of integrity and morality among the youth of our country.

Recently, however, an informative article in the *Eagles* magazine of March 1960, by Jim Collison, entitled “Young America's Moral Crisis,” did not just point an accusing finger at youth and adults for the existence of the difficulties facing young America; rather, the article also presented some constructive recommendations for improving the climate in which youth can grow educationally, spiritually, and morally.

I ask unanimous consent to have the article printed in the Appendix of the Record.

There being no objection, the article was ordered to be printed in the Record, as follows:

YOUNG AMERICA'S MORAL CRISIS

(By Jim Collison)

Adult Americans are corrupting young America. An alarming percentage of American teenagers—not alone the delinquent thugs among them—are maturing without an adequate sense of right and wrong. They seem to be developing morally void characters.

Luckily young people who have learned character discipline and whose parents have matured them are already pointing toward their own solutions to the youth problem.

These young people are digesting the unpleasant truth daily newspapers across the Nation report in increasing tempo—stories America's adults too quickly forget:

“DALLAS, TEX.—Alarmed over an increase in teenage marriages and pregnancies among school children, the Dallas Parent-Teacher Association council voted to ask that a separate school be set up for married students. A survey turned up one 12-year-old and two 13-year-old married students; marriages are up 41 percent since 1957—2 percent of the total school enrollment—and 144 girls dropped from school because of pregnancy.”

“STREATER, N. DAK.—Authorities have broken up a juvenile crime wave here, nabbing six boys aged 10 to 13 who had been looting business places over a 6-month period. Told they had hit every place in town except the bank one of the boys answered, ‘We got that, too,’ and produced two rolls of coins to prove it.”

“WASHINGTON, D.C.—Senator HERMAN TALMADGE, Democrat, Georgia, called Sunday for an investigation to determine whether Federal welfare payments encourage an increase in illegitimate births. The rate of illegitimate children born to teenage mothers has increased 5.2 percent from 1956 to 1957.

“DOWNERS GROVE, ILL.—The fire chief here said he would ask the village council to close a youth center as a result of a scuffle between hundreds of teenagers and 20 of his firemen. Several firemen suffered cuts and bruises in the melee. The fire chief lost several teeth. * * * He said many of the youth were drunk.”

The moral breakdown among American youth is so alarming that FBI Director J. Edgar Hoover has called it a crisis which threatens the very future of our Nation.

These are the facts that the 1960 White House Conference on Children and Youth will consider at meetings in Washington, D.C., from March 27 to April 2:

Almost one-third of all mothers work outside the home.

Juvenile delinquency is increasing five times faster than the child population of juvenile court age.

Although young people today are marrying younger, 1 out of every 7 girls between 15 and 19 who has a baby is not married.

Teenagers have 40 percent of all the illegitimate children born in the United States.

There are other statistics just as shocking: Juveniles represent one-half the venereal disease caseload in America. Health officials believe that 200,000 teenagers are infected with VD each year.

Unwed motherhood among adolescents is on the rise and will continue, Mrs. Katherine Brownell Oettinger, chief of the U.S. Children's Bureau, has stated.

Within 2 years, 110,000 to 120,000 illegitimate children will be born annually to teenage mothers.

The 1958 FBI crime report (last full-year report available) shows that in America there was a 9.3 percent overall increase in crime. During the last 5 years there was a 1 percent increase each year in crime among persons 18 and over; there was a 10 percent increase each year in crime for teenagers and youngsters under 18 years of age.

Juveniles under 18 represented 12 percent of all persons arrested in 1958. They accounted for: 64.1 percent of auto thefts; 49.9 percent of burglaries; 48.5 percent of larceny cases; 30.9 percent of receiving-and-possession-stolen-property charges, and 22.8 percent of robbery charges.

The National Safety Council notes a growing notion that children must not walk anywhere—they must not even walk two blocks to school. As a result nearly 6 million motorists are teenagers.

School officials are fast realizing the threat. One widely publicized study in an Idaho school showed that no straight-A senior student drove to school; 15 percent of the B seniors drove to school; 41 percent of the C seniors drove to school; 71 percent of the D seniors drove to school, and 83 percent of the failing seniors drove to school.

Now consider the average teenager's attitude toward previously accepted American political principles:

Dr. H. H. Remmers, director of Purdue University's Division of Educational Reference and originator of the Purdue Opinion Panel, in his book “The American Teenager” reveals that: 44 percent of American students believe that if a person is uncertain how to vote it is better if he does not vote; 57 percent agree that the average citizen is justified in remaining aloof from dirty politics that may exist in his community; 34 percent believe that the Government should prohibit some people from making public speeches; 53 percent say that history is the story of the fight for power between different economic classes (the Communist theory).

These tragic results seem to confirm beyond much doubt that our traditional freedom is already in danger. Certainly when nearly half of our teenagers feel that the people are incapable of making their own decisions, we have a massive and frightening rejection of the basic theory of democratic government. Dr. Remmers concluded: “If our interpretation of the findings of the Purdue Opinion Polls is correct, Americans should be much more concerned about the 97 percent of our teenagers who are not delinquent than about the 3 percent who are.”

Whatever the percentage of good youngsters in America—3 or 53—they themselves are beginning to see the moral decline in young America, and they are putting the blame squarely where it belongs.

A resolution adopted late last year at a 2-day convention of the New England Congress of Catholic Youth Councils in Manchester, N.H., noted that the conduct of teenagers is the responsibility of parents:

“Inasmuch as teenagers have been the target for criticism regarding driving and drinking, it is felt that parents should exercise their parental prerogative in these matters; that they should constantly alert youth to responsibilities to the public; that they should take a firm stand when the occasion demands; that if firm guidance is exercised,

much of the trouble caused by teenage driving and drinking could be averted."

The cause of juvenile delinquency and moral breakdown goes deeper, though.

Some authorities on the subject, like Judge Samuel Leibowitz of Kings County Criminal Court, New York, describes the cause as the "philosophy of permissiveness."

Judge Warren Hill, presiding justice of the domestic relations court in New York, best summarized the basic cause of juvenile moral breakdown when he told me that "you can readily infer that I deplore this policy of no restraint and no discipline, for our youngsters."

Before the U.S. Senate's Juvenile Delinquency Subcommittee Judge Leibowitz put his finger on the American juvenile cancer: "Our family life has gone to flinders."

Senator THOMAS C. HENNING, Jr., chairman of the Senate Juvenile Delinquency Subcommittee, told me that "testimony before this subcommittee and general research in sociology and criminology indicate that * * * parental roles are changing and thus confusing the frames of reference and goals on the basis of which parents are able to exert effective control over their children."

Senator HENNING went on to explain that "especially in delinquency areas, parents do not know what roles they are to play in society, and much less do they know what direction to give their children. This causes a lack of control."

What is the solution?

First, adults should recognize the problem and begin to organize and support youth councils throughout the Nation like those in the Cincinnati area.

Here are excerpts from a report which young people—500 strong from 40 high schools, 16 youth-serving agencies, and 5 youth councils participating in the first (1959) Greater Cincinnati Conference on Youth—prepared for the White House Conference on Children and Youth:

"The family is the basis of society, but it is falling apart because each member is going his own way. * * * The father is the head of the house. Mothers are needed in the home and should not work outside unless it is absolutely necessary.

"Stronger parental authority is needed. * * *

"Many adults don't have values for themselves; how can they set values for their children? * * *

"The youth of today have not developed sufficiently high moral qualities. The churches could help but youth will not give them a chance. * * *

"Youth have too easy access to beer and liquor in stores. They are seldom questioned about age. * * *

"Classroom discipline is too lax. Teachers need to be more strict. * * *

That report reflects the growing concern of young people about the vacuum they are reared in. For information on how to organize a Youth Council, write to The Citizens' Committee on Youth, 305 West Fourth Street, Cincinnati 2, Ohio.

Second, adults must support medical and scientific investigations into the juvenile delinquency problem.

For example, Dr. Sam I. Stein, former director of the psychiatric department, Family Court of Cook County, Illinois, is dedicating his talents to neuropsychiatric research. His is a complicated theory but is backed up by years of experience in working with delinquents in Chicago. Dr. Stein believes that love is a basic need for every human, and his research is directed at proving this theory of his scientifically.

Third, adults must combine understanding love with intelligent forms of discipline.

Discipline is needed at home and at school.

District Judge S. E. Prall last November ruled in Nevada, Iowa, that teachers have the

same right as a parent when it comes to disciplining an unruly youngster.

"I think it is time that we settle down and recognize that we as adults must have discipline, we must discipline ourselves, and these kids must be taught some means of discipline," he said.

The judge pointed out that judges are given authority to maintain order in their courtrooms. "I maintain we are going to have to get back to a little more discipline in order to run our schools properly and give our kids the education they are entitled to."

Fourth, adults must start leading young people to church and showing by example the practice of morality.

Chief Justice Irving Ben Cooper of the New York Court of Special Sessions has made the following remarks concerning delinquents:

"They have seen justification for the attitude: 'Make a fast buck.' They have seen it on all sides. No one has talked about integrity, honor, forthrightness. And so it is in the home where the mother is going to meetings. It is in the home where the mother is overworked. It is in the home where there is never any attendance at church, or the equivalent."

Fifth, adults must challenge young people with opportunities to do constructive work—at home, in school, in community affairs, and at work.

Dr. Ted W. Engstrom, president of Youth for Christ International, at the recent national convention in Washington, D.C., called for a "spiritual revolution."

"The only antidote to our present moral collapse," he said, "is a spiritual counter-attack. * * * I have little hope for the adults to save the world. The great hope lies with the teenagers. * * * The purpose of the entire (Youth for Christ) program is to challenge today's teens with the great spiritual values that have made our Nation great."

Will our young people accept the challenge?

Capital Punishment in the United States

EXTENSION OF REMARKS

OF

HON. ABRAHAM J. MULTER

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Thursday, March 3, 1960

Mr. MULTER. Mr. Speaker, much interest is presently being taken in my bill, H.R. 870, to abolish capital punishment.

In this connection I commend to the attention of our colleagues the following article by Victor Wilson as it appeared in the New York Herald Tribune of February 27, 1960:

CAPITAL PUNISHMENT IN THE UNITED STATES (By Victor Wilson)

WASHINGTON.—When Gov. Edmund G. Brown asks a special session of his California Legislature to abolish the death penalty, he could do no better than to call upon the U.S. Navy if he needs some expert witnesses.

For the Navy, a bit of research reveals, hasn't executed a man for any crime, including desertion in the face of the enemy in wartime, and murder, since 1842. This is a remarkable record, considering that the country has fought five wars since then.

The last Navy men to be executed were Philip Spencer and two coconspirators, who were strung up to the yardarm of the brig *Somers*, after conviction of mutiny. Spencer

was a son of the man who was Secretary of War in 1842.

A Navy spokesman, discussing this incident, explained with a perfectly straight face that the absence of executions since that date might well be attributed to the simple fact that the Navy knew enough to quit when it was ahead. There was a frightful uproar over the Spencer execution, but the captain of the brig *Somers* was held to be within his rights.

No overall figures are available on Army executions since 1842. But the Federal Bureau of Prisons recently released data showing that in the 30-year period, 1930-59, the Army—and Air Force—carried out 159 executions.

That included World War II and the Korean war. But only one death penalty was carried out for desertion. Of the others, 106 were for murder and 52 for rape. The Air Force and Army carried out the death penalty three times each in 1954, 1955, and 1957, and once each in 1958 and 1959.

The Navy spokesman pointed out that its courts-martial use the same military code for crimes as the Army and Air Force. There is no policy against death sentences; indeed, they are frequently voted by Navy general courts.

But, the spokesman said, the practice "just grew up" since 1842 that no Navy man is executed. On a few occasions, however, it took intervention by the Secretary of the Navy, or the President himself, to keep the record intact, with commutation of a death sentence to life imprisonment.

Governor Brown, who is against capital punishment as a matter of conscience, has the politically explosive Caryl Chessman case on his hands. Chessman, recently reprieved for 60 days from the California gas chamber pending legislative review of the State's death penalty statute, had been spared seven times previously since 1948. He was convicted at Los Angeles on two counts of kidnapping involving bodily harm.

On past form, the Governor's plea to the legislature looks forlorn. For in the last 27 years, eight similar appeals to drop the death penalty have been disregarded by the State's legislators, the last rejection occurring just last year.

Only 9 of the Nation's 50 States bar capital punishment—Michigan, Rhode Island, Wisconsin, Maine, Minnesota, North Dakota, Delaware, Hawaii, and Alaska. (There is no death penalty either, in Puerto Rico or the Virgin Islands.)

However, another nine States which once voted to abolish the death sentence, have reinstated it. They are Kansas, Colorado, Washington, Oregon, South Dakota, Arizona, Missouri, Tennessee, and Iowa. (Methods of execution include electrocution, lethal gas, and hanging. In Utah, however, one may choose between hanging or shooting.)

The Bureau of Prisons' data show that in 1959, 49 executions were carried out in 16 States. Florida led the way with 10. Arkansas and California had six each, and Georgia four. All were men, 41 convicted of murder, and 8 for rape. Last year's 49 figure was 1 above the alltime low set in 1958.

In view of Chessman's long, successful battle against death, it is noteworthy that the elapsed time between sentence and execution in 1959 for capital crimes ranged from 65 days in a Nebraska murder case, to 9 years 1 month and 21 days in the case of a Pennsylvania murderer. The Bureau's data remarks that "appeals, new trials, and judicial and executive orders granting stays * * * accounted for the wide range in elapsed periods."

Only one bill concerning capital punishment is now before the Congress. This is by Representative ABRAHAM J. MULTER, a Brooklyn Democrat, introduced in January 1959, which would substitute life imprisonment

for the death penalty in all Federal cases except military crimes and atomic espionage.

Like Governor Brown, Representative MULLER is opposed to capital punishment as a matter of conscience. He says he doubts the death penalty is a deterrent to capital crimes and that man is not infallible in judging guilt. The Department of Justice is opposed to this bill.

A check shows that since 1930, 31 Federal prisoners (excluding military, of course) have been executed—15 for murder; 2 for rape; 1 for armed robbery; 5 for kidnapping, and 8 for espionage. None were executed in 1958 or 1959.

Death of Red Cloud

EXTENSION OF REMARKS

OF

HON. KARL E. MUNDT

OF SOUTH DAKOTA

IN THE SENATE OF THE UNITED STATES

Friday, March 4, 1960

Mr. MUNDT. Mr. President, I ask unanimous consent to have printed in the Appendix of the Record some remarks of my own, and an editorial from the Daily Republic of Mitchell, S. Dak., on Tuesday, March 1, 1960, in connection with the death of Red Cloud, one of our great Sioux Indians.

There being no objection, the remarks and editorial were ordered to be printed in the Record, as follows:

STATEMENT BY SENATOR MUNDT

RED CLOUD—A GREAT INDIAN PASSES ON

There has passed from the South Dakota scene a truly remarkable man. Death has taken James Red Cloud of the Pine Ridge Indian Reservation in South Dakota.

The Daily Republic, of Mitchell, S. Dak., published a story about this well-known Indian leader in the March 1, 1960, edition.

Those of us in public life knew Red Cloud well. He was a spokesman for his people. He devoted his life to their problems and he attempted at all times to seek means of raising the standard of living for the Indians of South Dakota.

Red Cloud was a modest man. He was not self-seeking nor did he attempt to promote his own welfare at the expense of those whom he represented. He was a man from whom an honest answer could be expected. He was honorable, tolerant, religious, and solicitous of others.

I am sure that many South Dakotans will appreciate the fact that the Mitchell Republic printed this story about the life of Red Cloud. Too many of our great Indians pass away without any record being printed of their contributions to the welfare of their people and to their country.

The name of James Red Cloud will always remain on the great tribal honor rolls as a distinguished American Indian. He should serve as a model to his own people as well as to all of us.

[From the Mitchell (S. Dak.) Daily Republic, Mar. 1, 1960]

OGLALA SIOUX CHIEF, CHAMPION OF TRIBAL RIGHTS, WELFARE, DIES

PINE RIDGE.—On February 16, there passed from the American scene a great and romantic figure one of the few remaining links of the time with the old West, James Red Cloud, hereditary chief of the Oglala Sioux and grandson of the famous old warrior leader Red Cloud, died at the age of 83.

Chief James Red Cloud was born at Fort Laramie, Wyo., in 1877, the year another

famous chief Crazy Horse was killed and the year following the Custer battle. He was a boy during the time of the last sad struggles of his heroic people for their freedom and their homeland. He was 13 years old in 1890, when during Christmas week the Wounded Knee Massacre occurred, in which totally unarmed Indian men, woman, and children, even babies, were shot down or sabered to death by American cavalry troops, and his distinguished grandfather finally prevailed upon the Sioux to surrender and make a lasting peace.

After a childhood spent near Oglala on White Clay Creek among what were called the "Sore Back" clan (today no one seems to know the meaning of this description) his family moved to Pine Ridge in 1887, where the Government had built a house for the old chief out on the edge of the prairie just west of the present Indian boarding school. It was at this school that James Red Cloud made his first contact with the white man's learning. Later he attended Holy Rosary Mission which his grandfather had repeatedly invited the Jesuit Black Robes to found.

In 1911, he was a member of Buffalo Bill's 101 show and traveled all over the country, though never to Europe. It was while he was helping to load some show stock on a train that the accident occurred in which he fell and a switch engine ran over his left leg, making amputation necessary.

Like his grandfather, Chief James Red Cloud believed strongly in education and preached its value nearly all his life. Shortly before he died, at a feast to honor a grandson who had just graduated from high school at Holy Rosary Mission, the old chief, in full ceremonial costume and wearing his great headdress of eagle feathers, spoke long and eloquently from his wheelchair in behalf of education. He said that the Sioux people had lost to the white man; but that, even so, there was no need the Sioux should forever remain a defeated people; that through education they would rise again and learn to live in the white man's world and become honorable—and honored—citizens of America.

He was a great fighter all his life for the rights and welfare of his afflicted people and made 11 trips to Washington during his life to speak for them. He was also a great Christian, with a simple, living faith. Whenever he came to Pine Ridge, he never failed to visit Sacred Heart Church, where he would pray aloud in Indian and chant the praises of the Lord, whom his grandfather had first helped his people to know and honor.

In his old age, despite his many physical afflictions, the chief kept something of the striking handsomeness and fine bearing of his younger days. He was a tall, dignified man, and in his headdress presented an imposing figure. He kept his hair in two braids all his life.

He was buried at Holy Rosary Mission, the Rev. Lawrence Edwards, S.J., officiating at the grave. His grandfather also lies at rest in the same cemetery.

He is survived by two sons: Edgar, of Pine Ridge, and Louis of Pueblo, Colo., and one daughter, Agnes, of Pine Ridge.

Federal Water Pollution Control Act

EXTENSION OF REMARKS

OF

HON. NEAL SMITH

OF IOWA

IN THE HOUSE OF REPRESENTATIVES

Wednesday, March 2, 1960

Mr. SMITH of Iowa. Mr. Speaker, on February 23 the President vetoed H.R.

3610, the bill to amend the Water Pollution Control Act to increase grants for construction of sewage treatment facilities. On February 25 the House failed by a few votes to override the President's veto with 234 Democrats and 15 Republicans voting to override and 131 Republicans and 26 Democrats voting to sustain the veto. In vetoing H.R. 3610, the President disregarded the advice of his own Water Pollution Control Advisory Board which was established by law to advise him on such matters. The record shows that this legislation has greatly expanded local cooperation in this important health field with a relatively small proportion of the expense carried by the Federal Government. Most of the help is in planning and encouraging local cooperation and participation. As the President said, local communities should not need encouragement, but the plain fact is that they do need encouragement and a vital health problem is involved.

Mr. Speaker, the Pella Chronicle, published in Pella, Iowa, recently published a worthy editorial in this matter and under unanimous consent I insert this thought-provoking editorial in the CONGRESSIONAL RECORD, as follows:

BUDGET SAVINGS VERSUS PUBLIC HEALTH

U.S. Health, Education, and Welfare Department officials are showing a good deal of concern over serious water pollution in many sections of this country. They have warned if the situation prevails it could jeopardize the further growth and development of many areas of the country and even the health of millions of people.

Meanwhile, President Eisenhower is so engrossed in looking for budget savings he slashed next year's water pollution budget nearly in half. This was done in the face of reputable reports from a leading sanitary engineering center in Ohio which revealed that more than 3,000 communities still discharge raw waste into the Nation's waterways. A number of cities are pumping microscopic, unseen worms in their water. Some drinking water has been found to contain radioactive waste, cancer-causing chemicals, raw sewage, such diseases as typhoid fever, paralytic polio, yellow jaundice, and dysentery.

A \$90 million antipollution bill is on the President's desk, but he wants the Health, Education, and Welfare Department to prepare a veto message telling why the money is not needed. It is reported that all leading presidential contenders except Vice President Nixon have endorsed the pollution control program.

We believe in wise saving and in wise spending. But the President's action in this matter is disturbing. The Nation's health is more important than budget balancing.

Pollution Setback Temporary

EXTENSION OF REMARKS

OF

HON. HARRISON A. WILLIAMS, JR.

OF NEW JERSEY

IN THE SENATE OF THE UNITED STATES

Friday, March 4, 1960

Mr. WILLIAMS of New Jersey. Mr. President, a recent editorial in the Elizabeth (N.J.) Journal discussed the problems that would face the Nation if Congress failed to override the Presidential

veto of H.R. 3610, a bill which would have increased Federal grants for construction of facilities to deal with our national water pollution problem. The veto has not been overridden, and the problems persist.

Although the editorial was written before the vote on the veto it expresses a rapidly growing concern about the basic question of water pollution.

Mr. President, I ask unanimous consent that the editorial be printed in the Appendix of the RECORD.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

[From the Elizabeth (N.J.) Journal,
Mar. 1, 1960]

POLLUTION SETBACK TEMPORARY

If Congress fails to override the Presidential veto of H.R. 3610, the Federal water antipollution bill, such action can be viewed as only a temporary setback. Proponents of Federal financial aid to municipalities, with a maximum of 30 percent of construction costs, are disappointed, not discouraged. The battle to clean up our rivers which too often are running cesspools will go on despite the opposition of the U.S. Chamber of Commerce.

President Eisenhower's objection was predicated on assumption that pollution control is a job for State and local governments. Yet, when Federal aid first was made available, municipal sewerage construction almost doubled. A Federal grant often has decided whether a sewerage system would be built or improved when a municipality was hard pressed by demands for schools, roads, or other local improvement.

Industries—and in New Jersey it is no exception—often have been embarrassed when attention has been called to the noxious wastes they pass into our streams. In their opposition they do not realize that clean water often is as essential to manufacturing processes as it is to health and recreation.

The \$50 million a year under the original law to help municipalities construct sewage-treatment plants is unaffected by the Presidential veto. But that sum—which H.R. 3610 almost would have doubled—is far from adequate to accelerate the present rate of progress. If it makes possible keeping even with the gain in pollution the Nation will be fortunate.

Under the existing Federal law 160 sewage-treatment projects were built by Ohio River Valley towns at a cost of \$111 million. They received a total of \$20 million in Federal grants. The Ohio River long has been held up to national scorn as one of the most polluted streams in the land. Apparently, with a modicum of Federal aid, Ohio Valley towns are willing to do something about it.

The U.S. Chamber of Commerce repeatedly has singled out the antipollution control bill for attack along the lines used by the President in attempting to justify his veto. There are countless other channels into which Federal funds are being poured with far less to recommend them than clean waters.

The people of the United States, who are the taxpayers and foot the bill as well as reap the benefits, repeatedly have expressed themselves on the subject of pollution control. Clean streams are important to health, recreation, and American morale; in the past they have been and should continue to be an important factor in our American way of life.

Lithuanian Independence Day

SPEECH OF

HON. WILLIAM B. WIDNALL

OF NEW JERSEY

IN THE HOUSE OF REPRESENTATIVES

Tuesday, February 16, 1960

Mr. WIDNALL. Mr. Speaker, I welcome this opportunity to join with our colleague, the gentleman from Illinois [Mr. MURPHY], in paying tribute to the courageous nation of Lithuania on the occasion of the 42d anniversary of its proclamation of independence.

That independence is a state of mind, as well as a condition under which all peoples of the world have a right to live, is demonstrated by the indomitable people of Lithuania. For though ruthlessly overrun and totally deprived by force of communism of all human rights and freedom, there remains in the hearts of Lithuanians a spirit of resistance to such Godlessness that no amount of oppression can extinguish. The Communists have, since June 15, 1940, enslaved the Lithuanian people. However, they have not been able to hold in bondage the minds of their captives who live for the day they will be liberated.

The American people, Mr. Speaker, inherently are dedicated to the cause of freedom for everyone everywhere. It thus becomes our solemn duty as their chosen representatives in Congress to exert every wise effort toward achieving universal freedom.

On July 17, 1959, the President signed into law Senate Joint Resolution 111, providing for the designation of the third week of July as Captive Nations Week. On that date the President issued a proclamation so designating the week beginning July 19, 1959. As we join in this observance of Lithuanian independence, the message of President Eisenhower in his proclamation takes on special significance:

It is appropriate and proper to manifest to the peoples of the captive nations the support of the Government and the people of the United States of America for their just aspirations for freedom and national independence.

And to the American people:

I urge them to study the plight of the Soviet-dominated nations and to recommit themselves to the support of the just aspirations of those captive nations.

One well might become so used to the familiar language of proclamations that he could become insensitive to their import. But consider for a moment the depth of meaning to us of these words that appear over the signature of the President:

Done at the city of Washington, this 17th day of July, in the year of our Lord 1959, and of the independence of the United States of America the 184th.

Mr. Speaker, in saluting our friends in Lithuania we in Congress must rededicate ourselves to achieving the goal of individual liberty for all mankind.

We must keep this goal ever in our sights and never relax our efforts to secure and maintain this objective.

Lamar, Colo.—All America City

EXTENSION OF REMARKS OF

HON. JOHN A. CARROLL

OF COLORADO

IN THE SENATE OF THE UNITED STATES

Friday, March 4, 1960

Mr. CARROLL. Mr. President, the courageous Great Plains city of Lamar has become the second Colorado community in 2 years to receive designation as an All America City by the National Municipal League and Look magazine. Last year, similar honers went to Leadville, 2 miles above sea level in the Rockies. The people of Colorado are pleased, but not surprised.

I ask unanimous consent that an editorial on this subject from the Denver Post for February 25 be printed in the Appendix of the RECORD, together with a copy of a letter of congratulations which I wrote to Mayor C. O. Bowman, of Lamar.

There being no objection, the editorial and letter were ordered to be printed in the RECORD, as follows:

LAMAR'S EXAMPLE

Twelve years ago, Lamar, Colo., was an uneasy town, uncertain of its future. It was drought time; not as bad as the Dust Bowl days, but it brought back fears and memories.

Today, Lamar is thriving and confident.

It has a new community building, new schools, new sewage disposal facilities, a thriving airport, a big recreation program, a bigger hospital, an adequate water supply and many more new public facilities.

How did this happen?

First, through strong leadership by the chamber of commerce, the city council, the civil planning commission, and by the press.

Second, and perhaps more important, by the involvement of all the people, so that every Lamar citizen took a proprietary interest in what was going on, and so that the idea of "I got mine—let George do it" could not sidetrack the city's bootstrap project.

In a nutshell, that's why this week Lamar received from the National Municipal League and Look magazine the designation of "All America City." The honor is well deserved.

Lamar's community effort can serve as an excellent object lesson to many other Great Plains cities—some of them considerably bigger.

There's nothing so satisfying as achievement—especially community achievement—but it's like ice cream: You've got to taste it to know how good it is.

Trouble is, there are lots of skeptics who don't believe it's worth while to go to the trouble of picking up the spoon.

FEBRUARY 17, 1960.

Hon. C. O. BOWMAN,
Lamar, Colo.

DEAR MAYOR BOWMAN: Mrs. Carroll and I regret that the increasing pace of Senate business of historic significance during this session prevents us from attending the presentation ceremonies on February 22, when

Lamar will join the proud ranks of All America Cities. I wish I could be with you all that evening, but I trust that you will understand.

Let me say, however, that while the award is gratifying to all Coloradans, it comes as no surprise to the people of our State. Lamar's progress has been the talk of Colorado for years.

A plainsman named Lincoln once said that government should do for the people only what they could not do as well for themselves. Lamar citizens have shown the kind of healthy community independence that proves the wisdom of those words.

They saw a problem, studied it carefully, and went to work. They recognized that it would mean sacrifice of hard-earned money and perspiration and time, but they were willing to make the sacrifice. And they did it in a period of drought, uncertain farm economies, and a general flight of population toward metropolitan centers.

This marks the second year in a row that a Colorado city has been singled out for All America honors. As you may recall, Leadville was one of the 1959 winners. Both on the plains and in the mountains, Coloradans are showing the rest of the Nation how to turn a tough situation into an asset. This is appropriate, for ours has not been an easy kind of country to settle and make prosperous. It has required a special breed of people.

It is equally stimulating to note that you are not content to rest on your laurels—that another 10-year program is being developed under the same strong leadership mentioned by Look magazine—yourself, Fred Betz, Sr., Mrs. J. B. Spencer, Bob Scarffe, the members of the civic planning commission, and others.

In an age of self-doubt, when some thoughtful people express the fear that Americans have become physically and morally flabby—interested only in their own personal luxury and leisure—the Lamar story makes big news everywhere. It demonstrates that the individual's feeling of personal responsibility for the well-being of his neighbors, his friends, his hometown, is still a vital part of life in Colorado and our Nation. May it always be thus.

My warmest congratulations to you all.
Sincerely yours,

JOHN A. CARROLL.

The Problem of Equitable Treatment of Competitors

EXTENSION OF REMARKS

OF

HON. KENNETH B. KEATING

OF NEW YORK

IN THE SENATE OF THE UNITED STATES

Friday, March 4, 1960

Mr. KEATING. Mr. President, the antitrust law section of the New York State Bar Association recently heard a number of important addresses on various phases of our antimonopoly statutes and their application. Commissioner Edward T. Tait, of the Federal Trade Commission, presented an interesting discussion of the problem of equal treatment of competitors whose practices may come under the scrutiny of the Commission.

This is a subject of importance to both industry and the bar, yet it is a field which is not so well known as many other activities of the FTC. Because of this situation, I ask unanimous consent

that Mr. Tait's address on this subject be printed in the Appendix of the RECORD.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

EQUITABLE TREATMENT OF COMPETITORS

(By Edward T. Tait, Federal Trade Commissioner)

"Why pick on me?" is a common query heard at the Federal Trade Commission. As you listen you try to place this person and his remark in the proper setting. A businessman has just been caught violating the law. Sometimes you feel he must have known that he was doing so. Is he a seller or buyer caught in the intricate web of the Robinson-Patman Act or is he an advertiser squeezing more sales from an alluring but cleverly deceptive innuendo? Putting aside sympathy, or lack of it, you remember a pigeonholing phrase of our profession, "competition not competitors."

Respondents frequently say that their competitors are engaged in the same alleged illegal practices. They further claim that if the Commission issues a cease and desist order against themselves alone, they will be at a serious competitive disadvantage. Recently the Commission issued simultaneous complaints against one large company and several small ones. The large company was heard to complain at the very outset, "Why were we the only large company to be sued?"

I know you and your clients are very much interested in the competitive effects of the Commission's law enforcement. I shall not discuss the trade practice conference procedure. It is well understood as an effort to gain industry-wide voluntary compliance with the law through what one might call the educational process. I shall refer only briefly to the stipulation and guides procedures.

My remarks this afternoon are directed primarily to those situations wherein the Commission determines that it is necessary to issue formal complaints. This brings us to the heart of my topic—the equitable treatment of competitors in formal proceedings. Francis Bacon once said that the best armor is to keep out of gunshot. I could heed that advice by presenting a paper condemning the sale of lottery devices. Such a paper would be safe and probably of no interest to you. Bear in mind, however, that I am discussing the equitable treatment problem in general terms and advancing a general theme for purposes of information and illustration. I am not attempting to promulgate rules of procedure.

As a practical matter the Commission has neither sufficient funds nor manpower to investigate all competitors alleged engaged in identical malpractices, issue complaints, try the various cases separately and issue orders to cease and desist simultaneously. This raises the first question: Does the Commission have discretion in the selection and prosecution of cases? Or, can the Commission issue an order to cease and desist against only a few of the competing firms who allegedly are committing the same illegal offenses?

In the *Niehoff* (*C. E. Niehoff & Co. v. F.T.C.* (241 F. 2d 37 [1957])) and the *Moog* (*F.T.C. v. Moog Industries, Inc.* (238 F. 2d 43 [1956])) cases, the courts of appeal in the seventh and eighth circuits were urged to stay the enforcement of the Commission's orders to cease and desist until similar complaints and orders were issued against their competitors. In *Niehoff*, the seventh circuit did stay the enforcement of the order to cease and desist "in the light of equitable principles" and depending upon "the future course of the Commission's proceedings against *Niehoff's* competitors." In *Moog*, the eighth circuit affirmed the Commission's order without granting a stay.

These cases thus directly presented the issue. On certiorari, the Supreme Court clearly answered this question in the affirmative as follows (*Moog Industries, Inc. v. F.T.C.* (355 U.S. 411 [1958])):

"Thus, the decision as to whether or not an order against one firm to cease and desist from engaging in illegal price discrimination should go into effect before others are similarly prohibited depends on a variety of factors peculiarly within the expert understanding of the Commission. Only the Commission, for example, is competent to make an initial determination as to whether and to what extent there is a relevant industry within which the particular respondent competes and whether or not the nature of that competition is such as to indicate identical treatment of the entire industry by an enforcement agency. Moreover, although an allegedly illegal practice may appear to be operative throughout an industry, whether such appearances reflect fact, and whether all firms in the industry should be dealt with in a single proceeding or should receive individualized treatment are questions that call for discretionary determination by the administrative agency. It is clearly within the special competence of the Commission to appraise the adverse effect on competition that might result from postponing a particular order prohibiting continued violations of the law. Furthermore, the Commission alone is empowered to develop that enforcement policy best calculated to achieve the ends contemplated by Congress and to allocate its available funds and personnel in such a way as to execute its policy efficiently and economically."

It is therefore clearly established that the Commission can issue an order against one of several competitors, all of whom allegedly are violating the law. It logically follows that the selection of cases is also, within the discretion of the Commission.

In the exercise of this discretion is the Commission alert to reality, i.e., to the competitive disadvantage which may at times exist should an order issue against but one or few of many offenders? I assure you we are keenly aware of it. Indeed, you constantly remind us. Further, on our part, and on the part of some respondents who exhibit initiative, there is and has been a continued effort to provide workable solutions within the statutory framework. This is demonstrated by some specific cases to which I shall refer later.

In our processing of cases one factor—public interest—is at all times paramount. Although it is highly desirable that competitors be treated alike, the lodestar is the protection of the public interest. Where one dovetails with the other we can use shortened, flexible procedures to avoid competitive advantage or disadvantage.

Several procedures have been used and used successfully. And I should add that the cases include both antimonopoly and antideceptive practices. Therefore, I am not confronted with a situation similar to that faced by Rufus Choate who, when asked by the court to cite a precedent, replied, "I will look, Your Honor, for a precedent, although it would be a pity that the court should lose the honor of being the first to establish so just a rule."

Where all respondents desire to terminate the challenged practice at the same time, they can accept orders to cease and desist simultaneously. The orders may or may not vary in some detail, depending upon the particular facts. The Commission issued complaints against the Bulova Watch Co., Inc. (D. 5830), the Gruen Watch Co. (D. 5836), and the Elgin National Watch Co. (D. 5837), charging each of them with granting advertising allowances to customers on disproportional terms in violation of section 2(d) of the amended Clayton Act. It is a probability of business life that if sellers are competing for the business of preferred buyers by granting them dispro-

portional advertising allowances and that if one of the sellers is required to discontinue the practice first, then he will lose business.

Counsel for one of the respondents in the watch cases readily agreed that a cease and desist order could be issued against his client provided that such an order was simultaneously issued against the other two respondents. Subsequently, counsel for the two remaining respondents made similar proposals. The result was that orders were issued at the same time against the three competitors.

In effect, the Commission determined in the above cases that the public interest would be well protected by such agreements. Most certainly there was no delay in obtaining ultimate compliance with the law. In fact, compliance in all three cases was hastened. In addition, competitive advantage, or disadvantage, was eliminated. And it is readily apparent that the taxpayers' and the respondents' money was conserved.

In another series of cases the Commission issued complaints against Sperry Rand Corp. (D. 6701), Schick, Inc. (D. 6892), North American Philips Co., Inc. (D. 6900), and Ronson Corp. (D. 7066). The several complaints contained various charges of price discrimination in violation of section 2(a) of the amended Clayton Act, the use of disproportional advertising allowances in violation of section 2(d), the furnishing of services and facilities on disproportional terms in violation of section 2(e), and illegal resale price maintenance in violation of section 5 of the Federal Trade Commission Act.

The various respondents separately filed consent agreements providing that the effective date of the orders would be stayed until the Commission issued orders against the other respondents. Respondents' counsel, in submitting their separate proposals, insisted that the orders be issued simultaneously. The consent agreements were accepted.

These razor cases again illustrate that compliance with the law and equality of treatment for competitors can go hand in hand. It is noteworthy that the procedure was used successfully notwithstanding the multiplicity of charges in the various complaints. It was not necessary to litigate questions of law. The respondents, apparently, were primarily interested in obtaining equality of treatment both in substance and in the timing of the orders.

Another procedure has been used where all respondents wish to terminate the practice if it is found to be illegal. Under these circumstances, where there is a bona fide desire to litigate the issues, respondents may agree with the Commission that one case will be selected by the Commission for trial, all respondents to abide by the final determination in the selected test case. Respondents would further agree that should a cease and desist order issue in the test case, then such an order is to issue against each of them without further proceedings.

In the reprocessed oil cases it was necessary to litigate the illegality of the challenged practice. The Commission had issued a complaint against the Mohawk Refining Corp. (D. 6588), charging it with violation of the Federal Trade Commission Act through failure to disclose the prior use of certain oil products. While hearings were in progress, five respondents similarly charged in other complaints (Dockets 6581, 6682, 6717, 6709, and 6579) filed separate agreements that cease and desist orders could be issued against them provided that the orders be stayed until final decision in the Mohawk case. The Commission accepted these five agreements.

In the reprocessed oil cases, all of the sellers did not compete with each other but all of them competed with another. Counsel for five respondents agreed to abide by the decision in a case other than the case

against their clients. The Commission had reason to believe that the failure to label the oil as used oil was illegal, but there was no direct court precedent in Commission cases. Since litigation to determine the question of legality was apparently necessary, it was obvious that it was more efficient for the Commission to determine this point in the trial of one case. Compliance with the law by all respondents was thus obtained and the procedure saved the expense of extended litigation, including several appeals to the courts. At the same time, no respondent was placed at a competitive disadvantage.

A somewhat different procedure was used in two other groups of anticompetitive practice cases. The first proceeding was in May 1957 and involved six manufacturers of wool interliners (dockets 6796, 6797, 6798, 6799, 6800, and 6801); the second was in June 1958 and involved eight manufacturers of woolen waste (dockets 7227, 7228, 7229, 7230, 7231, 7232, 7233, and 7234).

Both groups were handled in the same way. After it was ascertained that the several proposed respondents were willing to consider agreements for consent orders, drafts of complaints were prepared for each case by the Bureau of Litigation and submitted to the proposed respondents informally, with explanation that this was the form of complaint which would be presented to the Commission with recommendation for issuance. At the same time an agreement containing a consent order was also submitted to each proposed respondent for signature. The agreement contained a provision that they waived service of the complaint. This agreement was signed, the date and docket number being left blank so that they could be filled in after issuance of complaint. Accompanying the agreement was a separate waiver for their signatures, whereby they waived service of the hearing examiner's initial decision and the 30-day period within which the initial decision may become the decision of the Commission under its rules. These negotiations were carried on with each proposed respondent with the understanding that the same procedure would be used as to all other proposed respondents involved, and that such action as would be taken would be simultaneous.

After the agreements and the waivers were signed by proposed respondents, the complaint drafts were then submitted to the Commission. Upon issuance of the complaints by the Commission (minus the usual notice form), the consent order agreements were transmitted to the hearing examiner. Upon issuance of his initial decisions based on the consent agreements, the initial decisions and the waivers mentioned above were filed with the Commission. The initial decisions as to all respondents were forthwith adopted as the decisions of the Commission and the attending cease and desist orders were issued simultaneously.

The novelty of the procedure used in the interliner and woolen waste cases was that the discussion and agreement among counsel occurred prior to the issuance of the complaints. Usually, of course, the discussions among counsel occur after the issuance of complaints. These cases were also unusual in that the two groups comprise practically the entire industries. Each group was highly competitive and anxious to avoid any competitive disadvantages.

With variations to accord with the particular circumstances, procedures substantially similar to those used in the reprocessed oil cases were quite recently used in the so-called cigarette vending machine cases which involved alleged violations of section 2(d) of the amended Clayton Act: Brown & Williamson Tobacco Corp. (D. 6908), R. J. Reynolds Tobacco Co. (D. 6848), Philip Morris, Inc. (D. 6750), American Tobacco Co. (D. 6830), and Liggett & Myers Tobacco Co., Inc. (D. 6842). The foregoing cases demon-

strate what can be accomplished to dovetail the public interest and competitive equality.

A factor common to each group of cases was that no respondent claimed that his particular situation deserved treatment different from his competitors. All wanted only to be treated alike. Insofar as it is possible we, too, desire to treat all who are alike, alike. In each of the cases, compliance with the law was obtained more quickly, efficiently, and economically than would otherwise be possible.

Generally speaking, what are some of the more basic considerations as to the availability of conditional consent agreements to alleviate competitive disadvantage? What atmosphere must prevail if their use is to be contemplated? Are subjective as well as objective factors involved?

The goal itself suggests one of the basic questions, namely, must a competitive situation exist among the various alleged offenders? Or, leaving aside the question of competitive disadvantage for a moment, assume the Commission files complaints against three fur retailers, none of whom competes with the others. If all three fur retailers want to litigate common, bona fide questions of law, is there any reason for the Commission to resist use of the test case procedure? Obviously, more reasons exist for the use of conditional consent agreements where competitive disadvantage is a factor. But competitive disadvantage should not be our only consideration. In a larger sense, as administrators we are striving in every instance to achieve greater degrees of flexibility in law enforcement through approaches geared to reasonableness, to practicality, and to the dictates of experience.¹

What is the effect of the existence of an enforceable order against a competitor of the respondent who seeks equitable treatment? If a respondent's competitor is already subject to such an order, respondent may have no valid claim to equitable relief. All the more, perhaps, is an enforceable order against him justified. Some equity lies with his restricted competitor. Recently the Commission rejected a respondent's conditional consent agreement for this and other reasons. But this reason, too, should not be the only consideration. For example, assume that the Commission issues similar complaints against 12 competitors. Further assume that one immediately accepts a consent order while the other 11 assert an intention to litigate a common, bona fide question of law. It might well be that the 11 should be permitted to use the test case procedure, as in the Reprocessed Oil cases. Depending upon the impact of the particular practice on the public, the compliance of the one restricted competitor might be stayed to await the outcome of the test case.

An atmosphere conducive to use of these procedures is present only if there is a full measure of cooperation, good faith, and understanding among the attorneys on the Commission's staff and counsel for the various respondents. I emphasize the good faith element because, in its absence, any attempt to use equitable procedures may but serve to delay final action. In short, equitable procedures are not available to sell the public interest down the river.

Subjectively, there must sometimes be the willingness by attorneys for the various competing respondents to risk the outcome of a case tried by another lawyer representing a respondent who is not their client. This not only involves the relative abilities of lawyers to try cases but also, perhaps, other more mundane considerations. The clients, no doubt, will also have definite views on this strategy.

Objectively, there is the question whether the facts and the law of various cases are suitable and appropriate for group handling. This decision is within the discretion of the

¹ See Groveton Paper Co., et al., D. 6592-6600.

Commission. As stated by the Supreme Court in the *Moog* case, supra, among a variety of factors for consideration is the extent of the relevant industry. Especially pertinent, of course, is the area of competitive impact. What is the nature of the offense? What is the nature of the competition? Another factor, and a very practical one, is whether the resources of the Commission will permit the investigation of a large number of concerns within a reasonable time. The Commission is not authorized under existing law to issue complaints unless there is reason to believe that the particular respondent has violated a law administered by the Commission.

Counsel for respondents can be of substantial assistance in developing the facts and the background data for the particular industry. Counsel may be able to obtain data from their clients as to the extent of the use of an illegal practice in the industry and the identity of the offenders. If the Commission receives this data early in the investigation, a tentative decision can then be made as to whether the practice might be appropriate for group handling. No respondent should complain of being singled out and not accorded equitable treatment unless he has exerted himself to the best of his ability to assist the Commission in bringing about the cessation of the same practices on the part of his competitors.

There are many situations where this group procedure may not be appropriate. For example, sellers of medicinal preparations containing different ingredients may recommend their products for the same general purpose. The alleged false advertisements may vary in considerable detail. Obviously, any orders to cease and desist might well vary with the facts in each case. Again, for example, if a number of sellers were charged with price discrimination in violation of section 2(a) of the amended Clayton Act, and if the defense to such charge were cost justification or the meeting of competition in good faith, then the several matters might have to be considered separately. These defenses, too, would vary with the facts in each case.

These same basic considerations with respect to the handling of formal complaint proceedings are applicable as well to those matters which initially are determined by the Commission to be the proper subject of stipulations to cease and desist under section 1.51 of the Commission's Rules of Practice. Assuming that the various requisites are all present, competing members in an industry can have assurance of equality of treatment by entering into separate voluntary stipulations with the Commission to cease and desist their practices at one and the same time.

In the context of today's discussion a brief reference to the Commission's guides program is equally fitting. Thus far the Commission has issued guides in carefully selected fields dealing, e.g., with tire and cigarette advertising, with fictitious pricing practices, and with bait advertising in general. These guides constitute another step taken by the Commission to place competitors upon a more even basis at the very outset insofar as knowledge of malpractices is concerned. For those in business and industry who sincerely wish to travel the straight and narrow, the guides serve as pathways. General voluntary compliance with the guides will tend to eliminate competitive disadvantages resulting at times from case-by-case enforcement of the law. Along with the trade practice rules, the guides therefore are another of the first lines of approach to the problem of equal impact of law enforcement upon competing members of an industry.

Litigation before both the courts and the administrative agencies is steadily increasing. We must be ever alert to improve legal procedures. At this time we are considering possible revision of the Commission's rules

to clarify the complaint and consent order procedure so it will be known to all. If adopted, one press release would cover the complaint and the order.

We have also referred to a staff group the problem of recommending new procedures for enforcing the Robinson-Patman Act. It is desirable that the Commission find better and more equitable enforcement procedures in this area without lessening the vigorous enforcement of the act. Some of the ideas considered to date are ingenious and even revolutionary; for example, can the Commission make greater use of section 6 of the Federal Trade Commission Act to detect violations of the law? It is too early, however, to predict what the Commission will adopt.

In preparing for our meeting today I failed to find any prior extensive discussion of what I call equitable treatment of competitors. One who does not hold public office could, perhaps, rephrase some of my questions as answers. Personally, in the light of the relevant factors mentioned, I prefer to handle these problems on a case-by-case or an industry-by-industry basis. Through time and experience we may be able to adopt more definite criteria.

Some legal procedures can be misapplied and misused to the detriment of public or private rights or both. The wise law enforcement official, I believe, is one who has the courage to be prudently flexible and the wisdom to realize that precedent is the guidepost of the law.

Today I have concentrated upon procedures at the Commission which perhaps are not sufficiently well known to the bar. There will be, of course, differences of opinion as to whether or not these procedures should be used in particular situations. However, such procedures in appropriate cases can be quite effective in giving flexibility and reasonableness to law enforcement.

Rochester Provides an Example for the World To Follow

EXTENSION OF REMARKS

OF

HON. KENNETH B. KEATING

OF NEW YORK

IN THE SENATE OF THE UNITED STATES

Friday, March 4, 1960

Mr. KEATING. Mr. President, my home city of Rochester, N.Y., has long been proud of the manner in which foreign-born newcomers have been welcomed there and have become parts of the community. Leaders in all fields of endeavor in the city and county have been drawn from almost every conceivable nation in the world. We are proud of our new citizens and of their important contributions to the culture, the progress, and the vitality of the Rochester community.

In a recent editorial published in the *Rochester Democrat & Chronicle*, the heartwarming manner in which refugees who recently have moved to the Rochester area have joined the community is set forth. The Rochester Association for the United Nations and other interested civic groups have played a vital role in this work.

The editorial also points out that Rochester's example might well be followed by the Arab Nations, which have persistently failed to live up to their obligations to the refugees of the Middle East. I hope the suggestions contained in the editorial and in the R.A.U.N. report will

be headed in the not too distant future.

Mr. President, I ask unanimous consent that the editorial be printed in the Appendix of the RECORD.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

[From the *Rochester Democrat & Chronicle*, Feb. 18, 1960]

REFUGEES REPORT

A heartwarming report on how 3,500 refugees in Rochester are faring is an object lesson that should be read with profit by Arab politicians in the Middle East.

Most of the refugees moving here since World War II, a Rochester Association for United Nations survey reveals, have made friends, become self-supporting and are a part of the community. Nearly all have become American citizens; many more will do so.

Since the Jewish-Arab war of 1948, Arab refugees now totaling more than a million have lived on U.N. resources in camps in or near Palestine. Repeatedly it has been suggested that these people be integrated in the Arab Nations. Substantial offers of help in doing this have been made. Arab leaders have persistently refused to do so. The R.A.U.N. report suggests that if our own community and scores of others in the United States can so warmly accept alien refugees from abroad, surely the politicians should permit the Arab Nations to absorb their own people.

Latin Nations Study Meeting

EXTENSION OF REMARKS

OF

HON. GEORGE A. SMATHERS

OF FLORIDA

IN THE SENATE OF THE UNITED STATES

Friday, March 4, 1960

Mr. SMATHERS. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an article published by the Associated Press entitled "Latin Nations Study Meeting."

There being no objection, the article was ordered to be printed in the RECORD, as follows:

LATIN NATIONS STUDY MEETING

A conference of the 10 South American nations on arms reduction was reported under active consideration today.

Uruguay, a nation which already is practically demilitarized, has been suggested as the site for the conference, and June or July have been proposed as dates.

President Eisenhower endorsed the idea of arms reduction yesterday. Speaking in Santiago, Chile, he pledged U.S. cooperation in any such meeting.

Chile's President Jorge Alessandri has been an outspoken advocate of arms reduction, saying such expenditures could better be spent on economic development and social progress.

United States officials here stressed that the initiative for such a conference has to come from South America, but that this Government will be glad to help out in any way it can. Latin American diplomats said the conference has been under discussion for some weeks and now appears to be taking form.

A conference of South American nations only was proposed because of unsettled conditions in the Caribbean area, notably Cuba and the Dominican Republic. But some diplomats said Central American countries, notably Mexico and Panama, might feel slighted if they were omitted and that consideration could be given to including them if they desired.

Diplomats here said the interest in an arms conference appeared to have been stimulated by President Eisenhower's interviews with the chief executives of Brazil, Argentina and Chile—all of whom are reported favorable to the plan. It has also had the endorsement of Peruvian and Colombian officials.

Inflation and International Gold Payments

EXTENSION OF REMARKS

OF

HON. HENRY DWORSHAK

OF IDAHO

IN THE SENATE OF THE UNITED STATES

Friday, March 4, 1960

Mr. DWORSHAK. Mr. President, there is growing concern in this country over our unfavorable balance of payments. In the January issue of the Mining Congress Journal there appeared an editorial written by Robert W. Van Evera, editor, which had some pertinent comments on this subject.

I ask unanimous consent to have this editorial published in the Appendix of the RECORD.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

INFLATION AND INTERNATIONAL GOLD PAYMENTS

(By Robert W. Van Evera, editor)

Increasing attention in recent months has been given by the business press to the problem of the balance of payments. R. Buford Brandis, chief economist of the American Cotton Manufacturers Institute, at the First National Conference of the Trade Relations Council last October, described the trend in the U.S. international payments position as "clearly an economic development of the first importance," and in a recent address, Ray L. Reiersen, vice president and chief economist of Bankers Trust Co., New York, said that "though no crisis is at hand, the balance of payments problem is indeed too serious to be ignored any longer."

This is a many-sided problem, and it is particularly related to the serious matter of inflation which has puzzled economic planners off and on throughout history—and more notably since 1934 when exchange for gold, the universal international monetary standard, was denied to our citizens as backing for U.S. paper currency. It is, of course, still unlawful, with minor exceptions, for Americans to own gold, and those few who can produce it at present-day high costs are required to turn it over to the U.S. Government at the same exchange rate, \$35 per ounce, that was set back in 1934.

According to Brandis and others participating in the recent Trade Relations Council Conference—including Franz Pick, an international monetary authority who spoke to the mining industry at the 1957 AMC convention in Salt Lake City—the U.S. gold reserve now has a balance of \$19.4 billion, \$5.2 billion less than 10 years ago. About \$12 billion of this is mortgaged to foreign governments holding convertible dollar assets. In addition \$6 billion of private foreign short-term investments exist and can be exchanged for gold in our reserves after transferring them to one of the foreign central banks. That totals about \$18 billion in obligations, leaving us a cushion of about \$1.4 billion—internationally.

Our monetary laws call for the Treasury to maintain gold backing for our currency at

25 percent of the outstanding banknote circulation—estimated by Pick to be an additional \$8 billion required in reserve. Thus our obligations exceed our total reserves by some \$6 to \$7 billion.

It is fortunate that the matter isn't so direct or simple as to leave only the recourse of declaring national bankruptcy, but nevertheless corrective action is imperative.

Reiersen, in the same address quoted above, said, "whereas the net balance of payments deficit averaged around \$2 billion a year in the early and middle 1950's and almost disappeared in 1957, it increased to almost \$3.5 billion in 1958 and is likely to be in the \$4 billion range in the current year (1959); in fact it may be above \$5 billion if our contribution to the International Monetary Fund is included." This deficit is, in turn, made up of several factors, among which are our total imports from foreign countries, foreign aid, capital investment abroad, and U.S. military and defense spending abroad—to the extent that they overbalance our exports. In final summation, we are spending, giving away, or investing far more money in foreign countries than we are selling or otherwise earning in those countries. Such a trend cannot be allowed to continue much longer.

So it is more than a question of gold economics—though the importance of pure monetary policy is paramount. Also involved are such critical considerations as our domestic wage-price spiral, which is still going on and is now pricing American goods out of international markets; our tariff policies, and the foreign-aid program. Domestically our Government has lived beyond its means in most of the past 30 years, and internationally we have been doing the same for nearly 20. How are we going to reverse this trend?

Wise and reasonable guideposts to corrective action are pointed out in the American Mining Congress Declaration of Policy—published in full in the October 1959 issue of Mining Congress Journal—which covers tariffs; other matters relating to inflation such as taxation, Government expenditures, Government reorganization and labor relations; and gold, silver, and monetary policy.

In the case of gold, the Mining Congress policy declaration recommends that:

"1. The restrictions on the purchase, ownership, and sale of gold by U.S. citizens be abolished.

"2. The administration recognize the historical and traditional confidence in gold and silver as monetary metals throughout the world, and as part of its foreign policy aid to other governments in restoring gold and silver coinage—and currencies convertible into gold—as a standard of value and as a circulating medium.

"3. Congress fix the ratio at which the dollar and gold are to be made fully convertible and take all steps necessary to provide for the orderly restoration of the gold standard.

"4. The Treasury, prior to restoration of full convertibility, cease sales of gold for industrial uses."

Johan Ludvig Runeberg (1804-77)

EXTENSION OF REMARKS

OF

HON. ABRAHAM J. MULTER

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Thursday, March 3, 1960

Mr. MULTER. Mr. Speaker, on March 5 Finland will celebrate the an-

niversary of the birth of Johan Ludvig Runeberg.

Runeberg was a distinguished man of letters of the last century, though little known in this country. At the peak of his fame, in mid-19th century, he had become the national poet of Finland, and at the time of his death he was esteemed most highly as a great poet both in Finland and in Sweden.

This highly talented son of a Swedish sea captain was born in Finland, but really belonged to two nations. He showed unusual interest from the very first in popular poetry and folklore. Breaking off his college studies at the University of Abo, he traveled various parts of the country and learned many popular songs by heart. Later when he began to compose his own verses, he showed the influence of classical Greek poetry. In 1848 he achieved great popular success with the publication of his series of poems on the war of independence of 1808. It was this series of poems that made him Finland's national poet, her poet laureate. All his verses show great originality and immense power, and his poems form the firmest link between the Finnish and Swedish people. He remains the idol of both peoples.

All honor to the memory of Johan Ludvig Runeberg, the national poet of Finland.

Seizure Excuses

EXTENSION OF REMARKS

OF

HON. HALE BOGGS

OF LOUISIANA

IN THE HOUSE OF REPRESENTATIVES

Tuesday, February 23, 1960

Mr. BOGGS. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following editorial from the New Orleans States-Item:

SEIZURE EXCUSES

The arguments of have-not nations, when they grab foreign assets in the name of "nationalization" of natural resources, have always taken the same channel: foreign capitalists have robbed the people of their natural wealth.

That channel is fast becoming a rut. Dr. Castro in Cuba, for example, in the instance of nickel ore, is making moves like he would expropriate all foreign holdings in that field in the interest of the Cuban people.

There is a happy medium between latent ownership and equitable development. Natural resources are seldom productive without proper development which often requires capital and engineering know-how. The day of the late 19th and early 20th century industrial barons who looted resources with little return to the sources of material or manpower is gone. If nothing else, international public opinion is against it.

The enlightened countries of the world realize that underdeveloped countries with marketable natural resources and an honest determination to derive the most from those resources are entitled to certain considerations. Such considerations extend to reasonable and legitimate taxation which finds its way into national coffers, not private hands. Modern developers cooperate in construction and maintenance of schools, hospitals, sanitation, and other improvements.

partly for their own protection. Dictators, however, gain more from ranting against foreign investors than from such gains as these for their people, even though it be a short-lived gain for themselves.

The Four Chaplains Died for God and Country

EXTENSION OF REMARKS

OF

HON. HARRISON A. WILLIAMS, JR.

OF NEW JERSEY

IN THE SENATE OF THE UNITED STATES

Friday, March 4, 1960

Mr. WILLIAMS of New Jersey. Mr. President, Americans will long remember the four chaplains who went down with the SS *Dorchester* in the early years of World War II. Their devotion and courage gave us a memory which persisted during that long war, and we remember their example with equal clarity today.

Recently in New Jersey several observances were conducted to pay tribute to the four chaplains. An editorial in the February 27 issue of the *Paterson (N.J.) Morning Call* tells about one.

Mr. President, I ask unanimous consent that the editorial be printed in the Appendix of the RECORD.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

THE FOUR CHAPLAINS DIED FOR GOD AND COUNTRY

On Sunday afternoon at 3:30 at the Alexander Hamilton Hotel, the Passaic County American Legion will pay a commemorative tribute to the four heroic chaplains who went down with the USS *Dorchester* off Greenland on February 3, 1943.

They died for God and country. Together with them, more than 600 lives were lost when the troopship was sunk by enemy action. To the men who served this Nation aboard the *Dorchester*, these four chaplains were their spiritual leaders, bringing to them God's words, His teachings of love, of faith, of brotherhood. While of different faiths, all men were to them made in the image of their God, entitled to the liberties and freedoms for which they on that sad day gave their very all that other Americans might live in peace and dignity.

Each of these heroic chaplains—George L. Fox and Clark V. Poling, Protestants; John P. Washington, Catholic; and Alexander D. Goode, Jewish—was awarded the Purple Heart and Distinguished Service Cross posthumously.

It is fitting that at the close of Brotherhood Week—an observance which should be continued throughout the year—that the Legion is paying tribute to the memory of these noble chaplains, who while amongst us, served mankind.

The citation accompanying the Distinguished Service Cross to the four chaplains bears eloquent tribute to their heroic deed:

"For extraordinary heroism in connection with military operations against an enemy of the United States. On the night of the 3d of February 1943, a loaded troop transport was torpedoed, without warning, by an enemy submarine in the North Atlantic and began to sink rapidly. In the resulting confusion and darkness some men found themselves without the life jackets and others became helpless through fear and the dread of plunging into the freezing water. These

four chaplains heroically and calmly moved about the deck, encouraging the men and assisting them to abandon ship. After the available supply of life jackets was exhausted, they gave up their own. They remained aboard ship and went down with it offering words of encouragement and prayer to the last."

Would that the spirit of the four chaplains reside in the hearts and minds of all peoples throughout this war-weary world. Would that the enslavers of free nations were to learn the great lesson the lives and death of the chaplains teach.

Then would there be peace, freedom, and self-determination among peoples in all countries, some of whom are now oppressed, living in constant fear of imprisonment and death for expressing a yearning for liberty.

The four chaplains freely gave their life jackets to others; they didn't ask, nor did they consider the religion, race, or color of those whom they so nobly assisted in a time of peril. To them each man aboard was equal.

They died that others might live, in the service of God and humanity. Their memory will ever live and the inspiration of their sacrifice should move those who live not by the Golden Rule that we are all brethren, deserving the dignity all should be accorded.

Their physical beings are no longer here, but the spirit of the four chaplains must never die.

The Honorable Francis E. Walter

EXTENSION OF REMARKS

OF

HON. OVERTON BROOKS

OF LOUISIANA

IN THE HOUSE OF REPRESENTATIVES

Wednesday, February 17, 1960

Mr. BROOKS of Louisiana. Mr. Speaker, recently it was the privilege of the State of Louisiana to have within our midst a distinguished Pennsylvanian, a Member of the House of Representatives and chairman of the House Committee on Un-American Activities. Mr. FRANCIS E. WALTER, at the invitation of the Americanism Commission, First District of Louisiana, the American Legion, received in appropriate ceremony the George Washington Great American Award. I was not permitted the opportunity to attend this occasion because of official duties in Washington, but my State was proud of the fact that Chairman WALTER came down to receive this important Legion award.

The speech which Chairman WALTER delivered on that occasion is outstanding. Backing up a long period of active service as chairman of the Un-American Activities Committee, the speech presents graphically some of the outstanding achievements of this committee in its fight against communism. This is an enemy which never sleeps, and the House of Representatives, in the interest of supporting democracy in the New World, certainly is to be commended for having set up a special committee for this purpose.

Chairman WALTER and his committee have a great deal of work ahead of them in the future. It is going to require his time and energy, but Mr. WALTER has exhibited real leadership in this respect and I am happy my State had the sig-

nal honor of making this award to a great Pennsylvanian and a great American.

Needed: Early Action on Special Milk Bill

EXTENSION OF REMARKS

OF

HON. ALEXANDER WILEY

OF WISCONSIN

IN THE SENATE OF THE UNITED STATES

Friday, March 4, 1960

Mr. WILEY. Mr. President, as we know, H.R. 9331, now on the Senate Calendar, would provide for expansion of the special school milk program.

The proposal would provide additional funds for the program, increasing the amount from \$81 million to \$85 million for the current fiscal year and additional funds for the next fiscal year.

As a sponsor of legislation with similar objectives, I am naturally hopeful that this bill can be considered and approved as early as possible.

Unless it is done, this excellent program providing first, for a useful outlet for surplus milk, and second, improving the health of our schoolchildren will suffer serious curtailment.

Fortunately, the U.S. Department of Agriculture has found it possible to set back its date for cutbacks—necessary because of shortages of funds—from March 1 to April 1.

Recognizing the parliamentary situation that exists, I nevertheless sincerely hope that the Senate will find it possible to act on this legislation soon, to avoid a serious disruption of the program.

Recently, the Green Bay Press-Gazette published an article by George Armour, reflecting the splendid way in which this program is moving forward in Wisconsin, as it is doing in other States throughout the country.

I ask unanimous consent to have the article, entitled "Hike in School Milk Funds Foreseen," printed in the Appendix of the RECORD.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

[From the Green Bay Press-Gazette, Mar. 1, 1960]

HIKE IN SCHOOL MILK PROGRAM FUND FORESEEN—DIRECTOR OF STATE UNIT CONFIDENT OF BACKING IN CONGRESS

(By George Armour)

MADISON.—"It's a sure thing" that Congress will appropriate an additional \$4 million for the 1959-60 extra milk program, Director Gordon Gunderson of the Wisconsin school lunch program said Monday.

Gunderson said the increase from \$81 million for the year to \$85 million would save Wisconsin school districts or children about \$194,000 in the remaining months of the fiscal year.

If the appropriation had not been raised, the Federal Government would have reduced the amount it reimburses schools per half pint of milk from 4 cents to 3½ cents for schools under the lunch program and from 3 cents to 2½ cents for schools under the extra milk program alone.

The Federal Government had set Tuesday as the date for cutting the reimbursement, but Agriculture Secretary Ezra Benson extended this to April 1. Gunderson said Ben-

son has recommended the increase in the appropriation and House and Senate Agriculture Committees have approved it.

URGED BY GOVERNOR

Gov. Gaylord Nelson urged an increase in the appropriation in letters to congressional committees in January and his dairy farm policy committee urged that the program be continued and expanded at its meeting Friday. Nelson also asked that the appropriation be set at \$90 million for 1960-61.

Wisconsin schools bought 85,306,000 half pints of milk in 1958-59 from local dairies and about 57 million half pints of that total were under the extra milk program for which Federal reimbursement funds are available. The rest of the milk was bought for the type A lunches provided by the schools.

AVERAGES \$1.25 WEEKLY

The Federal Government reimburses schools 5 cents per type A lunch served. The lunches must include one-half pint of milk, 2 ounces of protein, bread and butter, fruit, and vegetables. The schools are able to obtain food bought by the Federal Government for these lunches and other surplus removal and price support foodstuffs.

George Boerke, supervisor, and John Homberger, administrative assistant, for the school lunch program said that the State received more than 300 freight carloads of food from the Federal Government in the last fiscal year for use by schools.

The State stores the food at eight warehouses and trucks it to county distribution centers where the schools pick it up. Madison and Milwaukee each have two warehouses, and there is one each at Green Bay, Shawano, Eau Claire, and La Crosse.

ONE HUNDRED AND EIGHTY-FOUR THOUSAND SERVED DAILY

Homberger said 184,000 lunches are being served daily in the current school year, compared with 59,120 a day when the program began in 1946-47. A total of 7,186,173 lunches were served in that first year and last year the total was 27,299,103.

Boerke reported a trend toward use of central kitchens in certain areas of the State. The food is prepared at the central kitchen and then distributed at noon to smaller schools in the vicinity. He said this is being done at Eau Claire, Milwaukee, Black River Falls, and other cities.

Both employees of the department of public instruction agreed the program had benefited children greatly from a nutritional standpoint. They said that in some cases, the school lunch was the best meal the children received each day.

Juvenile Successes

EXTENSION OF REMARKS

OF

HON. HARRISON A. WILLIAMS, JR.

OF NEW JERSEY

IN THE SENATE OF THE UNITED STATES

Friday, March 4, 1960

Mr. WILLIAMS of New Jersey. Mr. President, the Asbury Park (N.J.) Evening Press made an important point in a February 26 editorial, when it noted that young people of the United States have a persistent and enthusiastic way of achieving new goals.

I was particularly delighted at the mention of accomplishments of Miss Cornelia Harrington, of Wayne, N.J.

Mr. President, I ask unanimous consent that the editorial be printed in the Appendix of the RECORD.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

JUVENILE SUCCESSES

In these days when a delinquent minority among our young people too often command headlines there is a refreshing contrast in the headlines being written at the winter Olympics at Squaw Valley. The prowess of Miss Carol Heiss, of Ozone Park, N.Y., in winning the first gold medal for this country in the women's figure skating contest; of Miss Jeanne Ashworth, of Wilmington, Mass., as a speed skater; and of Miss Cornelia Harrington, of Wayne, N.J., a runner-up to Miss Ashworth, indicates enthusiasm for achievement and a willingness to sacrifice toward that end.

They can't all be champions, but it is our belief that these young women who capture Olympic medals are typical of the great majority of our youthful citizens. For every juvenile criminal there are thousands who devote themselves to high attainment and take their recreation in wholesome pursuits. They seldom make headlines, because their conduct is normal and it is usually the abnormal that attract attention. Thus when young hoodlums are ignored and the headlines relate an outbreak of good behavior among young people the situation will be far more disturbing than it is today.

Bulgarian Liberation Day

EXTENSION OF REMARKS

OF

HON. J. GLENN BEALL

OF MARYLAND

IN THE SENATE OF THE UNITED STATES

Friday, March 4, 1960

Mr. BEALL. Mr. President, today we are celebrating Bulgarian Liberation Day. A banquet will be held in New York tonight in honor of this event. In view of the fact that it will not be possible for me to be there myself, I ask unanimous consent to have printed in the Appendix of the RECORD a statement I have prepared to be read at the banquet.

There being no objection, the statement was ordered to be printed in the RECORD, as follows:

STATEMENT BY U.S. SENATOR J. GLENN BEALL, OF MARYLAND

To Those in Attendance at the Annual Banquet Commemorating Bulgarian Liberation Day, New Yorker Hotel, New York, N.Y.:

I regret that it is impossible for me to be with you this evening. It would be a distinct pleasure to join with my Bulgarian-American friends and other friends of Bulgaria on this occasion commemorating Bulgarian Liberation Day.

On March 3, 1878, after 500 years of foreign rule, Bulgaria gained her freedom. Many brave Bulgarians gave their lives in the struggle for liberation. It is that victory which you are celebrating—and it is one the Bulgarian people will always remember with gladness.

Unfortunately, your country has fallen under Communist oppression. Bulgaria is held under satellite status by the Soviets. However, the spirit of freedom lives in the hearts of all Bulgarians everywhere, and I am confident that your country will again enjoy freedom—in the not too distant future.

I extend my best wishes to you all on this occasion.

Recognition of Outstanding Accomplishments of Three Oregon Orchardists

EXTENSION OF REMARKS

OF

HON. WAYNE MORSE

OF OREGON

IN THE SENATE OF THE UNITED STATES

Friday, March 4, 1960

Mr. MORSE. Mr. President, it is a singular pleasure for me, upon occasion, to be able to pay tribute to deserved accomplishments which have been recognized by various Oregon communities.

The Hood River County Chamber of Commerce, through my good friend, Mr. George D. Bartch, its able manager, has written to me concerning the awards won by three farmers of the area.

Bill Hazeltine, a Parkdale orchardist, who owns and manages a 60-acre ranch, of which 50 acres is in orchard, received the "Orchardist of the Year" award. The following public services are connected with Bill Hazeltine's name: Charter member of Parkdale Fire Department 9 years, past member of board of directors of Parkdale Fire District, member and past president of Upper Valley Booster Club, member of Wy'east Booster Club, member of Parkdale and Wy'east PTA, charter member of Hood River Soil Conservation District, past vice president of board of supervisors of Hood River Soil Conservation District, vice president Hood River County Unit School Board, member of Wy'east Vo-Agr Advisory Council, member of several extension service committees, alternate member of Hood River County School District Reorganization Committee, member Hood River Elks Lodge 14 years, second vice president of Oregon State Horticultural Society, past council member of Boy Scouts and Job's Daughters, and president, 1959-60, Oregon State Horticultural Society.

A second young farmer is Ross Hukari, who was awarded the "Young Farmer of 1959" recognition. He operates a 70-acre orchard in the Pine Grove district. He is past president of Oregon Horticulture Society and past president of the Apple Growers Association. Of particular interest is the fact that he participates annually in the foreign student exchange program which employs foreign students in his orchard operation.

The third Hood River County resident who took top honors in the annual award banquet is Odell rancher Jan Kurahara, who received the "Senior Citizen" award. Mr. Kurahara operates a 30-acre orchard, and has taken an active role in community affairs. Not only is he a successful valley rancher, but he also is a member of the Hood River County Farm Bureau, member of chamber of commerce agricultural committee, past director of Hood River County Chamber of Commerce, chairman of the Hood River County Agricultural Stabilization and Conservation Committee, district commissioner, Explorer Training Committee, Columbia Gorge District Boy Scouts, chairman, county unit school board; and he served 3 years on the Hood River County Budget Committee.

George Barch tells me that the awards dinner featured our great Hood River apples in many ways, including casseroles of apple and onion, sweet potatoes and apples, three apple salads, a number of relishes, five apple desserts, and apple breads, and apple candy, all of which were prepared by the Pine Grove Home Economics Club.

Mr. President, the awards dinner is, as I have indicated, an annual one, at which the community gives deserved recognition to those who serve as models and inspiration to their colleagues. It was fitting and appropriate that at the celebration the Governor of the State presented the banquet address. I join with him in extending congratulations not only to the winners, but also to all others who participated in making it an outstanding community function.

ORT 80 Years After Getting There First

EXTENSION OF REMARKS OF

HON. HARRISON A. WILLIAMS, JR.

OF NEW JERSEY

IN THE SENATE OF THE UNITED STATES

Friday, March 4, 1960

Mr. WILLIAMS of New Jersey. Mr. President, when we help others we prove that we believe in more than ourselves. Our mutual security program is based on that principle; so are the great campaigns we stage when we help others who have been stricken by disaster.

An editorial in the Bergen Evening Record (Hackensack, N.J.) of February 29 tells how the Organization for Rehabilitation Through Training has worked for 80 years to develop potential skills and to spread understanding. Mr. President, the editorial speaks for itself, and I ask unanimous consent that the editorial be printed in the RECORD.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

ORGANIZATION FOR REHABILITATION THROUGH TRAINING 80 YEARS AFTER GETTING THERE
FIRST

When necessary resources and technological skills are lacking people must be assisted, or all the world will suffer. This is not a matter of charity or of easing our own conscience through doles. . . . The help we give to our friends is help and strength for the cause of American freedom as well as freedom throughout the world.

Thus reporting on his return from his trip through Europe, Africa, and Asia, President Eisenhower set before us alternatives. Either the underdeveloped countries will acquire somehow the skills and techniques they need to join us in the living standards of the 20th century, or (these are his words) they could well become so desperate as to create a world catastrophe.

For 80 years now ORT, the Organization for Rehabilitation Through Training, has been saying something like that and doing something about it. In its vocational schools for the unskilled and uprooted and impoverished it now has 36,000 students across 19 countries—teenagers acquiring a technical education, young people and adults who will

never be scientists or engineers but who get a training that equips them within swift months to turn their back forever on begging and squalor and to take decent work in industry. To refugees from persecution ORT has given the intellectual equipment for adjusted and productive citizenship in their new homeland.

Women's American ORT will celebrate ORT Day Wednesday. The observance, especially in Teaneck, will be well worth the respectful and grateful attention of anyone who agrees that in skills and knowledge, as much as in philosophy and political commitment, may be found strength for the cause of American freedom as well as freedom throughout the world.

Padre Island National Seashore: A Beach for Our Grandchildren, From the Lone Star Catholic

EXTENSION OF REMARKS OF

HON. RALPH W. YARBOROUGH

OF TEXAS

IN THE SENATE OF THE UNITED STATES

Friday, March 4, 1960

Mr. YARBOROUGH. Mr. President, the proposal to establish a national seashore recreation area on Padre Island has evoked widespread comment in the press nationally. But of all the stories, articles and columns written on this subject none have been more persuasive or factual than one written by Mr. Dale Francis, editor of the Lone Star Catholic.

Mr. Francis entitled his column, "A Beach for Grandchildren," and then told in strong and colorful language of the need for preserving for public use "Padre Island, one of the most beautiful beaches in the world."

His comments in the Lone Star Catholic, which is the official weekly newspaper of the Austin Diocese, brought letters from readers all over the Nation expressing support of the Padre Island National Seashore Recreation Area proposal. His support and that of his readers will prove of great assistance to the project.

Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD the column from the Lone Star Catholic of January 10, 1960, entitled "A Beach for Grandchildren," by Dale Francis.

There being no objection, the column was ordered to be printed in the RECORD, as follows:

I wonder if you'd give me a helping hand so I can get my grandchildren out to the beach.

Of course, I don't have any grandchildren and, while my 8-year-old daughter has talked about having 10 or 12 children when she gets married, I don't know whether I'm going to have any grandchildren.

But if not my grandchildren then your grandchildren or your grandchildren's grandchildren. Help them to get to the beach.

Not long ago I gave a talk at a hotel on one of the most famous beaches in the United States—Miami Beach. I was amazed to see the growth of the hotels and motels in the last couple of years—beautiful, luxurious

hotels. They twinkle a million different color combinations at night.

But while I give talks there, I don't stay in the hotels. I don't have the money to put out to stay overnight, let alone a week. I mentioned to someone who was driving me down this luxury lane of hotels that it seemed a shame there hadn't been provision made for people who couldn't afford luxury hotels. He said provisions had been made and he showed me two or three blocks of public beach. But then this is public beach used primarily by people who stay at luxury hotels that aren't on the waterfront. It wasn't what I meant at all.

What I meant was a beach like the one that was discovered on an island by Padre Nicolas Balli, 156 years ago. He called it the Dead Desert when he built the mission of Santa Cruz there. There was the white shifting sand, the brightly colored seashells, the blue of the sky, and not much else.

Ever since then this long island, off the southeastern coast of Texas, has been called Padre's Island. It has taken the people a long time to find it, but in the last dozen years more and more people have come to recognize it as one of the most beautiful beaches in the world.

It has perpetual sunshine and on the southern end the climate is as mild as the climate of Miami Beach. The island stretches 120 miles and every bit of it beautiful beach.

But as the people discovered it, so did the promoters. This beautiful island is on the way to becoming like Miami Beach, a long row of luxury hotels with private beaches.

That's why I want it saved for my grandchildren and yours. That's why something has to be done right now. And you are the one who can do it.

The junior Senator from Texas, RALPH YARBOROUGH, has sponsored a bill to make Padre Island a national park. The response in Texas has been tremendous. The senior Senator, LYNDON JOHNSON, joined in backing the project. Conservative newspapers were as enthusiastic as the more liberal newspapers. When the National Park Commissioner asked for the opinions of citizens there were more than 15,000 who wrote to urge Padre Island be made a national park, only two who wrote dissenting.

But a thing like this deserves backing from all over the country and for it really to go over, it needs the backing of your Senators and your Congressmen.

The proposal leaves 17 miles of beach for commercial development. That means that private hotel owners can build 17 miles of hotels and motels. So they aren't being cut out of a chance to develop the area commercially—this isn't an attack on free enterprise. But close on to 100 miles is to be kept free of all commercialization, saved as natural beachland for all the people to enjoy.

There is no national park in the Nation that offers a beach like this—as a matter of fact, there is no other beach like this in the Nation. It is a beach located near the center of the Nation—even now it can be reached by plane, train, or car quickly from all over the country but in the future as travel speeds up and new superhighways are built, this will truly be at the center of the Southland.

This can be a national park for everyone in the Nation. It offers a vacation area for the whole Nation if it can be made into a national park. But if it is not made into a national park right now—before the building of private interests begin—it will be too late.

So please write to your Congressmen, your Senators. Let there not be a Congressman or Senator in the Nation who isn't informed of your wish for this great national park.

Then when the bill is passed, when Padre Island is made a national park, you'll be able

to sit back and say, "Well, I made a reservation on the beach for my grandchildren's grandchildren, a hundred years from now."

Estonia's Independence Must Be Restored

EXTENSION OF REMARKS
OF

HON. HARRISON A. WILLIAMS, JR.

OF NEW JERSEY

IN THE SENATE OF THE UNITED STATES

Friday, March 4, 1960

Mr. WILLIAMS of New Jersey. Mr. President, the Paterson (N.J.) Morning Call expressed editorially on February 26 the feelings that many of us share when we consider the misfortune of those peoples who fought for independence and then lost it to Soviet aggression.

Mr. President, I ask unanimous consent that the editorial be printed in the Appendix of the RECORD.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

ESTONIA'S INDEPENDENCE MUST BE RESTORED

Americans of Estonian ancestry here and throughout the land are observing the 42d anniversary of the Estonian Republic. It was in 1918 that Estonia was proclaimed an independent, democratic republic.

Today, Estonia is no longer independent, its liberties and freedoms having become victim of cruel Soviet invasion and oppression.

As the observance is being held, there is sadness that a once free land is under the complete domination of murderous Reds whose enslavement of free peoples in many European nations is notorious for its atrociousness.

In violation of treaties—which to the Reds are mere scraps of paper—Soviet Russia overran Estonia in 1940, murdering thousands and transporting other thousands of innocent peoples to Siberia. It would take pages to recount the crimes perpetrated against Estonians by their enslavers.

Many Estonians were fortunate in escaping and more fortunate in finding a haven in this land of the free, where they became citizens, hundreds residing in this area. To their adopted country they have displayed deep loyalty and an intense love for freedom. It is only natural that they fervently hope and pray that their brethren overseas who were unable to escape Red tyranny will be freed of oppression and once more become independent.

Mayor William H. Dillistin has issued a proclamation calling on the citizenry to join with neighbors of Lithuanian ancestry in prayers for the overthrow of Communist domination of Estonia.

Estonia must again become a member of the free nations of the world. Its peoples should have the liberty and freedom which we hold so dear restored, for Estonia of right should be a sovereign nation. The United States and all countries that cherish democracy recognized Estonia, which was admitted to the U.N. as a sovereign republic.

We of the Call called the turn when many here and across this Nation welcomed Khrushchev to our shores and treated him as a friend instead of the foe to democracy that he is. We wrote that his words masked

cruelty of thought and action, that his treaties are worthless. We warned that no good could come of his visit. The passage of months has shown the rightness of our stand.

The enslavement of Estonia and all the once-free nations of Europe which the commies now occupy—the loss of freedom which came in the wake of Red invasion—the murder of thousands and shipment of innocents to Siberia—all prove conclusively that communism is a menacing influence in the world.

With our many friends of Lithuanian ancestry we hope and pray that the shackles of communism will be lifted and Estonia once again restored as a free nation.

The Democratic Goal

EXTENSION OF REMARKS

OF

HON. WAYNE MORSE

OF OREGON

IN THE SENATE OF THE UNITED STATES

Friday, March 4, 1960

Mr. MORSE. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an excellent editorial which was published in the January 1960 issue of the Oregon-Washington Farmer Union. The editorial was written by a great liberal in Oregon. In fact, Arthur Bone, the writer of the editorial, is one of the most dedicated liberal Democrats in my State of Oregon. Therefore I offer for the RECORD the editorial, entitled "The Democratic Goal."

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

THE DEMOCRATIC GOAL

The Democratic Party of Oregon will hold a State convention at Salem January 29-30 to draw up a platform on which its candidates will seek election in November. Of equal importance, it will be a guide to voters in evaluating the records of Democrats seeking nomination in the May primaries. There were a lot of so-called Democrats in the last legislature who might better have been left at home.

We hope the Republicans decide to hold a similar convention. Voters are entitled to know what the parties stand for.

What does the Democratic Party stand for? This is a hard one to answer. Judged by its recent congressional record, it doesn't stand for much. Judged by its candidates—from MORSE, HUMPHREY, and STEVENSON on the liberal left to KENNEDY, SYMINGTON, and JOHNSON on the conservative right—it embraces all colors of the spectrum. Its loudest voices seem to call for a bigger and better defense program, despite the \$7½ billion already being wasted on "defense" by the Pentagon. At a recent press conference, Senator KENNEDY emphasized that national defense should come at the very top of the 1960 issues because the proposed budget figure for defense was "too low by a substantial percentage," and SYMINGTON and JOHNSON would go right along with the boyish Senator from Massachusetts.

If the Democratic Party goes to the people this year with that kind of a program, it will be defeated. The people are weary and tired of letting the Pentagon call the shots.

They are interested in peace, not as a slogan, not as a far-off goal, but as a major cornerstone of a national policy. Peace—not more billions for defense—should be the major emphasis in foreign policy. What progressive steps would a Democratic administration take toward disarmament? What is the stand of the party on abolition of nuclear tests? What about abolition of the draft? These are some of the questions for which they would like answers.

On the domestic front, the party should boldly proclaim its wider support of governmental intervention in the economy to make certain that things are done that are already badly overdue. As someone has well said, the opposition party, to be successful, must have a "categorical imperative." It must have a great simple, central theme. That theme should be to do for people the things that need doing, the things they want done and are unable to do for themselves. The party should not be afraid of Government, providing that Government is by and for the people.

On the farm front, that means rejection of any policy that would turn farmers back to the free market as a means of solving their price problems. One constructive solution of the farm problem which would find widespread support among farmers would be Government loans to build integrated co-ops on a nationwide scale as one means of giving farmers greater bargaining power in the marketplace.

Cooperative enterprises should be used on a much wider scale than they are now being used to "police" the whole private sector of the economy. Yardstick plants, financed by Government loans, in such areas as steel manufacturer, automobile manufacturer, food processing and distribution, and aluminum manufacture and fabrication, should be used to establish standards of cost and quality. The "yardstick" principle has worked well in the TVA and the Bonneville Administration in lowering power rates and increasing enormously power consumption. And it has not injured private utilities. It should be extended to other areas in the economy. It would be the cheapest and most effective way to provide competition to administered prices in an economy tending ever more strongly toward greater concentration and monopoly.

We need government expansion—both State and Federal—in other fields. In the field of health and hospital protection, the immediate goal should be adoption of the Forand-Morse bill which will assure medical care to our retired citizens. We need Federal aid in rebuilding our cities and unscrambling the traffic chaos which threatens to engulf them. We need Federal aid to education. We need cheap Federal credit to bring down interest rates. We need greater development of our natural resources, and especially full development of the power potential of our rivers.

To finance such a program, we need an increasingly progressive tax system based on ability to pay. To an ever increasing extent, we must rely on the taxing power of the Federal Government which alone is able to tap wealth where wealth is. Federal taxation, also, eliminates the penalizing of liberal and progressive States by backward States with no social welfare program—and low taxes.

With imagination and courage, Democrats in Oregon and over the Nation should face these problems and respond to their challenge. A craving for "respectability" and conformity will get the party no place. The Republicans can do that much better. A program looking forward to tomorrow and answering the problems of today should be the Democratic goal.

All Eyes on Eisenhower

EXTENSION OF REMARKS

OF

HON. CHARLES O. PORTER

OF OREGON

IN THE HOUSE OF REPRESENTATIVES

Monday, February 29, 1960

Mr. PORTER. Mr. Speaker, Cyrus Eaton, chairman of the board of the Chesapeake & Ohio Railway Co., has spelled out the position of the United States in world consideration of weapons testing and disarmament. He makes it clear that the United States is lagging in affirming a clear opposition to future testing and that the responsibility belongs to one man, the President of the United States.

Under a previous consent I am including hereunder a letter from Mr. Eaton to the Cleveland Plain Dealer which appeared in the February 28, 1960, issue of that paper:

CYRUS EATON CONTENTS ENDING OF NUCLEAR TESTS IS UP TO EISENHOWER

EDITOR, PLAIN DEALER.

SIR: At the time of the first Pugwash Conference of nuclear scientists, the United States, the U.S.S.R., and the United Kingdom were the sole possessors of the dread secret of the bomb. Over a 4-year period, 5 Pugwash scientific conferences have brought together 112 eminent specialists from 23 major nations, east and west, all of the unanimous opinion that weapons of mass annihilation must be universally banned, and that delay can only lead to the eventual possession of the worst forms of weaponry by every country of consequence around the globe.

With the recent French explosion in the Sahara, membership in the nuclear club has increased to four. Unless international agreement is reached soon to prohibit tests and ban nuclear weapons, each of the other 19 nations on the Pugwash list, along with others, will in all likelihood be equipping itself with nuclear weapons. All of these countries now have the requisite scientific manpower and industrial capacity in the key fields of electric power, steel, chemicals, engineering, and large-scale construction.

These grave considerations dictate the urgency for the early conclusion of a clear-cut test ban agreement at Geneva, where negotiations have been dragging along for 15 months. There can be no hope whatever of agreement at Geneva as long as pressure for further testing, however limited, continues to be successfully exerted on the White House and the Congress by the U.S. Defense Department, the Atomic Energy Commission, and the small handful of official scientific advisers with a vested interest in urging the United States to run the risk of more tests.

America's closest western allies have restrained themselves from open criticism of the U.S. position with the greatest forbearance, but now seem determined to convince world opinion that they, for their part, favor a different course. The Canadian Government has just announced a straightforward new foreign policy calling for the end of all nuclear testing and the complete prohibition of nuclear, biological, and chemical warfare. At the same time, Great Britain is giving every evidence of intending to follow the Canadian example promptly.

The rivalries that now seem to loom large between the United States and the U.S.S.R. will be overshadowed by the terrible hazards that will confront mankind if 23 or

more nations become manufacturers of their own nuclear arms. The eyes of the world are focused on the President of the United States, the one man who can make the fateful decision. Let us hope that his concern for humanity and respect for world sentiment, coupled with his profound knowledge of weaponry and broad experience in warfare, will tip the scales toward the immediate end of nuclear testing as the first step in disarmament.

CYRUS EATON.

THE TERMINAL TOWER.

Education in the Tomorrow

EXTENSION OF REMARKS

OF

HON. BARRATT O'HARA

OF ILLINOIS

IN THE HOUSE OF REPRESENTATIVES

Monday, February 29, 1960

Mr. O'HARA of Illinois. Mr. Speaker, by unanimous consent, I am extending my remarks to include an article by Dr. George S. Reuter, Jr., the distinguished research director of the American Federation of Teachers, a national organization of large stature affiliated with CIO-AFL and dedicated to democracy in education; education for democracy. Mary J. Herrick, whom I am proud to number among my outstanding constituents, is 1 of the 16 vice presidents of the American Federation of Teachers, representative of every section of our Nation. Dr. Reuter's illuminating article follows:

WHICH WAY AMERICA?

(By Dr. George S. Reuter, Jr., research director, American Federation of Teachers)

The people of America are entering 1960 with some apparent confusion but with much zeal. A better world is expected, but the plans are still abstract. Much attention will be given to the past and the present, but greater goals will need to be established. It is our duty to help in this worthy cause.

Many citizens of all ages have been born, lived their lives, and died without purpose. Some of the trouble can be traced to what Dr. Joy Elmer Morgan was talking about when he said: "It is not possible for society to guarantee to every child a devoted mother and a wise provident father, but society can guarantee to every child a competent, well-prepared, and adequately paid teacher." But, even here there is danger in our age, as called to our attention recently by Dr. Robert M. Hutchins. He noted: "Hannah Arendt has suggested, we appear to be entering an era in which men will no longer act; they will simply behave," and this will affect the teacher too.

The day of questioning the place of a lady on a program was true in 1853 but not in 1960, yet ladies can't solve all the troubles. In 1853, a man said: "Behold the beautiful pillar of this superb hall; contemplate its pedestal, its shafts, its rich entablature, the crowning glory of the whole. Each and all the parts in their appropriate places contribute to its strength, symmetry, and beauty. Could I aid in talking down that entablature from its proud elevation and placing it in the dust and dirt of the pedestal?" In 1960, it is the interesting book by a lady educator and traveler that stands forth. Yes, it is Charlotte Boren's "South America in 30 Days."

Events will not always be sweet or right. A sad note happened some months ago when

Debbie Reynolds, one of the great Christians of Hollywood, was divorced through no fault of her own. She recently remarked: "I was never happier in my marriage than when I didn't know it was ending. It's very hard to find the person you love doesn't love you. A divorced woman shouldn't think about it or talk about it. I don't look at myself as a divorced woman. I accept that I am but I try not to think about it. I haven't reached the stage yet of looking around for something else."

Dr. Daniel R. Davies of Columbia University has developed many challenging points that we should briefly consider. These are:

1. "The human race is multiplying at a dizzying pace. And the rate appears to be still going up. The consequences if not terrifying, are at least sobering. The direct effect upon schools is, of course, the number of beings to provide for."

2. "It took 16 centuries—the time between the birth of Christ and the death of Queen Elizabeth—for the world population to double. It is now expected to double in less than one-half century."

3. "The rate of population increase of the U.S.A. is greater than that of India. Our national population almost doubled in the first half of the 20th century, and is still increasing" (from 76 to 151.7 million from 1900 to 1950).

4. "In the elementary age group, 5 to 13 years, we can expect an annual increase of about 1 million kindergarteners for the next several years, and then a tapering off. The high school group will increase more steadily at the rate of about one-half million annually."

5. "Not only do people grow up, but they live longer. The death rate from natural causes in our country between 1 month and 40 years in approaching zero. In 1900 the average life expectancy of the American male was 48.2 years. In 1950 it was 65.5 years. Today it is approximately 70. Some responsible observers predict that it will be 100 years by the end of the century."

6. "If we add up the estimated population for 1965 in the elementary, secondary, and higher education age groups we get a total of 92.6 million. The Census Bureau arrive at their estimates by assuming that the same proportion of the group's total population will be in school than as was the case in 1958, namely 54.7 percent. The trouble with that assumption is that the proportion of school enrollment to total population has been increasing through the past decade."

7. "Two effects then will be at work in expanding the school enrollments. First, there is the sheer increase in numbers, as pointed out by the census figures. Second, there is the trend toward a greater proportion of school attendance in all age groups."

8. "It is rapidly becoming old fashioned to speak of the public school system as including grades 1 through 12. Look at the junior college statistics. In 1958, Dr. Bethel, president of the Fashion Institute of Technology, gave the following statistics: there were 625 junior and community colleges enrolling 765,000 students in 1958-59. This means we have witnessed a growth of 250 percent in a decade in the junior college. On June 1, 1959, Dr. Bethel said that the current figures are 667 junior and community colleges with an enrollment of 892,000. He continued by saying that by 1970 about 50 percent of all college freshmen will be enrolled in junior colleges. In California, the proportion is already far higher than this estimate: 65 percent. Florida figures are almost unbelievable. In the 26 counties having junior colleges, 75 percent of the students enrolling in college for the first time chose the junior college. Florida now has 16 public junior colleges compared to 7 in 1957. Between the fall of 1957 and

the fall of 1958, there was an enrollment increase of 57 percent."

9. "The 4-year colleges, too, are in for their boom period according to the book, 'Manpower and Education,' which says 'taking many factors into consideration, some specialists estimate that college enrollments in 1965 may exceed 5 million students and even approach 6 million.'"

10. "Public school adult education is becoming big business. In 1946-47 there were 2,662,786 public school enrollees in the 48 States and the District of Columbia. The comparable figure in 1956-57 according to the U.S. Office of Education statistics is 4,373,054. In the same period State financial aid increased from \$5.3 million to \$15.8 million."

Dr. Walter D. Cocking wrote of a past failure but a future prediction. He noted: "Comprehensive Federal support legislation will not be enacted by the Congress at the 1959 session. However, within 10 years such legislation will be passed and people (present opponents and supporters alike) will wonder what all the shooting was about."

Dr. Lawrence A. Kimpton, chancellor, University of Chicago, provides further challenges to education and America. Below are a few of these key gems:

1. "It is the professor and his family who are currently subsidizing higher education, and, if labor can talk about a day's work for a day's pay, why cannot the academic world?"

2. "At whatever level, education is not a commodity to be bought and sold. It is a natural right and should be as free to all as the air we breathe. This country, with one of the highest literacy rates in the world, was built upon this Jeffersonian principle. It is immoral to treat learning as anything but a gift which each State owes to all its sons and daughters."

3. "We live in a divided world and higher education is probably the key to the survival of Western civilization."

4. "My father was a poor farm boy from Kansas, and my name is not by accident 'Lawrence.' The University of Kansas meant for him a whole new way of life that otherwise would have been beyond his and his family's wildest dreams. The public university as it meets the needs, both individual and regional, of its area is the symbol and the actuality of the democracy that is America."

5. "All of us here would agree that we must have more money for all higher education, public and private."

Toynbee gives us hope too: "The 20th century will be remembered as the 1st age in history in which people thought it practical to make the benefits of civilization available to the whole human race." Yet, at about the same time these remarks were being uttered, George Meany wrote to Mrs. Povl Bang-Jensen: "The courage and honor of your husband in his refusal to compromise his high principles will everlastingly provide inspiration to men everywhere who defend the ideals of freedom against the forces of tyranny. Sincere condolences to you and your children." The idea of Toynbee is a beautiful dream, but the condition of the latter represents black reality to the dead man's family.

Bishop Vincent S. Waters, of Raleigh, N.C., recently suggested that all people should possess: "the right to physical integrity, the right to moral integrity, the right to intellectual integrity, the right to social integrity, and the right to economic integrity." These principles would do much toward building a positive program.

A better nation and world will come only through dreams and positive programs, however, and the then Secretary of State George C. Marshall gave a lofty statement at Harvard in June of 1947, when he said: "Our policy

is directed not against any country or doctrine but against hunger, poverty, desperation, and chaos. Its purpose should be the revival of a working economy in the world so as to permit the emergence of political and social conditions in which free institutions can exist." Later, the words of Dr. Harold Benjamin provided additional direction: "Free men cannot be taught properly by slaves; courageous citizens cannot be well educated by scared hired men."

If we will accept some of the goals of Dr. Cocking, we will be looking in the direction of progress. Among these are:

1. Reduction of operating school districts from about 49,000 to 40,000 by 1969.

2. Greater experimental research in education.

3. Increased and broadened programs of education in business and industry.

4. The use of automation in business offices of schools and colleges.

5. Greater student housing for all types of students.

6. The centralized kitchen should become more common in school systems and colleges. Efficiency and economy will thus be served.

7. Greater growth and development of junior or community colleges.

8. Citizen committee activities should be expanded.

9. State departments of education should devote more attention to service and research activities.

On the one side Americans face the reality of Robert Mauer's comment concerning the patterns of education, and on the other the status that Dr. Hutchins sees. The Antioch professor noted: "At one academic pole, represented by St. John's College in Maryland, every instructor is required sooner or later to teach everything—languages, music, sciences, literature—the whole liberal arts curriculum. At the opposite extreme are professors in large universities whose principal duties are research and publication in a narrowly specialized field and whose teaching assignments, if any, are kept to an absolute minimum so as not to interfere with their scholarly work."

Then, Dr. Hutchins sees the other: "Industrialization has introduced a new element into the aims of the state: a primary object must now be to keep the industrial machine going. The production of goods therefore becomes an end in itself, without regard to their utility. That popular statistic, the gross national product, makes no distinction among products in terms of their desirability or quality: quantity is all. Full employment, to which all countries are committed, does not ask whether the worker is producing cosmetics or tractors."

Which way America? All of us must work for a complete and worthy answer.

Endorsement of Establishment of Forest Work Camps

EXTENSION OF REMARKS

OF

HON. WAYNE MORSE

OF OREGON

IN THE SENATE OF THE UNITED STATES

Friday, March 4, 1960

Mr. MORSE. Mr. President, I ask unanimous consent to have printed in the Appendix of the Record a letter, dated February 27, 1960, which I have received from Miss Bibiana M. Maher, secretary of the Oregon Juvenile Council, of Portland, Ore. The letter sets

forth a resolution adopted by the council at its last meeting.

There being no objection, the letter was ordered to be printed in the Record, as follows:

OREGON JUVENILE COUNCIL,
Portland, Ore., February 27, 1960.

HON. WAYNE L. MORSE,
U.S. Senate,
Washington, D.C.

DEAR SENATOR MORSE: At our latest conference, among our resolutions was the following:

"Whereas there is pending in Congress legislation for the establishment of forest work camps similar to the former CCC camps; and

"Whereas there is a great need to provide training and work for youth in this country and for the conservation of our national resources: Be it

"Resolved, That the Oregon Juvenile Council, in convention assembled, approves such legislation."

We are confident, Senator Morse, that you are interested in this action of our organization.

Yours very truly,

MISS BIBIANA M. MAHER,
Secretary.

Serving the General Housing Demand and Protecting the Homebuilder's Investment

EXTENSION OF REMARKS

OF

HON. GEORGE P. MILLER

OF CALIFORNIA

IN THE HOUSE OF REPRESENTATIVES

Monday, February 15, 1960

Mr. GEORGE P. MILLER. Mr. Speaker, Mr. Richard Barrett of Barrett Homes and the Barrett Construction Co., San Francisco, Calif., made a speech before the Urban League Housing Conference in December on the subject of building houses for interracial occupancy.

Barrett Homes is not new to the building industry. Mr. Barrett's distinguished father was long engaged in the construction industry in California and the company has inherited a remarkable record of success.

One of the officers of this company is Mr. John H. Tolan, Jr., son of the late Representative from the Seventh Congressional District. He, like his father, has done an outstanding job in his chosen field.

The experiences of Dick Barrett should be of great interest to all, particularly at this time, and I am happy to make his speech a part of my remarks:

SERVING THE GENERAL HOUSING DEMAND AND PROTECTING THE HOMEBUILDERS' INVESTMENT

(By R. H. Barrett, partner, Barrett Construction Co., San Francisco, Calif.)

The subject of building housing for interracial occupancy requires a general contractor to step out of his working clothes. This is a field afar from our customary labor and management problems, from the procurement and assembly of materials and construction components, from the business of compiling estimates, and the submission of competitive bids.

Few general contractors operate as we do; that is, with a division of the company devoted to production housing. When you build housing you must face the general retail market rather than a single customer for one large building. Thus we are forced by the new laws to take another look at the social structure of our home sales and rentals.

Our experience in interracial housing has been confined to the Plaza, Richmond, Calif. Two years ago we sold 91 buildings in this development. There were 20 single family detached homes, 62 attached or semiautonomous row houses (called patio town houses), and 9 duplex buildings. The 100 living units were sold and occupied by 74 Caucasian, 11 Negro, 8 Filipino, 4 Japanese, and 3 Chinese families. This is a total of 26 percent minority.

As of last week we have had seven resales. The percentage of minority families has held constant, although one oriental family sold to a Negro family and, to that extent, changed the pattern within the minority group by 1 percent. Another oriental family sold to a Caucasian family, and that resale has accounted for a 1 percent increase in white occupancy.

There have also been five family moves due to the rental or rental of homes or duplex apartments. Here we gained one oriental family and one Negro family as against the original racial distribution.

The net change in the entire project so far as minority families are concerned is one additional Negro family. The resale picture indicates that this new neighborhood is more stable than any other local new subdivision. Everyone is making money when they resell. The last family to move out due to a job change paid a full 6 percent real estate commission and had a new cash balance of \$1,600 to take with them after their loan was assumed by the new buyer.

We are proud of this achievement. We liked doing this sort of a job. It was something that needed doing. We didn't talk about it or explain it—we simply did it.

Builders believe the new law will increase social and racial justice—but not economic justice. It puts a discriminatory burden of compliance on the merchant builders who use FHA and VA financing, or those involved in urban redevelopment and renewal. The statute must be broadened if it seeks to do economic justice to the new house builders as well as social justice to home-seeking minority families.

It appears highly probable that many a seller of older homes or single custom-built new homes will say to sales prospects:

"Don't buy in that new subdivision. They are building over five houses and have to accept colored buyers by law. Buy from me instead. We don't have that problem here."

As long as merchant builders of new homes remain the focal pressure point they will be apprehensive that their subdivisions may be overwhelmed by minority buyers. There is no way to release that pressure except by making this law apply to all home sales. It may be years before the right to purchase anywhere can be exercised by everyone. The number of these years will be shortened, in our opinion by meetings like this one. This gathering, with its spirit of cooperation, is of vital importance to builders.

After all, the deed to real property, especially a new home, is filled with many personal overtones. Ultimately there is just a buyer and a seller—one, or the other, or both, full of faith and hope over the transaction—or full of doubt and uncertainty.

"Who are my neighbors?" our buyers always ask.

Will it ever be satisfactory to answer: "According to law your neighbors are Mr. and Mrs. So and So."

You are saying by this meeting, "No, our horizons are broader than that."

But I just want to point out—as a builder of new homes—that the sound leadership in finding a new high standard of housing for minorities must work with continuing controls over new neighborhoods. Intergroup relations agencies must and will help stem the tide of unreasonable and unreasoning pressure in any one locale. Enduring property value is an economic must for any family, regardless of race, creed, or color.

To the builders here assembled may I suggest that we must continue to make substantial progress in the planning, architectural design, and construction quality particularly when we must carry the psychological market handicap of interracial sales. These are the plus values that will make our product so attractive that the unreasonable elements of uncertainty and doubt are readily overcome.

Your chairman has asked me to delineate our position and function.

Our position is simply to develop land, to build and sell shelter. Our function is to perform this service for value at a profit.

Secondly, I have been asked to discuss our problems and limitations. Well, our problems have to do with steadily increasing costs and the competition we face in the market from other goods, other services—and especially for an adequate supply of mortgage money at reasonable interest rates and loan fees. As to the limitations—I will take these up when I show you a series of colored slides.

Finally, your chairman would like our suggestions as to positive steps which can be taken for cooperation. I would suggest:

1. The public must be educated to expect integrated neighborhoods when they purchase new homes. There is no advantage to anyone in a surprised buyer, a forfeited deposit, a panic resale, or a disgruntled neighbor.

2. The responsibility for total integration cannot be shifted by law from the community to the individual builder. We are carrying organization and financing burdens now that are overwhelming many good firms. Don't try to overload a mechanic with a social and philosophical problem. By urban league activity and leadership give the builder his chance for modest cooperation and back him with reciprocal support.

3. Don't rely entirely on the penalties available under this new law. This inherent threat could hurt as well as help. The builder who complies will face increased marketing costs. Are you ready to share these expenses by paying higher prices?

4. This is not a ghost problem. You have to work with it—come to grips with it in the field—in order to do something about it. Are we all willing to sacrifice the time and pay the costs involved in giving proper attention to this subject on the local community level? You have called this group together today. Please call more of these meetings. I compliment you on your leadership, and thank you for your courtesy in inviting me to attend.

The Case for Federal Aid to Education

EXTENSION OF REMARKS

OF

HON. CHARLES O. PORTER

OF OREGON

IN THE HOUSE OF REPRESENTATIVES

Monday, February 29, 1960

Mr. PORTER. Mr. Speaker, the chancellor emeritus of higher education in

Oregon, Dr. Frederick M. Hunter, is a man of great wisdom and wide experience. His views are received with respect in and out of Oregon. A dedicated educator, he has devoted his life to improving and enlarging education for our people.

I am including here, under a previous consent, a telegram which I have received from Chancellor Hunter:

EUGENE, OREG., February 29, 1960.

HON. CHARLES PORTER,

House of Representatives:

Sincerely and earnestly I urge you do all in your power to bring about the enactment of a law providing assistance to the States adequate to enable them to pay teacher salaries and construct buildings to meet the present critical situation and the continually increasing deficiency resulting from explosive population increases. No other issue is so important. How except for the public school have 41 million foreigners become good American citizens? How except for the public schools have 2 million young Americans coming to maturity each year, been given a common loyalty to our national objectives sufficient to meet the crises of two great World Wars? How from now on, can we hope to meet the colossal task of giving the sense of oneness of a free people to more than 4 million youths maturing each year in a divided world except for greatly expanded and improved educational institutions? The issue is: Shall we continue to do this or shall we surrender to the Russian dictators' verdict "We shall bury you"? That's the stake when Congress votes on the bill for Federal support to the States for public education.

FREDERICK M. HUNTER.

Operation Catalyst in Oregon

EXTENSION OF REMARKS

OF

HON. CHARLES O. PORTER

OF OREGON

IN THE HOUSE OF REPRESENTATIVES

Wednesday, February 17, 1960

Mr. PORTER. Mr. Speaker, the January 1960 issue of Audiovisual Instruction carried a story of how Oregon is making use of title III in the National Defense Education Act. Author Henry C. Ruark, Jr., is an audiovisual instructor.

In his words:

One of the most interesting title III developments in the State is the cooperative program for televised Spanish instruction taking place in Bethel-Eugene-Springfield, a three-community area centered around Eugene which is the home of the University of Oregon. In these three districts, a large percentage of foreign language teachers in Oregon get their practice-teaching experience. The TV instruction, at sixth-grade level, is supplemented with classroom work by both the classroom teacher and the special TV instructor.

Under leave to extend my remarks in the RECORD I include the full text of Mr. Ruark's article:

TITLE III IN OREGON—OPERATION CATALYST

(By Henry C. Ruark, Jr.)

(Hank Ruark will be a stranger to few readers in this field, having taught AV in two Oregon colleges, worked in the center at Indiana University, and served as director of information for NAVA. He is consultant on instructional materials and coordinator of acquisitions for title III in Oregon.)

The title III program for the improvement and strengthening of instruction in science, mathematics, and modern foreign languages has brought significant stimulation to the audiovisual field in Oregon. Although it is too early to attempt any thorough analysis or evaluation of its impact, a catalytic trigger effect is clearly discernible, reaching beyond the NDEA subjects into other educational areas.

There is also a growing interest in cooperative establishment or expansion of county or regional film libraries; a greater awareness among school administrators, teachers, and principals of the need for assistance from a competent audiovisual person, and a broadened acceptance of AV teaching tools as an integral part of any plan to improve instruction.

It has been less than a year since Oregon's plan for title III was accepted by the U.S. Office of Education on February 16, 1959. Since then, Oregon has:

Organized a new instructional services section in the State department of education to administer title III's dual program—acquisition of special equipment and materials, and improvement of supervision in NDEA subject areas; guidance and counseling under title V, section A. The new section will also be responsible for other special-service programs of the Department, including school library consultant services and a program to improve curriculum and instruction for the educationally able and gifted. The latter program was in part an outgrowth of section A of title V.

Completed two application periods for title III (one covering 1958-59 allocations and a second covering 1959-60 grants) totaling more than \$1 million and including 410 applications from 139 school districts in 31 of the State's 36 counties. About 20 percent of expenditures were in the audiovisual field, and indications are that this proportion will increase.

Set up a second, supplementary, application period for 1959-60 funds, with an estimated 175 applications due for processing after December 10, 1959. (At deadline for this article nearly 300 applications had been requested.) Nearly \$500,000 in Federal matching funds is available for this supplementary period.

Completed reimbursement in many school districts for 1958-59 projects, and begun processing of claims for reimbursement on 1959-60 projects for which acquisitions have been fully or partially completed.

Planned an application period for 1960-61 funds to take place early in 1960 in order to time NDEA procedures with school budgeting.

Begun special programs of consultation and inservice work by new subject-area specialists under the improvement of supervision phase. The demand for the services of title III consultants in the three NDEA subject areas and in instructional materials is already heavy although these programs did not get underway until after school started last fall.

There is probably no such thing as a typical title III project, at least not in Oregon. The emphasis on curriculum change and development in the State during the past 5 years has brought about an understanding of the need for general improvement in instruction and has had a great deal to do with the acceptance of NDEA in Oregon. Most project applications submitted were pretty well tailored to meet local needs, with emphasis differing markedly from project to project and with the inventory of requested equipment differing just as markedly.

As in many States, the science area with its special needs for equipment drew much attention. Out of total allocations of \$1,009,000, science activities were granted \$631,000. Science appears 305 times in Oregon projects.

Mathematics appears 162 times during

the first 2 application periods (1958-59 and 1959-60) with \$194,000 allocated. Foreign language grants totaled \$184,000 with 92 activities underway in the same 2 periods. About 40 of these deal only with materials.

Many projects in science, especially for elementary schools, were confined to so-called minimum list items in 1958-59 and expanded to acquire other and more specialized or complex equipment in 1959-60. The minimum list items are considered the basic types which should be readily available before additional equipment is acquired. In mathematics there has been a fairly heavy demand for manipulative materials in the elementary grades with some emphasis on models and more specialized equipment at the secondary level.

In Oregon the approach to language teaching equipment has tended to be conservative, slow, and rather carefully planned; many districts are still working out the details for language laboratory installations, making sure that the facilities they install will fill their needs and provide for reasonable expansion and change. Thus many of the early projects requested building-block equipment, which can be integrated into functional use with more complex equipment later, and which provides better opportunity than in former years for teachers and students to familiarize themselves with equipment before making the transition.

One of the most interesting title III developments in the State is the cooperative program for televised Spanish instruction taking place in Bethel-Eugene-Springfield, a three-community area centered around Eugene which is the home of the University of Oregon. In these three districts a large percentage of foreign language teachers in Oregon get their practice-teaching experience. The TV instruction, at sixth-grade level, is supplemented with classroom work by both the classroom teacher and the special TV instructor.

VARYING STAGES OF LANGUAGE EQUIPMENT

In addition, all three school systems are making varying installations of electronic equipment for use at secondary and elementary levels. At Bethel the State's first level III language lab (listen-speak-record) is in daily use at the Willamette High School. In Eugene and Springfield, listening-corner equipment and materials are employed on an expanding scale, and recording and playback devices are also used. Depending on needs and experience, other levels of language labs may be installed in each community. There are, in fact, 12 level III installations, or modifications thereof, in various phases of acquisition or installation in the State.

It has been considered policy throughout the Oregon effort under title III to stress the interrelatedness of all types of materials for every subject. As a result of this policy in part, most title III projects have included requests for many types of supplementary printed materials, and in general it appears that these resources have also been strengthened in many projects.

Oregon policy regarding audiovisual materials and equipment has specifically been kept as flexible as possible. No "basic list" or suggested set of equipment or materials has been set up, and the official Guide for Oregon Projects Under Title III, NDEA carries this statement:

"Because the provision of audiovisual equipment at the local level is so closely connected with other factors of importance in good utilization of such equipment (i.e., supply and distribution of materials, teacher experience, interest and readiness for equipment application, light control facilities * * * etc.) quantitative standards for specific pieces of equipment have not been established. Each item of audiovisual equipment may be individually justified in what-

ever quantity can be shown to be essential to the individual project."

In addition, each subject-area section of the Guide carries a statement pointing out that the NDEA specifically recognizes and emphasizes the use of the audiovisual media; still further, separate standards for basic types of audiovisual equipment are contained in the Guide, and light control specifications are also written into the standards for remodeling. Facilities for light control are considered as "special equipment" in some cases where remodeling is not necessary, and where it would not serve the purpose of the act to consider these essential means for audiovisual instruction as "remodeling."

Another area in which there is increasing interest and activity in Oregon is that of local preparation of materials. One particular project will serve as an example; the high school mathematics instructors in the Beaverton school system are working together to produce visualized units for the overhead projector, making use of its unique qualities to bring new insight into special areas of this subject. The materials for the project are being supplied by the school district; the projection equipment has been acquired under a title III grant. The school system has also allowed worktime for the math instructors under a special summer program. Although the project is still in the beginning phases, it appears that some significant and interesting materials may result. The materials and experience gained will be made available to other Oregon schools when ready.

Some of the larger school systems have made an interesting use of title III by proposing projects for the acquisition of one or several items of special equipment for each school. For instance, one project stipulates a considerable number of micro-projectors, portable laboratory tables, and similar equipment for each elementary and junior high school. Another similar project in the field of audiovisual materials provides solely for a large number of new films and filmstrips in science, mathematics and modern foreign languages. Title III has also served as impetus for a growing number of joint projects, involving from 2 to 30 individual school districts, sometimes in more than one county. Most of these projects are centered on specialized materials, often films, filmstrips, recordings, and printed supplementary materials.

One of the most important phases of the title III program in Oregon is just getting underway; that is the work of special consultants in the NDEA subject areas and in instructional materials. Oregon has long practiced general supervision, and has an interesting history of effective action in this area. Now the title III program has made available a well-trained and skilled specialist in each NDEA subject area—math, science, and foreign languages. The primary responsibility of each specialist is simply the statewide improvement of instruction in his subject area. Each of the consultants is available to school systems for work with administrators, principals, teachers, and others. Each is maintaining close liaison with professional subject groups, with administrators at all levels, with institutions of higher education (especially teacher-training centers) and with groups at the national level. Each devotes full time to his particular subject area, and is also the chief resource person for the Department of Education. Each will be involved in curriculum development and planning, preparation of publications, and the wide variety of committee and group work on which these types of activities are based in Oregon.

In the instructional materials area, the Oregon Audio-Visual Association is working closely with the title III administration. One

phase of association activity undergoing expansion is the basic one of providing information and services; plans are underway for an action group which will carry out a continuing program to make sure that school administrators, school board members, the public generally, and others concerned with Oregon education have at their disposal full knowledge of the function and importance of audiovisual instruction.

A basic step to bring into reality the great potential of audiovisual instruction in every State is participation by the local audiovisual person in the planning steps for title III projects. In Oregon this fact is becoming more widely recognized not only as it pertains to NDEA but any kind of planning for improvement of instruction. The great danger is that the AV person will not get this opportunity to participate, unless he has proven himself by previous work with subject-area administrators, teachers, principals, curriculum people, and through his own audiovisual activities. Undoubtedly, what happens at this crucial local level can do more to determine audiovisual progress through title III than nearly any other factor in the program.

What has happened in less than 1 year in Oregon may well set the pattern for many future years to come, within or without NDEA. The most important developments can be summed up thus:

Title III has brought about significant new activities of great promise, both at the State and the local level.

Large sums of money have been expended on special equipment and materials, with a growing proportion going to audiovisual tools and media specifically.

The attention of administrators and teachers has been caught and directed specifically to audiovisual media as integral parts of key plans for improving instruction.

Growing interest in cooperative development of larger supplies and a broader range of audiovisual materials closer to the point of classroom use is now in evidence and will probably result in expanded cooperative activities.

State level and OAVA activities in the audiovisual field are sure of continued expansion during the next few years to meet the increasing demands for information, consultation, and in planning for increased audiovisual programming in Oregon schools.

Successful Decade Sees Growth of Port of Portland

EXTENSION OF REMARKS

OF

HON. EDITH GREEN

OF OREGON

IN THE HOUSE OF REPRESENTATIVES

Thursday, February 4, 1960

Mrs. GREEN of Oregon. Mr. Speaker, one of the greatest assets of the city of Portland, Ore., is its complex of port facilities. The Commission of Public Docks is an important part of the management of those facilities, and a very important part of the reason for Portland's growth in recent years. In a recent issue of Title Tips, a publication of the Title & Trust Co. of Portland, there appeared an excellent article about the work of the commission. Under unanimous consent I include the story in the Appendix of the RECORD:

SUCCESSFUL DECADE SEES GROWTH OF PORT OF PORTLAND

"Leading West Coast Dry Cargo Tonnage Port"; "West Coast's Leading Grain Export Port"; "Terminal No. 4 Site of Northwest's Largest Maritime Construction Project in 1959"; "1959 Ushers Out Decade of Unparalleled Progress for Portland Harbor."

Such headlines were commonplace during 1959. For Portland Harbor has just ended what was by far its most successful decade for new construction starts and handling of recordbreaking tonnages. The modern facilities located along Portland's 25 miles of waterfront and the port's large trading area—more than 300,000 square miles—are strong attractions to the world's leading shipping lines and to importers and exporters.

Cargo tonnages rose approximately 6 percent during 1959 over the previous year. Waterfront payrolls in Portland amounted to more than \$8.1 million, making the maritime industry one of Portland's largest single economic factors. In addition, studies made by the Library of Congress in cooperation with the Oregon State System of Higher Education and the State Planning and Development Department, revealed that 57 percent of Oregon's manufacturing, agriculture, fishing, and port industries have a positive foreign trade interest, while 33 percent have a net import competitive interest—evidence of the fact that international trade is the backbone of Oregon's economy.

The Portland Commission of Public Docks, entering its 50th year of service in 1960, was founded under city charter amendment to provide for and maintain the port's public marine terminals and to promote trade and traffic through Portland's harbor. Today, the commission maintains three of the finest general and bulk-cargo terminals along the west coast—owned and operated under single management and representing an investment of more than \$20 million of public moneys. The commission, operating from only a one-tenth of 1 mill tax levy for the general fund (approximately \$70,000 in 1959), maintains these facilities through the reinvestment of operating revenues, wharfage charges, etc. Privately operated docks in the harbor represent additional investment in Portland's future as a leading port.

FOUR SHIPS EACH DAY

Portland handles more than 1,500 vessels per year—an average arrival of one every 6 hours. Among primary imports are ores and concentrates, steel and iron products, foreign autos, and burlap. Leading exports are grains, lumber, paper products, and scrap metal.

Portland is linked to the world's seaports by more than 50 steamship lines. The port is serviced by more than 30 tug and barge lines, 5 major transcontinental railroads, and several of the world's leading airlines. There are more than 100 interstate truck lines operating in Portland to expedite the transshipment of imports to their final destination. The downtown banking firms with foreign trade departments, the city's customs house brokers, freight forwarders, and services of 19 foreign consuls round out the picture of a completely integrated world trade center.

Traffic and solicitation for the port of Portland is carried on extensively throughout Portland's trade area by personal calls of the dock commission's traffic department representatives. The commission also maintains a New York traffic representative.

A modern, newly installed IBM machine records unit at the commission office keeps complete, up-to-date tabulation of all commodities passing through the public terminals. This information, compiled by origination and destination, tonnage, and commodity, is useful in tonnage surveys and

planning sales solicitations. This department also maintains the commission's operating and payroll systems.

LABOR RELATIONS GOOD

All aspects of a modern port are found in Portland and are reflected in the harbor's record of progress and prosperity. Excellent labor-management relations exist in the harbor—evidenced by not a single major work stoppage in the past decade.

During mid-1959, the U.S. Department of Commerce officially announced that Portland was, for the third consecutive year, the leading west coast dry cargo tonnage port. More than 2,444,000 tons of foreign cargo passed through the port. In second place, with nearly three-quarters of a million tons less dry cargo, was Los Angeles. Seattle, Long Beach, and San Francisco followed, in that order.

Nearly 54 million bushels of grain were exported via Portland during 1959—strengthening Portland's position as No. 1 grain port of the U.S. Pacific Coast. Grains of all types, originating throughout eastern Oregon and the Inland Empire, move down the Columbia River aboard barges, and by truck and rail, to be unloaded and processed prior to export at the commission's 8-million-bushel elevator (largest tidewater elevator in the Western United States) or at one of the harbor's privately owned elevators.

The commission, noting the growing demand for imports of ores and concentrates by western U.S. industry, began construction of a \$3,700,000 bulk cargo pier at its Terminal No. 4. Due for completion in mid-1960, the pier will be the most modern bulk facility on the coast with its giant 900-ton-per-hour traveling bulk unloading tower and holding area for more than 100 rail cars. Ores and concentrates presently are the port's leading import commodity and prospects for increasing amounts are strongly evident.

DECADE OF GROWTH

The years 1950-60 marked highlights in practically every phase of Portland's waterfront industry. More than \$9 million was invested in new and modernized public facilities with funds derived from the commission's earnings and a \$6,500,000 bond issue granted the commission by Portland voters in 1954. New general cargo berths, modernization of bulk cargo handling facilities, and reconditioning of terminals gave a completely new look to the harbor and were instrumental in Portland's attaining the rank of leading dry cargo port.

Private industry spent several million more in new terminal operations and facilities. A 12-acre warehouse, reputedly the largest in the Nation, was erected in the central harbor area for handling paper products. Harvey Aluminum Co. put into service a new, completely mechanized dock, for receipt of waterborne imports of alumina ore. Union Pacific Railroad appropriated more than \$2 million in improving and enlarging its waterside freightyards and increasing its Portland base operations.

The coming decade promises more progress and even better records of achievement. A survey by a nationally recognized firm of engineering consultants predicted a constant rise in Portland's cargo handling operations and pointed out the need for added facilities in the not too distant future. A trade tour, made by dock commission members, resulted in promise of more trade with Japan, already Portland's leading harbor customer—more than two dozen personal calls were made on leading Japanese shipping company and import-export company executives throughout Japan. Portland's International Trade Fair awakened strong interest in Portland's trade area and harbor in the minds of many foreign exhibitors and national trade officials. Sev-

eral foreign government representatives expressed strong sentiments for increasing trade with Portland, even to the extent of opening trade offices here to complement the east coast offices.

Portland is seeing prosperity and an increased tempo in development of international trade and marine commerce. This development is actually just beginning along Portland's modern waterfront. The commission of public docks and the harbor's private interests are working together to maintain Portland's strong position as an international seaport and the world port of the Pacific.

U.S. Navy Band Comes Home

EXTENSION OF REMARKS

OF

HON. CHARLES O. PORTER

OF OREGON

IN THE HOUSE OF REPRESENTATIVES

Monday, February 29, 1960

Mr. PORTER. Mr. Speaker, the U.S. Navy Band comes home next week after its good will tour of several South American cities. It will return home, too, to pay its last respects to several of its members who lost their lives in the tragic air collision with a Brazilian airliner near Rio de Janeiro's Sugar Loaf Mountain February 25.

The Navy informs me that the special collective commitment service for the band members is open to the public. It will be held Tuesday, March 8, at 2 p.m. in Arlington National Cemetery. Full military honors will be accorded the men at that time.

Reports of the success of the band's trip will be coming back to us for a long time. One report on the band's March 2 visit in Santiago, Chile, has come from Ambassador Howe. The Ambassador told of the crowds who came to hear the band concerts.

In the Municipal Stadium in Santiago there were 40,000 persons present. In Constitution Plaza there were 15,000 in the audience. In Park Forrestal the number was 10,000.

As Ambassador Howe wired:

The U.S. Navy Band has endeared itself to Chile and has won the United States many friends.

I understand that the Secretary of the Navy, the Chief of Naval Operations, and other ranking Navy personnel will be present to honor those talented and devoted musicians who gave their lives in the line of duty. I join in paying my respects. The spirit of the band and Commander Brendler in completing the tour is commendable. The results can never be estimated. The band had a job to do. It did it.

The fields of battle are varied. It may not be the particular duty of the hero to carry the torch or brandish the sword—sometimes he may play his part on a violin or flute.

Under leave to extend my remarks in the RECORD, I include a list of those Navy men who lost their lives February 25, a copy of my weekly report about the U.S. Navy Band, and two news stories which appeared in the February 26, 1960, New York Times:

U.S. NAVY BAND MEMBERS

Lt. J. H. Fultz: Wife, Mrs. Luna J. Fultz, care of I. Jerome Jackson, Middelbert, N.C.; parents: Mr. and Mrs. L. G. Fultz, Arlington, Va.

E. L. Armiger, MUC: Parents, Mr. and Mrs. Joseph E. Armiger, Baltimore, Md.

Milton G. Bergy, MU2: Parents, Mr. and Mrs. Milton Bergy, Huntington, N.Y.

G. F. Meier, MU1: Parents, Mr. and Mrs. Harold J. Meier, Lockport, N.Y.

R. R. Mickellaf, MUC: Wife, Norene Mickellaf, Cheverly, Md.; parents, Mr. and Mrs. Francis J. Mickellaf, Brooklyn, N.Y.

J. A. Mohs, MUC: Parents, Mr. and Mrs. Clifford H. Mohs, Cincinnati, Ohio.

R. B. Wilklow, MU1: Parents, Mr. and Mrs. Lee Clement Mattoon Wilklow, Perry, N.Y.

A. J. Desiderio, MUSA: Parents, Mr. and Mrs. Albert Desiderio, Springfield, Pa.

V. P. Tramontana, MU1: Parents, Mr. and Mrs. Anthony Tramontana, Bronx, N.Y.

J. Rosenthal, MUC: Brother, Mr. Alfred Rosenthal, Pikesville, Md.

E. W. Richey, MUC: Parents, Mr. and Mrs. Bradford S. Richey, Eureka, Calif.

W. M. Penland, MUC: Parents, Mr. and Mrs. Thomas Clark Penland, Iowa City, Iowa.

R. S. Gaglio, MU1: Parents, Mr. and Mrs. R. E. Gaglio, Compton, Calif.

R. D. Harl, MU1: Father, Ben Hur Harl, St. Petersburg, Fla.

Henry Bein, MUC: Father, Mr. John Bein, Philadelphia, Pa.; mother, Mrs. Gertrude Bein, Philadelphia, Pa.

W. F. Albrecht, MU2: Parents, Mr. and Mrs. Frederick Albrecht, San Francisco, Calif.

R. L. Clark, MU1: Sister, Mrs. Dexter Lake, Lockport, N.Y.

J. B. Young, MUC: Father, Zebulon V. Young, Greensboro, N.C.

A. M. D'Amico, MU1: Wife, Mrs. Judith D'Amico, Adelphi, Md.

AIRPLANE CREW MEMBERS

Lt. (j.g.) Carle Lorenz Jackson: Wife, Mrs. Laura Virginia Jackson, Hollywood, Md.; parents, Mr. and Mrs. C. W. Jackson, Pryor, Okla.

Eugene Nevitte Torrance: Wife, Mrs. Marjorie Torrance, Norfolk, Va.; mother, Mrs. Annie Harvey Torrance, Arlington, Va.

James Aublin Cordell: Mother, Mrs. Letia Moore Cordell, Sylacauga, Ala.; wife, Mrs. Marjorie C. Cordell, NAS Patuxent River, Md.

Russell Edward Martin: Wife, Mrs. Hulda M. Martin, Lexington Park, Md.; father, Mr. Seward Martin, Virgle, Ky.; mother, Mrs. Clara Isaacs Jones, Devinsville, Ky.

Lt. (j.g.) Owen Proctor Hartshorn: Parents, Mr. and Mrs. Frank M. Hartshorn, Essex, Iowa; wife, Mrs. Betty J. Hartshorn, Lexington Park, Md.

Victor Dale Fugate: Wife, Mrs. Edythe Fugate, Lexington Park, Md.; father, Mr. Calvin W. Fugate, Canton, Tex.; mother, Mrs. Ruth D. Fugate, San Leandro, Calif.

Leonard Ray Maynard: Wife, Mrs. Nanetta Allen Maynard, Lexington Park, Md.

PASSENGERS

Lt. Robert S. Brown, staff consultant, liaison with band: Wife, Ruth Doris Brown, Naval Station, Trinidad, B.W.I.; mother, Dorothy T. McBride, Philadelphia, Pa.

J. B. Erickson, ATC: Wife, Doris Mildred Erickson, Norfolk, Va.

Lt. (j.g.) Burdett Van Otterloo: Parents, Mr. and Mrs. Herman L. Van Otterloo, Hall, Iowa.

Lt. (j.g.) V. A. Schoen: Parents, Mr. and Mrs. W. J. Schoen, Columbus, Nebr.

J. T. Mathenia, TM1: Sister, Mrs. Liddle Lowery, Barnhart, Miss.

C. L. Wagner, TM2: Father, Mr. Cecil Wagner, Quincy, Ill.; mother, Mrs. Erma Colbert, La Grange, Ill.; wife, Mrs. Phyllis Wagner, Quincy, Ill.

R. F. Osborne, TMC: Wife, Mrs. Evelyn L. Osborne, Key West, Fla.; parents, Mr. and Mrs. M. F. Osborne, Gallen, Mich.

W. P. Glass, TM2: Parents, Mr. and Mrs. Parker A. Glass, Kingston, Mass.; wife, Mrs. Ruth A. Glass, Norfolk, Va.

C. B. Ashby, TM3: Parents, Mr. and Mrs. B. L. Ashby, Norwalk, Calif.

SURVIVORS

Lt. George Paul Fitzgibbons: Mother, Mary E. Fitzgibbons, Worcester, Mass.

F. E. Wilson: Parents, Mr. and Mrs. Earl L. Wilson, Dallas, Tex.

H. R. Halenza: Wife, Mrs. Grace L. Halenza, Oakdale Farms, Norfolk, Va.; parents, Mr. and Mrs. Gottlieb F. Halenza, Wheaton, Ill.

PORTER'S WEEKLY REPORT

(By Representative CHARLES O. PORTER)

U.S. NAVY BAND

The tragic air collision of a U.S. Navy plane and a Brazilian airliner near Rio de Janeiro's Sugar Loaf Mountain February 25, 1960, snuffed out the lives of 36 men who had been hard at work improving our person-to-person relations in South America.

Nineteen of those killed were members of the U.S. Navy Band, which has often played in Oregon. One of the dead, Lt. J. Harold Fultz, was the assistant band leader. I mention him particularly because Lieutenant Fultz conducted the band and its chorus, the Sea Chanters, in a special version of the Oregon State song in 1958.

I had asked the Navy band if "Oregon, My Oregon" was a part of its musical repertoire. Commander Brendler and Lieutenant Fultz told me it was not but they volunteered to make it a part if I could find the music. With the assistance of friends in Oregon I was able to provide the band with the music. The result was a stirring version, musical and choral, of our fine State song.

This February when the Oregon State Society met in Washington, D.C., the recorded Navy arrangement was played for the displaced Oregonians attending the annual society dinner. There were many favorable comments which I had hoped to tell Lieutenant Fultz about when the band returned from its South American good will tour.

Seven of the Navy men lost in the crash had been sent to Argentina to help that country hunt for a mystery submarine. Like the band members they were specially trained technicians. They will be hard to replace.

It was a terrible tragedy.

[From the New York Times, Feb. 26, 1960]
SIXTY-ONE LOST AS PLANES COLLIDE AT RIO: 19 WERE U.S. NAVY BAND MEMBERS GOING TO EISENHOWER FETE THERE—ONLY 3 SURVIVORS—DISASTER CASTS PALL ON PRESIDENT'S TRIP—HE VISITS HOSPITAL

RIO DE JANEIRO, February 25.—A U.S. Navy plane and a Brazilian airliner with a total of 64 persons aboard them collided over Rio de Janeiro's bay in an overcast today.

Both planes broke into pieces and sank within view of horrified spectators.

The disaster wiped out a section of the U.S. Navy Band-Orchestra that was to have played here for President Eisenhower. When rescue operations were halted at nightfall only three survivors had been found.

The disaster cast a pall of tragedy over President Eisenhower's visit to Brazil.

ANTISUBMARINE MEN VICTIMS

With some of the top talent from the Navy Band and Orchestra the plane carried a group of U.S. antisubmarine men who had been in Argentina trying to help the Argentine Navy investigate the rumored presence of an alien submarine.

The bandmen who formed an orchestral group, were to have played at a dinner President Eisenhower was giving tonight for President Juscelino Kubitschek of Brazil. (Other reports said that the dinner was canceled because of the tragedy.)

Many members of the band are known personally to President Eisenhower and he and President Kubitschek hurried to a hospital to comfort the survivors.

James C. Hagerty, Presidential press secretary, said the President "feels terrible about this tragic accident," but would go ahead with his South American tour.

The Navy plane, a four-engine R-6D, was flying to Rio de Janeiro from Buenos Aires. (The Defense Department in Washington said it carried 38 persons. The U.S. Embassy in Rio de Janeiro said earlier there were 44 persons aboard—the bandsmen, crewmen, and members of the anti-submarine team.)

The commercial airliner was a two-engine plane belonging to REAL Airlines. The company said it carried 22 passengers, including an infant, and a crew of 4.

The three survivors, taken to Miguel Conto Hospital, were listed as: Lt. G. P. Fitzgibbons, Worcester, Mass.; F. E. Wilson, sonar man, son of Mr. and Mrs. Earl Wilson of Dallas, Tex., and Aviation Ordnance Man H. R. Halenza, husband of Mrs. Grace Halenza, Norfolk, Va.

(The Navy in Washington listed these 19 bandsmen as missing: Lt. Johann H. Fultz, assistant band leader; Milton G. Bergey, Walter M. Penland, Robert L. Clark, William F. Albrecht, Richard D. Harl, James A. Mohs, Elmer L. Armiger, Earl W. Richey, Roger B. Wilkowi, Jefferson B. Young, Jerome Rosenthal, Vincent Tramontana, Raymond H. Micallef, Gerald R. Meier, Henry Bein, Reyes S. Gaglio, Anthony M. D'Amico, and Albert J. Desiderio.)

The Navy musicians were members of a 92-man band group that came to South America February 16 for appearances at several cities. Its headquarters was on the cruiser *Macon*, now at Buenos Aires.

WITNESS DESCRIBES DISASTER

One witness to the disaster was David B. Richardson, former war correspondent and South American regional editor for the magazine *U.S. News & World Report*. He was in a taxicab near Guanabara Bay.

"I happened to glance up at Sugar Loaf Mountain and noticed it was shrouded in thick fog," Mr. Richardson said. "Just at that moment a big four-engine plane—or what was left of it—came tumbling out of the fog."

"It spiraled crazily. The tail and rear section were missing. From the chopped-off fuselage a whole array of objects came spilling out as if it were a sort of ghastly cornucopia. I thought I saw a human figure in the falling debris."

"The plane hit the water with a splash that shot a sheet of white spray into the air. Then came the bizarre sight of the plane's tail section gliding slowly downward in a slow spiral until it fell gently into the bay. Other objects fell at the same time."

"Then the scene was as placid as it was just before that horrible moment."

As darkness fell, the search for bodies was halted. Buoys were put in place to mark the spot until work can be resumed tomorrow. Rain fell through most of the day.

PRESIDENTS SEE CRASH SCENE

As the two Presidents left the hospital ward, Mr. Halenza, one of the survivors, looked in President Eisenhower's direction and said: "Goodbye and thank you, sir."

Driving from the hospital to the Embassy residence, General Eisenhower and Dr. Kubitschek passed the bay area where the planes collided. They saw a long line of people standing in the rain watching rescue operations.

Dr. Kubitschek later issued a statement from the presidential palace saying:

"The news of the disaster that robbed the lives of Americans and Brazilians fills me with profound sadness."

"I speak in this moment certain of interpreting the sentiments of the Brazilian nation. Pain and sorrow cover all of Brazil."

"I turn my thoughts to God in moving prayer for the souls of those who died. And I hope that this sacrifice will unite even more the two American nations that live in these days moments of the purest joy and solidarity."

Robert Hartman, chief of the Washington bureau of the *Los Angeles Times*, accompanied the Presidents to the hospital as representative of all newsmen traveling with the American Chief Executive.

President Eisenhower, Mr. Hartman reported, stopped at the bedside of each of the three Americans, gave each a sympathetic pat and expressed wishes for their speedy recovery. All three survivors were in shock and under heavy sedation, but they obviously recognized the President.

President Eisenhower remarked to the men that "this surely is a tragic thing" and added that he was confident the doctors and nurses "will take good care of you."

The Embassy said the Navy plane, similar to a DC-6, was scheduled to fly at 6,000 feet and was headed for a landing at Galeao Airport.

The Real airliner was scheduled to fly at 5,000 feet and was coming in from Vitoria, north of Rio de Janeiro, for a landing at Santos Dumont Airport.

Rear Adm. John Quinn, chief of the U.S. Navy, mission to Brazil, appointed his deputy, Capt. John G. Hilton, to head a board to investigate the crash.

Secretary of State Christian A. Herter, who remained here while President Eisenhower was in Sao Paulo, issued a statement saying:

"Words cannot express my shock on hearing of the tragic accident. I can only express my profound distress that such an accident should have taken place and my deepest sympathy to the families of those who unhappily lost their lives."

[From the *New York Times*, Feb. 26, 1960]
NAVY BAND HEARD ALL OVER WORLD—COLORFUL OUTFIT, WHICH CAN PLAY SYMPHONY OR DANCE MUSIC, SET UP IN 1924

WASHINGTON, February 25.—Music lovers in many parts of the world have heard the famous Navy Band, some of whose members perished today in a plane collision over Rio de Janeiro.

The colorful outfit has played in more than a thousand cities at home and abroad since it was organized in 1924.

The band grew out of a unit of musicians stationed at the navy yard here prior to 1924. Recognized as the outstanding of a number of small musical units of the Navy, the organization was designated as the official band by Congress. This enabled it to play in the inaugural ceremony for Calvin Coolidge on March 4, 1924.

Navy ships had their small bands for almost a hundred years before the official band was formed. The log of a frigate, written in 1825, refers to the signing of a musician, with a salary of \$10 a month.

One of the famous units was the Great Lakes Band, led by John Philip Sousa, who was commissioned in the Naval Reserve to lead it.

Within the present Navy Band is a complete symphony orchestra, a section to provide light opera music and a dance band.

The band is a traditional part of Washington's parades and inaugural ceremonies, and sections play at funerals for Navy men at Arlington National Cemetery.

It has a library of more than 20,000 pieces. It operates its own school of music, to which musically inclined men are eligible after 3 months' basic training.

Lt. Comdr. Charles R. Brendler, present commander of the band, joined the Navy more than three decades ago, became chief musician for the old Navy Yard band and eventually advanced to leader of the official band.

The present size of the band is 128 men. Of those, 93 were on the South American tour, but only a minority were aboard the plane that crashed.

In remarks inserted in the *CONGRESSIONAL RECORD* Monday, Representative CHARLES O. PORTER, Democrat of Oregon, said that efforts had been under way since 1957 to get the band to Latin America but that a lack of funds had prevented a trip.

Early this year, he said, the Navy authorized the cruiser *Macon* to "make a series of official state visits to certain coastal ports along the eastern shore of South America." The Navy Band was a logical choice to go along, he added.

Referring to plans for the band to play at the U.S. Embassy in Buenos Aires at a reception honoring the President, Mr. PORTER called this one of the most important assignments in the band's historic career.

"The assignment was not prearranged, I am told," he said. "It was a happy coincidence, a most opportune crossing of schedules for the President, the citizens of Argentina and the U.S. Navy Band members."

LAWS RELATIVE TO THE PRINTING OF DOCUMENTS

Either House may order the printing of a document not already provided for by law, but only when the same shall be accompanied by an estimate from the Public Printer as to the probable cost thereof. Any executive department, bureau, board, or independent office of the Government submitting reports or documents in response to inquiries from Congress shall submit therewith an estimate of the probable cost of printing the usual number. Nothing in this section relating to estimates shall apply to reports or documents not exceeding 50 pages (U.S. Code, title 44, sec. 140, p. 1938).

Resolutions for printing extra copies, when presented to either House, shall be referred immediately to the Committee on House Administration of the House of Representatives or the Committee on Rules and Administration of the Senate, who, in making their report, shall give the probable cost of the proposed printing upon the estimate of the Public Printer, and no extra copies shall be printed, before such committee has reported (U.S. Code, title 44, sec. 133, p. 1937).

GOVERNMENT PUBLICATIONS FOR SALE

Additional copies of Government publications are offered for sale to the public by the Superintendent of Documents, Government Printing Office, Washington 25, D.C., at cost thereof as determined by the Public Printer plus 50 percent: *Provided*, That a discount of not to exceed 25 percent may be allowed to authorized bookdealers and quantity purchasers, but such printing shall not interfere with the prompt execution of work for the Government. The Superintendent of Documents shall prescribe the terms and conditions under which he may authorize the resale of Government publications by bookdealers, and he may designate any Government officer his agent for the sale of Government publications under such regulations as shall be agreed upon by the Superintendent of Documents and the head of the respective department or establishment of the Government (U.S. Code, title 44, sec. 72a, Supp. 2).

Appendix

Abraham Lincoln

EXTENSION OF REMARKS

OF

HON. KENNETH B. KEATING

OF NEW YORK

IN THE SENATE OF THE UNITED STATES

Saturday, March 5, 1960

Mr. KEATING. Mr. President, the distinguished minority leader, the Senator from Illinois [Mr. DIRKSEN], recently delivered a splendid address at the 100th anniversary of the Cooper Union, in New York City. It is appropriate that Senator DIRKSEN should choose as his topic "The Man From Illinois," for he probably knows more about Abraham Lincoln than does any other Member of Congress.

The Senator's topic was doubly appropriate because in so many ways he exemplifies the virtues and abilities of The Great Emancipator. I hazard the guess that every Member of this body holds the distinguished Senator from Illinois in the highest regard, and that he is well liked by every Member of the U.S. Senate. There is also great respect for his activities as a leader of his political party and as a spokesman for American ideals.

Mr. President, in order that a wider audience can benefit from the eloquence of the minority leader, I ask unanimous consent that his address at the Cooper Union be printed in the Appendix of the RECORD.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

THE MAN FROM ILLINOIS

(Address by Senator EVERETT MCKINLEY DIRKSEN at the Cooper Union, New York, N.Y.)

One hundred years ago today the man from Illinois came here to speak. He sought to make clear that the men who brought forth this new Nation were familiar with the problem of the extension of slavery. He came to prove that in all their later actions and conduct they did not directly or otherwise take the position that the Federal Government had the power to deal with this institution and its control in the territories. He came to accent the moral issue involved by pointing out that the fact that the South thought slavery right and the North thought it wrong was the precise fact at the bottom of the controversy. To all of his countrymen he addressed the appeal that we not lightly set aside what the Founding Fathers had wrought and that he and his associates were not unreasonable or sectional in their position. To those of his own political faith he urged that nothing be done in passion or ill temper. And, finally, he uttered his own supreme conviction that right makes might, and to that end he asked all that they do their duty.

How cruel and mistaken contemporary judgments can be. When he left Springfield, Ill., to come to New York for this address, the Springfield Register made this cryptic

comment: "Subject not known, consideration \$200 and expenses; object, presidential capital; effect, disappointment." Thus are men blinded to the inexorable sweeps of destiny. Ninety days after he spoke here he was nominated for the Presidency on the Republican ticket. Eight months after his appearance here, he was catapulted into the Presidency even as the fevers of the Nation quickened, and the ominous rumble of the irresistible conflict grew louder and louder. The man from Illinois was to become the grand captain in a vast and bloody conflict.

We must go back beyond the address delivered here 100 years ago tonight to note the emergence of the man from Illinois as the incomparable crusader in a moral cause, the magnificent missionary whose real armor in a day of fiery ordeal was his incandescent conviction, his unflinching zeal, his invincible logic, and his unflinching sense of right and wrong. We must indeed go back to the very prairies of Illinois, which he hallowed and where his brooding spirit still lives.

It was in May of 1856 that one might have noted the emergence of the inner spirit which was to be his shield and buckler.

Two years before that date, the repeal of the Missouri Compromise and also the new and hateful doctrine of popular sovereignty was beginning to breed a strong revulsion in the land.

Before that, the issue of slavery was regarded in many quarters as a matter of policy rather than a transcendent moral issue. Among many of that day, it seemed to be little more than an intellectual exercise.

At the meeting in Bloomington, Ill., on May 29, 1856, the man from Illinois was summoned to speak at the party convention. This was the occasion when he uttered the celebrated "Lost Speech." The form and text may have in large measure been lost, but the spirit and effect were imperishable.

His law partner, Mr. Herndon, was present on that occasion. He referred to that speech as the greatest in the life of the man from Illinois. Until then, according to Herndon, the slavery issue had, in fact, been argued and discussed on grounds of policy and not from the eternal standpoint of what was right and wrong. But on that day, the man from Illinois was baptized in a new and unshakable cause. "From that day," wrote Herndon, "to the day of his death, he stood firm in the right."

The smothered flame had broken forth. A new and almost savage sense of justice fired his energies. The soul of the crusader was now seasoned. A new sense of mission was lighting the way. The man from Illinois had found his cross. There on the rolling prairies of Illinois where he had been a storekeeper and postmaster, lawyer and surveyor, State legislator and Congressman, the magnificent missionary had suddenly emerged to become mankind's greatest crusader in a human cause.

In that day and time there were many other events which aided destiny in making the man from Illinois ready for the role he was to play. In the year 1856, James Buchanan was elected President. In the territory of Kansas the recurring clashes over the slavery issue were being referred to as war. The unrestrained spirit of John Brown burst forth in murderous action like that of some horseman out of the Apocalypse, crying for death and vengeance. In that time also came the decision of the U.S. Supreme Court under the leadership of Chief

Justice Taney in the Dred Scott case, a decision which was to make history and to shake history as well.

Came also in that day a most extraordinary document, then known as the LeCompton Constitution, under which one group believed and expected that the Territory of Kansas might come into the Union.

There came in the year 1858, a campaign for the U.S. Senate between the man from Illinois and a distinguished and able opponent, a campaign marked by sharp allusions and pointed personalities, as each sought victory. And in the late summer of that year, as a part of the campaign, came that celebrated series of debates which have so greatly enriched the political literature of that day and left a revealing insight for those who were to come after.

In this great continuing discussion beginning at Ottawa, Ill., and ending in Alton, few things were left undiscussed.

The debate embraced the Missouri Compromise of 1850, which sought to limit the extension of slavery. It included the effort to repeal that compromise through the Kansas-Nebraska bill, which was piloted through a committee of the U.S. Senate by Senator Stephen A. Douglas, who was the opponent of the man from Illinois.

It involved the Dred Scott decision. It covered the personal life of the candidates.

But the moral issue became the overriding light and it came in the very first discussion in the first debate at Ottawa.

"I hold," said the man from Illinois, "there is no reason in the world why the Negro is not entitled to all the natural rights enumerated in the Declaration of Independence. The right to life, liberty, and the pursuit of happiness, * * * and the right to eat the bread without the leave of anybody else which his own hand earns. He is my equal and the equal of Judge Douglas and the equal of every living man."

Here was the beginning of the moral thunder which was to roll down through conflict, through emancipation, and through victory.

On they went—these two gladiators—from Ottawa to Freeport, from Freeport to Jonesboro, from Jonesboro to Charleston, from Charleston to Galesburg, from Galesburg to Quincy, and from Quincy to Alton.

By that time it was mid-October in the year 1858. It was at Alton where the final discussion took place. Slavery is wrong. It is wrong. It is wrong. The very word "wrong" came tumbling from the lips of the man from Illinois over and over again.

And in that final discussion, the man from Illinois said, "That is the real issue. That is the issue which will continue in this country when these poor tongues of Judge Douglas and myself shall be silent. It is the eternal struggle between these two principles—right and wrong—throughout the world."

In that day, even as in this day, editors and politicians, scholars and historians could interpret the debates as they saw and felt them against the backdrop of their own generation.

It may be difficult to evaluate this great event by orienting oneself into that period and then looking backward into the past and forward into the present.

Two years before the debates the great moral missionary had emerged. Character and conviction had emerged. A notion of the ultimate course which the country was to take and the moral concepts which must

be asserted had emerged. The missioner had found himself, and so on and on he went. The issue of principle was drawn. It was the age-old struggle of right and wrong.

At first it had to be tempered to reality, and the man from Illinois was indeed a realist. He knew that he was dealing with an entrenched institution. He knew that he was dealing with a Supreme Court, with a Congress, and with a Constitution. He knew that he was dealing with a divided land and with people who were sharply divided. He was dealing with friends and party associates who were deeply interested in a political victory. He was dealing with his own senatorial candidacy. All these were realities and he kept constantly in mind the necessities of the occasion.

Moreover, he knew that the people must be conditioned for this whole dose of basic moral principle and the struggle between right and wrong.

This was not a case for a thimbleful of gospel, and as the very conditioning process went on, so the conditioning of the spirit of the man from Illinois went on. With it all there was the slow but inevitable contagion which developed. The thousands upon thousands of people who attended the debates or who read the accounts were caught up in the fervor of the occasion. They were given a sustained chance to think and to meditate on the moral issue and to gradually separate the superficial from the genuine. They had a chance to get a sharpened sense of the real issue and to reflect week after week upon the basic principle of human equality.

And so at long last as the great issue of that day began to incubate, the man from Illinois was invited to address a meeting here in Cooper Union. He arrived on February 25, 1860.

He had accepted the invitation extended to him, together with the promised fee of \$200, partly because he wanted to come and see his son, Robert, who was then at Phillips Academy in New Hampshire and was expected to enter Harvard but had done very poorly in his entrance examination.

The weather as contemporary reports indicate was unseasonable and a heavy snow blanketed the city. This might have discouraged attendance at the meeting, and yet it is said that 1,500 people came to the huge basement hall to hear him. In that audience were great men of that period who helped to fashion public opinion. It included Horace Greeley and George Palmer Putnam, William Cullen Bryant and David Dudley Field; and it was William Cullen Bryant who introduced the man from Illinois to that audience 100 years ago tonight.

Here in Cooper Union the man from Illinois, in his ill-fitting wrinkled clothes, answered the South; here he answered those who charged his party with resorting to sectionalism; here he answered those who charged his party with inciting John Brown's insurrection; here he established beyond all doubt that the Pounding Fathers not only understood the slavery issue but that a majority of those framers of our basic law pursued a constant and consistent course in not limiting the Federal power to deal with this institution in the territories; and here it was that he set his foot on the first rung of the political ladder which took him to the Presidency, for it was but a few days more than a year after his appearance at Cooper Union that he took the oath as President of the United States of America.

How often in the century which has elapsed have his fellow countrymen expressed the prayerful wish and hope that he might be alive in days when we were confronted by a crisis. This human frailty is not strange. It is in the nature of mankind to wish their heroes back from their pedestals when the way seems dark and the future uncertain. Once in an hour of crisis

and despair in England's history a celebrated Englishman was moved to say, "John Milton, thou shouldst be living at this hour."

But the man from Illinois lives on because he speaks constantly to all the generations who have come after him. The Apostle Paul, in his letter to the Hebrews, comments on the sacrifices made by Abel to gain righteousness, and then said, "Being dead, yet speaketh". The man from Illinois, being dead yet speaketh to his countrymen time after time. And what does he say?

He speaks of liberty not merely in its relation to the slave issue of his own day, but because of its promise to all and its importance to the unfolding of the Republic. In a fragment which he set down on paper in 1861 in the very turmoil of conflict, he paid testimony to the Constitution and to the Union and their impact upon our national well-being, and then he added, "but even these are not the primary cause of our great prosperity. There is something else, and that something is the principle of liberty to all—the principle that clears the path to all—gives hope to all—and by consequence, enterprise, and industry to all." That sentiment might well have been uttered in every home, at every fireside, at every workbench, in every citadel of commerce this very night 100 years after the man from Illinois stood here.

He spoke of unshakable purpose in the pursuit of fundamental principles. To a friend, Henry Asbury, he wrote in 1858 that the "cause of civil liberty must not be surrendered at the end of 1 or even 100 defeats." To Secretary Seward he wrote in 1862, "I expect to maintain this contest until successful, or until I die, or am conquered, or my term expires, or the Congress, or the country forsakes me." In this hour, a century later, what a nourishing sentiment this is, as the Congress, having before it a vivid recollection of the incidents at Clinton, Tenn., and Little Rock, Ark., wrestles with the great issue of civil rights, civil liberty, and the equal protection of the laws guaranteed by the Constitution.

The man from Illinois spoke of the steady course as the true course in preserving a great cause. Then as now there were those who would move faster. Then as now there were those who urged a course of action that might well have jeopardized the very cause for which so much blood had been shed. Heavy as were his burdens, he could still say to Senator Chandler in 1863, "I hope to stand firm enough not to go backward and yet not go forward fast enough to wreck the country's cause." What a lesson for those who in this tumultuous period would recreate America over night and spurn all the lessons of the past.

The man from Illinois even now speaks of courage and devotion to a great issue and a great cause regardless of the political consequences. Even as a young man while addressing a church group in the city of Springfield, Ill., he could say, "Let not the probability of defeat deter us from asserting a cause which is just." In this day and time the lure of political victory is great. The lure of public office is even greater. The desire to appease sectional and economic groups is difficult to restrain. The impulse to yield to pressure is not unknown. Well might we listen to the man from Illinois, as he placed causes and principles above all other considerations.

Above all else, he speaks to us of the future. How preoccupied each generation becomes with its own affairs and concerns, and how often the future is forgotten.

The man from Illinois was thinking not merely of his own time but of the future of the Republic, knowing that unnumbered generations would live in this fair land. What then was to be their legacy?

In his message to Congress in 1861, he said, "The struggle of today is not altogether for today—it is for a vast future also."

But it was at Gettysburg that the grand sweep of the past, the present, and the future was in his mind and in his heart. First came the deathless question whether a nation conceived in liberty and dedicated to equality could long endure. It is a deathless question for it continues to roll down the corridors of time as an ever recurring challenge.

Then came the haunting present, as he noted the sacrifices which had already been made on the altar of that cause. And then came the future expressed in terms of the unfinished work, the great task that remained, and finally the flaming hope "that this Nation, under God, shall have a new birth of freedom—and that government of the people, by the people, for the people shall not perish from the earth."

The man from Illinois still speaks to his countrymen. So long as Providence endows his countrymen with the capacity to remember, he shall continue to speak to them, even as he spoke to them here 100 years ago this night. The man from Illinois—his name was Abraham Lincoln.

Urban Decay Is the Forerunner of National Decay

EXTENSION OF REMARKS OF

HON. BARRATT O'HARA

OF ILLINOIS

IN THE HOUSE OF REPRESENTATIVES

Monday, February 29, 1960

Mr. O'HARA of Illinois. Mr. Speaker, it is a source of wonderment to me that so many of my distinguished colleagues know so little about our big cities of the North. It concerns me that because of unfamiliarity with urban changes, problems, and needs there is so little awareness of the danger to our country in urban neglect.

Julian Levi, director of the Southeast Chicago Commission, recently wrote: "Budget allocations for urban renewal are, of course, political questions, but the future of American civilization and democracy had better also be debated."

Stanley Pargellis, director of the famed Newberry Library, of Chicago, participated in the "know your Chicago" program sponsored by the Women's College Board and the Downtown Center of the University of Chicago. The University of Chicago magazine publishes his contribution in its issue of March 1960. Reading it will give to my colleagues from other areas something of the feel of the big city. It will leave them with a greater sense that our big cities in a world of transportation and other changes and shifting populations, do have serious problems and unless those problems are resolved all our country will be adversely affected. History makes it crystal clear that urban decay is the forerunner of national decay. Mr. Pargellis' article follows:

THE SPIRIT OF A CITY—CHICAGO

(By Stanley Pargellis, director, Newberry Library, Chicago)

Can we compare the spirit of Chicago with that of any of the great cities of the past? I doubt it.

A German prince who has lost his heart to America thought the comparison unfair

to the old cities. They all live on their past, he said in America you look ahead. And yet the report from those who know Europe well is that Rome is again the first city there, because it is looking ahead, and that London is second, and Paris a poor third. And where would Moscow rank, if judged by that standard?

Nor can Chicago today be compared to these cities at the moment of their greatest glory; with Athens, a city-state, its citizens poverty stricken in comparison with ours today, almost continually at war with its neighbors, and yet rising for a generation to a height of architectural, cultural, literary, and philosophic achievement that has been the despair and the inspiration for the world ever since; Rome in the time of Augustus, a city of brick become a city of marble, a city-state grown into an empire, its Romans proud to have been born to rule the world; or Florence under the Medici, or Paris in the time of Louis XIV; or Victorian London, capital of a world empire when Chicago was a muddy, stinking village. Comparison of Chicago with these cities in their great moments would be unreal, or, if you want to press it, unfair to Chicago.

And yet, from the experience of these and other cities, one can set down some, at least, of the marks which distinguish a great city. Mind you, there is no agreement on this. To some poets a city consists of the little people who live there, and not of its buildings and bridges, its towers and palaces and churches. To others it is a place where famous men have lived, dined, talked with their friends, or have written books and painted pictures and composed music. To others, and I think I would agree, a city, any city, is so complex that it cannot be understood. It is mankind's greatest work of art, because it represents the collective effort of all of its citizens. Without cities there would be no civilization—the terms are synonymous.

What are some of the marks which, generalized, make a city great?

First of all, I would place freedom. Traditionally, the medieval city gave freedom to a serf from the country if he had lived a year and a day within its walls. The city has always given privacy to the individual, from penthouse to garret—curious that both should be on the same top floor—privacy not found in a small town or in the country. What a man does in a city is his own affair, and no one else's, save in a police state, which, if it continues for long, ruins the city and its culture. And the city provides a stimulus, if he wants it, not found elsewhere. The queen comes to the city, the citizens assemble in the forum, they flock to hear the sermons of Savonarola, they throng into the Crystal Palace. Suburbanites, even in this day, have little concept of the life of a city. They may draw their sustenance from it; they may occasionally honor it with their presence, they may make a contribution of one sort or another now and then to it, but they have removed themselves from its lifeblood. Their freedom, if they have it in the suburbs, is secondhand, derived from the city they have abandoned. Freedom, I repeat, is only to be found and nourished in the city; only there does one's next door neighbor neither know nor care what you are doing; the city, the mysterious city, swallows us, and leaves us free.

Second, I would put in my category of the things that make a city great—civic pride. This is so enormous a subject that I cannot begin to do it justice. Listen to Pericles: "Our public opinion welcomes and honors talent in every branch of achievement, not for any sectional reason but on grounds of excellence alone." Athens, had it had a daily newspaper, would have headlined the Olympic games as we did the White Sox

winning the pennant; and it would have given equal, if not more space in the press to the first performance of a play by Euripides.

What creates a sense of civic pride? Let's start with the very small things. In the days when Britain was conquering India, and Canada, and ruling the Seven Seas, Dr. Johnson, walking the streets of London, had to keep to the wall, nearest in from the curb, lest garbage and slops be dumped on his head. Maybe cleanliness, so important to us today, is not necessary if the city has other merits. And yet, in default of other merits, we now judge a city by its degree of cleanliness; I was in such-and-such a city in Africa, filthy; such-and-such a city is clean. England in the late 18th century had Goldsmith for its novelist, Burke for its politician and philosopher, Garrick for its actor, Sheridan for its dramatist, Reynolds for its painter, and Johnson for its Great Cham.

Take a bus sightseeing through Chicago. What do you see? Loyola, Mundelein, Northwestern, the Art Institute, the Chicago Historical Society, the Elks Memorial, the University of Chicago, Bughouse Square and the Newberry Library, the Stock Yards, the parks, and the tall buildings. These, perhaps 90 percent of them, are, as Walter Lippmann said the other day, "the institutions which are essential to a good society, yet cannot be operated for profit." They are the sights which a profitmaking organization singles out as a source of pride for Chicago.

Civic pride—you can tell from the way a man leaves his money where his heart is. I have a friend who has gone through all the wills of the 16th century England, in order to discover what the people in every city and county in England believed in then, as worth continuing and worth their money after they had met the requirements of their families. What will a similar survey of wills made in Chicago show when a scholar, a century hence, works upon them? It looks as though, now, many men believed much more in Eastern institutions like Harvard and Yale than those in their own city. They are, and their wills show it, halfhearted Chicagoans.

We have institutions here which, if this city develops as it should and will, will match anything the world has to offer. But the men who are putting their money on Chicago's future seem not to be putting it in Chicago's cultural institutions. There is in this city a Library of International Relations with 50,000 volumes, the result of one woman's devoted efforts over a number of years. She cannot find the sources from which to support it. She is negotiating for the transfer of this library, in a city which is going to become, with the opening of the St. Lawrence Waterway, one of the world's great ports and therefore presumably concerned with the world's problems, to the library of Michigan State University, at East Lansing. As far as I can see, Chicago is accepting this loss without a tremor.

Civic pride—a city should, as the Germans say, schön liegen; lie beautifully. And yet, I wonder about this. Rome has hills, and a rather miserable dirty river. Most of the European cities have not much in the way of natural scenery; none of them has a river like the St. Lawrence, with the citadel of Quebec above it, or bays like San Francisco and New York; or a lake front as carefully and well guarded as Chicago's. The spirit of a city in the past has not depended very much upon its natural beauties.

There is another word which enters into this concept of a city's spirit. Listen again to Pericles: "We are lovers of beauty without extravagance, and lovers of wisdom without unmanliness. Let us draw strength from the busy spectacle of our great city's life as we have it before us day by day, falling in love with her as we see her." Love for a

city—this is a different thing from civic pride. A real Londoner, when the bombs began to fall, supposing he were 40 miles away and safe, had got to get back into the city. It was his; he'd got to be there. It's no question of the safety of his own place, it was simply the city. To be there through that misery with his own, to suffer with them, and if it comes to it, to die with them. Back to London, at whatever cost. Back to the tower, St. Paul's, Fleet Street, Trafalgar Square, Piccadilly Circus, Hyde Park.

I asked a taxicab driver the other day "What do you think of Chicago?" "I like it." "Why?" "I can make money here." "Do you love it?" "No, I am a Greek, I am making money to return home." "Where are you from?" "Athens." "Do you love Athens?" "Oh-oh-hohoh."

Some people love Chicago as Londoners do London, or Greeks Athens. I don't know how many.

Love for a city is one of those intangibles about which it is difficult to talk. I have known New Yorkers, little New Yorkers, for whom the universe rises and sets on Third Avenue; we all know Bostonians for whom still that universe's hub stretches west to the Mississippi; Philadelphians there are who must live and die within the potential peal of the Liberty Bell.

Ruined cities in Germany were asked, after the war, what they first wanted restored. In Stuttgart they wanted a department store; in Frankfurt, because it was on the border between the Catholic and Protestant belts, they wanted a Catholic church, and so voted; in Mainz there was to be the annual carnival the following February, and they wanted a hall for it. They traded wine for steel beams to build the hall. If Chicago were bombed, and we were asked to vote what should be restored first, what would we choose? Marshall Field's, the Art Institute, Comiskey Park? Or would we say, let us alone to build what we can manage, each of us by ourselves?

Love for a city—maybe the easy way out is to follow the novelists. Wherever love is—and that means for the particular girl—there is the beautiful city. There the towers stand enchanted, there the street lights fold and shield, only two among the millions, all alone, in love. That is the beautiful city, whichever one it be.

Let us get at this question of Ethos another way. Cities today in this country have almost insoluble problems. They are being drained away to the suburbs, which are not under their jurisdiction. Within another decade 80 percent of the population of the United States will live in metropolitan areas, but the main city itself cannot get financial support from all those millions. It is left with the problem of supporting the abandoned multitudes who must stay within its limits, the slum dwellers, the helpless, the poor, the juvenile delinquents, the aged. The modern city simply hasn't money enough to keep up with the normal increasing costs of fire protection, police protection, and of teachers for its schools. It has, under our outmoded State constitutions, no means of raising the money it needs. It has only sales and property taxes to depend upon, which are not enough. It is easy to say that, if the city were cleaner politically, if we didn't have aldermen manipulating matters in their own wards to their political advantage, if we didn't have an unacknowledged but apparently still existing connection between organized crime and politics, if we had—in short—an ideal city government—seldom obtainable in a democracy—then our city problems would be solved. That is not true. The mischief of the tremendous disintegrating city would still remain. Chicago has done as much as any city can to solve this question by focusing attention upon the Loop. It has built expressways and garages, it has not had

the power to continue cheap suburban means of transportation.

Intelligent city planning—and city planning is essential—becomes impossible under these conditions. At the moment the city needs Federal aid more than do the farmers. Perhaps the only solution in the long run is that every metropolitan community become a State of the Federal Union. The State of Chicago, running from Lake Forest to Gary, and as far inland as future population growth would appear to warrant, would carry a weight in Congress it does not carry today. There would then be possibilities of intelligent consideration of the entire metropolitan city problem.

In the meantime the swollen, sullen multitudes continue to descend upon the city. It is obvious why they come. A good living, or a better living than they have had, can be made here. "Oh, sure, I like Chicago. I do all right here."

There are, says Sir. George Clark, three attitudes of mind to be found in a city. First are those who are active in the city's behalf. They feel responsibility for it; consciously they serve its administrative, business, and cultural life. They are the decision makers and the artists, writers, thinkers, and educators who strive to make their wares available to all. Next come the people who participate much less actively but still feel a pride and joy in their citizenship. The fortunes of the city depend upon the relationship of these two groups to a third; those who merely live in, but not for or by, the city and who turn to their own private gain or loss whatever the city proffers to them. The test of city planning in the future is whether it can convert the third group to the convictions of the other two. And such city planning somehow means an ease of transportation, airports, shops, theaters, hotels, law enforcement, city administration—all these things, so well built and arranged and planned and carried out that the city comes to be something stable in the modern whirlpool. The mayor's committee is making great strides towards the accomplishment of this ideal, but the ideal is still far and away in the future.

The spirit of Chicago. What is it? Native Chicagoans are not as trustworthy on this judgment as foreigners. We have in the Newberry the travel account of almost every foreigner who ever visited Chicago and wrote a book about it. I'll give you a few. Sienkiewicz, the Polish author of "Quo Vadis," came here a few years after the fire. It's a port, he says, in the middle of the continent. It unites New York, with the West. It's a city built by giants for giants. It's a fantastic premonition of what 20th century cities are to be. Its got innovations unknown elsewhere, like telegraph poles. The vitality and incredible energy of its inhabitants, who all look to tomorrow. And here is a German in 1931 prophesying that in 1960 Chicago will have 9 million people, will be the center of the world for certain industries and the business center of the United States. It will have 20 acres of park for every 1,000 people, and since civilization has moved from Athens to Rome to Paris to London to New York to Chicago, it will be the center—"mittelpunkt"—of the migration of peoples. "Bevolkerung."

I have been asking foreign visitors in Chicago, who know something of the city, what they think its spirit is. Says one: "Three American cities are known on the Continent: Chicago, Hollywood, and San Francisco. They say in London that Chicago is known for only two things: Poetry magazine and gangsters." And another defines "ethos" as what its people do after the business of earning a livelihood is over for the day. I don't know what they do; neither do you. I know only that we are not producing so very much creatively. We were the natural center in

the country for TV; we missed out on it. Most young writers of merit succumb to the lure of the East, to its money and its opportunities. What do people do in their spare time? How many are doing creative things, which in the old American dream was what the individual would be doing after he was released from the tiresome drudgery of barely making enough to keep his head above water?

And finally here is a visitor who says, "Don't be modest in this business of Ethos. Where is there anywhere in the world, or anywhere in past of the world, a second city which can compare with Chicago? New York is first, we must admit. But you have a university, he says, which has probably more intellectual ferment in it than any university in the world. In the university rankings, he says, it is fourth or fifth; I would put it after Harvard, which is far and away the greatest university in the country. But who comes really second? Chicago stands there with Yale and Columbia and California. Where can you find a second city anywhere with an art gallery like yours? Or your museums, opera. You have everything a great city should have—the things that you proudly show visitors—and you must hang on to them all at whatever cost."

Old time Chicagoans may disagree with this enthusiastic judgment. They will say that Chicago moves in spurts, and that that is one of the characteristics of our spirit. We are slow to move, so slow that sometimes we miss the opportunity and the need. It must be drummed into our heads that this year, say, it is Roosevelt University, a fine institution deserving of support, which needs money. And meanwhile the University of Illinois, supported in large measure by funds from the Chicago area, plans to move into an area where it is not really needed. Our city universities have sufficient potential growth to take care of an increasing number of students. The building and maintenance of a new university will be a heavy drain on State resources. Nobody, as far as I know, has raised this basic objection to the University of Illinois plans.

My effort has now come to an end. I have given you many opinions about the spirit of cities, and of Chicago in particular. We are young, so bold and yet so cautious, less sophisticated than New York, rougher but not as hard (Chicago has few libel suits in comparison with New York), an appealing city, a friendly city (all my foreign friends say that), and a city which, somehow representing more of America's diversities than any other metropolis, has an unbounded future. We are now in direct touch with salt water, which has always broadened men's horizons, but, like Paris and Rome, not too closely in touch. The spirit of a city is an unspoken compact between the dead, the living and the yet unborn. If we can keep and build on what we have and are going to have, our children's children will yield to no city in pride of place.

Annual George Washington Dinner of American Good Government Society

EXTENSION OF REMARKS

OF

HON. KARL E. MUNDT

OF SOUTH DAKOTA

IN THE SENATE OF THE UNITED STATES
Saturday, March 5, 1960

Mr. MUNDT. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an announcement of the annual George

Washington dinner of the American Good Government Society, which this year is going to be held on April 30. All the details of the dinner are included in the release which I have asked to have printed in the Appendix of the RECORD.

There being no objection, the statement was ordered to be printed in the RECORD, as follows:

STANS TO BE DINNER SPEAKER

The Honorable Maurice H. Stans, Director of the Bureau of the Budget, will deliver the address of the evening on April 30 at the annual George Washington Dinner of the American Good Government Society to be held in the Sheraton Park Hotel. This was announced yesterday (Sunday) by A. Burks Summers, president of the society.

At the dinner the society's George Washington awards will be given to Representative GRAHAM A. BARDEN, North Carolina Democrat, and to Senator BARRY GOLDWATER, Arizona Republican. The awards are made annually by the society for contributions to the cause of good government. April 30, the date of the dinner, will be the 171st anniversary of the inauguration of George Washington as the first President of the United States. The award to Mr. BARDEN will be presented on behalf of the society by Representative CHARLES A. HALLECK, Indiana Republican, who is minority leader of the House of Representatives, and that to Senator GOLDWATER will be presented by Senator STROM THURMOND, Democrat, of South Carolina.

Members of the society's dinner committee are: Rudolph F. Bannow, Bridgeport, Conn.; Hyman L. Battle, Rocky Mount, N.C.; Walter R. Bimston, Phoenix, Ariz.; Mrs. Katherine C. Blow, Yorktown, Va.; Hon. and Mrs. John W. Bricker, Columbus, Ohio; Frank C. Brophy, Phoenix, Ariz.; J. Edgar Brophy, Lenoir, N.C.; Raymond A. Bryan, Goldsboro, N.C.; R. T. Burney, Wilmington, N.C.; Hon. and Mrs. Edward R. Burke, Kensington, Md.; Harold F. Coffey, Lenoir, N.C.; Hon. and Mrs. William M. Colmer, Pascagoula, Miss.; Hon. and Mrs. Colgate W. Darden, Jr., Norfolk, Va.; Colonel and Mrs. J. Hunter Drum, Washington, D.C.; Mr. and Mrs. Stephen F. Dunn, Bethesda, Md.; Hon. and Mrs. Paul Fannin, Phoenix, Ariz.; Mr. Henry A. Foscoe, High Point, N.C.; Daniel C. Gaine, Owatonna, Minn.; Miss Louise Gore, Potomac, Md.; Hon. and Mrs. Laurens Morgan Hamilton, Warrenton, Va.

Also, Walter Harnischfeger, Milwaukee, Wis.; Sherman Hazeltine, Phoenix, Ariz.; Mr. and Mrs. Lewis R. Holding, Smithfield, N.C.; Mr. and Mrs. Bert W. Holloway, Burbank, Calif.; Mr. and Mrs. Clifford F. Hood, Pittsburgh, Pa.; Hon. Herbert Hoover, New York, N.Y.; Hon. and Mrs. George M. Humphrey, Mentor, Ohio; G. Allen Ives, New Bern, N.C.; Mr. and Mrs. Ray Prescott Johnson, Chicago, Ill.; Halbert M. Jones, Lenoir, N.C.; Hon. James S. Kemper, Chicago, Ill.; Denison Kitchel, Phoenix, Ariz.; Hon. William F. Knowland, Oakland, Calif.; Hon. and Mrs. John L. McClellan, Camden, Ark.; J. Muse McCotter, New Bern, N.C.; Mr. Phillip M. McKenna, Latrobe, Pa.; Jeremiah Milbank, New York, N.Y.

Others are J. Clifford Miller, Jr., Richmond, Va.; Thomas O. Moore, Winston-Salem, N.C.; Felix Morley, Gibson Island, Md.; Hon. and Mrs. Karl E. Mundt, Madison, S. Dak.; G. Harold Myrick, Lincolnton, N.C.; Dr. Louis M. Orr, Orlando, Fla.; Mr. and Mrs. Jack Overall, New York, N.Y.; Mr. and Mrs. H. Bruce Palmer, Newark, N.J.; Robert H. Pinix, Gastonia, N.C.; Frank O. Prior, Chicago, Ill.; Hon. Howard Pyle, Chicago, Ill.; Mr. and Mrs. Harry Rosenzweig, Phoenix, Ariz.; Mr. and Mrs. William H. Ruffin, Durham, N.C.; Hon. Richard B. Russell, Winier, Ga.; Hon. and Mrs. Allan Shivers, Austin, Tex.; Hon. and Mrs. George A. Shuford, Asheville, N.C.; R. Arthur Spauld, Winston-Salem, N.C.; Hon. Howard W. Smith, Broad Run, Va.; Mr.

and Mrs. Louis V. Sutton, Raleigh, N.C.; E. W. Weant, Greensboro, N.C.; and Gen. Albert C. Wedemeyer, Boyds, Md.

Previous recipients of the George Washington awards have been: 1953, Senator Harry F. Byrd of Virginia and the late Senator Robert A. Taft; 1954, former President Herbert Hoover and Hon. Allan Shivers, then Governor of Texas; 1955, Gen. Robert E. Wood of Chicago and Representative Howard W. Smith, of Virginia; 1956, then Secretary of the Treasury George M. Humphrey and the late Senator Walter F. George, of Georgia; 1957, Representative William M. Colmer, of Mississippi and Senator Karl E. Mundt, of South Dakota; 1958, then Senator William F. Knowland, of California and Senator Richard B. Russell, of Georgia; and 1959, Senator John L. McClellan, of Arkansas and then Secretary of Commerce Lewis L. Strauss.

William A. Noell, Jr., Wins West Virginia Title in the "I Speak for Democracy" Contest; Splendid Speech Is Worth Reading

EXTENSION OF REMARKS

OF

HON. JENNINGS RANDOLPH

OF WEST VIRGINIA

IN THE SENATE OF THE UNITED STATES

Saturday, March 5, 1960

Mr. RANDOLPH. Mr. President, a few days ago I was thrilled to listen to the final speeches—four of them—at the National Awards luncheon in Washington, D.C., of the "I Speak for Democracy" contest.

Members of the Senate were in attendance and sat with their State winners. The West Virginia youth from Bluefield told me of his plan to study law or business administration when he attends college. He realizes his personal responsibility to contribute a well-lived and productive life. In his speech, which I ask unanimous consent be printed in the Appendix of the RECORD, he sets forth in stimulating words, his belief in our country and its future.

There being no objection, the speech was ordered to be printed in the RECORD, as follows:

I SPEAK FOR DEMOCRACY

(By William A. Noell, Jr., Bluefield, W. Va.)

I speak for democracy, but what if democracy could speak? If democracy could speak, what would it say to you? You know, in praying there are two essentials: talking to God, and letting God talk to you. Now, it is fine to speak of democracy and to sing its praises, but I wonder how many people have ever sat down to let democracy speak to them.

By now, I imagine that some of you have realized that the use of the term "if" in the phrase, if democracy could speak, is somewhat in error, for democracy does speak in loud, clear tones to all who will listen.

Surely, democracy has something to say to the peoples of foreign lands who hunger for its advantages, and live in the dream of coming to our shores for the gold which paves our streets or for the equality which we preach and cannot always find room in our hearts to practice. Oh yes, the greatness of our way of life based on democracy is well known. Others wait in eager anticipation of the day when they, too, can see

for themselves the fulfilled promises of that new way of life.

Then democracy speaks a various language to those who must live without its benefits; yet it speaks in the universal language of freedom—something which only those who must live without it can fully appreciate.

It is easy, then, to understand the appeal of democracy to those abroad and the hopefulness they find in the words of Emma Lazarus:

"Give me your tired, your poor,
Your huddled masses yearning to breathe free * * *

Send these, the homeless, the tempest-tost,
to me."

But to Americans upon whom the face of good fortune has shone, and to whom a gift more priceless than the finest silver has been given, there can be but one cry of democracy, one question: "How big am I? How big am I to you?"

"Democracy," to quote H. E. Fosdick, "is the form of government based on the assumption that there are some extraordinary possibilities in ordinary people." Yet these same ordinary people may believe in the very narrowest type of democracy; it is my democracy; it is my way of life; it is big enough for me and maybe my neighbor, but minute enough to still have a small sphere of influence and personal involvement.

To these people democracy can only say that their conception are as large as their hearts and their souls. It is a small man who has a small democracy.

Edna St. Vincent Millay has some interesting thoughts along this line:

"The world stands out on either side,
No wider than the heart is wide;
And above the world is stretched the sky,
No higher than the soul is high."

The desire for democracy is worldwide. Its concepts are fully understood only by those who possess the heart and the mind to grasp them. Democracy is big enough for the universe; man's mind is the only thing small enough to confine it.

Walt Whitman's mind was big enough to get a true picture of American and, indeed, of universal democracy. He knew how to hear his country, his America speaking to him. When he wrote "I Hear America Singing," he was hearing democracy speak. He realized with Plato that the only thing any democracy need fear is too much freedom and the complacency of this condition brings.

Understanding that democracy can destroy itself, that as Paine said, "What we obtain too cheap, we esteem too lightly," and that democracy pleads with all of us to—know me; love me; preserve me; strengthen me; expand me.

We as Americans are faced with a great responsibility. We live in a country that can and does speak with a booming voice to the rest of the world. If we will allow democracy to speak to us, our appreciation of it will be greatly advanced. Since America is democracy's spokesman to the world, our actions determine the tone of our voices. Act Americans—our actions speak for us, and America, and democracy.

Tribute to Paul Johnson

EXTENSION OF REMARKS

OF

HON. HERMAN E. TALMADGE

OF GEORGIA

IN THE SENATE OF THE UNITED STATES

Saturday, March 5, 1960

Mr. TALMADGE. Mr. President, a deserved tribute to the long and faithful

service to the Senate of Paul C. Johnson, head waiter of the Senate restaurant, is contained in an article written for the Atlanta (Ga.) Constitution on February 19, 1960, by Mrs. Jerry Duggan of Dublin, Ga. The article is entitled, "Top Seniority on Capitol Hill Held by Negro Headwaiter." Mrs. Duggan is a beloved and respected Georgia educator, and I had the privilege of studying history and political science as one of her pupils at McRae-Helena High School. I ask unanimous consent, Mr. President, that the text of her article about Paul Johnson be printed in the Appendix of the RECORD.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

TOP SENIORITY ON CAPITOL HILL HELD BY NEGRO HEADWAITER

(By Mrs. Jerry Duggan)

(EDITOR'S NOTE.—Mrs. Jerry Duggan is the former Miss Enda Ballard, well-known south Georgia high school teacher of history and political science. It was she who kindled Senator TALMADGE's interest in these subjects while he was a student at McRae-Helena High School. At her insistence he went out for the debating team, which she coached, and he became its most outstanding member. Through the years they have remained close friends.)

DUBLIN.—This fall the President and Vice President, all 435 Members of the House of Representatives and 32 of the 100 Members of the Senate will be elected. These elections in all probability will send many new faces to the Capitol when the 87th Congress convenes next January. However, no matter what the election results are, if providence is willing, there will be one there whose face will not be new for he has served in that building longer than any other living person. He is Paul C. Johnson, a dignified, elderly Negro.

Senator CARL HAYDEN, of Arizona, went to Washington in 1911, serving 16 years in the House before being elected to the Senate in 1927. Thus he has a record of 48 years in the Capitol and ranks first in seniority in the Senate. Our own senior Senator, RICHARD B. RUSSELL, went to the Senate in 1933 and has thus served 26 years. He ranks second in seniority in the Senate.

Speaker of the House SAM RAYBURN, of Texas, has served in the House 46 years, while Georgia's CARL VINSON has been there 45 years to be second in seniority.

TOP SENIORITY

We think of these four distinguished and able Members of Congress as having unusually long and enviable records of service in our Capitol, and they have. But, when the fact shows that Paul Johnson has been serving there since the year 1900, we can see that his 60 years on Capitol Hill gives him top seniority.

In 1900 when Paul was 17 years old, he went to Washington from his home in Virginia to visit his aunt Ada Lacey, who was the cook for the family of Virginia's Senator Barber. Aunt Ada's son, Willie, was a coachman and butler for the Barber family. While on this visit, Paul was told by Senator Barber that he could go to the Senate dining room and fall in for a boy who was out because of sickness. His services proved so satisfactory that Senator Barber's colleague, Senator Josephus Daniels of Virginia (not the North Carolina Josephus Daniels), caused Paul to be hired permanently. He had very little schooling but being ambitious Paul went to night school and today he would certainly be classed as "an educated person." His environment and associations

have, of course, had their part in achieving this.

This writer first became acquainted with Paul while on a visit to Washington as the guest of Senator and Mrs. Talmadge. Shortly after arriving, I was told that reservations had been made in the Senate restaurant for lunch. Senator TALMADGE immediately said that, because of my interest and love for all history and especially for events connected with the Capitol, he wanted me to know Paul Johnson—that, Paul had been there longer than anybody and could tell me much history that has never been put in books. When he entered the restaurant, we were met by this tall, polite and dignified man, who led us to a table in the exact center of the room. As soon as we were seated, the Senator made us acquainted.

RESPONSIBLE POSITION

Paul Johnson holds the responsible position of head waiter in the Senate restaurant, a beautifully appointed luncheon rendezvous, that caters exclusively to Senators and their guests. He became head waiter in 1935. His position is one that required much tact and diplomacy for the Senate restaurant has a limited seating capacity. However, once a reservation is entered in this head waiter's memorandum book, it immediately assumes the status of top priority. Paul handles all this with the assurance that comes only from long experience. When asked how he manages to find room for everyone in the restaurant and know which place is whose, he explained that it is simply a matter of keeping an accurate record of the request of Senators for luncheon accommodations. Too, the fact that the Senators lunch irregularly and all are never there at the same time with their guests, prevents what could be serious problems for this head waiter.

Added to Paul's remarkable physical appearance is a remarkable memory. This man of nearly 77 years—looks as if he were in his early 60's—talked with great clarity about Senators who have served Georgia in Congress since he has been in the Capitol. He recalls Senators Clay of Marietta, Bacon of Macon, Hoke Smith of Atlanta, Wm. J. Harris of Cedartown, Thomas E. Watson of Thomson and Walter F. George of Vienna.

At our first meeting on being told that I was from Georgia, he immediately asked, "How is Miss Lucy?" He expresses great admiration for Senators RUSSELL and TALMADGE. It is assumed that this man has known and seen more people famous in these United States than any other living person and can tell you something about most of them. He says, "I've met and served some of the most prominent figures on the political scene for nearly six decades and I've found each and every one of them to be gentlemen in every sense of the word."

During this writer's last interview with Paul in the fall of 1959, I asked him if he has any special wish or desire and his answer was: "Yes, when the Capitol's additions and renovations are completed and the Senate restaurant has much larger and even more beautiful quarters, I hope I will still be living and able to carry on there."

May this man, Paul Johnson, who has served so many, so well and for so long, live many more years and thus retain his seniority on Capitol Hill—that is the sincere wish not only of the Members of the U.S. Senate but of all his friends whom he numbers by the hundreds.

The Railsplitter—Tribute to Abraham Lincoln

EXTENSION OF REMARKS OF

HON. FRANK CARLSON

OF KANSAS

IN THE SENATE OF THE UNITED STATES

Saturday, March 5, 1960

Mr. CARLSON. Mr. President, on February 12, we celebrated the 152d birthday anniversary of Abraham Lincoln. It was an occasion for many outstanding addresses by individuals and splendid articles written by writers all over the Nation.

I was particularly impressed by a tribute to the Great Emancipator written by Frank Madson, a press photographer for the Wichita Beacon, of Wichita, Kans. His tribute, entitled "The Railsplitter" was printed in the February 12 issue of the Wichita Beacon.

I ask unanimous consent that this tribute be made a part of these remarks and be printed in the Appendix of the RECORD.

There being no objection, the tribute was ordered to be printed in the RECORD, as follows:

THE RAILSPLITTER

(By Frank Madson)

Americans. Wait up. Yankee Doodle Dandies. Time out.

You there, with your eyes toward the stars. You fast moving, restless, ambitious, crazy-mixed-up bunch of wonderful guys and dolls. Poised on the edge of infinity for your greatest adventure. You pioneers of the new age, nearing the countdown for blastoff into that new frontier of illimitable mystery—outer space.

Can you spare a minute, to pause and reflect to total up our priceless heritage, on this remembering day? I implore you. Take just a moment to recall, the birthday of the tall man from Kentucky and Illinois—and America. They called him Abraham Lincoln, to his friends and neighbors just Honest Abe: cabin born, prairie grown, frontiersman, yarn spinner, railsplitter.

But we haven't time, you say. What of this railsplitter? This is the age of the atom splitter. This is the 20th century, and it's such a long time since Mr. Lincoln was around. What can he possibly mean for our day? What answers can he have for our pushbutton world of automation? How can his plodding horse-drawn day, with its squirrel rifle and cannonball have any significance for our era of the H-bomb and intercontinental ballistic missile?

All right, Mr. and Mrs. America, racing through your ultra-modern, chrome-plated 20th century. Now hear this. Here are your answers. Don't look down your jet-age nose at Abe Lincoln. His shining spirit will always be, and is, as timeless as tomorrow, as new as the next satellite in orbit. Listen to his words. Words to live by. They are a beacon for all men of all time. He said of democracy: "As I would not be a slave, so I would not be a master. Any difference to the extent of the difference, is no democracy."

And those deathless words at Gettysburg: "Fourscore and seven years ago our fathers brought forth, upon this continent, a new nation, conceived in liberty, and dedicated

to the proposition that all men are created equal.

"... Now we are testing whether that nation, or any nation so conceived, and so dedicated, can long endure.

"The world will little note, nor long remember what we say here, but it can never forget what they did here.

"It is for us, the living, rather to be dedicated here to the unfinished work... that from these honored dead we take increased devotion... that we here highly resolve that these dead shall not have died in vain; that this Nation, under God, shall have a new birth of freedom; and that government of the people, by the people, for the people shall not perish from the earth."

Space-age Americans, there is your answer, you fortunate young moderns with your glass skyscrapers, backyard swimming pools, bulging colleges, portable TV, wide screen movies, and that tiger-by-the-tail nuclear energy. Consider your hard-bought inheritance of liberty and democracy.

I give you Abe Lincoln—thank your lucky stars he came along and kept the stars united. He picked up the pieces of a disintegrating dream. When the hour was dark for the Nation and democracy. He kept the flickering candle flame of liberty shining through blood, tears, and a million heartbreaks. He preserved a dissolving Union. He believed it worth the saving for his countrymen and the endless generations to come. We must be ever grateful. Ours is the responsibility to sustain it and maintain it.

So happy birthday, Mr. Lincoln. Happy birthday, "Honest Abe." And, incidentally, thank you very much.

Water Pollution Control Must Be Pushed

EXTENSION OF REMARKS

OF

HON. FRANK E. MOSS

OF UTAH

IN THE SENATE OF THE UNITED STATES

Saturday, March 5, 1960

Mr. MOSS. Mr. President, the recent water pollution control bill, which was passed by the Congress and vetoed by the President, is one that faced up to the problem of the evergrowing pollution in our streams, lakes, and rivers. The pollution is growing faster than we are dealing with it. The decision of the President to veto this bill, to me seems incredible. I ask unanimous consent to have printed in the Appendix of the RECORD an editorial of the Salt Lake Tribune for Monday, February 28.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

WATER POLLUTION CONTROL MUST BE PUSHED

The House of Representatives failure to override the Presidential veto of the pollution control bill should stimulate all possible other efforts to clean up the Nation's water supplies.

The veto did not kill the national control program, in effect since 1956. It holds total Federal aid at \$50 million a year instead of raising it to \$90 million and it blocks cooperative metropolitan programs under the act. (Mr. Eisenhower has asked that the U.S. contribution be cut to \$20 million for the next fiscal year.)

As alternatives to upping U.S. matching funds, the President proposed a national conference on water pollution to focus attention on the problem. He also suggested Federal control measures where the problem involves several States or is beyond State power to deal with it, financial aid in the administration of State and interstate pollution control programs and more U.S. research and technical assistance.

If effectively carried out, these proposals could help alleviate what is becoming one of America's most critical problems. Stronger Federal action may be necessary, however, to cut appreciably the amount of untreated industrial poisons being dumped into waterways by more than 3,000 communities.

Several rivers which are veritable open sewers of human and industrial wastes, flow through a number of States.

Most Utah streams terminate in the Great Salt Lake Basin. But from a starkly selfish attitude, it must be remembered that Utahans, like other Americans, are highly mobile and on occasion may drink or wash in water from a dozen sources in a single day.

The U.S. Public Health Service laboratory at Cincinnati, Ohio, last year examined thousands of samples from water plants of 22 major American cities. Fifteen of the cities studied draw water from rivers. Fourteen supplies from 13 rivers were found to contain microscopic worms which can carry disease-causing bacteria and viruses, says U.S. News & World Report. The wriggling micro-organisms are able to withstand chlorination, the standard treatment for impurities in drinking water. These worms also were found in water from Lake Michigan and in a man-made reservoir serving a city in Colorado. None of the cities involved are specifically named in the report.

Asked if the organisms, called nematodes, are dangerous to humans, Dr. Sih Lu Chang, microbiologist at the laboratory, replied: "No, not by themselves." He pointed out, however, that since some of the worms originate in sewage-treatment plants there is a possibility that they will ingest disease-causing bacteria and viruses. Hence they could serve as carriers of disease.

In addition to their possible threat to health, Dr. Chang said, the nematodes produce a musty flavor which gives an odor to the water.

Another new problem is that of detergents, used in washing machines and dishwashers. These pass through the most efficient treatment plants essentially unchanged because they are soluble in water. In some cases so much detergent gets into the supply that a sudsy "head" appears when a glass of water is drawn from the tap. This problem is prevalent not only in water supplies from rivers but also in suburban areas which use well water for drinking and septic systems for waste disposal.

In the same category as detergents are chemical wastes, particularly those from petrochemical industries which produce such things as plastics, says U.S. News & World Report. Health authorities are unable to say at present what the effects of these substances are on human health. More information is needed.

New methods of water treatment are needed, warn Public Health Service researchers.

With the U.S. population exploding and the water supply remaining constant, waste, sewage and filth are pouring into the Nation's streams faster than they are being dealt with. The problem is serious locally, statewide, regionally and nationally. It calls for strong, heroic measures all along the line.

Tribute to Ozaukee County, Wis.

EXTENSION OF REMARKS

OF

HON. ALEXANDER WILEY

OF WISCONSIN

IN THE SENATE OF THE UNITED STATES

Saturday, March 5, 1960

Mr. WILEY. Mr. President, the creation of small in size but big in importance, closely knit communities on the landscape of America represents one of the great strengths of this country.

Today these communities are making an ever-greater contribution to providing the products, services, and, above all, the study, creative, patriotic, productive citizens which provide the foundation of progress, now and in the future.

In a fast-advancing age, however, the scientific, technological, sociological, economic, and other kinds of revolutions pose at times serious, complex problems.

Competition with the larger urban areas—toward which, incidentally, more and more people from both farms and small towns are migrating—also represents a tremendous challenge.

Despite these factors, however, these communities, through forward-looking leadership and staunch, constructive citizen support, are continuing to make their tremendously significant contribution to the growth and progress in this country.

Today I would like to pay tribute to one such area, the smallest county in Wisconsin, but big in importance, Ozaukee County.

By farsighted, creative utilization of its human and natural resources, this community is making a commendable contribution in manufactured products, farm commodities and, above all, in outstanding citizens, to progress in Wisconsin and the country.

Recently the Milwaukee Journal carried an informative article by Loren H. Osman reflecting the historic progress by Ozaukee County. I ask unanimous consent to have the article printed in the Appendix of the RECORD.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

[From the Milwaukee Journal, Mar. 3, 1960]
SMALLEST IN SIZE, OZAUKEE COUNTY IS BIG IN IMPORTANCE—IT HAS WILD BEAUTY, AND INDUSTRIES, TOO

(By Loren H. Osman)

PORT WASHINGTON, WIS.—Little Ozaukee County has importance out of proportion to its size. Smallest in the State, Ozaukee County's 232 square miles form a dull wedge along Lake Michigan. The point of the wedge is blunted on thickly settled Milwaukee County. The west boundary lies against Washington County. The boundary, which contains a noticeable jog, was drawn after a bitter squabble separated the two. The north end is capped by big, friendly Sheboygan County.

Within the area are an estimated 30,000 persons and nearly a quarter billion dollars' worth of property. Its industries turn out plastic products, ceramics, castings, engines,

woolen clothing, pumps, garden machinery, electrical components and a host of other products. It is home for thousands of commuters.

MEANS "YELLOW EARTH"

Alternately lashed and caressed by Lake Michigan's waves, threaded by the lazy Milwaukee River and a half dozen smaller streams, pocked with swamps, ravines and bogs, Ozaukee County has a wild beauty that appeals to the professional naturalist and family picnickers alike.

Ozaukee is an Indian name meaning "yellow earth." The description applies to its undulating hills, but they are far more productive—through good husbandry—than their pale tops would indicate.

This was the peaceful home of the Menominee, Potawatomi, Sac and Fox tribes of the Algonquin Indian Nation, according to H. H. Peters, county highway commissioner who has written a history of the county.

FRENCH, ENGLISH HELD IT

Dense forests of hardwoods and evergreens covered the hills. Clear streams ran through the valleys. French traders came to establish fur posts and the Jesuits to bring Christianity. The land passed from the French to the English who held it until the Revolution.

The Indians moved out under the treaty of 1835, the same year the first sale of Ozaukee County land was recorded, to Wooster Harrison & Associates. They platted lands at the mouth of Sauk Creek and called it Washington City, now Port Washington.

Originally a part of Milwaukee County, the area was cut off by the first legislature to form Washington County in 1830.

DISSENSION CAUSED COUNTY TO BE SPLIT

Port Washington was the county seat, a fact which rankled residents on the west side of the county. Dissension reached such a peak that in 1853 the legislature set off the seven eastern towns to form Ozaukee County. Somewhere along the line, the western faction made off with the early election files, so Ozaukee County has no records of elections prior to 1852.

Not all the early visitors stayed. Among those who moved on were Leland Stanford, a lawyer who practiced here from 1848 to 1852, then went to California and fame as that State's Governor, Senator and railroad magnate. Abraham Lincoln visited the city while looking for a place to practice law.

PLEADINGS FOUND

Municipal Judge Charles Larson, one of Ozaukee County's amateur historians, has delved into old files to find Stanford's original pleadings, written in longhand. "Stanford," said the judge, "had an intense practice, and had great depth and weight in his profession."

The early settlers brought industry as well as agriculture to the county. Mills sprang up along the Milwaukee River. The stream also was used to scow supplies into the developing area. In 1856, the Milwaukee & Lake Superior Railroad was built from funds raised in a stock issue among farmers.

Fourteen miles of road were built to Mequon. The president then absconded with the funds, leaving bitterness and losses throughout the county. More railroads were to come, of course—the Milwaukee road, the North Western and an electric interurban which streaked through the county for many years, but now has been abandoned.

CLAY WAS USEFUL

The county's yellow clay and sand were the basis for brick and tile factories. Remnants of old kilns still can be seen in hillsides. The building materials, including native limestone, went into the homes and

public buildings, including the first courthouse.

Timber was cleared and cut in the water-powered sawmills. It made building lumber, barrel staves, and railroad ties.

The Germans who had come to escape the militarism of their own country were puzzled to find the United States embroiled in civil war. Misunderstanding of the issues brought a draft riot in 1862. It was easily put down and the community responded with many enlistments, once the citizens understood the cause.

TOLL ROADS HELPED RAISE PUBLIC FUNDS

With Government funds short, several toll roads were built. Among them were the Cedarburg Plank Road, the Fond du Lac Road, and Saukville-Grafton Road. Today the county is laced with 93 miles of State and Federal highways, 107 miles of county trunk roads, and 412 miles of town, city, and village roads and streets.

Two important north-south arteries, Highways 57 and 141, speed traffic through the county. The latter is expected to someday be four lanes wide, meeting a similar facility in Milwaukee County.

Ozaukee County's proximity to Milwaukee, plus its natural beauty, has given it a role of part-time chef. City residents pour into the county on weekends and summer evenings to dine in well-appointed restaurants along the lake, river, and in the villages.

URBANIZATION GAINING

Urbanization is very much recognized in the conduct of the county's business, according to Ray F. Blank, chairman of the county board for the last 16 years and a board member for 26. He noted that Ozaukee was one of the first counties to petition the Governor for regional planning for southeastern Wisconsin.

"We want to have beautiful communities without going broke doing it," said Blank, also chairman of the town of Grafton.

A farmer, Blank has seen vast changes in the last few decades. The Lakefield 4-H club of his community, for instance, had 15 boys and girls, all from farm families, 30 years ago. Now it has 82 members, but only four are from farms.

Blank pointed, from his living room window, to several ranch houses, set on parcels cut out of his and neighbor's farms. The owners, he said, worked in the city, with the wonderful arrangement of country living. Even a cluster of high-rent apartments has been built in the town.

SHUTTILING POINTED OUT

A two-way commuting system has developed in Ozaukee County. Although workers drive into Milwaukee jobs daily, others come out from Milwaukee to work in plants which have settled in the suburbs. There is considerable shuttling between communities.

Even city and village officials make their living in next door municipalities. Mayor Paul T. Schmit of Port Washington is sales manager for an automobile agency at Grafton. Mayor Merlin G. Rostad of Cedarburg runs an aluminum casting company at Grafton. Belgium's president, Roman Schmitz, and its clerk, Bert Wester, make their living outside the village.

Booming Grafton is an example of the attraction the suburbs have for industry. Its edges are dotted with small, low plants, brought in by low-priced land and favorable taxes.

The village clerk, Emory Sacho, estimated that more than 1,000 jobs had been added. The population, at 1,487 in the 1950 census, now probably has reached 3,300.

Cedarburg's Mayor Rostad reported a near doubling of his community's population in the last decade to an estimated 5,000. It too has had an influx of new industry—a box company, structural steel firm, casting

specialties company among others. He estimated that half of the employed citizens commute.

Among new civic improvements is a high school and gymnasium, with an enrollment of 525.

QUAINT BEAUTY REMAINS

Cedarburg, still holding some of the quaint beauty of its past, has a peculiar problem. How can its old landmarks be preserved, without financial loss to owners?

Cedar Creek, one of the most charming streams in the State, winds through the county, spanned near Cedarburg by the only remaining covered bridge in the State. It joins the Milwaukee River south of Grafton.

CEDEBURG SWAMP PICTURESQUE SPOT

In the western part of the county is Cedarburg swamp, two sections of preserves which seem to have gotten lost in nature's timetable. Vegetation still is decaying into soil. Songbirds and wildflowers abound. Close by is one of the biggest stands of beech trees found in the State.

Half way up the length of the county is Saukville, crossroads of highways and with the Milwaukee River skimming peacefully along its park and under a handsome bridge. The diligent sightseer will find an older bridge downstream, with a dam that served a long abandoned mill.

From there northward, Ozaukee County rapidly becomes rural. The roads roller coaster over valleys and hills. Stone farmhouses probably crowding a century, still stand squarely against the winter winds. Lake Michigan's brilliant blue sparkles through the birches and spruce, and farmers show a willingness to share the magnificent view by signs which read "wooded frontage for sale."

VENERABLE PORT WASHINGTON PLANS VENETIAN NIGHT CELEBRATION

Mr. WILEY. Mr. President, in addition, I would like to pay tribute to the venerable, 125-year-old city that serves as a county seat for Ozaukee County, Port Washington, Wis.

Known as "The City of the Seven Hills," Port Washington offers a unique environment for business, industry, commerce, trade and residence.

To celebrate its 125th birthday, this fine city is planning a special "Venetian Night" later in the year.

Representing a spirited community effort aimed at helping to provide an ever-better place in which to live. I ask unanimous consent to have an additional article from the Milwaukee Journal, on Port Washington, printed in the Appendix of the Record.

There being no objection, the article was ordered to be printed in the Record, as follows:

[From the Milwaukee Journal, Mar. 3, 1960]

VENERABLE PORT WASHINGTON PLANS VENETIAN NIGHT PARTY

PORT WASHINGTON, Wis.—At the venerable age of 125, this city plans to celebrate its birthday next summer with a sprightly party, Venetian night, on Lake Michigan.

There will be gaily decorated pleasure craft, water skiing, and other stunts. In addition to the thousands of persons who will watch, the gulls that dot the lake front undoubtedly will be there.

Port Washington has lived through some lively times, now is old enough to have rehabilitation problems. Older by a quarter century than the county of which it is the governmental seat, Port Washington is known as the City of the Seven Hills. No one can visit here without being impressed

by the grand peaks on which the city was built.

CHURCH IS PROMINENT

Towering on one hilltop is St. Mary's, the Catholic church that looks down like a benign mother on the community. A steep stairway rises from Franklin Street, but there is an easier way up, along curving Catalpa Street.

The first mass was said at St. Mary's in 1847, when only three Catholic families lived here. By 1849, the parish had grown to 20 families. A small frame church was built on two lots donated by Hiram Johnson, an early settler.

So amiable was the relationship with the rest of the community that H. W. Schwin, then public school clerk, wrote of the early days: "No other town as yet has ever been known to consent to paying out of public school money (\$800 a year) for the support of a Catholic school. The whole affair is contrary to law, but as it seems to be a sort of family agreement all around, no one feels disposed to make objections."

STONE LAID IN 1882

The cornerstone for the present church was laid in 1882, and the \$70,000 edifice was dedicated 2 years later. Among its features were a clock with a 7-foot dial which has marked time ever since, and three great bells. The school has been a part of the parish from its beginnings, and now teaches 825 elementary pupils. The parish has more than 1,300 families.

Another hilltop landmark is the Coast Guard station, built in 1860. Other hills form a park with a spectacular view of the lake and surrounding countryside.

Remnants of a once bustling commercial fishing business remain at Port Washington. Smith Bros., which also operates a restaurant here and others in California, puts out one boat, daily netting about 800 pounds of good fish, mostly chubs, a member of the whitefish family, which are smoked.

Another half ton of trash fish also is taken each day. Those go to mink ranchers. Another fisherman, Joseph Cayner, also puts out a boat, a trawler dragging a big purse-shaped seine on which he takes anything, as a volume operation.

CAN'T JUST SIT

Port Washington got a jolt, a few years ago, when the Wisconsin Chair Co. shut up shop, leaving 300 persons jobless. The city bought the old plant, then sold it to A. C. Krueger of Mold Craft Co., who in turn has put paper box and broom factories in parts of the building. Portions were razed for municipal parking and a proposed shopping center.

Looking back, Mayor Paul T. Schmit thinks the demise of the chair factory may have been a blessing in disguise, for it forced the community into taking a good look at itself. The reflection indicated that the city was a mite lethargic.

"In the last 6 or 7 years, a lot of people have decided they can't just sit and watch the smoke from the electric company plant," the mayor said.

In 1935, the utility bought the city's power plant and erected what was then the most modern and efficient generating unit anywhere. Smoke from the four tall stacks has been a part of the Port Washington scene ever since. And the \$400,000 in utility taxes received annually, represents about a third of the city's budget.

Port Washington's drive for new industry is being led by a committee of citizens, the Association of Commerce and the Jaycees. The best news so far was that the Koehring Co.'s Kwik Mix division here was to be expanded to include the Ka-Mo Corp. which Koehring acquired and moved from Cicero, Ill. That brought 45 new jobs.

MAAS PRAISED

E. W. Maas, president and general manager of Kwik Mix, is considered something of a local hero to have turned the trick in favor of Port Washington.

The city calls itself the power garden equipment manufacturing center of the world. Although the title might be hard to prove, two of the giants of the industry are located here, the Bolens division of Food Machinery & Chemical Corp., with a payroll of 340 and Simplicity, with about 200.

Rumors are current that an 8-million-gallon storage tank area for petroleum products will be built along the harbor. With its mile of pipeline to a dispersal point, the project might involve an investment of \$750,000.

And \$250,000 is expected to be spent on a new private rest home for the aged.

CITY BUILDING NOW

The city government not long ago moved into a \$277,000 municipal building, which replaced the old frame "opera house" that went back to the 1890's. A new \$400,000 grade school was completed, and improvements made to other schools. A library may be one of the next projects, taking that function out of the aging vocational school.

The vocational school itself hums with day and night activity. Adults as well as youngsters learn upholstery, baking, sewing, and other crafts in its shops.

A Frontline Fighter

EXTENSION OF REMARKS

OF

HON. OREN E. LONG

OF HAWAII

IN THE SENATE OF THE UNITED STATES

Saturday, March 5, 1960

Mr. LONG of Hawaii. Mr. President, Dr. Yoshio Yamashiro of Honolulu is one of those unsung heroes fighting a courageous battle for freedom on the frontlines of our foreign aid program. Because the mistakes—some of which are perhaps inevitable in such a program—receive so much publicity, it is refreshing when the story is told of some of our successes, particularly when the story portrays the human elements involved in this vast struggle against ignorance, poverty, disease, and communism. Mr. Jack Teehan of the Honolulu Advertiser recently wrote such a story about Dr. Yamashiro's inspiring efforts in Vietnam. I ask unanimous consent that Mr. Teehan's article from the Advertiser of March 1 be printed in the Appendix of the Record so that it can be read by all Members of the Senate.

There being no objection, the article was ordered to be printed in the Record, as follows:

NO MEDALS—BUT HE'S HERO IN OUR FOREIGN AID FIGHT

(By Jack Teehan)

We don't pin medals on all our heroes. Meet Dr. Yoshio Yamashiro, a veterinarian of 2206 Wilder Avenue, Honolulu, just back from 5 years in Vietnam.

This footslogger in America's foreign aid army certainly doesn't look like a hero. Slight of build and graying, Dr. Yamashiro is the guy next door, the fellow at the next table in the downtown restaurant.

But Dr. Yamashiro is just back from the front in Asia, that vast theater of operations where the U.S. is desperately clinging to its

tiny beachheads in Vietnam, South Korea, and Taiwan.

He was a livestock adviser, one of the key men in the agricultural end of our aid program in Vietnam, a country of 12 million people.

In all those years in Vietnam he never talked to an American reporter, but only because one never called.

Yamashiro arrived in Saigon April 1, 1955. The revolution toppling the French colonial government was 3 days old. The nation was in the throes of poverty without even work animals to till its fields.

"My first job was to negotiate for the purchase of work animals," Yamashiro said. He found the necessary buffaloes and oxen in Thailand and Cambodia.

But the owners didn't want to sell the animals. They had them earmarked for slaughter. Yamashiro persuaded Cabinet ministers to help and he got the animals.

On this little deal he saved the United States about \$85,000 because he showed the owners how to make portable pens which could be used over and over again. Before he tossed this idea into their laps they charged \$5 per head for ship pens which were junked after shipment.

On one trip Yamashiro spent 3 days below decks with 258 seaskick animals while his Panamanian freighter wallowed through the typhoon-lashed South China Sea. He didn't lose an animal.

The ship was machinegunned and shelled going upriver to Saigon. "We had to turn back and land them at the mouth," Yamashiro said.

But the program was underway. Yamashiro brought in 23,000 buffaloes and oxen, 480,000 day-old chicks, 7,300 Yorkshire and Berkshire pigs, 6,000 pullets, and 2,300 rabbits for distribution throughout Vietnam.

"Each recipient had to return two in kind," Yamashiro explained. "If you got one large pig you had to return two after she farrowed—so everybody benefited."

Yamashiro started a vaccine laboratory, producing vaccine for 5 percent of previous animal vaccine costs.

Next came a hatchery large enough to incubate 100,000 eggs.

He organized seven mobile vaccination teams to eradicate rinderpest.

"It never made the New York Times, but the grateful Vietnamese gave torchlight parades to honor the teams," Yamashiro said proudly.

And while all this was going on, Yamashiro helped rehabilitate 2,300 families, part of the 1 million refugees from Red-controlled North Vietnam. "After 3 or 4 years, everybody seems to be gainfully employed and they have a roof over their heads," he told me.

It wasn't easy. The Communist underground doesn't like American aid programs. So when Yamashiro would pick out a likely village leader to win cooperation, the Communists knew what to do—they killed him.

"There are many killings," Yamashiro said simply. And he explained that these murderous acts made it doubly difficult to find replacements.

Even U.S. allies can be troublesome. Once Yamashiro's forces were shipping some 500 pigs into the country by boat.

Hours before the boat docked the French—at great expense—air freighted 100 pigs into the country in a Constellation.

"They got most of the publicity," Yamashiro said. But he said the people are very much aware of America's contributions.

Yamashiro makes sure of that by silk-screening the U.S. foreign aid symbol (two clasped hands) appears on every animal. He found that navy blue looks best on a white pig, yellow on a black one.

Other than that he's had to fight Communist infiltration of his own work force,

disease (he came down with typhus), and keep an eye out for man-eating tigers (hundreds of people are killed every year) and cobras that run up to 26 feet long and 14 inches in diameter.

Well, the eggs are bigger in Vietnam now. Everybody has some meat to eat. Tuberculosis isn't a major problem now. The people are healthier and an edict forbidding Vietnamese males to have more than one wife is cancelling out much of the population explosion.

Vietnamese have learned how to care for and feed poultry and livestock and how to improve the breeds. Their living standards have been raised to the point where only technical aid will be offered after 1961.

So Dr. Yamashiro is taking on a new job in Taiwan.

And by the way—he made one other contribution to his country. Two Yamashiro boys gave their lives under the 442d Regimental Combat Team's banner in World War II.

A Goal for Nuclear Test Conference

EXTENSION OF REMARKS

OF

HON. A. S. MIKE MONRONEY

OF OKLAHOMA

IN THE SENATE OF THE UNITED STATES

Saturday, March 5, 1960

Mr. MONRONEY. Mr. President, I would like to call the attention of the Senate to an interview with Senator ALBERT GORE of Tennessee regarding the Geneva Conference on the Discontinuance of Atomic Weapons Tests.

This is indeed a complicated and difficult problem. Senator GORE long has offered logical and farsighted advice in this field. As early as 1958 he suggested a limited ban on atmospheric testing pending an agreement on a foolproof inspection system for all other testing.

Because of the clarity of his position and the forthright position he is taking today, as well as his leadership in this field in the past, I commend it to all Senators for their information. We can all be grateful for his understanding of this subject and his determination for U.S. leadership in countering the Communist peace propaganda.

I ask unanimous consent that the article entitled "A Goal for Nuclear Test Conference," published in the Christian Science Monitor of March 2, 1960, be printed in the Appendix of the Record.

There being no objection, the article was ordered to be printed in the Record, as follows:

A GOAL FOR NUCLEAR TEST CONFERENCE—A CAPITAL INTERVIEW WITH SENATOR GORE

(By Courtney Sheldon)

WASHINGTON.—Senator ALBERT GORE, Democrat, of Tennessee, selected as a Senate adviser, and thus a member of the U.S. delegation to the Geneva conference on discontinuance of nuclear weapons tests, and one of the darkhorse possibilities for the Democratic presidential nomination in event of a convention deadlock:

Believes that "unless there is some success achieved in the Geneva conference on nuclear weapons, then there can be no real optimism for success of the general disarmament conference."

Says "France, of course, must be brought into" a nuclear weapons test-ban control

system and Red China, too, "else underground tests could proceed undetected in Red China."

Question. "Do you feel, Senator GORE, that there is a fair chance the Russians will come around to a limited ban on nuclear weapons testing?"

Answer. "I am apprehensive that they will now flatly turn anything down. They think they are winning the propaganda battle and I am not sure that they are not."

Question. "Did we wait too long before we officially made the proposal for a limited ban (cessation of atmospheric tests pending an agreement on an inspection system for other testing)? I believe you first suggested it 2 weeks after the Geneva talks began in 1958."

Answer. "World opinion has changed, but Russian intransigence has changed but little. The so-called concessions that the Soviets have made amount to very little. Actually, if you boil them down, they have conceded more in form than in substance."

Question. "Where does this leave us? What if we resume testing? Would world opinion censure us?"

Answer. "Well, much would depend on the manner of resumption. I cannot give a certain answer. From the standpoint of disarmament, there is little difference in the perfection of an intercontinental ballistic missile and in the perfection of the nuclear warhead. They are both part of the same missile. Yet a psychological and political element has attached itself to nuclear tests, even though that testing is done in a manner that does not contaminate the world's atmosphere."

"Let me turn to one unusual occurrence. Though we have been at the conference table with the Russians for 16 months, we have not yet asked them whether they have conducted underground tests. I suggested to the Secretary of State that we do so. I had a letter recently saying that the delegation in Geneva had been asked to ascertain the answer to that question."

Question. "In your judgment is there a necessity for the United States to conduct further nuclear weapons tests for reasons of security?"

Answer. "I am a layman and there are many persons more qualified to speak on this subject. I have not reached a conclusion myself whether, if empowered with the decision, I would resume underground testing. But until we are sure that the Russians are not doing so, then at the very least we should keep ourselves free to make the decision as to whether we do."

"To begin with, I think the President made a serious strategic error in August 1958, by his unilateral stoppage of all tests. This has operated now for 18 months to give to the Soviets that which they desired—the complete stoppage of nuclear weapons development by testing in this country without any system of inspection in the Soviet Union to give us assurance that the Russians are not proceeding with weapons development through underground tests, without any real progress being made to bring the Russians into the family of nations under a system of obedience to law and order."

"I think the President recouped his position somewhat by declining on December 29, 1959, to extend this ban on all tests."

Question. "What could further testing do for the U.S. military program?"

Answer. "Maybe I could boil it down to a basic problem. The area in which the Russians appear to be furthest ahead of us is in rocket thrust, the ability to hoist into intercontinental space a heavier payload. Our missiles are much smaller. The smaller the missile, the greater the need for increasing the explosive power of the warhead."

Question. "Are there any types of inspection systems that you feel have possibilities that perhaps we should now begin to push or explore? I am thinking mainly of the idea that recently came into the open that unmanned, underground detection systems could overcome some of the Soviet objections to an inspection system."

Answer. "Of course, improvements will be made in scientific instruments. The basic problem, however, is the freedom of a scientific team to inspect not according to a political quota but any time and place where scientific requirements would dictate. Now the Soviets have steadfastly given political direction to their scientists. Our scientists have gone to Geneva in two conferences free from political dictation."

Question. "What about the problem of bringing other nations into the control system?"

Answer. "France, of course, must now be brought into it. Red China must be brought into the agreement, else underground tests could proceed undetected in Red China. Whether they should be brought into the negotiations at this particular stage, I am not prepared to say for the moment."

Question. "How does the nuclear test ban negotiation relate to the broader question of disarmament, in your opinion?"

Answer. "Unless there is some success achieved in the Geneva Conference on Nuclear Weapons, then there can be no real optimism for success of the general disarmament conference in which the problems are far more complicated and difficult—a nuclear explosion, for instance, being so much easier to detect than a stored or concealed weapon."

"This is one reason why I had suggested early that the United States stake for itself an achievable goal in a field where we could detect a Russian violation if they did not follow our example. Because of this probability of detection, we could likely force the Soviet Union into either actual or tacit agreement with us. Their respect for international agreement could be demonstrated or their perfidy detected."

"The achievement of this kind of arrangement, it seems to me, is the real goal of the nuclear test conference. It is very important that success, even very limited, be achieved."

New York Egg Month

EXTENSION OF REMARKS

OF

HON. KENNETH B. KEATING

OF NEW YORK

IN THE SENATE OF THE UNITED STATES

Saturday, March 5, 1960

Mr. KEATING. Mr. President, the poultry business in New York State constitutes one of the most vital and flourishing aspects of the agricultural life of the State. In official recognition of this fact, Gov. Nelson A. Rockefeller has proclaimed the month of March as "New York Egg Month."

In view of the significance of this action to the health and prosperity of New York State, I ask unanimous consent that Governor Rockefeller's proclamation be printed in the Appendix of the RECORD.

There being no objection, the proclamation was ordered to be printed in the RECORD, as follows:

PROCLAMATION OF THE STATE OF NEW YORK EXECUTIVE CHAMBER, ALBANY

Our poultry farms are a highly important factor in the economy of the Empire State. In cash income produced, the egg business ranks second only to dairying in our State. Nutritionally speaking, eggs are a perfect food, completely uncontaminated since they come in their own, germproof containers the shell. The content includes vitamins, proteins, minerals and amino acids.

The production of eggs is an essential industry. The men and women engaged in it render an absolutely vital service and should be encouraged.

Now, therefore, I, Nelson A. Rockefeller, Governor of the State of New York, do hereby proclaim the month of March 1960 as "New York Egg Month," and I urge that full recognition be given to the role of poultrymen in our economy.

Given under my hand and the privy seal of the State at the capitol in the city of Albany this 24th day of February in the year of our Lord 1960.

NELSON A. ROCKEFELLER.

By the Governor:

WILLIAM J. RONAN.

Secretary to the Governor.

Two Red Telephones and One Atlas Missile

EXTENSION OF REMARKS

OF

HON. CLAIR ENGLE

OF CALIFORNIA

IN THE SENATE OF THE UNITED STATES

Saturday, March 5, 1960

Mr. ENGLE. Mr. President, articles in the Los Angeles Times and the Los Angeles Examiner, both dated February 29, 1960, correctly assert that the total strength of the United States in ready-to-launch intercontinental ballistic missiles is one. I know this to be a fact, but I hadn't said so on the floor of the Senate because I was afraid it might be regarded as security information.

The articles are written by Mr. Julian Hartt for the Los Angeles Examiner and by Mr. Marvin Miles of the Los Angeles Times. After a visit to Vandenberg Air Force Base, Mr. Hartt observes that, "The bones of our skeleton of defense rattled loudly." Mr. Miles makes an excellent analysis of our defense weakness. I commend these articles to the attention of my colleagues and ask unanimous consent that they be printed in the Appendix of the RECORD.

There being no objection, the articles were ordered to be printed in the RECORD, as follows:

[From the Los Angeles Examiner, Feb. 29, 1960]

ONE ICBM MOUNTED IN ALL UNITED STATES— SOLE ATLAS POISED AT VANDENBERG

(By Julian Hartt)

SANTA MARIA, February 28.—The total strength of the United States in ready-to-launch ICBM's—intercontinental ballistic missiles—is one.

Just one missile—an Atlas.

This one fact stood out among all others when Vandenberg Air Force Base—America's only "operational" ICBM launcher—was opened today for a "look in any closet."

The bones of our skeleton of defense rattled loudly during that inspection. There are two red telephones to order a firing. But there is only one Atlas ready to launch.

Of course, this Convair-built Atlas has the capability of dropping right into the Kremlin, blasting the heart out of Moscow, if an attack upon us dictated instant retaliation.

But:

1. No missile is 100 percent reliable. It might not get off the ground. It might go as far away as Discoverer IX earlier this month, and be blown up on command no farther away than the nearby farming town of Guadalupe.

2. Any such situation presumes an attack, and it would be sheer folly to assume further that the Soviets would not make Vandenberg a primary target in a space-age "Pearl Harbor." Exposed like a telephone pole in the desert, our lonely Atlas could be crippled or killed by a "near miss" atomic warhead dropping miles away.

3. And even if this Atlas's thermonuclear warhead were dropped inside the Kremlin walls—our guidance is that good, even better than President Eisenhower announced some weeks ago—there probably wouldn't be anyone home anyhow. After all, the Russians would be the only ones to know in advance what they meant to do.

This is not to say the Air Force, and the equally-dedicated civilians working under the Army's Corps of Engineers, are not doing their utmost at Vandenberg AFB to hurry America's readiness at top speed.

The holes are being dug for the follow-on Titan ICBM, and for the underground Atlas housings yet to be tested. Elsewhere the Atlas and Titan launch bases are being rushed.

We also have the Thor (300 to 1,750 miles range) missiles on duty in England, ready to go with nuclear warheads whenever the two ignition keys—labeled "war" and "peace"—and held by British and American officers—are slipped into the launch locks and turned.

There also has been much publicity about Atlas becoming operational 5 months ago, tempered by the admission there are but three launch pads available at Vandenberg AFB for combat firings.

It is quite impressive and dramatic, too, that a young officer in the Atlas blockhouse wears a pistol to protect himself—presumably against other Americans—and the encapsulated code word he wears about his neck on a chain. That is to verify the "fire" order he might one day receive over the red phones, one linked to First Missile Division, the other to Strategic Air Command headquarters in Omaha, Nebr.

But the fact remains:

As of this writing, one of the three Atlases is ready to go in a less-than-20-minute countdown.

The second is still in a gantry, and the console has as many red lights—indicating "not ready"—as green.

And the third is lying down under maintenance.

The young officer has a more terrible responsibility than even he may know—two telephones; one missile.

VANDENBERG'S THREE ATLAS PADS FORM TOTAL MISSILE RETALIATION POWER

(By Marvin Miles)

VANDENBERG AFB, February 28.—Three Atlas launching pads on this vast Strategic Air Command base represent—as of today—this Nation's sole ICBM retaliation capability within the required 15-minute reaction time.

And they are "soft" pads, vulnerable, unprotected against incoming missile warheads.

Furthermore, it is virtually impossible to keep three missiles in full combat readiness every minute of every day, considering maintenance, checkout procedures, etc.

Hence there are short periods from time to time when America's immediate retaliatory strength is limited to two missiles—or even one—that could be launched in a quarter-hour countdown.

If Russia attacked the United States with missiles today, a flight of three Atlases would be the biggest ICBM counterassault the Nation could expect to launch—"in time."

True, there might be time to haul up other missiles and launch them, but this cannot be assured.

No one can doubt that any missile assault launched against the United States today would pinpoint Vandenberg as a primary target to prevent, if possible, immediate ICBM retaliation.

Such an intercontinental nuclear attack would be delivered in a half hour at 15,000 m.p.h., hence the insistence on a 15-minute reaction (launch) time for U.S. retaliation missiles.

The chance of launching a second flight of Atlases would depend on the accuracy of enemy missiles.

But there is little doubt about that accuracy at this sprawling base 140 miles northwest of Los Angeles that would become an instant "frontline" in any major war of the future.

This is the situation in an uneasy world and amidst Washington arguments on the missile gap.

OTHER BASES PLANNED

Other Atlas bases are planned, of course. A dozen more have been announced, with Warren AFB, Cheyenne, Wyo., scheduled to become operational "sometime soon" as the second American ICBM stronghold.

Meanwhile crews of SAC's 1st Missile Division here work constantly to keep three of the big birds on the pads, ready for flight—missiles armed with thermonuclear warheads, already programmed to fly fixed trajectories to secret, predetermined targets.

The basic mission of the 1st Missile Division, commanded by tall, heavy-set Maj. Gen. David Wade, is the training of missile crews, although the three unprotected Atlas pads—resulting from a crash program to achieve ICBM operational status soonest—are primarily combat-ready units.

NEARING READINESS

Three horizontal Atlas launchers are nearing readiness, systems that maintain the missiles horizontally, but shielded to some degree by concrete walls and roll-away roofs.

In action, the roof is hauled clear to expose the bird which is then erected for launching within the walled shelter.

Two other horizontal launchers are also being developed, but these will offer more protection, for they will be bunker types, housing a missile just underground, with a protective roof at surface level.

UNDER CONSTRUCTION

In addition, a silo Atlas facility is under construction, a vast underground pit 174 feet deep, 52 feet in diameter, in which the missile will be stored vertically beneath massive steel-and-concrete doors.

This system provides for subsurface fueling after which the missile would be raised to ground level by an elevator and fired from the surface.

Together with the Atlas complexes, Vandenberg will have underground silo systems for Titan, the ICBM (now under flight test) that will follow Atlas into operational status.

COMPLEX OF TUNNELS

The first Titan silo with an elevator to surface the missile for launching is now nearing completion with its complex of tunnels and underground facilities, and probably four more such silos will be constructed here. The Army's Corps of Engi-

neers supervises all such construction projects.

And in the future, the base no doubt will have Minuteman, the smaller, solid-propellant ICBM, a third-generation missile that will be maintained in silos like a cartridge in a rifle chamber and actually fired from underground. (Minuteman also will be launched from railroads cars to provide the protection of mobility.)

These various installations, with the exception of Minuteman for which a site is now being considered, were shown to newsmen for the first time today when this secret missile base was really opened to the press.

(Vandenberg officers declined to comment on reports that hush-hush developments on the base include at least one new silo system designed to permit a Titan launch from underground. This Titan will feature cryogenic (supercooled) propellants, informed sources say. Another report indicates an even newer Titan for underground launch will have storable fuel.)

PRIMARILY FOR TRAINING

Most if these missile complexes, with the exception of designated operational launchers and a special Discoverer polar orbit satellite pad, serve (or will serve) a training function primarily.

In a war emergency, they would, of course, be available for combat launch—provided there is sufficient warning.

The systems also serve as test beds for various types of missile launch installations and point up changes or modifications that should be incorporated in future operational facilities.

Newsmen were impressed with the huge and complex system making up the Titan silo launcher and reached the pit after walking 820 feet through a tunnel that connects it with the underground control center.

In reality an underground gantry, the silo is awesome in size and looking into its 165-foot depth develops the same dizzy feeling as peering down the side of a high building. Concrete lined, air conditioned, and filled with a maze of steel and cables and piping to provide for its intricate systems, the 40-foot-wide silo is topped at the surface with two incredible steel and concrete doors almost 4 feet thick and weighing 283 tons each—protection against a nuclear blast.

Newsmen also were shown the operation of the horizontal launchers, given details of the intricate launch procedures and permitted close-up inspection of Thor IRBM training pads, the Discoverer launch pad where an Agena second stage was being mated to a Thor booster for the forthcoming launch of the Discoverer XI satellite.

They were invited into control centers, taken on an inspection tour of the missile assembly area, shown the amazing pit that will eventually be the Atlas silo and allowed to study the Atlas both in maintenance and gantry phase.

Despite the brooding menace of the big missiles, however, the most intriguing area visited was the launch control center for the combat Atlas complex—the heart of the operation.

Here the wall panel light systems showed the standby condition of each of the three missiles. Twin consoles faced each wall panel, one for the launch operator, one for the launch analyst. Behind them a third console summarized conditions for the launch control officer, hence a panel and three consoles for each missile.

FLASH INFORMATION

On the consoles themselves, red, green, yellow, and white lights flashed information on the operation of the maze of systems in each Atlas—green indicating ready or "go," red for not ready or "no go"—perhaps a malfunction; yellow for "in process," white for proper valve status.

The chains of colored lights on the consoles gave the green-colored control center somewhat the aspect of a recreation room with a series of complex pinball machines in operation.

But the false atmosphere of relaxation was dispelled immediately by the automatic pistol worn by the officer in charge, by the sealed capsule he wore around his neck.

The sealed capsule worn by the officer in charge contains coded secret instructions for the quick verification of any SAC firing order so the command system cannot be gimmicked by unauthorized persons.

Reporters came away with high respect for the job being done at Vandenberg, for the command system and the crews responsible for maintaining and launching the huge birds.

They saw eight Atlases on the base—three on the ready pads, four in missile assembly (two operational, two training), one in a horizontal launcher. Then they saw two more being delivered from Convair as they departed.

Reaction was unanimous:
"Wish we had more."

Primitive People

EXTENSION OF REMARKS OF HON. ALEXANDER WILEY OF WISCONSIN

IN THE SENATE OF THE UNITED STATES
Saturday, March 5, 1960

Mr. WILEY. Mr. President, in a modern age—in which discoveries in the technological, scientific, industrial, agricultural, and other fields, are creating ever-new conditions, we find that, as a people, we need to constantly attempt to obtain a perspective of the values and influences affecting our lives, as well as the directions in which we are traveling.

The challenge is particularly great, in an era in which the survival of our system is threatened by an opposing system that adheres to none of the principles, precepts, and ideals which we feel are fundamental to progress or a happy life.

In relation to the fast-advancing conditions, it has been said that "we are a primitive people" in a new world.

Recently, the National Grange Monthly published an editorial by Herschel D. Newsom, master of the Grange, entitled "Primitive People."

Reflecting on the need for maintaining a kind of mountaintop perspective, to assure the course of our journey through this modern age, I ask unanimous consent to have the editorial printed in the Appendix of the Record.

There being no objection, the editorial was ordered to be printed in the Record, as follows:

PRIMITIVE PEOPLE

(By Merschel D. Newsom, master, National Grange)

"We are primitive people in a new world."

Dr. Arthur Schuck, chief Scout executive, speaking on a 50th anniversary program of the Boy Scouts, made this thought-provoking statement, one that is a little deflating. Perhaps we had better look at it seriously.

The "new world" may be a development we have but partially understood. A statement by the U.S. Secretary of the Treasury,

announcing the completion of negotiations of the articles of agreement of the International Development Association (now being transmitted by the International Bank for Reconstruction and Development, to each of its 68-member governments), is perhaps just another chapter in the unfolding of this "new world." Whether or not the United States will subscribe the \$320 million, and whether or not subscriptions, totaling some \$440-odd millions, will be immediately forthcoming from other member countries, will provide a measure of the significance of this new world, and of our responsibilities internationally in such a world.

TWO SYSTEMS

It is apparent that the struggle between two systems of economics and political philosophies will go on for a long time. To meet the challenge successfully we must thoroughly understand that people of the world will make decisions on the basis of their own estimates or understanding of the effectiveness of the competing systems, economically, politically, and philosophically to serve their interests and needs. We must also understand that our ability to continue to help the peoples of the rest of the world to meet those needs, is determined by the degree to which we keep our own house—our economic structure—in proper order.

The IDA is being proposed by the administration. In fact, a resolution by the Congress directs the preparation of the articles of agreement for the purpose of providing extra credit, over and above normal credit facilities, for economic development in several countries.

Even here in America we find that extraordinary measures are necessary to meet the capital requirements in agriculture and other segments of the economy. The tremendous demand for capital indicates the extent to which we are substituting improved equipment and methods for man-hours. We have done a great deal of this, within agriculture especially. Agricultural output per man-hour has increased by 83 percent in less than 20 years while industrial output in America has increased by only 30 percent in the same period.

Despite the fact that farm marketing last year set a new all-time record, however, net farm income from all sources was down some 12-15 percent.

We have serious challenges in the world and within our own country. The contribution that our progress makes to our standard of living, to our well-being in America—both rural and urban—depends upon our ability to translate the improved man-hour efficiency into a sound division of benefits to the three parties concerned:

1. Unless the producers, from the standpoint of management and ownership, realize a reasonable profit from such substitution, the proper amount of capital for continuing the process will not be long available.

2. Unless the worker, be he farm owner, operator, manager, or employee, receives compensation in reasonable proportion to the production resulting from his work, the substitution of equipment for labor may well be a threat to his living standard, and indeed to that of all American workers.

3. Unless society as a whole (consumers and users of products of industry where such substitution is made) receives reasonable benefit from the increased efficiency, the rising living standard necessary to generate both purchasing power and capital will be diminished or absent. In this event, bids for capital required inevitably will raise the cost of such capital. (This is the real reason that interest rates go up.)

The rising level of indebtedness in agriculture, in spite of the phenomenal increase in productivity indicates that the producer does not realize a reasonable profit from his capital investment.

This, in turn, coupled with indications that we are not attaining the objective in No. 3 above, shows that we must examine carefully the question of whether we are primitive people—whether we are mature enough as a people to keep our own house in order that we may meet successfully the challenges in the New World.

Appointment of Dr. Jerry C. McCall, of Oxford, Miss., as Assistant to Dr. Wernher von Braun, Director of Development Operations, Division of Army Ballistic Agency, Huntsville, Ala.

EXTENSION OF REMARKS OF

HON. JOHN STENNIS

OF MISSISSIPPI

IN THE SENATE OF THE UNITED STATES
Saturday, March 5, 1960

Mr. STENNIS. Mr. President, I have just learned of the appointment of Dr. Jerry C. McCall, of Oxford, Miss., as assistant to Dr. Wernher von Braun, Director of the Development Operations Division of the Army Ballistic Missile Agency at Huntsville. Dr. McCall is a resident of Oxford, Miss., and has been trained in the field of mathematics with specialty in the computation field. I am particularly proud that Dr. von Braun chose Dr. McCall from available scientific talent and know that Dr. McCall's contribution to the successful space team located at Huntsville will be most constructive.

I ask unanimous consent that the press release from Huntsville, Ala., announcing the appointment of Dr. McCall be printed in the Appendix of the Record.

There being no objection, the press release was ordered to be printed in the Record, as follows:

HUNTSVILLE, ALA.—Dr. Jerry C. McCall, 32, of Oxford, Miss., has been named assistant to Dr. Wernher von Braun, director of the Development Operations Division, Army Ballistic Missile Agency.

Dr. McCall's duties will include carrying out special projects and conducting program studies for the director, and maintaining liaison with Dr. von Braun's laboratories, other Government agencies, and industry.

The organization which Dr. von Braun heads is proposed for transfer to the National Aeronautics and Space Administration July 1 under terms of a presidential recommendations to Congress.

Dr. McCall joined the Missile Agency late last year as a member of the scientific staff in the computation laboratory. He assumed the new position effective March 1.

Dr. McCall holds B.A. and M.A. degrees in mathematics from the University of Mississippi, and B.S. and Ph. D. degrees in mathematics from the University of Illinois. In the field of pure mathematics he specialized in theoretical aspects of the design of electrical systems.

Formerly he taught mathematics at both Illinois and Mississippi. At Illinois, his work included the application of digital computers to Navy fleet defense systems. After leaving the university, he joined the International Business Machines Corp., at Springfield, Ill., where he worked in the industrial application of digital computers. Later, he was

executive vice president of the Midwest Computer Service, Inc., of Decatur, Ill.

Dr. McCall has been initiated in the following honorary organizations: Phi Kappa Pi, scholastic fraternity; Omicron Delta Kappa; Chi Epsilon, engineering fraternity; Pi Mu Epsilon, mathematics fraternity; and Sigma Xi, research fraternity. He also holds membership in the American Mathematics Society; the American Rocket Society, and the Association for Computing Machinery.

A Navy veteran, Dr. McCall, is the son of Mr. and Mrs. E. F. McCall, of Oxford, Miss. He is married to the former Marget Denton, daughter of Mr. and Mrs. H. L. Denton, of Tupelo, Miss. The McCalls and their two daughters, Betsy, 3 years, and Lynn, 6 months, reside at 525 Trousdale Drive, Huntsville.

**Joyce Anne Thompson, a Talented
Science Student of Charleston, W. Va.,
Wins National Honors**

EXTENSION OF REMARKS

OF

HON. JENNINGS RANDOLPH

OF WEST VIRGINIA

IN THE SENATE OF THE UNITED STATES

Saturday, March 5, 1960

Mr. RANDOLPH. Mr. President, our younger generation are often characterized as "scattered-brained"—not using their brains—but there is much evidence to prove that the lads and lassies in our high schools very often possess well organized mental powers.

Joyce Anne Thompson, of Charleston, W. Va., is in the National Capital as one of the 40 finalists during a busy week of activity for the young men and young women who have merited the honors of a select group. The other youth from our State who were among the list of 448 to receive awards, are Elizabeth Brock and Andrew McCormick, also of Charleston; Suzanne Saliga, of Clarksburg; and George Harper and Vaude Linde, both of St. Albans.

Mr. President, it was pleasant to be visited by Joyce Anne, who told me of her project report. I ask unanimous consent that this material be printed in the Appendix of the RECORD.

There being no objection, the report was ordered to be printed in the RECORD, as follows:

MEASURING THE HALF LIFE OF FREE RADICALS

Polymerization by free radicals is the most important process employed by the billion-dollar plastics industry, as well as the rubber and acrylic fiber industries. Through reading and talking with polymer chemists I became interested in discovering just how free radicals behave. These very unstable molecules can exist for only a very short time under ordinary conditions before combining either with other free radicals or with other molecules.

My first step in developing a project on free radicals was to find out their structure and what causes them to form. The most common source of free radicals is an organic peroxide. When ultraviolet light passes through certain peroxides the molecules split at the oxygen double bonds and free radicals are formed. Using ultraviolet light to produce radicals seemed the best way for me to carry out my initial experi-

ments. Therefore I had to set up an apparatus that would produce a large enough concentration of radicals to be measured.

I chose dibenzoyl peroxide as my radical-former since ultraviolet light was supposed to break it up comparatively easily and because this peroxide was relatively safe and easy to handle. Then I decided to use acrylonitrile as the monomer because it would react readily with the peroxide radical to form a polymer which was insoluble in the monomer and, therefore, easily seen and recovered. A special 100-watt mercury arc was used as the source of the ultraviolet light.

The first apparatus tried was not successful because when I tried to form the free radicals in a separate solution they combined too rapidly to build up a high enough concentration for effective polymerization. Evidently the only way polymer could be produced would be to dissolve the radical-former in the monomer and then form the radicals right in the monomer with the ultraviolet light.

My second apparatus was more successful. At least radicals were obviously produced because polymer was formed. However, this time the problem was that the polymer was formed so rapidly that the polymerization temperature went out of control and the polymer virtually exploded from the volumetric flask. This problem was easily remedied by placing the flask in a water bath of ice water. A magnetic stirrer was used to keep the water circulating and the temperature constant.

Now that I had a means of producing free radicals, I had to find a method of determining their half-life. It appeared that this problem could be solved by using a method developed by Dr. H. W. Melville in England. With this method the steady flow of ultraviolet light is broken up into light flickers. When the duration of the dark period approaches the half-life of the free radical the rate of polymerization will begin to decrease. By plotting the flickering rate against the rate of polymerization I could determine the half-life of the radical.

To obtain this flickering light I placed a motor-driven sector wheel directly in front of the mercury arc. The mercury arc was placed in a shield which not only directed the light only toward the sector wheel, but also protected the eyes from this powerful and damaging light. The wheel was arranged so that it completely blocked the light when a sector was in front of the lamp but allowed the full flow of light to penetrate the flask when an open section was in front of the lamp. For convenience the light and dark flashes were made exactly equal. A wide range of flickering rates was obtained by varying the speed of the motor driving the sector wheel and by using wheels with different sized sectors.

The polymerization rate was determined by measuring the amount of polymer formed as the polymerization proceeded. Since the density of the polymer is greater than the density of the monomer there is a decrease in the volume of the polymerization mixture as the polymer is formed. This decrease in volume is directly proportional to the amount of polymer formed and, thus, may be used to calculate the degree of conversion of monomer to polymer. The decrease in volume during polymerization can be determined from the decrease in the height of the liquid in the narrow neck of the flask. A small cathetometer was used to follow this change in height. Since the volume change due to polymerization is quite small, careful control of the polymerization temperature is necessary to avoid error from this source.

So far I have not made enough trials to enable me to make a graph which could be used to compute the half-life of the benzoyl

radical. However, I have solved many of the problems which have arisen. After making more runs at different flickering rates I should be able to calculate this value.

I believe that knowledge of the half-life of various free radicals will enable the polymer chemist to choose the most suitable peroxide for his needs—one which will produce the desired polymer, has the appropriate reaction time, and is least expensive to use. I hope my efforts will be of value in acquiring this knowledge.

LAWS RELATIVE TO THE PRINTING OF DOCUMENTS

Either House may order the printing of a document not already provided for by law, but only when the same shall be accompanied by an estimate from the Public Printer as to the probable cost thereof. Any executive department, bureau, board, or independent office of the Government submitting reports or documents in response to inquiries from Congress shall submit therewith an estimate of the probable cost of printing the usual number. Nothing in this section relating to estimates shall apply to reports or documents not exceeding 50 pages (U.S. Code, title 44, sec. 140, p. 1938).

Resolutions for printing extra copies, when presented to either House, shall be referred immediately to the Committee on House Administration of the House of Representatives or the Committee on Rules and Administration of the Senate, who, in making their report, shall give the probable cost of the proposed printing upon the estimate of the Public Printer, and no extra copies shall be printed before such committee has reported (U.S. Code, title 44, sec. 133, p. 1937).

GOVERNMENT PUBLICATIONS FOR SALE

Additional copies of Government publications are offered for sale to the public by the Superintendent of Documents, Government Printing Office, Washington 25, D.C., at cost thereof as determined by the Public Printer plus 50 percent: *Provided*, That a discount of not to exceed 25 percent may be allowed to authorized bookdealers and quantity purchasers, but such printing shall not interfere with the prompt execution of work for the Government. The Superintendent of Documents shall prescribe the terms and conditions under which he may authorize the resale of Government publications by bookdealers, and he may designate any Government officer his agent for the sale of Government publications under such regulations as shall be agreed upon by the Superintendent of Documents and the head of the respective department or establishment of the Government (U.S. Code, title 44, sec. 72a, Supp. 2).

RECORD OFFICE AT THE CAPITOL

An office for the CONGRESSIONAL RECORD, with Mr. Raymond F. Noyes in charge, is located in Statuary Hall, House wing, where orders will be received for subscriptions to the RECORD at \$1.50 per month or for single copies at 1 cent for eight pages (minimum charge of 3 cents). Also, orders from Members of Congress to purchase reprints from the RECORD should be processed through this office.

PRINTING OF CONGRESSIONAL RECORD EXTRACTS

It shall be lawful for the Public Printer to print and deliver upon the order of any Senator, Representative, or Delegate, extracts from the CONGRESSIONAL RECORD, the person ordering the same paying the cost thereof (U.S. Code, title 44, sec. 185, p. 1942).

Appendix

What's Right With West Virginia; There Are Health and Hope in Its Two Greatest Resources—the People and the Land

EXTENSION OF REMARKS

OF

HON. JENNINGS RANDOLPH

OF WEST VIRGINIA

IN THE SENATE OF THE UNITED STATES

Monday, March 7, 1960

Mr. RANDOLPH. Mr. President, recently the Saturday Evening Post published an article entitled "The Strange Case of West Virginia." Both Senators from West Virginia have heretofore discussed the Post story in this body. Subsequently, I wrote to the executive editor of that periodical and suggested that the Post should consider exposing its vast circulation to another article about West Virginia with a different approach than that employed by the author of the one published in the magazine's February 6, 1960, issue. In response, the executive editor replied that he was "sorry to say that the Post cannot grant space for an article of rebuttal."

When this exchange of correspondence was made available to the newspaper editors of West Virginia by me, the editor of the Charleston Gazette, Harry G. Hoffmann, telegraphed an invitation that I prepare the article for publication in that newspaper.

Mr. President, I ask unanimous consent that the article, "What's Right With West Virginia," be printed in the Appendix of the RECORD.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

WHAT'S RIGHT WITH WEST VIRGINIA

(By JENNINGS RANDOLPH, U.S. Senator from West Virginia)

Is West Virginia a dying State—is it chronically and critically ill—or are its problems those of localized infection which will respond to specific as well as general courses of treatment?

As with an individual, so with the body politic, there must be a diagnosis of the ailment, consideration for its causes, evaluation of the patient's resources, and then a prescription of treatment to bring renewed health.

There is indeed a sickness in our State. My responsibilities as a Senator from West Virginia have made necessary a focusing of attention upon many aspects of this fact, a consequence of which has been that I have received rather intemperate criticism from some quarters. But a fact is a condition which must be faced, and it is a fact that there are some extraordinary circumstances in our State which demand attention. It is axiomatic that a problem is not solved by according it nothing more than neglect. A public official must expect to be subject to censure as well as commendation, but to be

censured for inaction and inattention to conditions which require vital action and to fail to consider adequately all sides of a question are matters against which alert, patriotic citizens must and will arise and take appropriate action.

HEALTH AND HOPE IN WEST VIRGINIA

When I point out that there are health and hope in West Virginia, as well as sickness, and when I declare that ours is not a dying State, I cannot, with fairness, be accused of having assumed a Pollyanna attitude.

BEAUTIFUL SCENERY OF WEST VIRGINIA

On one of my recent trips from Washington back to West Virginia, I was a passenger on Eastern Airlines Flight 463, with Charleston as the destination. It was a clear day. There were only a few scattered cumulus clouds below as we crossed the Blue Ridge Mountains and approached the Appalachians at an altitude of 8,000 feet. Our pilot, Capt. George H. Miller, announced that we were flying over West Virginia—"a State with magnificent scenery," he commented. The pilot did not refer to our unemployment rate, to abandoned and worked out coal mines, nor to the habits of some of our mountain people. He spoke of the beauty of West Virginia.

Later, at Kanawha Airport, on the outskirts of Charleston, Captain Miller added to his earlier comments on the scenery of West Virginia and told us of the kindness and hospitality of the men and women whom he encounters on his frequent fishing trips to the South Branch Valley of the Potomac in our State.

This occurrence is related because, in his remarks to the plane's passengers, Captain Miller touched upon the two greatest resources of our State—the people and the land.

This is the substance from which we will fashion our future, and the new frontier of our State will be what you, the people, make it—what you demand will be. This is a belief which I have maintained throughout my adult life since first having expressed it in an article for the West Virginia Review magazine in the mid-1920's, at the time my friend, Phil Conley, was its publisher. We need more men and women who constructively chronicle and build West Virginia on the foundation of its finest assets—the people and the land.

SPIRIT OF THE PEOPLE OF WEST VIRGINIA

As West Virginians, we are familiar with the spirit which once moved among our people and is reputed to have inspired George Washington to remark, "Leave me but a banner to plant upon the mountains of West Augusta, and I will gather around me the men who will lift our bleeding country from the dust and set her free."

And who has not heard quoted the vivid description of Thomas Jefferson when he first viewed the confluence of the Potomac and Shenandoah Rivers and said: "In the moment of their junction they rush together against the mountain, rend it as under they pass off to the sea. The scene is worth a voyage across the Atlantic."

True, these stories belong to a realm of history. And perhaps they are merely apocryphal. But if so, yet they illuminate a kind of truth which lives even in the fictions of history, for they refer to the time-

less spirit of our people and the enduring strength and beauty of our land.

And certainly the resources of our citizens, and the natural, industrial, economic, and scenic resources of our earth are equal to the challenges posed by our present economic difficulties. But first we must have a clear understanding of the nature of our problems.

IMPORTANCE OF COAL MINING

Probably the most widely accepted explanation of our condition is that it is due to the mechanization of the coal mines. While this is certainly a major factor, it is a gross oversimplification to reduce our complex circumstances to such a single set of terms.

Competition with other fuels and technological developments within our national industrial and transportation systems are equally important factors in our coal mining economy. Coal is basic to the economy of our State, but any consideration which treats of coal alone is inadequate.

FARMING AND INDUSTRY

We have, in effect, at least five distinctive patterns of geographic and economic specialization.

In the eastern panhandle, the economy is based largely upon fruit, vegetable, and poultry farming; in the northern panhandle the base is principally the iron and steel industry; in the central area, coal, timber, and livestock raising predominate; in the southern section of the State, coal is the foundation; and in the Kanawha Valley and mid-Ohio Valley, economic life turns predominantly about the immense chemical development. Nor should we fail to acknowledge the significance of the new aluminum industry concentrated in the Ohio Valley, as well as our pottery, glass, and hardwood industries in West Virginia.

Even the briefest summary reveals an amazingly varied and rich economy, and one which is certainly unmatched in its profusion and contribution to our national wealth, except by the larger States of the Union.

Yet, despite the variety and productivity of the State's economy, and despite the development of new industries and the expansion of established ones, we continue to be confronted with the stubborn problem of an unemployment rate almost twice that of the national average. The main reason for this seeming paradox is that the areas of industrial expansion have been those in which there is already a high degree of mechanization and, therefore, a high rate of capital investment per worker. We have not maintained an equivalent rate of expansion in peripheral and subsidiary economic activities and in those areas where the slack in employment must be overcome.

A later article will deal with this problem in more detail, but it might be revealing to note at this point a comparison between the percentage of our labor force in certain employment categories in West Virginia and in the Nation as a whole.

These are some examples which need amplification:

In West Virginia 14.5 percent of our labor force is employed in wholesale and retail trade, but for the United States as a whole the figure is 20 percent.

In the fields of finance, insurance, and real estate, only 2.1 percent of West Vir-

ginians find employment in their home State, compared with 4.5 percent for the entire country.

And, in contract construction our employment rate is only slightly more than one-half that of the national average—3.3 percent for West Virginia compared with 6 percent for the United States.

Although these figures indicate certain limitations as we face our present problems, they also signify the range of opportunities for the inventiveness and initiative of our people. And I am confident that the men and women of West Virginia will be equal to the tasks of the present—as they have been in the past.

Voting Is Not Main Issue

EXTENSION OF REMARKS

OF

HON. PAUL BROWN

OF GEORGIA

IN THE HOUSE OF REPRESENTATIVES

Monday, March 7, 1960

Mr. BROWN of Georgia. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following splendid editorial entitled "Voting Is Not Main Issue" from the Augusta (Ga.) Chronicle, the South's oldest newspaper:

VOTING IS NOT MAIN ISSUE

The big lie has been given to the argument that the principal aim of the pending civil rights legislation in the Senate is to insure voting rights for all people.

That sanctimonious bleat, the cry of such newspapers as the New York Times and the Washington Post, has been refuted by the very men whom they support in the Halls of Congress, the liberals on both sides of the aisle who would impale the South on the thorn of political convenience.

With calculated fervor, the Post declared editorially that the "voting provisions are the heart of the bill" and that the "vast majority of the sponsors of the bill so regard them." The Times, with exaggerated piety as to intent and complete distortion as to treatment, terms "the first and most immediate barrier to equality of rights is the effective denial of the franchise to millions of Americans because of their color."

The Chronicle offers no opposition to the argument that all qualified persons should be entitled to vote. We simply say that rules governing those qualifications belong not to the Federal Government but to the individual States.

But we take issue with those who cry that voting rights is the predominant point in question, gaining support for that contention by the actions of the liberal Democrats and Republicans in the Senate who have refused to accept a strong voting rights measure in exchange for an end to the time and energy consuming filibuster now in progress.

If, as the Times says, the administration bill against which the filibuster is directed is nothing more than a "mild antisegregation" measure, why should not those sponsoring it be willing to compromise—as would those opposing it—and turn their deliberations to more pressing problems? Could it be that sponsors will settle for nothing less than section 4 of the proposed bill that provides congressional recognition of the Supreme Court decision as being basic law? The Washington Post calls it innocuous recognition. Should not a newspaper being published in the Capital of the United States know, as most southerners know, that

the Constitution, not an on-again-off-again ruling of a Supreme Court, is the "law of the land" and that a recognition to the contrary would be catastrophic—not innocuous?

Voting is not, nor should it be, the major issue. It is charged that only about 25 percent of Negroes of voting age in the South are registered. Senator RICHARD B. RUSSELL effectively pointed out on the floor of the Senate Wednesday that only 26 percent of voting age Negroes in Cleveland, Ohio, are registered—and only 26 percent of those registered actually vote. He also cited a Civil Rights Commission report praising the freedom with which Negroes may register in Atlanta, though only 29 percent there do so. There may be instances in the South where the Negro is denied his voting privilege. But that is the exception, not the rule. Right here in Augusta, the Weekly Review, a Negro newspaper, places the blame for failure of Negroes to vote just where it should be placed—on the Negro himself, for failing to register. Thus, when the New York Times charges that "millions" are disfranchised because of their color, it must either be aware of a flock of disfranchised Negroes in the North, or it is guilty of distorting facts.

No, voting is not the dominant issue. To the contrary. It must be the least important issue. Why else would the liberals in the Senate be unwilling to go along with just a voting bill?

It is because the entire movement is itself an integrated package deal, a bald-faced, politically motivated grab for Negro votes en bloc.

Russia's Giant Rocket

EXTENSION OF REMARKS

OF

HON. MIKE MANSFIELD

OF MONTANA

IN THE SENATE OF THE UNITED STATES

Monday, March 7, 1960

Mr. MANSFIELD. Mr. President, in the March 6 issue of Parade magazine appears an article entitled "Russia's Giant Rocket." The article was written by the able correspondent, Jack Anderson.

In the article Mr. Anderson points out:

When a Soviet missile plunged into the Pacific recently within 800 miles of Pearl Harbor, the splash was heard around the world.

He further states:

From its launching site near the Aral Sea, the Russian rocket hurtled 7,767 miles in 36.5 minutes. It soared to a 765-mile altitude, streaked back into the atmosphere at 16,156 miles an hour, and plopped into the ocean only 1.2 miles from the bull's-eye. The warhead was huge enough to hold an 8-megaton bomb (equivalent to 8 million tons of TNT).

In the article, he further states:

Yet the biggest shock for the experts was the way the Russian warhead ejected an instrument package before plunging into the ocean. This capsule, once it was thrown free of the warhead, apparently used retro-rockets to slow its speed. Then a parachute blossomed, and it floated gently down upon a Pacific swell. A Soviet ship was waiting nearby to fish it out. The feat required split-second timing that left our experts with their mouths agape.

Later in the article he points out that—

The new Russian ICBM first showed up on U.S. radarscopes last summer when two were fired from the northeastern shore of the Caspian Sea into the Pacific halfway between the Kamchatka Peninsula and Hawaii. Two Red ships were waiting in the target area to register the impact.

Mr. President, in view of the impact of the article on the debate now in process, I ask unanimous consent that the article by Jack Anderson be printed in full in the Appendix of the RECORD.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

A NEWS REPORT ON RUSSIA'S GIANT ROCKET (By Jack Anderson)

When a Soviet missile plunged into the Pacific recently within 800 miles of Pearl Harbor, the splash was heard around the world. It caused military men here to break into a sweat as if from the ocean spray.

From its launching site near the Aral Sea, the Russian rocket hurtled 7,767 miles in 36.5 minutes. It soared to a 765-mile altitude, streaked back into the atmosphere at 16,156 miles an hour, and plopped into the ocean only 1.2 miles from the bull's-eye. The warhead was huge enough to hold an 8-megaton bomb (equivalent to 8 million tons of TNT). These frightening figures add up to one answer: our cities are now only minutes away from possible total destruction.

Yet the biggest shock for the experts was the way the Russian warhead ejected an instrument package before plunging into the ocean. This capsule, once it was thrown free of the warhead, apparently used retro-rockets to slow its speed. Then a parachute blossomed, and it floated gently down upon a Pacific swell. A Soviet ship was waiting nearby to fish it out. The feat required split-second timing that left our experts with their mouths agape.

One Air Force general suggested to Parade that it demonstrates Russia's ability to fire a double-barreled missile.

"Two hydrogen bombs could be loaded into a single warhead," he speculated. "The first bomb might be ejected, say, over Detroit while the warhead sped on to Chicago." Not two birds with one stone, but two cities with one "bird."

What is known of this monster missile, which has now become the No. 1 threat to America's security?

As yet our trackers and observers have been unable to fit together enough jigsaw pieces to form a full profile of the new missile. But from intelligence sources Parade can provide its readers with at least a silhouette. (See photo and comparative details, right.) [Not printed in RECORD.]

What we have may be only a nuclear pop compared to the Russian bang. Yet the Atlas can strike as far and accurately as the Soviet rocket.

OUT TO SEA

The new Russian ICBM first showed up on U.S. radarscopes last summer when two were fired from the northeastern shore of the Caspian Sea into the Pacific half way between the Kamchatka Peninsula and Hawaii. Two Red ships were waiting in the target area to register the impact.

These shots were never announced by Moscow or Washington. But Premier Khrushchev mischievously brought them up during his private talk in the Kremlin with Vice President NIXON. With a straight face, Khrushchev said the missiles had taken on too much fuel and has overshot into the Pacific. He added with a wry smile: "I suppose you tracked them, since we track all your missiles."

Of course, missiles don't overshoot because someone accidentally pours in too much fuel.

It is even less likely the two observation ships would make a navigational error that would put them conveniently at the right spot.

The next series of Pacific tests, proclaimed in advance by the Kremlin, began in January. Unknown to the public, however, the fanfare that greeted the first successful test was hastily shut off after the second launching. The second missile blew up; it was the Russians' first ICBM failure in 10 months. The world was told later that the third shot was really the second in the series.

How could Russia, just emerging from a wheelbarrow technology, manage to build a missile superior to our own? One answer is that the Soviets plunged into missile development before the echoes of World War II had died away. While we were leisurely patching together our first copy of the German V-2 rocket, the Russians had already produced 1,000 V-2's in the underground rocket plant they seized in East Germany.

From the V-2's the Russians developed an improved version, now known as the T-1. This was followed by the intermediate-range T-2, with a span of 1,200 miles. The big bruisers followed: First the T-3A, then its ballistic brother, the T-3B. Both were three-stage missiles and packed 1,200-pound warheads that could carry 2½-megaton bombs.

ONWARD AND UPWARD

The latest ICBM, which has been splashing in the Pacific, is a modification of the T-3B. But the genealogy of all Soviet missiles can be traced to the V-2.

Perhaps another reason the Russians got ahead of us is that we concentrated on shrinking the H-bomb. We built a smaller H-bomb while they worked on a bigger missile.

While the Atlas packs a nuclear wallop that can destroy any military target, the super-sized missiles have given Russia a headstart in the race to pioneer outer space.

But just as the British a few centuries ago pulled ahead of the Spaniards in pioneering the New World, the Americans are now rushing to catch up in space.

Senators Saltonstall and Kennedy and Congressman Burke Write Bethlehem Shipbuilding Management and Union Urging Early Settlement of Strike

EXTENSION OF REMARKS

OF

HON. JAMES A. BURKE

OF MASSACHUSETTS

IN THE HOUSE OF REPRESENTATIVES

Monday, March 7, 1960

Mr. BURKE of Massachusetts. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following letter:

SENATORS SALTONSTALL AND KENNEDY AND
CONGRESSMAN BURKE WRITE BETHLEHEM
SHIPBUILDING MANAGEMENT AND UNION
URGING EARLY SETTLEMENT OF STRIKE

MARCH 4, 1960.

Mr. DANIEL D. STROHMEIER,
Vice President, Shipbuilding Division, Bethlehem Steel Co., New York, N.Y.

Mr. JOHN GROCAN,
International President, Industrial Union of
Marine and Shipbuilding Workers of
America, New York, N.Y.

GENTLEMEN: The Bethlehem Shipbuilding Division strike has now been in progress for more than a month. During this time we have been in frequent contact with officials of the Navy Department, including the Secretary, the Under Secretary and responsible officials in the Quincy area. At our request, our staffs have discussed this most serious

problem with local and national representatives of the union and with representatives of Bethlehem Steel Co. Needless to say, we are vitally interested in an early and equitable settlement of the dispute.

Our concern in this matter stems not only from the serious situation in which workers and their families find themselves as a result of the prolonged worked stoppage, but also because of the most critical delays in defense production which the strike has entailed. In addition, trades people and service industries in Quincy and the entire South Shore are feeling the indirect effects of the strike.

We and the people of Quincy are apprehensive that this strike may have serious long-term consequences for the economy of the area. The people of Quincy are now concerned over both their immediate and their long-range interests. We have urged the Navy to leave the Springfield in Quincy pending an early settlement of the strike. This the Navy informs us it is planning to do, but of course national interest, if the strike is prolonged, may require the Navy to change its plans.

While in the early stages of the dispute it appeared that most of the issues were susceptible to negotiation and we were hopeful that a settlement could be reached quickly, we are now informed by the Federal Mediation and Conciliation Service that negotiations have slowed down considerably. We recognize that there are serious issues involved between labor and management but none of these appear to us to be insurmountable and we believe that with serious good-faith bargaining on the part of both parties to the dispute, a quick agreement can be reached. We are greatly disturbed that since negotiations have become centered in New York progress has been halting and the parties have not been meeting as frequently as the serious situation seems to demand. We are informed that locally both union and management are most anxious to bring these protracted negotiations to a close and arrive at an equitable settlement for all concerned. Consequently, we most strongly urge that the union and management take every practical step to intensify their bargaining efforts so that a settlement may be reached promptly.

Above all, we are concerned that the interests of Massachusetts people, who have for years assisted the Nation and made their living through responsible hard work on the ships being constructed in Quincy, are given full consideration in this controversy. Our sailors fought World War II in ships constructed in Quincy. Though we hope the cold war will never become a hot war, we all hope that America's deterrent capability on the sea will remain strong with the assistance of the people of Quincy. We look forward to a speedy and amicable settlement of the strike.

Sincerely yours,

LEVERETT SALTONSTALL,
U.S. Senate.

JOHN F. KENNEDY,
U.S. Senate.

JAMES A. BURKE,
Member of Congress.

Conditions in Latin America

EXTENSION OF REMARKS

OF

Hon. EVERETT MCKINLEY DIRKSEN

OF ILLINOIS

IN THE SENATE OF THE UNITED STATES

Monday, March 7, 1960

Mr. DIRKSEN. Mr. President, on occasion there has appeared before the Senate, to deliver the invocation, a very

distinguished Catholic prelate who is a longtime friend of mine. I refer to Father Joseph F. Thorning, associate editor of World Affairs. He has had a long tour of duty in Latin America, and served in many charges there.

Recently he delivered an address in regard to certain situations in Latin America—in particular, in Brazil. I believe his address is of much value, for it deals, in part, with the possible attitude of the United States in regard to the making of loans to the Brazilian Government oil monopoly for the development of the petroleum interests there.

I believe his address is of sufficient value to have excerpts from it printed in the Appendix of the RECORD, and I so request.

There being no objection, the excerpts from the address were ordered to be printed in the RECORD, as follows:

FREDERICK, MD.—Addressing the faculty and students of the Visitation Academy, the Reverend Dr. Joseph F. Thorning, pastor of historic St. Joseph's Church, Carrollton Manor, and a specialist on inter-American history, declared that, when President Dwight D. Eisenhower meets President Juscelino Kubitschek, of Brazil, next week, "a decision will have to be made about U.S. loans to Petrobras, the Brazilian Government oil monopoly, a decision that will determine the future of private enterprise in large areas of Latin America."

The Maryland author, educator, and diplomat added:

"Up to the present, the Eisenhower administration has been adamant against official aid to Petrobras on the grounds that millions advanced to a government-owned and operated industry would mean encouragement to socialistic tendencies, thus favoring collectivism rather than private business. Since the seizure of oil properties in Mexico in 1938 and the establishment of Pemex, the Mexican Government oil monopoly, the White House and State Department have rejected all requests that any U.S. agency should provide Pemex with loans for exploration and development of petroleum resources. If President Eisenhower, yielding to the pleas of his Brazilian counterpart in Rio de Janeiro, should reverse this stand, it may be taken for granted that the Governments of Mexico, Bolivia, Cuba, Panama, Guatemala, Ecuador, Chile, and Peru would demand help in the discovery and exploitation of new oil wells.

"On the other hand, when President Arturo Frondizi, of Argentina, talks with the North American Chief Executive in Buenos Aires, he will report that private enterprise, within 14 months, has brought oil production up to a level where the Argentine economy will no longer have to depend upon foreign suppliers. In the case of Argentina, the U.S. Government encouraged President Frondizi, from the outset of his administration, to enlist the aid of private corporations. Although this was a policy highly unpopular with the Argentine masses, who had been led to believe by Juan Domingo Perón that the state was the fountainhead of all blessings, Dr. Frondizi risked his political life by bringing in North American companies whose technicians opened up new oilfields and greatly increased production. Now Argentina is almost self-sufficient with regard to crude oil, while the dollar drain upon the national treasury has been reduced to manageable proportions.

"Government monopoly a la Fidel Castro versus private enterprise is the issue that will have to be faced by President Eisenhower, not only in Brazil, Argentina, Uruguay, and Chile, but throughout all Latin

America. If the principle is surrendered on oil, the clamor will arise for huge subventions for many other types of official monopolies."

The Philippine Sugar Quota

EXTENSION OF REMARKS

OF

HON. JOSEPH W. MARTIN, JR.

OF MASSACHUSETTS

IN THE HOUSE OF REPRESENTATIVES

Monday, March 7, 1960

Mr. MARTIN. Mr. Speaker, under leave to extend my remarks, I include excerpts from an article entitled "The Philippine Sugar Industry in 1959" by Manuel Elizalde, President of the Philippine Sugar Association, which appeared in the 1959 Yearbook of the Fookien Times.

Since the present Sugar Act expires in December of this year, new legislation must be considered at this session of Congress.

Under the revised Philippine-American Trade Agreement of 1955, Congress may increase the Philippine sugar quota to the United States. We did not implement this provision of the agreement when we amended and extended the present Sugar Act of 1948 in 1956. Consequently, the Philippines has been the only major area supplying sugar to the United States which has not participated in increases in sugar consumption in continental United States by reason of the population growth.

The President noted this discrimination against the Philippines, in signing the amendments to the Sugar Act on May 29, 1956, when he said:

It was not considered feasible to recommend an increase in the Philippine quota at this time. I believe, therefore, that when new amendments are being prepared at the conclusion of the present act, consideration should be given to allowing the Philippines to share in increased consumption, as is now provided for other foreign countries by this bill.

In considering quotas to be awarded to foreign nations in the new legislation, we should bear in mind that the Philippines are a friendly and important ally in an area of the world where we need friends. We should demonstrate that we appreciate their friendship.

Mr. Elizalde's article follows:

THE PHILIPPINE SUGAR INDUSTRY IN 1959

(By Manuel Elizalde, president, Philippine Sugar Association)

CROP, 1958-59

The Sugar Quota Administration has reported sugar production as of June 7, 1959, at 1,379,409 short tons, constituting 93.06 percent of the total estimated crops of 1,482,664 short tons for 1958-59. This leaves but 103,255 tons to produce, making it the record postwar crop, exceeding by 49,383 tons the 1953-54 production of 1,434,281 tons, which had stood unchallenged for 5 years. This season also has maintained for the second year, a bumper crop exceeding the previous year's by 104,817 short tons.

EXPORTS TO THE UNITED STATES OF AMERICA

The sugar shipments to the United States chargeable against the 1959 quota of the Philippines as of May 31, 1959, totaled 643,-

464 short tons, equivalent to 67.59 percent of the total quota, while the quantity cleared for shipment up to mid-June totaled 778,626 tons, equivalent to 81.79 percent of the quota, as compared to 80.13 percent for the corresponding period last year.

EXPORTS TO THE WORLD FREE MARKET

The Philippines has complied with its commitments to export its 1958 quota of 45,000 metric tons for the world free market.

Our quota in effect as of June 17, 1959, would be 45,000 metric tons less 10 percent, or 40,500 metric tons (44,642.85 short tons), from which would be deducted our excess exports of 1,265 metric tons in 1958, thus placing our effective quota for 1959 at 39,235 metric tons, or 43,248.44 short tons.

DOMESTIC CONSUMPTION

Withdrawals for local consumption during the past year totaled 319,386 short tons. The quota for 1959 has been fixed at 320,000 short tons. These compare with the withdrawals of 302,015 tons for 1957, 293,400 tons for 1956, 280,517 tons for 1955, and 295,457 tons for 1954.

MARKETS FOR PHILIPPINE SUGAR

Besides the domestic market which will absorb about 320,000 tons this year, the Philippines has a guaranteed minimum share of 952,000 tons, commercial weight, or 980,000 short tons, raw value, of the consumption of sugar in the United States, under the U.S. Sugar Act of 1948, as amended in 1956, and the Revised Philippine-American Trade Agreement of 1955 and lastly, a quota of 45,000 metric tons (49,800 short tons), in the world free market.

U.S. SUGAR ACT OF 1948, AS AMENDED AND EXTENDED

President Eisenhower on May 29, 1956, signed legislation extending the Sugar Act of 1948 to December 31, 1960—4 years from the expiration date of December 31, 1956—made retroactive to January 1, 1956.

The new law restores to the domestic areas their historic right to share in increased consumption of sugar in the United States. Commencing on January 1, 1956, 55 percent of any excess of the estimate of consumption over the base figure of 8,350,000 tons of sugar shall be allotted to the domestic areas as follows: the first 165,000 tons of such excess shall be divided, 51.5 percent to the beet area and 48.5 percent to the mainland cane area; the next 20,000 tons shall be allotted to Puerto Rico; next 3,000 tons to the Virgin Islands; and after the first 188,000 tons of such excess shall have thus been allotted, the domestic share be divided pro rata among all of the domestic areas, including Hawaii, in proportion to the quotas as adjusted by adding the initial distribution of amounts as stated above.

Forty-five percent of the excess of consumption beyond the basic figure of 8,350,000 tons would go to Cuba and the full-duty countries. In 1956 this went to 96 percent to Cuba and 4 percent to full-duty countries. From 1957 through 1960, the 45 percent would be apportioned as follows: Cuba, 29.59 percent; Mexico, 5.10 percent; Dominican Republic, 4.95 percent; Peru, 4.33 percent, and other full-duty suppliers, 1.03 percent.

Since the sugar quota system has been in effect, the tariff on Cuban sugar has been reduced progressively from the rate of 2 cents per pound provided under the Tariff Act of 1930 to current level of 0.50 cent per pound and the full-duty rate has been reduced from 2.50 cents per pound to 0.625 cent per pound. The present effective rate of 0.50 cent per pound on Cuban sugar has been in effect since January 1948.

PHILIPPINES ONLY FOREIGN SUPPLIER EXCLUDED FROM GROWTH

Unlike the domestic areas and other foreign suppliers, the Philippines is excluded from participating in any increase in sugar consumption in the United States, as pro-

vided for in the Sugar Act of 1948, as amended. However, President Eisenhower, upon signing this legislation extending the effectivity of the act for 4 years to December 31, 1960, made a statement to the effect that he believes consideration should be given to allowing the Philippines to share in the consumption increase as is now provided for other foreign countries by that bill, when new amendments are being prepared at the conclusion of the present act.

Also the Philippine-American Trade Agreement signed in Washington on September 6, 1955, provided for elasticity and possible increases in the sugar quota of the Philippines at the discretion of Congress, and article II paragraph 1, of the agreement accordingly provides:

"The establishment herein of the limitations of the amounts of Philippine raw and refined sugar that may be entered, or withdrawn from warehouses in the United States for consumption, shall be without prejudice to any increases which the Congress of the United States might allocate to the Philippines in the future."

The Philippine quota of 980,000 tons being inflexible year after year, as the consumption in the United States rises, is becoming an ever-diminishing percentage of the annual U.S. domestic consumption needs. Calculated to be 15.41 percent of the total U.S. consumption in 1934 when the U.S. quota system was established, it is today 11.74 percent of the basic 8,350,000 short tons and only 10.65 percent of the current 1959 consumption quota of 9,200,000 tons. As the Philippines sells about 75 percent of its annual output to the U.S. market, it can improve upon its production methods with a view to reducing costs only if it will participate in the increased consumption of its principal market. If it fails to move forward with the market, it will have to doubly intensify efforts toward a substantial improvement of production and marketing methods.

Notwithstanding the handicap of an inflexible quota in the U.S. markets, the Philippine sugar industry has increased its yield per hectare, both as a result of heavier cane tonnage and larger rendement. The performance of the previous and the current crops attests to this significant progress of the industry.

Our Government with the help of the Philippine Sugar Association has been doing everything within its power all this time to secure reconsideration of the Philippine request for participation in the increased sugar consumption in the United States. Only thus can it hope to be able to adjust its production and marketing costs and thereby offset even gradually the loss of its preferential status in the American market.

Philippine participation in the U.S. increased consumption annually is vital to the industry for growth and development. Moreover, especially at this time, we need to increase our exports not only for the dollars we need but for employment opportunities to our labor force that such increased exports will generate. We particularly need dollars from larger exports to enable us to continue buying our essential needs from the United States.

PHILIPPINES MADE GREATEST SACRIFICE ON ADOPTION OF QUOTA SYSTEM

It is a fact that the Philippines sustained a greater reduction in production than any other supplier to the U.S. market when the U.S. sugar quota system became effective retroactively in 1934 (from 1,565,455 tons in 1933-34 down to 695,134 tons in 1934-35, or a reduction of almost 56 percent.)

During the latter part of 1941, the Philippines had run short of bottoms for its sugar exports to the United States, so that a sizable volume of the quota could not be shipped during that year, when the war broke out in December.

PHILIPPINES, FRIEND AND ALLY

The sacrifices of the Philippine sugar industry became more pronounced during and after the war when sugar lands and sugar centrals were abandoned and destroyed. The industry was dormant for 3 years and with liberation came the destruction of most of the centrals. After 10 years of feverish efforts at reconstruction and rehabilitation, the industry at last was able to fill its quota of 952,000 tons in 1954. In the period from 1941 to 1953, the Philippines shipped to the United States only 4,433,501 short tons out of its share of 12,376,000 short tons or barely 36 percent of the total. Other foreign sources supplied the deficiencies of almost 8 million tons lost by the Philippine sugar producers due to the war, principally Cuba.

PHILIPPINES PLACED IN STRAITJACKET BY 1956 AMENDMENTS

Following the 1956 amendments to the Sugar Act of 1948 in which an increase in U.S. consumption above the basic supply of 8,350,000 was contemplated, the sugar needs of the mounting population of the United States have in fact been augmented but the Philippines has enjoyed no part of the excess supply. Taking the estimate of the Secretary of Agriculture for 1959 of 9,200,000 short tons, raw value, the actual proportion of the Philippine share in U.S. sugar consumption is only 10.65 percent.

The Philippines should be entitled to a share of at least 11.74 percent of the increase in annual U.S. consumption representing the same proportion as their static quota of 980,000 short tons bears to the agreed basic quota of 8,350,000 short tons.

In attaining the desired result for the Philippines of sharing in the supply of annual excess U.S. sugar consumption demand to the extent of 11.74 percent, it is not contemplated that there be any decrease in the proportion of 55 percent of the excess U.S. sugar consumption above the basic amount of 8,350,000 short tons allotted to U.S. domestic suppliers. The position of the Philippine sugar suppliers can be restored by allotting to them a portion of the remaining 45 percent of the excess U.S. sugar consumption as estimated by the Secretary of Agriculture from year to year above the basic supply of 8,350,000 short tons which is reserved for foreign suppliers.

SIGNIFICANCE OF OUR SUGAR INDUSTRY

As in prewar years, our sugar industry has continued to occupy in the postwar years a very important and significant position in our economy, not only because it is one of the most stable and largest earners of dollars but also because it is one of the largest providers of employment and among the heaviest taxpayers in the country. Then, too, various banking, insurance, shipping, machinery, fertilizer, oil, and other commercial enterprises depend on the sugar industry for their profitable operation.

The United States Should Remain Firm in Berlin

EXTENSION OF REMARKS
OF

HON. VANCE HARTKE

OF INDIANA

IN THE SENATE OF THE UNITED STATES
Monday, March 7, 1960

Mr. HARTKE. Mr. President, the Indianapolis News of March 2, 1960, in an editorial entitled "Where We Came In," discussed the importance of the United States remaining firm in Berlin.

The editorial suggests that President Eisenhower should announce once again that the United States will not give an inch in Berlin—come what may.

I believe that this is an excellent editorial, Mr. President, and I ask unanimous consent to have it printed in the Appendix of the RECORD.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

WHERE WE CAME IN

A year ago today the free world faced a threat by Khrushchev to seize West Berlin. The target date was May 27—a deadline set 6 months earlier by the Russian dictator.

As it turned out, an uneasy summer passed by and nothing happened. This was partly due to Western firmness. But it was due more to such disgraceful acts of appeasement as letting Khrushchev strut around America as though he already owned the place.

All of this was climaxed by the spirit of Camp David and an agreement to a May summit meeting.

Now, one year later, we are right back where we came in. The spirit of Camp David is a poltergeist, to say the best for it.

Khrushchev, heady with self-confidence, has just issued a new warning that the Reds will seize West Berlin unless the May summit meeting goes to suit them.

Coincident with this, the Western Powers have shown a measure of backbone by announcing they will fly their planes at high altitudes through the three assigned air corridors into West Berlin. In the last year they have tried to appease the Russians by flying below 10,000 feet.

Let us hope this small gesture of defiance presages Western determination to keep West Berlin free at all costs. Any retreat from the island city deep inside communism's European empire would be the beginning of a general retreat from all Germany and all Europe.

The News has said time and again that Berlin is the key to all of Khrushchev's complex diplomatic maneuverings. He recognizes that, if he can bluff us into a surrender there, he will be able to proceed from that victory to a series of triumphs which will, in short order, leave the United States a besieged bastion in a communized world.

It is time for President Eisenhower to announce once again that "we will not give an inch" in Berlin—come what may.

George Huddleston, Sr.

SPEECH

OF

HON. CARL ELLIOTT

OF ALABAMA

IN THE HOUSE OF REPRESENTATIVES

Tuesday, March 1, 1960

Mr. ELLIOTT. Mr. Speaker, last week Alabama lost one of its outstanding citizens in the death of Hon. George Huddleston, Sr., of Birmingham. For 22 years prior to 1936 he served Alabama with great distinction in the U.S. House of Representatives. He was a member of the Interstate and Foreign Commerce Committee.

Under leave to extend my remarks, I include an editorial from the March 2, 1960, edition of the Birmingham News. The editorial is a neighborly expression about Mr. Huddleston which I commend to the House. It follows:

GEORGE HUDDLESTON, Sr.

For 22 years George Huddleston, Sr., with intense devotion and attention to details served the citizens of Jefferson County in the U.S. House of Representatives. His death at 90 brings to a close an active life, one filled with the pleasures of a fine and closely knit family, and with the immense satisfactions of public service and knowledge over the years that it was publicly appreciated.

Mr. Huddleston had what clearly was one of his greatest rewards for a life so well-spent—seeing his son win, and win well, election to the same seat in the House which he had himself filled for 11 terms. And he had the satisfaction, too, of knowing that his son, George, Jr., fitted himself into that body with skill and carried on service to Jefferson on the same basis as had the elder Huddleston. Mr. Huddleston's death at 90 is occasion for sorrow. But it also is an occasion on which we all might ponder the values in living a life of concern about public affairs and of interest in the welfare of fellow citizens.

High Interest Rates Hit Small Businessmen Who Are School Building Contractors

EXTENSION OF REMARKS

OF

HON. WILLIAM PROXMIRE

OF WISCONSIN

IN THE SENATE OF THE UNITED STATES

Monday, March 7, 1960

Mr. PROXMIRE. Mr. President, a friend of mine who is a building contractor in Hancock, Wis., has provided a fine example of the direct impact of high interest rates, not only on the construction of schools, but on the welfare of the small businessmen who do the building.

Mr. Bushman, who is a general contractor with experience in constructing schools in central Wisconsin, writes me that his firm has more than doubled its gross in the past year without increasing its net one iota. On the basis of my recent analysis, which I placed in the CONGRESSIONAL RECORD, of the vast increase in school construction costs caused by high interest rates, I feel very strongly that his complaint is thoroughly justified, and I ask unanimous consent that a copy of his letter be placed in the Appendix of the RECORD at this point.

There being no objection, a copy of the letter was ordered placed in the Appendix of the RECORD as follows:

JOHN J. BUSHMAN,
Hancock, Wis.WILLIAM PROXMIRE,
U.S. Senator—Wisconsin,
Washington, D.C.

DEAR BILL: Many thanks for your informative bulletin on the tight money situation relative to school construction—since school construction in the State of Wisconsin accounts for approximately 80 percent of my own business, I was especially interested in what you had to say—and am grateful to you for saying it where it counts, on the Senate floor. The last paragraph of your address hit the nail squarely on the head with respect to my own situation—our firm more than doubled its gross in the preceding calendar year, but our net profit remained the same as the previous calendar year. Over the past few years, we have been

forced to put out money for heavy machinery and adopt mechanization practices in order to be successful bidders—the construction industry is becoming a highly competitive field, and all the contractors have the same gripe—we have to go out for more and more work just to maintain our present net.

Sincerely yours,

JOHN J. BUSHMAN,
General Contractor.

What Is the Communist Position on Capitalism and Armaments?

EXTENSION OF REMARKS

OF

HON. BYRON L. JOHNSON

OF COLORADO

IN THE HOUSE OF REPRESENTATIVES

Monday, March 7, 1960

Mr. JOHNSON of Colorado. Mr. Speaker, the Communist line on the economics of armaments is certainly a puzzling one.

On February 29, Thomas P. Whitney in his Washington Post article, "Capitalism Can Disarm Without Crisis, United States Now Told: Red Propaganda Rejects One of Its Own Myths," pointed out that Soviet propaganda is now trying to refute the myth which they helped start that disarmament is impossible for America because it must lead to economic crisis.

Recent efforts of the Communist Party of the Soviet Union, which have aimed at showing that the United States could indeed demobilize without risking economic collapse, have seemed peculiar in light of classical Communist doctrine. Early Marxist-Lenin-Stalin doctrine maintained that without an economy based upon, and bolstered by armaments, capitalism would collapse. The United States and other capitalist countries, the Communists argued, were driven by the nature of their economic systems, to resist major disarmament.

The falsity of this argument is so well known that it hardly needs rebuttal. I have long contended that the United States could reconvert its economy without fear of collapse. I have taken this position before the public in answer to the classical Communist charge that a capitalist nation dares not disarm. A recent article of mine, "If Peace Were To Break Out," which appeared in the December 9, 1959, issue of the *Christian Century* and which was inserted in the *CONGRESSIONAL RECORD* by Congressman LEONARD WOLF, demonstrated that our economy is resilient enough to absorb huge cuts in the Government spending sector. Such was the case after the Second World War and the same, I confidently predict, will happen in the event of future disarmament and reconversion.

COMMUNIST RECORD

Premier Khrushchev, in a speech before the 20th Congress of the Communist Party in 1956 disagreed with my long-held contention and stated that:

The capitalists and the learned defenders of their interests are circulating a 'theory'

that the uninterrupted expansion of arms manufacture brings salvation from economic crises.

In a speech in July 1958, the Soviet leader went even further in attacking the American economy and likened its condition to that of a dying man. Stated Khrushchev:

As one seriously ill is prepared to use any remedy to prolong his life, so capitalism whose organism is affected by an incurable disease, holds to such remedies as the arms race, preparation for war, hydrogen bombs, military blocs, so as to put a brake on the development of socialism and to prolong its own existence.

This was and still is pure nonsense.

According to a brief study done by the Library of Congress, recently Mr. Khrushchev reversed his field. Now, the Soviet leadership anxious to reach some disarmament accord with the West, Mr. Khrushchev has made several statements which imply that he no longer deeply believes the economies of the capitalist nations will collapse if the arms race is halted.

Adlai Stevenson, immediately after the Premier's visit to this country, wrote in the *New York Times*:

I have been interrogated during the past year by several important Russian visitors about the economic effect of reduced defense spending, and Khrushchev's conclusion that our 'economy is so large' that our industry could be converted without major trouble represents a sharp reversal of Soviet attitude.

However, Mr. Stevenson qualified his remarks by adding that "Mr. K. concluded that subject with a twinkle in his darting eyes, 'at least that's what your industrialists all tell me; and what else could they say?'"

It is likely that the Soviet Premier is unwilling to publicly admit that he now realizes that our economy need not maintain armaments production to survive. But this line is now being repeated in Soviet speeches and press releases.

Everyone acquainted with the basic principles of economics knows that white is white, that adequate income can be generated without arms spending. I am pleased to see that the Soviets are now abandoning their policy of depicting white as the darkest shade of black.

We are all coming to agree that our economy's strength does not rely on defense production. Just because the Communists, whether sincerely or because of strategy or tactics, now recognize that capitalism will not expire with a relaxation of tensions and disarmament, I see no reason to argue the issue with them. There remain many other, and more important points which we still need to discuss and debate, while holding fast to the truth as we see it.

Whatever the party line happens to be at the moment, facts have demonstrated that our economy can be adapted and used to serve our purposes, whether for purposes of military defense, purposes of meeting our public needs, purposes of domestic consumption, or purposes of helping other nations of the world realize their full potentialities.

Let us pursue our hopes for the resolution of tensions and international disarmament with greater vigor now that

the Soviets have finally given some indication that they believe we can afford to make that choice. The change in their line should spur our actions, not stop them.

The article follows:

CAPITALISM CAN DISARM WITHOUT CRISIS, UNITED STATES NOW TOLD—RED PROPAGANDA REJECTS ONE OF ITS OWN MYTHS

(By Thomas P. Whitney)

Soviet propaganda is now trying to refute one of its most assiduously cultivated myths—that disarmament is impossible for America because its must lead to economic crisis.

The standard Soviet argument, repeated to the point of nausea in the postwar period, has been that since high current levels of production in the United States are solely the result of "militarization of the economy" American "ruling circles" must inevitably prevent and frustrate all disarmament efforts.

"Wall Street monopolists," ran this line, can only continue to pump out their fabulous profits from the pockets of American workers through keeping the arms race going. Capitalism, declared Soviet propaganda day in and day out, is incapable of forging swords into ploughshares.

This whole line of Communist logic was then elevated to the status of proof that it is the U.S. Government that is responsible for the cold war and the arms race and the threat of nuclear destruction of mankind.

But now, with a summit meeting scheduled for May and the Eisenhower-Khrushchev meetings in Russia due in June, there's a new theme in the air.

"Some Western press organs assert that the discontinuation of the arms race will result in a destructive economic crisis," declared a recent official press release of the Soviet Embassy in Washington. It went on to say that "the truth is that . . . general disarmament does not present a threat to the capitalist economy."

The Soviet Embassy presents this interesting assertion as the conclusion of Erik Pletnyov, an assistant professor of the Institute of International Relations in Moscow.

Somewhat similar views were expressed, though not nearly so categorically, by Premier Nikita Khrushchev in his speech on disarmament to the Supreme Soviet of the U.S.S.R. in January. And the most authoritative Soviet journal in the area of international economics, *World Economics and International Relations*, in its latest issue describes as a myth the idea that armament orders are irreplaceable in the American economy.

Pletnyov, however, develops the new Soviet propaganda concept much further than have other Soviet sources. To prove his point about the possibilities of successful reconversion of arms industries to consumer and capital goods he cites American experience in the immediate postwar period of 1945-47 and again in the period after the Korean war in 1953-54.

Pletnyov points out that in both these periods the United States successfully reduced arms expenditures by very large amounts without severe shock to the national economy. This is an extremely interesting Soviet admission—and one which American propagandists would do well to note for future use—for it has always been a key Soviet stand in discussion of the origins of the cold war that the United States did not convert its wartime economy to peaceful pursuits after World War II.

Declaring that Marxists are still convinced that capitalism cannot get rid of economic crises, Pletnyov at the same time makes the rather curious statement that: "Actually it is absolutely contrary to Marxism to

assert that capitalism can increase production and employment only in the conditions of an arms race."

The amusing aspect of this new Soviet line is that apparently it represents a case in which Soviet propagandists, faced with changing needs in a year in which international agreement and sweetness and light are in the atmosphere, are fearful that people in the West may actually have come to believe a previous propaganda line and are now rushing to reassure that it really wasn't so.

Forty-second Anniversary of Lithuania's Independence

EXTENSION OF REMARKS

OF

HON. HOMER E. CAPEHART

OF INDIANA

IN THE SENATE OF THE UNITED STATES

Monday, March 7, 1960

Mr. CAPEHART. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD the attached resolution which was presented, adopted, and unanimously passed at a mass meeting sponsored by the Lithuanian American Council of Lake and Laporte Counties, Ind., commemorating the 42d anniversary of Lithuania's independence.

There being no objection, the resolution was ordered to be printed in the RECORD, as follows:

Whereas the peace loving and progressive Lithuanian nation, notwithstanding its loyalty to international treaties and agreements, fell victim to unprovoked aggression and military invasion of Soviet Russia; and

Whereas the Lithuanian people are strongly opposed to foreign domination and are determined to restore their freedom and sovereignty which they had rightly and deservedly enjoyed for many centuries in the past; and

Whereas because of their manifest and unmistakable anti-Communist attitude, the Lithuanian people behind the Iron Curtain, backed by their kinsmen in the free world, represent an active and reliable outpost in the present defense front of the free nations against international communism; and

Whereas the Soviet dictatorship constantly strives to extend its rule over the new territories in Europe, Asia, and Africa and seeks to dominate the whole world: Now, therefore, be it

Resolved, That this gathering appeal to the Government of the United States to respond to the demands of our times by giving wise and coordinated leadership to the troubled world aspiring to peace, justice and freedom; and be it further

Resolved, That it is our consensus that American leadership in the fight for freedom and peace will be best exerted by inaugurating strong and dynamic policy aimed not only at preventing further expansion of Communist imperialism but also at abolishing the fruits of all past Kremlin aggressions; and be it further

Resolved, That this meeting asks the Government of the United States to refrain from signing any new treaties with the Soviet Union until the latter agrees to restore freedom and sovereign rights of self determination to the Lithuanian people and to other enslaved Eastern European nations.

ALBERT G. VINICK,

President, Lithuanian American Council,

REV. PETER CELESIVUE,

Secretary, Lithuanian American Council.

Air Force Reports Smog Device Which Pays for Itself

EXTENSION OF REMARKS

OF

HON. KENNETH A. ROBERTS

OF ALABAMA

IN THE HOUSE OF REPRESENTATIVES

Monday, March 7, 1960

Mr. ROBERTS. Mr. Speaker, recently the Subcommittee on Health and Safety held hearings on the problems of air pollution emanating from the discharge of unburned hydrocarbon from automobiles.

The automobile manufacturers report they have a device which will be installed on cars sold in California, which can effectively reduce these fumes.

My own reaction to this as I have expressed here previously is: Why cannot this device, if it is effective and inexpensive, be installed on all automobiles? Air pollution does not stop at the California State line.

Secretary Flemming, of the Department of Health, Education, and Welfare, appeared before the subcommittee during the hearings and testified in a similar vein.

I was very interested to learn that another device has been developed, and approved by the Air Force, which not only would reduce smog-producing pollutants, but would assist in the operation of the vehicle in which it is installed.

Testing authorities believe it could pay for itself within 6 months.

Under leave to extend my remarks, I wish to include an article which appeared in the Washington Post on March 1, 1960, on this subject.

The article follows:

AIR FORCE VEHICLE DEVICE CUTS SMOG

(By Morton Mintz)

A cost-cutting device approved by the Air Force for its 185,000 ground motor vehicles offers a surprise bonus—it reduces air pollution.

A spokesman said that within 3 years it will be standard equipment on most of the vehicles and on thousands of stationary units powered by internal combustion engines.

The spokesman, Lt. Col. Walter A. Miller, said the device was tested for 8 months and then approved by both the Research and Development and Materiel Commands. He is chief maintenance engineer for motor vehicles.

The device adds an eat-your-cake-and-have-it-too angle to the fight against air pollution, holding out hope that even private car owners will be able to save money by fighting smog.

The report on the testing project, conducted by special shops at Schilling Air Force Base, Kans., said installation costs should be amortized within 6 months.

The Public Health Service, a spokesman said, is satisfied that the device removes the smog-forming hydrocarbons normally vented into the atmosphere by the crankcase "breather" pipe. The Army and Navy are among other Federal agencies that have the report under study.

The report was completed in July, 4 months before the auto industry's announcement that the crankcase had been found to be a significant source of hydrocarbons. The exhaust pipe remains the major source.

The crankcase fumes, called "blowby," are chiefly raw gasoline that slips past the piston rings. Various devices, including one approved by the auto industry, feed blowby back into the engine to be burned.

The Air Force-approved unit, made by the Oildex Corp., of Tulsa, traps impurities in the "blowby." Powered by engine vacuum, it atomizes the remaining fuel, oil and moisture and sends the cleansed mixture into the engine for burning via the intake manifold.

The Schilling report says tests on 45 Oildex-equipped vehicles—checked against the same number and type of vehicles operated for the same purposes—showed that a list of claims made by the manufacturer are true.

The report said the units "conclusively reduced our maintenance workload approximately 70 percent as far as engines are concerned * * * inspection may be ultimately beyond the 6-month cycles now established."

Colonel Miller said the average cost of a factory installation for the Air Force—because of mass purchasing and tax exemptions would be \$20. An Oildex spokesman put the usual range for an existing privately owned used car at \$35 to \$50.

The Schilling report—fully endorsed by Miller—said the device generally effects a "restoration" in older vehicles and protects new ones against those conditions which make them old.

It said that with proper installation—which can require repair of certain faulty engine parts—the device removes and prevents formation of carbon and sludge and reduces the frequency of needed oil changes and spark-plug and oil-filter replacement.

The device, easily serviced and about the size and shape of a quart jar, is said to increase compression and horsepower, reduce gasoline consumption slightly and reveal coolant leaks.

Why I Am a Democrat, by Senator Jennings Randolph and the Tulia Herald

EXTENSION OF REMARKS

OF

HON. RALPH W. YARBOROUGH

OF TEXAS

IN THE SENATE OF THE UNITED STATES

Monday, March 7, 1960

Mr. YARBOROUGH. Mr. President, all of us realize the importance of a strong two-party system in order for our form of government to work best. All of us could list many reasons as to why we chose our particular party whether we be Democrats or Republicans.

Recently the Tulia (Tex.) Herald, one of the Nation's finest weekly newspapers, whose editor H. M. Baggerly is a National Editorial Association prizewinner, published an outstanding editorial on the subject, "Why I Am a Democrat." This editorial was based on a very excellent speech by my friend and colleague the distinguished and able Senator from West Virginia, Senator JENNINGS RANDOLPH, one of the best speakers for democracy in America.

I ask unanimous consent to have printed in the Appendix of the RECORD the editorial from the January 21, 1960, issue of the Tulia Herald, headed, "Why I Am a Democrat."

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

WHY I AM A DEMOCRAT

Despite our widespread learning and media for the dissemination of information, we Americans, in many instances, are grossly ignorant. How many of us, for example, understand the difference between Democrats and Republicans?

It isn't enough to say glibly that "They're all just alike" or make some other flippant observation such as "It isn't the party, it's the man." It would be more logical to say that "It isn't the church, it's the personality of the pastor."

When Senator JENNINGS RANDOLPH of West Virginia was invited to speak at the Bethany College convocation, Bethany, W. Va., recently, he chose the subject, "Why I Am a Democrat."

Said Senator RANDOLPH, "First, I am a Democrat because I am young. Even though the years are magnified, I will be young with the Democratic Party."

"The Democratic Party, though the oldest political party in existence, is still the youngest in this country measured by vitality. Ours is the party of youth, for it sees the world in terms of its tomorrows while not relying entirely upon its yesterdays. Ours is the party with eyes in its forehead—not in its hindhead."

"In this respect I have sometimes thought that, rather than the elephant, a more appropriate symbol for the other party would be the vain and strutting peacock with a thousand eyes in its tail—all looking backward. However, the elephant, with much memory but little imagination, will do."

"The valid concepts of the New Deal and the Fair Deal—and most of them were valid—have become an enduring part of our national, political, and economic life, and have prevented the recurrence of the tragedies of the era of the thirties. Just as the great depression tested the assumptions of the philosophy of Let nature take its course—and found those assumptions insufficient, so has the period since World War II tested the basic principles of the New Deal—and found them valid."

Space prevents other comments of Senator RANDOLPH on his first point.

"There is a second reason why I am a Democrat," continued the Senator. "The Democratic Party is not afraid to dare. Our party, since its founding by Thomas Jefferson in 1794, has been willing to experiment in the public interest. And it is no accident of history that throughout our national life the significant surges of growth toward the realization of the American dream have been associated with the Democratic Party. It was Jefferson's Democratic-Republican Party which routed the narrow mercantile philosophy of the Federalists. (I might add, parenthetically, that although Jefferson's party dropped the Republican suffix in 1828, one still finds a Democrat here and there who has not heard of that simplification.)"

"Before continuing with a discussion of the present challenge to the creativity of the Democratic Party, there is a third reason why I am Democrat. It is the party which embraces the broadest interests of the American people. And I say, with all respect—and some sympathy for members of the minority party—ours is the only really national party. During the dynamic 19th century industrial expansion, the concept of private property became identified with the ownership of factories, mines, and railroads. Thus, after the Civil War it was the powerful industrial and railroad barons who captured the Republican Party and defeated the hopes of Abraham Lincoln. Finally, during the 20th century, the concept of private property has again shifted under the development of the corporation as the major economic institution. And in this century we have found that the representatives of the major corporations have gained ascendancy in the councils of the Repub-

lican Party. The farmer, the small businessman, the worker, the aged and the unemployed may advance their claims only if the budget is balanced to the satisfaction of the dominant business executives.

"The property interests of the corporation are only a segment of the total area of the meaning of property rights. Without a fair price for his commodities, the farmer's property rights become an ironic jest—and a poor one."

"In thus recognizing a broader definition of property rights the Democratic Party has sought to extend the fruits of democracy to an ever-widening number of people. For this reason the Democratic Party continues to attract, in ever-increasing numbers, the farmer, laborer, the small businessman, the intellectual—and all those who look to the future, rather than to the past."

This is one man's reason for being a Democrat.

Radioactive Fallout on Agriculture

EXTENSION OF REMARKS

OF

HON. CHARLES B. HOEVEN

OF IOWA

IN THE HOUSE OF REPRESENTATIVES

Monday, March 7, 1960

Mr. HOEVEN. Mr. Speaker, under leave to extend my remarks in the RECORD, I include a speech made before the 15th Annual Convention of the National Agricultural Limestone Institute, Inc., in Washington, D.C., on January 19, 1960, by Dr. Frank A. Todd, Assistant to the Administrator of the Agricultural Research Service, Department of Agriculture:

REDUCING THE EFFECTS OF RADIOACTIVE FALLOUT ON AGRICULTURE IN TIME OF EMERGENCY

In an age when nuclear weapons are a reality, we as a Nation should be prepared with as much knowledge as possible about protection and survival from an attack with these weapons. The primary responsibilities of agricultural leaders and farmers in such a catastrophe would be the protection of the farm people and the ability to produce the food and other crops necessary for existence.

Research is developing knowledge that would help to provide this protection. The study of nuclear weapons and their effects is a relatively new science, and it is understandable that not all of our information is definite at this time. However, research studies are extensive and our fund of dependable knowledge is growing rapidly.

One of the problems that is being widely studied to help agriculture survive a nuclear attack is the effect of radioactive fallout. And in approaching this problem we can start with the nuclear explosion itself.

NUCLEAR EXPLOSION

A nuclear explosion is accompanied by four destructive phenomena—blast, heat, initial radiation, and residual radiation. The first three are almost instantaneous while the fourth—residual radiation—produces its effects later and over a much longer period.

The area of destruction resulting from the blast, heat, and initial radiation will vary with the size of the bomb, the height of the explosion, and—to some extent—the terrain and atmospheric conditions. The size of the large bombs developed since World War II are expressed in terms of megatons. A megaton has the energy equivalent of 1 million tons of TNT.

When a nuclear explosion occurs close to

the ground, particles of earth, debris, and radioactive portions of the bomb—amounting to thousands of tons of material—are taken up into the familiar fireball and rise in the mushroom cloud. The maximum temperature of the fireball approaches that of the center of the sun—millions of degrees Fahrenheit. In the fireball, the particles of material are converted to gases and liquids. As these condense and solidify during cooling, they entrap radioisotopes formed from the bomb materials, and the resulting particles are thereby made radioactive. Other particles will not fuse, and may collect radioisotopes on their surfaces.

The heavier bits of debris begin falling in the immediate area shortly after the detonation and may continue for several hours depending on the meteorological conditions.

According to estimates, about one-half the fallout from an atomic explosion will return to the earth's surface in about 12 hours. The remainder may go high into the atmosphere—some may go even above the troposphere into the stratosphere—and gradually descend as fallout over a period of days or years. The size of the fallout particles, together with the wind, rain, and other atmospheric conditions, will determine largely when and where they will fall to the earth's surface. The fallout is a source of radiation that can be damaging to an area when it falls in large quantities.

In very general terms the region of severe local fallout contamination can be described as an elongated, cigar-shaped area extending downwind from the point of burst. The pattern will be extremely irregular in outline and contamination within the area is usually not uniform. There may be local areas of extreme danger, others with very little contamination, and all gradations in between. We can speculate on the causes for these variations—air currents, rain, and other weather conditions—but the exact cause is not certain.

NUCLEAR RADIATION

The danger of radioactive fallout is from the nuclear radiation emitted by radioisotopes produced by the explosion of the bomb. This radiation can pass into and through matter. When it does, it can change, damage, or destroy living cells through ionization—the production of electrically charged particles from cell constituents. Ionization resulting from radioactive fallout damages and destroys some of the constituents essential to the normal functioning of body cells. It forms products that may act as poisons to these cells. Furthermore, cells may lose their ability to divide and grow, thus inhibiting normal cell replacement in the body.

Thus nuclear radiation can damage or affect both living and inanimate matter, but it does not transmit the radioactivity to the affected matter. In our problem, the radioactive contamination is in the fallout itself. Once it has been removed, the irradiated materials are not contaminated thereafter, but the radiation damage to the living matter may persist or may not appear until later.

We are most concerned, of course, about the harmful effects of ionizing radiation produced in the cells of living tissue and biological systems. There are two types of hazards to animal tissue created by radioactive fallout materials: (1) External radiation and (2) internal radiation.

External radiation is the acute problem that would be faced at the time fallout first drops on an area. The major concern is with the shorter life isotopes that produce gamma rays, capable of traveling long distances. Internal radiation is the chronic problem created largely by the consumption of contaminated food and water. It is caused chiefly by longer life isotopes that produce beta rays which are capable of traveling only short distances. Once inside the body, they

can continue to damage the cells with which they come in contact. This radiation hazard is of major concern to agriculture since it can affect most food commodities.

Protection against both types of hazard are available.

PROTECTION FROM EXTERNAL RADIATION

There are three basic principles of radiation protection against external sources: Distance, time, and shielding.

Distance

The first natural protection is distance. As would be expected, the radiation exposure from a nuclear explosion or from fallout is less the farther away you are from the point of the burst or the source of radiation. This is true because the radiation is spread over larger and larger areas and diluted in strength as it travels away from the original point. The general formula applied is that the dose of radiation decreases through distance according to the inverse square law.

Time

The lapse of time is a natural protection against radioactive fallout. The total radiation hazard of the fallout begins to decrease immediately after its deposition. The various radioactive elements included in the fallout cloud decay at different rates, usually expressed in terms of their half-lives. Some isotopes lose half their radiation strength within seconds, hours, or days. Others decay at a much slower rate. For example, iodine 131 has a half-life of 8 days, while strontium 90 has a half-life of 28 years. In other words, iodine 131 has decayed to half its strength in 8 days while it takes 28 years for strontium 90 to lose half its original radioactivity. Therefore, the total radioactivity of fresh fallout decreases rapidly at first, but the rate of decay slows to a very low level after the shorter life elements have lost their radioactivity.

An approximate rule has been developed to estimate the decay rate of the mixture of all isotopes developed from a nuclear explosion. This rule follows that for every sevenfold increase in time following the detonation the radiation activity decreases by a factor of 10. Using this assumption a dose rate of 1,000 roentgens per hour at H/1 hour will decay to 100/hr at H/7 hours, to 10/hr at H/49 hours, to 1/hr at H/343 hours (approximately 2 weeks) and to 0.1/hr at H/14 weeks. The 0.1/hr exposure can be accepted in an emergency as relatively safe for work which must be carried on out-of-doors. This would result in about 1r/day exposure since part of the 24 hours would be spent indoors.

Shielding

The third protection is shielding. Farmers should be prepared to provide shelter from fallout for their families and livestock, as well as for their food, feed, and water. The most critical period of danger from radioactive fallout is the first 48 hours after detonation. However, in areas affected by heavy radioactive fallout, farmers should be in a position to provide shelter and uncontaminated food and water for their family and animals for longer periods. It might be advisable to stay within shelter—at least most of the time—for as much as a week or two.

Research experience indicates that a person on the first floor of an ordinary frame house in a fallout area would acquire about one-half the radiation dose received out-of-doors without any protection. Adequate protection would be found in an underground shelter with a covering of earth at least 3 feet thick.

DECONTAMINATION

Since radioactive materials cannot be destroyed, decontamination involves the transport of the source of radiation or contami-

nation. The fallout should be removed from a location where it is a hazard to a place where it can do little or no harm. Thus, there are two procedures: (1) removal and (2) disposal.

FARMERS' PROBLEMS

The farmer has two major responsibilities in the event of a nuclear attack.

First, to provide protection for himself and his family from radiation and fallout. He must provide adequate shelter, food, and water (at least 2 weeks' supply), sanitary facilities, and battery radio or some other means of receiving emergency information.

Second, he should provide protection for his livestock and poultry from radiation and fallout. This protection would include shelter, uncontaminated food and water, and buildings and other facilities for confinement until the radioactivity outdoors decays to a level that would be relatively safe for the livestock to be turned out.

For livestock, a good tight barn would reduce radiation dosage about one-half. But any kind of shelter provides some degree of protection. Proper use of shelter for animals can reduce the number of deaths from radiation by 75 percent or more.

Field experiments have indicated that total body radiation exposure of animals to from 300 to 600 roentgens provides a midlethal dose—or the dose level which you could expect to kill 50 percent of the animals within 30 days. However, there is a variation of tolerance among species of animals.

Table I gives the percent mortality of various species of unsheltered animals affected by exposure to different intensities of radiation. Table II shows the effects of shielding, using a two-story basement type barn with a loft filled with hay.

TABLE I.—Percent mortality of various species of unsheltered animals following exposure to a 24-hour radiation dose

Species	Percent mortality				
	100	80	50	20	0
Exposure dose in roentgens ¹					
Cattle.....	700	600	600	510	400
Sheep.....	600	600	520	440	350
Swine.....	610	530	460	390	310
Poultry.....	1,000	920	800	680	540

¹ Exposure dose in area where livestock and building are located.

TABLE II.—Percent mortality of various species of sheltered animals following exposure to a 24-hour radiation dose

Species	Percent mortality				
	100	80	50	20	0
Exposure dose in roentgens ¹					
Cattle.....	3,900	3,400	3,000	2,500	2,000
Sheep.....	3,400	3,000	2,600	2,200	1,700
Swine.....	3,000	2,600	2,300	1,900	1,500
Poultry.....	5,000	4,600	4,000	3,400	2,700

¹ Exposure dose in area where livestock and building are located.

In protecting feed and water, the objective is to prevent the fallout, which is the source of radiation, from becoming incorporated into the materials. This can be done by placing a cover over the feedstuffs or water. Grain stored in a permanent bin or ensilage in a silo are provided with adequate protection against fallout and the contents can be safely used when the farmer is able to get into the area to use them. The haystack in an open field can be protected with a covering such as a tarpaulin. The fallout will lodge on the tarpaulin, irradiate the

hay—just as it does the contents of the feed bin and silo—but by carefully removing the tarpaulin, the radioactive fallout will be removed. Although the hay would be irradiated, it would not be radioactive and could be used as a safe source of feed for livestock.

The use of standing crops such as grain, fruits, and vegetables subjected to fallout will depend upon the stage of growth—that is, whether they can be allowed to stand until radioactivity has decayed enough to make it relatively safe to get to them to harvest. If fallout is heavy, ripe, thin-skinned fruits may be lost because of the personal hazard involved in harvesting them. Thick-skinned fruits that do not have to be picked immediately and that can be peeled before eating, can probably be saved. They can be decontaminated with washing agents before marketing. Orchard trees should be maintained and the fruits examined for radioactivity before and after harvest. Leafy vegetables such as lettuce should not be eaten unless they are thoroughly washed and are known to be free of hazardous amounts of radioactivity. Growths of alfalfa and other feed crops standing in the fields at the time of the fallout might not be usable. Subsequent growths would be less radioactive.

Meat animals subjected to fallout may be thoroughly washed off to remove the external radioactive particles. If they are needed for food, they may be slaughtered immediately and the hides carefully discarded to prevent contamination of the edible parts. Because of the ingested and inhaled fallout, it will be necessary to discard the respiratory organs and the entire alimentary tract, along with the contaminated hide. The disposition of these contaminated parts should be determined after a more thorough radiological examination. If the area has been subjected to sublethal amounts of fallout, animals may develop signs of radiation sickness. In this case, they might be placed on clean, uncontaminated pasture and treated symptomatically.

HAZARDS OF INTERNAL RADIATION

The second phase of radiation hazard from fallout is internal radiation or the chronic exposure to the long-life radioactive isotopes, especially those that find their way into the food chain. These radioactive elements generally enter the bodies of animals and human beings with food and water.

At first, the principal sources of internal radiation is edible plants contaminated externally when the fallout first drops on the affected area. For livestock this would involve primarily forage grasses and legumes. For man it would involve fruits and vegetables. As time passes, and the contaminated food and feed are discarded, the principal source of internal radiation for animals and man is from the contamination in the soil which is absorbed through plant roots.

The radioactive isotopes of most significance as internal radiation hazards are iodine 131, cesium 137, and strontium 90. Many others produced by nuclear explosions are of minor concern because of the small amounts available, their extremely short half-life, and the fact that they are not incorporated into the food chain and hence do not affect animals and man.

Radioactive iodine is very similar to ordinary iodine. When it is consumed with contaminated plants it gets into the biological system. It collects in the thyroid gland. Children are more susceptible than adults to thyroid damage by radioactive iodine. In mammals it can be transferred to milk. Fortunately, this isotope has a relatively short half life of 8 days. Its radiation hazard has virtually disappeared in about 60 days. While the early acute hazards may be serious, there is general agreement among research scientists that iodine 131

will not be an important long-term fallout hazard.

Cesium 137 has a long half life of 30 years and is somewhat similar to the essential nutrient element potassium. When it is consumed and absorbed, it is found primarily in muscle tissue. But this radioisotope is not retained long in the body. It continually enters and leaves the system just as potassium.

Strontium 90, however, with a half-life of 28 years, is of primary importance. It behaves much like calcium in soils, plants, and animals. Atomic explosions produce large amounts of strontium 90. It is taken up in biological systems, secreted in milk, and collects in bones, where it remains for a number of years.

Just as other radioactive isotopes of fallout, strontium 90 falls on the surface of plants and can be consumed with contaminated foods and forage. Some of it enters the soil, remaining for considerable periods in the top several inches of uncultivated land. From here it is taken up by plants along with calcium, and when the plants are eaten by animals the radioactive strontium enters the bone and milk.

Fortunately, there is a protective factor termed the "discrimination factor." As the strontium and calcium move together through the food chain from the soil to the plant, through the body of animals to the meat and milk, and then through the body of man to its resting place in the bones, relatively more calcium than strontium is left. This is the natural discrimination between calcium and strontium. The findings of Comar show that if there are 100 units of strontium to each 100 units of calcium in plants, only 8 to 16 units of strontium for each 100 units of calcium would enter the bones of the human population.

Nutrition experts estimate that within the United States, from 70 to 80 percent of the calcium intake in our average diet comes from milk and dairy products. As the biological systems of both the cow and man discriminate between calcium and strontium, human bones accumulate only 34 percent of its hazardous strontium while it is getting 80 percent of its calcium from milk. From plants, the human bones get 15 percent of the necessary calcium while it is collecting 63 percent of the strontium content. In addition, we get about 5 percent of our calcium and 3 percent of the strontium 90 from meat.

Therefore, because milk is the outstanding food for building healthy bones and teeth, it would not be wise to recommend the substitution of another source of calcium in our diets, except under conditions of extreme emergency. In fact, the evidence available at this time would indicate that it is better to continue getting more of our dietary calcium from milk and less from plants.

(To digress for a moment—radioactive iodine is seriously damaging to young children and would be contained in milk produced in fallout areas. Therefore, milk from contaminated areas should not be consumed by children for about 60 days after the nuclear explosion to allow time for the decay of radioactive iodine. Such milk, under emergency conditions, need not be destroyed but can be converted into dairy products and stored for at least 60 days or until the radioiodine has decayed.)

Radioactive isotopes of strontium deposited in the bone probably can produce serious consequences, including bone cancer and leukemia. But since radiostrontium is assimilated in the bones, it constitutes essentially no genetic hazard for its radiations do not reach the reproductive organs in any quantity.

The question of whether there is a level of ionizing radiations under which there are no harmful effects to man has received considerable attention by many investigators.

The results as of today are generally inconclusive because measurements at low radiation levels are difficult to make. In general, the maximum concentration of strontium 90 in the bones recommended by the National Committee on Radiation Protection and Measurement for atomic industry workers is one microcurie (very small measure of radiation) for a man whose body is estimated to contain 1,000 grams of calcium. Experiments with the reaction of animals to radiation indicate that appreciable increases in the number of bone tumors should not be expected to appear at less than 10 times this level. The average daily maximum permissible concentration (MPC) for peacetime consumption of food and water has been 80 strontium units. A strontium unit (s.u.) is one micromicrocurie of strontium 90 (Sr^{90}) per gram of calcium, or a millionth of a millionth of a curie of Sr^{90} per gram of calcium. The MPC is based on continuous intake. It was set by the International Commission on Radiation Protection.

Human beings under normal conditions constantly receive radiation from many sources. Cosmic rays, X-rays, potassium, and radium present in earth, bones, and wrist watches are a few of these sources. This background radiation contributes about 2 percent of the maximum level adopted by the International Commission on Radiation Protection as acceptable for large segments of the general population.

The exact long-term results of chronic exposure to internal radiation created by multibursts of modern nuclear weapons, under emergency conditions of an attack on populated areas, are not known.

RESEARCH

Reclaiming contaminated soil

Decontamination of soils is necessary only for the removal of strontium 90. Other biologically significant fission products either are taken up from soils by plants in much smaller amounts or have such short lives that decontamination is not necessary. In zones of heavy fallout, the most stringent decontamination measures available will be necessary in order to reduce the strontium 90 content of the soil to a level acceptable for production of vegetables and milk. (These products absorb a greater percentage of the available strontium 90 than others.) For production of other crops, or in zones of lighter fallout, it may be sufficient to use less effective practices which reduce the uptake of strontium 90 to a lesser degree. Obviously, heavily contaminated lands (over 1,000r/hr at H/1) should be placed in cultivation only when their use is absolutely necessary.

DECONTAMINATION BY REMOVAL OF GROUND COVER

Decontamination by the removal of ground cover is effective when the existing cover is thick enough. The cover provided by a sod or by a mulch consisting of two tons of oat straw per acre is practically complete. More than 90 percent of the fallout on sod or mulch may be removed by removing the sod or raking off the straw. Standing crops usually provide less complete ground cover, especially when young, and their harvest may remove only a small fraction of the fallout.

Contaminated crops could be disposed of by harvesting and baling to reduce their bulk. The bales must be stored where they will not contaminate other foods. The workers should avoid breathing the dust created by these operations by wearing respirators. Clothing should be kept as clean as possible. Thorough washing of the hands and face are necessary before eating.

The cover by the mulch illustrates the effectiveness of the level of two tons of oat

straw per acre. Less dense cover, of course, would provide less effective removal.

DECONTAMINATION BY REMOVAL OF SOIL SURFACE

The removal of soil surface is one of the most effective methods of decontamination, but it would be expensive and—with the procedures developed at this time—not suitable for large acreages. It might be useful if small clean areas are needed to produce food for survival.

The effectiveness of decontaminating surface soil by scraping ranges from partially successful for rough land to highly successful for smooth land. Rough, freshly plowed surfaces are difficult to decontaminate. Scraping off two inches of soil with a road grader may remove over 99 percent of the fallout from smooth soil, and only 60 percent from rough soil. Rough soil surfaces may be decontaminated more completely by scraping off more soil. Just as in harvesting, precautions against breathing dust and for cleanliness will be necessary.

The safe disposal of contaminated surface soil after removal is a serious problem. For the large volumes of soil involved, the only practical places for disposal appear to be pits in the center of small fields or regularly spaced ditches across fields. The pits or ditches would have to be protected from erosion and not used for crop production.

OTHER METHODS OF DECONTAMINATING SOIL

Several additional methods of decontaminating soils do not appear to be practical on a field scale. Among these are leaching and cropping soils to remove strontium 90. Leaching would require extremely large amounts of water and calcium salts or acids. In addition to removing strontium 90, plant nutrients would be leached out of the root zones and would have to be replaced. Cropping, even with those crops known to take up large amounts of calcium and strontium, would require more than 40 successive crops to achieve 90 percent decontamination.

REDUCING STRONTIUM 90 UPTAKE WITH SOIL AMENDMENTS

Additions of lime, gypsum, fertilizers, or organic matter in practical amounts usually reduce uptake of strontium 90 by less than half. Combinations of soil amendments and tillage practices may reduce uptake more than any single amendment would. The best use of soil amendments for maximum crop production is often the same as their best use for reducing strontium 90 uptake.

DILUTING CONTAMINATION BY LIMING

Another method of making contaminated soil more useful to agriculture may be by the addition of lime (or gypsum). The plant's need for calcium leads to the absorption of the similar element strontium. In soils low in exchangeable calcium, more strontium 90 will be taken up by the plant. By liming acid soils, more calcium is made available to the plant and less strontium 90 will be absorbed. It is useful on highly acid soils on which liming would be normally beneficial for other reasons. (Gypsum would be most useful on soils containing large quantities of exchangeable sodium, which would normally need lime or gypsum regardless of the strontium 90 hazard.) However, at best the strontium uptake can be reduced by the application of lime to about one-third the uptake if the soil were not treated.

Potassium fertilization at the rate of several hundred pounds per acre can also reduce the uptake of strontium 90. However, the calcium uptake by the plants is also reduced by this practice. Crop residues and manure applied at the rate of 20 tons per acre has reduced the uptake of strontium 90 by one-third.

RECLAIMING SOIL BY DEEP PLOWING

Decontamination by deep plowing would be aimed at turning the contaminated surface soil under to a depth of 18 inches or more—or below the root zone of the plants that are to be grown. Deep plowing might reduce the uptake of strontium 90 by about one-third compared to that without treatment in shallow-rooted crops such as grasses and many vegetables. It will be most effective when the freshly exposed surface soil has a high supply of calcium either naturally or by addition of lime or gypsum. However, before the method is used, careful evaluation should be made of the situation in the area and of the alternatives. Once strontium 90 has been plowed under, future removal is extremely difficult. Also, the productivity of some soils may have been drastically reduced.

Under field conditions, the uptake of strontium 90 may be greatly affected by its placement and that of calcium relative to the plant root system. Experiments are being initiated in which the strontium 90 will be plowed down as deeply as possible. The growth of the plant roots will be kept as shallow as possible by use of lime, fertilizer, and irrigation. The immediate goal of these experiments is to reduce strontium 90 uptake by a factor of 10.

SUMMARY

In short, we find that in the event of attack with nuclear weapons, the hazards of radioactive fallout to agriculture would be serious. But there are practical methods of protection. Even in areas of heavy radioactive fallout contamination, proper shelters for sufficient periods of time can significantly reduce the damages of external radiation to man and his animals. The long-term hazard of internal radiation is less acute but does present a chronic problem of major concern. Through the knowledge being gained by research, we could expect to reduce this hazard by the proper use of the land and its products that provide the Nation's food supply.

Controversy Between Matson Navigation Co. and Pacific Far East Line

EXTENSION OF REMARKS

OF

HON. GEORGE A. SMATHERS

OF FLORIDA

IN THE SENATE OF THE UNITED STATES

Monday, March 7, 1960

Mr. SMATHERS. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an editorial which appeared in the Pacific Shipper, entitled "Basic Matson-PFEL Issue Is Subsidy and Not Monopoly."

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

[From the Pacific Shipper, Feb. 22, 1960]
BASIC MATSON-PFEL ISSUE IS SUBSIDY AND NOT MONOPOLY

Our venerable policy has always been to take no sides in intramural shipping disputes, and we have no intention of revising it, now or in the future. This applies, of course, to the controversy between Matson Navigation Co. and Pacific Far East Line, which has gathered a lot of attention, in and out of the press, and has reached the U.S. circuit court of appeals, last stop before the U.S. Supreme Court. The issue is moot, and still before the courts, so that it would be improper for us to pass on it, even

if this were not contrary to policy as stated above. It also is dramatized by the sudden curtailment of the Hawaiian Marine Freightways Service, the third recent casualty of this route.

However, it is our duty, as we see it, to inform and interpret. We imagine there is confusion in the minds of the shipping public over the true nature of the Matson-PFEL controversy, and this confusion ought to be cleared up.

There is, as far as we are aware, no dispute whatever about anybody's right to compete with Matson in the Hawaiian trade under what we will call, for want of a better term, "ordinary circumstances." As a matter of fact, steamship companies have been bucking Matson on this route as far back as we can remember, which is too far for any pleasantries. Besides sporadic competition, the Los Angeles Steamship Co. for many years gave Matson a stirring, even if possibly losing, battle before LASCOR was absorbed by the older firm. Since the war, Hawaiian Marine Freightways and its two predecessors have been operated in direct rivalry, and while there has been heavy firing over rates and traffic, nobody has tried to exclude the newcomers. In short, whether Matson has or has not a monopoly may be for the courts to decide, but it is a simple statement of fact to say that it has not had a monopoly in the sense that any carrier, not otherwise obligated, was somehow disbarred. We pointedly refrain from identifying the right to compete with the ability to make a go of it. Legally, the distinction is important.

So, as may not be clear to the lay reader, the issue in the PFEL case is not monopoly as commonly understood; it is whether a subsidized operator in foreign commerce has the right to compete with an unsubsidized domestic operator. All domestic operators are unsubsidized. The Hawaiian case is not the first instance in which vessels subsidized on other segments of their routes have vied with domestic operators; the oldest familiar example that comes to mind is the incidental competition of transpacific or round-the-world vessels with intercoastal services.

It is to be noted that while the question of monopolistic transportation may have been introduced in the Matson-PFEL case, and while some of the news reports read as though this were the basic issue, what is really being debated is the right of a subsidized carrier to compete with a domestic shipping service. That is what we leave to the courts to determine; as it stands at this writing, the answer is in the affirmative.

On Capital Punishment

EXTENSION OF REMARKS

OF

HON. ABRAHAM J. MULTER

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Monday, March 7, 1960

Mr. MULTER. Mr. Speaker, on January 7, 1959, I introduced H.R. 870 to abolish the death penalty under all laws of the United States except the Uniform Code of Military Justice, and to authorize the imposition of life imprisonment in lieu thereof.

In that connection, I commend to the attention of our colleagues the following article by C. Gordon Post, professor of political science. Professor Post is a member of the New York Committee to

Abolish Capital Punishment. His article appeared in the December 1959 Vassar Alumnae magazine:

ON CAPITAL PUNISHMENT

(By C. Gordon Post, professor of political science)

Master Barnardine, what ho! your friend the hangman! you must be so good, sir, to rise, and be put to death: Pray, Master Barnardine, awake, till you are executed, and sleep afterwards.—Measure for Measure.

Of the death penalty I find it difficult to speak with restraint. This obscene ritual of our society is no more than murder—premeditated, deliberated, and intended; "official" murder, to be sure, and done in theory by a vague abstraction called the United States or the State of New York or the State of California. The ritual involves a whole cast of characters: the legislators who provide for the death penalty, the jury which convicts, the judge who sentences, the prison officials who guard the victim and strap him in the chair, the priest, the executioner who throws the switch; they are all part of the ritual and they are all accessories. As long as we countenance this dismal and barbaric performance, we are all accessories.

So the deed is done. The guests depart, the executioner gets his fee, the body, if unclaimed, is consigned to quicklime, everything is tidied up. All can go to their rest with the feeling of a job well done and with assurance that society has been safeguarded.

And yet—and yet, in a poor and shabby section of the city, and while the pillars of society sleep, a woman who has been "two-timing" her sweetheart is slain with a bread-knife.

Thus, I express my feeling about capital punishment and thus I suggest its futility.

THE DETERRENCE ARGUMENT

The chief prop of those who favor retention of capital punishment is that it is a unique deterrent.¹ Sir James Fitzjames Stephen stated this view very clearly in 1864: "No other punishment deters men so effectually from committing crimes as the punishment of death. This is one of those propositions which it is difficult to prove, simply because they are in themselves more obvious than any proof can make them. It is possible to display ingenuity in arguing against it, but that is all. The whole experience of mankind is in the other direction. The threat of instant death is the one to which resort has always been made when there was an absolute necessity for producing some result. . . . No one goes to certain inevitable death except by compulsion. Put the matter the other way. Was there ever yet a criminal who, when sentenced to death and brought out to die, would refuse the offer of a commutation of his sentence for the severest secondary punishment? Surely not? Why is this? It can only be because 'All that a man has will he give for his life.' In any secondary punishment, however terrible, there is hope; but death is death; its terrors can not be described more forcibly."

The argument of deterrence is centuries-old. In the 18th century, Blackstone asserted that the death penalty set "a dreadful example to deter others." William Paley, author of a profoundly influential book, Principles of Moral and Political Philosophy, declared that the object of punishment was not the satisfaction of justice, but "the prevention of crimes." "Sheep-stealing, horse-stealing, stealing of cloth from tenters or bleaching grounds, by our laws," he said, "subject the offenders to sentence of death: not that these crimes are in their nature

¹ In this paper I am concerned with capital punishment for civil offenses, not for treason or other political offenses.

more heinous than many simple felonies which are punished by imprisonment or transportation, but because the property, being more exposed, requires the terror of capital punishment to protect it."

In the 19th century, the Chief Justice of England, Lord Ellenborough, held that capital punishment "ceases not to hold out that terror which alone will be sufficient to prevent the frequent commission of the offense." To the same effect, Lord Chancellor Eldon declared that he was "rather of opinion that it is not from the circumstances of the severity of the law being put into execution to the fullest extent, so much as the imaginary terrors of it on the mind, that produces the abhorrence of crime."

The same argument is frequently voiced in our own century. In the Canadian report of the Joint Committee of the Senate and House of Commons on Capital Punishment (1956) it is said that the committee was impressed by the support given the death penalty by law enforcement officers who felt that "it was an effective deterrent to murder." At a hearing of the New Jersey Assembly Judiciary Committee on bills to abolish capital punishment (1958) a police chief stated emphatically that "capital punishment is a deterrent."²

At this point there are two important questions to ask. The first is: Is capital punishment in fact a deterrent? Obviously, it is not. When a murder is committed, and many are committed in the United States every year, capital punishment has failed as a deterrent; and its failures can be numbered.

The second and more important question is: Is the great mass of law-abiding people in the United States deterred from committing murder by the death penalty? Its successes cannot be numbered. To this second question there is no conclusive answer. There are, however, certain trends, certain facts, certain observations which cast serious doubt upon the claim that the death penalty is a general deterrent.

TREND AWAY FROM THE DEATH PENALTY

There has been a trend toward abolition of the death penalty for civil murder. The States which have either abolished capital punishment by law or have allowed it to fall into disuse by a policy of reprieve are as follows: Austria (1950), Belgium (1863), Denmark (1930), Finland (1949), West Germany (1949), Holland (1870), Iceland (1944), Israel (1954), Italy (1948), Luxembourg (1822), Nepal (1931), Norway (1905), Portugal (1867), Rumania (1864), Sweden (1921), Switzerland (1942), U.S.S.R. (1947), the Argentine (1922), Brazil (1891), Colombia (1910), Costa Rica (1980), Dominican Republic (1924), Ecuador (1897), Honduras (1894), Mexico (1928), Panama (1903), Uruguay (1907), Venezuela (1863), and Queensland (1922).

Of the 49 States of the Union, there are 8 in which the maximum penalty for murder is life imprisonment: Michigan (1846), Rhode Island (1852), Wisconsin (1853), Maine (1887), Minnesota (1911), North Da-

kota (1915), Alaska (1957), and Delaware (1958).³

In western Europe, it will be observed, only Spain, France, and the United Kingdom continue to make use of the death penalty for civil murder, and in the last named State, its application has been curtailed by the Homicide Act of 1957.

This movement or trend, if such it may be called, must indicate that in the minds of many peoples there has been, and is, great doubt as to the general deterrent effects of the death penalty. Many of the States aforementioned have known no executions for civil murder for decades; if there had been a considerable and continued increase in the murder rates at any time following abolition, the death penalty would no doubt have been restored. But with the abolition of the death penalty there has been no general and

continued rise in the murder rates. In the words of Prof. Thorsten Sellin, of the University of Pennsylvania, "whether the death penalty is used or not, both death penalty States and abolition States show rates which suggest that their rates are conditioned by other factors than the death penalty." After extensive study of the evidence from foreign countries, the recent British Royal Commission concluded "That there is no clear evidence in any of the figures we have examined that the abolition of capital punishment has led to an increase in the homicide rate, or that its reintroduction has led to a fall."

The following table, the work of Professor Sellin and taken from the Report of the Royal Commission on Capital Punishment (1949-53), is illuminating:

Homicide death rates (1920-48) per 100,000, in selected American States

Year	Michigan, abolished	Ohio	Indiana	Minnesota, abolished	Iowa	Wisconsin, abolished	North Dakota, abolished	South Dakota ¹	Nebraska
1920	5.5	6.9	4.7	3.1	1.7	1.7			4.2
1921	4.7	7.9	6.4	4.4	2.2	2.2			4.9
1922	4.3	7.3	5.7	3.6	1.8	1.8			4.5
1923	6.1	7.8	6.1	2.9	2.1	2.2			4.1
1924	7.1	6.9	7.3	3.2	2.7	1.8	2.1		4.4
1925	7.4	8.1	6.6	3.8	2.7	2.3	2.0		4.0
1926	10.4	8.6	5.8	2.2	2.3	2.6	1.8		2.7

¹ Capital punishment restored, 1939.

THE NATURE OF THE MURDERER

A third observation has to do with the nature of the murderer. Most homicides are committed without any consideration of the death penalty. Most murderers do not premeditate, deliberate, and intend the death of another; in most cases, murder is the unhappy end product of anger, frustration, jealousy, despair, alcohol, pity, or sex. In the report of the California subcommittee of the Judiciary Committee on Capital Punishment, it is said that "From data from the State bureau of criminal statistics it appears that, of the 93 men executed between 1945 and 1955, 52 or 55.9 percent had no known prior criminal record other than misdemeanors. Twenty-five of them had no record even of misdemeanors. The point is that, in the

majority of cases, these executed men were not of the habitual criminal class. Their homicides were in the nature of explosive incidents."

Beyond the "explosive incident," Dr. Bernard Glueck, Jr., psychiatrist at Sing Sing, holds that "no person in our society is in a normal state of mind when he commits a murder." Another psychiatrist, Dr. Isadore Zifferstein, of Los Angeles, has declared: "Psychological studies have shown that the vast majority of those who have been executed for capital crimes were very sick people mentally." Similar testimony is to be found in all reports of legislative committees concerned with the problem of capital punishment.

If what the psychiatrists tell us is true (and there is no reason to doubt their findings), how can the death penalty be a deterrent? If the murderer's action is compulsive, if what he does is in the heat of passion or dissension, in explosive rage or torment, if he is the product of a broken home and broken spirits, if he is a psychoneurotic or a schizophrenic or a mental defective, how, then, can be restrained by capital punishment?⁴

⁴ No consideration has been given here to the legal definition of insanity, which is antiquated and not in accord with medical knowledge.

² The police chief thought, that the lives of policemen in line of duty would be greatly endangered if the death penalty were abolished. Mr. Herbert L. Cobin, president of the the Prisoners Aid Society of Delaware, has very kindly sent me a statement summarizing the findings of Thorsten Sellin and Donald Campion, S.J., on this question. "It is obvious," said Professor Sellin, "from an inspection of the data that it is impossible to conclude that the States which have abolished the death penalty have thereby made the policemen's lot more hazardous."

³ Several States have abolished capital punishment and then restored it: Iowa, Kansas, Colorado, Washington, Oregon, South Dakota, Tennessee, Arizona and Missouri. Maine abolished in 1876, restored in 1883, and reabolished in 1887. Professor Sellin is of the opinion that "the main reason for the restoration of capital punishment was always the same; something happened which aroused popular feeling, probably quite irrationally, and the Legislature rushed into imposing the death penalty." See Report of the Royal Commission, pp. 374-375.

THE MAD DOG DOCTRINE

There are those, however, who believe that insane or not, the murderer, like a mad dog, should be quietly eliminated. Sir Ernest Gowers, chairman of the recent Royal Commission on Capital Punishment, in his book, "A Life for a Life?" quotes an army colonel and two doctors to this effect. The colonel declared, "When the further existence of any person is clearly against the public interest, and still more when it is a positive menace to the community, as in the case, for example, of a murderer who is held to be insane, it is folly to keep him alive. He should be dealt with as humanely as we deal with unwanted domestic animals now. * * * To one doctor, capital punishment "is a practical decision to remove permanently from the community a person who has made himself unsuitable to continue in it"; to another doctor, "When the criminal has no moral sense and is a true psychopath, he should be regarded as a human refuse, dangerous to society, and quietly and humanely dispatched." No good to themselves, no good to the community, a burden at least, possibly a threat to others, let us rid ourselves of them.

"Such doctrines," it is declared in the Report of the Royal Commission, "have been preached and practiced in National Socialist Germany, but they are repugnant to the moral traditions of Western civilization and we are confident that they would be unhesitatingly rejected by the great majority of the population of this country. We assume the continuance of the ancient and humane principle that has long formed part of our common law," namely, that if at the time of his unlawful act, a person is so mentally disordered that it seems unreasonable to impute guilt to his act, he ought not to be held responsible under the criminal law.

There appear to be three functions of punishment: Retribution, deterrence, and reformation. Obviously, if a man is executed there is no opportunity for reformation. There is serious and sound doubt as to the validity of the death penalty as a deterrent. Thus, we are left with the one function which modern penology has discarded, namely, retribution—the lex talionis, an eye for an eye, retaliation, revenge, call it what you will.

"We have," declared Sir John Anderson, "over the years, fortunately succeeded to a very large extent, if not entirely, in relegating the purely punitive aspects of our criminal law to the background." Buried but not dead, retribution is covered with the mythical flowers of deterrence whose color of plausibility blinds men to the fact that capital punishment is society's vengeance.

THE MISCARRIAGE OF JUSTICE

Edwin M. Borchard in "Convicting the Innocent," quotes a district attorney as saying, "Innocent men are never convicted. Don't worry about it, it never happens in the world. It is a physical impossibility." A comforting thought, were it true.

Late in 1949, Mrs. Beryl Evans and her baby daughter, Geraldine, were murdered in their flat, located in a London slum. In January 1950, the husband, Timothy John Evans, was tried at the Old Bailey for the murder of his child, and a large part of the evidence presented in court was directed to show that the accused had strangled his wife, the prosecution contending that whoever murdered the mother must necessarily have murdered the child. Evans, an illiterate, mentally subnormal lorry driver, at first had confessed and later retracted his confession, at the same time accusing John Christie, the chief witness for the Crown, of the murders. Christie's testimony was crucial; Evans was found guilty, and on March 9 he was hanged.

In 1953, the Crown's chief witness in the Evans case was arrested and tried for the

murder of his wife. An investigation of Christie's flat and outbuildings brought to light the bodies of six women, including Mrs. Christie's, all of whom Christie admitted having strangled. He confessed to the murder of Beryl Evans but denied killing the baby; whether he did or not must be placed in the category of "not proven." At any rate, Dr. J. A. Hobson, who examined Christie and to whom Christie originally confessed several murders, has had this to say: "It is unfortunate that I did not question Christie more fully about his killing of Mrs. Evans, but at that time my primary interest was to establish Christie's insanity. It is even more unfortunate that I was refused access to him after his sentence. * * * I feel that it is more than likely that he would * * * have told me how he had murdered baby Geraldine."

The home secretary who wrote on Evans' papers, "The law must take its course," has voiced a hope "that no future home secretary, while in office or after he has left office, will ever have to feel that although he did his best and no one would wish to accuse him of being either careless or inefficient, he sent a man to the gallows who was not guilty as charged," all of which is no consolation to Timothy Evans.

With all of our procedural safeguards, there is still the possibility of error. This may be due to improper identification; a witness may lie or he may be the victim of defective observational powers. It may be due to an overzealous prosecutor or police. Expert testimony can be unreliable, and an inflamed public opinion may insist upon a conviction.

Borchard discusses eight trials for murder in which no crime whatever had been committed.

There is much room for error in our criminal trials; and where the accused is put to death, error discovered later cannot be remedied nor amends made. The literature is replete with cases of men who were found guilty of murder, sentenced to die, and then reprieved; and who later were found to have been innocent. The opportunity of establishing one's innocence is gone with the springing of the trap or the throwing of the switch.

On March 15, 1957, at 10 a.m., Burton Abbott was scheduled to enter California's gas chamber. A reprieve was granted at 9:10 to permit the defense to present an appeal. The appeal was denied at 11 o'clock and at 11:15 Abbott was placed in the chamber. At 11:20 the secretary of the reprieve board notified the prison that the board had changed its decision. But Abbott was dead.

THE ALTERNATIVE

The alternative to capital punishment is life imprisonment which in England means from 8 to 12 years, and in the United States, an indefinite sentence, the prisoner being released on parole when this move is considered appropriate.

The argument is sometimes put forth that life imprisonment is a punishment worse than death. This is a specious argument. Decades ago, prison conditions were bad, horrible, but I daresay that, even then, imprisonment was preferable to death.

It is also argued that murderers would make the problems of prison administration more difficult and constitute a source of danger to prison personnel and prisoners. The evidence gathered from far and wide by the Royal Commission refutes this contention: "murderers are no more likely than any other prisoners to commit acts of violence against officers or fellow prisoners or to attempt escape; on the contrary, it would appear that in all countries murderers are, on the whole, better behaved than most prisoners."

Of course, a man who is incapable of reform or who is criminally insane or dangerously psychopathic ought never to be turned back to society; but with all other murderers

the object of punishment should not be annihilation but reformation. Even the murderer deserves his chance and society should accord him this chance; for it is not too clear that the rest of us are without responsibility, without guilt.

CONCLUSION

My story ends. It is not a complete story; that would be impossible in a space so brief. It does, I hope, suggest a few of the reasons why I oppose capital punishment.

For those who wish to pursue the matter more broadly and more deeply, there is appended a list of books which may be helpful.

One last word. Capital punishment, however you look at it, is brutal, sordid, and savage; it is unworthy of a civilized people.

In our time, we have witnessed an almost unprecedented savagery in Europe and elsewhere; in our own country, we see and hear brutality, brutality, brutality, over television and radio; in motion pictures and so-called comic books, brutality is common fare. Without being a pessimist or a Cassandra, I lament and resent this pernicious influence.

We resent the "third degree" because it is brutal; we resent a lynching, not only because a man has been denied a fair trial, but because it is brutal; we resent a bully because he is brutal.

Let us make clear to our own people, and to the world, that we detest brutality by the abolition of a sentence which cannot reform and which does not, on the evidence available, deter.

SELECTED BIBLIOGRAPHY

"A History of English Criminal Law and Its Administration From 1750" (Vol. I, The Movement for Reform), Leon Radzinowicz, London, Stevens & Sons (1948). For a knowledge of the background of capital punishment, no work surpasses this volume.

"Report, Royal Commission on Capital Punishment," 1949-1953, London, H.M.S.O. (1953). This is a solid, factual, balanced, and comprehensive consideration of capital punishment. It is a "must" for those who would be informed on the subject.

"Murder and the Penalty of Death," edited by Thorsten Sellin, in The Annals of the American Academy of Political and Social Science, Philadelphia (1952). This issue consists of a series of factual articles on murder and the death penalty and edited by America's first authority on criminal statistics.

"Reports on Capital Punishment, Corporal Punishment, and Lotteries," the Joint Committee of the Senate and House of Commons, Ottawa, the Queen's Printer (1956). An excellent factual report but not as comprehensive as the British report.

"Problems of the Death Penalty and Its Administration in California," report of the Subcommittee of the Judiciary Committee on Capital Punishment, the assembly of the State of California (1957). A brief report consisting of statistical evidence, the social and psychiatric status of men executed in California, and an account of the testimony presented at the hearings of the committee.

"First and Second Public Hearings on Assembly Bills Nos. 33 and 34" (Abolition of Capital Punishment), Assembly Judiciary Committee, Trenton (1958). This mimeographed material consists solely of the verbatim testimony of 24 witnesses who appeared before the committee. Most of these witnesses were opposed to capital punishment.

"Capital Punishment in the 20th Century," E. Roy Calvert, London and New York, G. P. Putnam's Sons (1927). This book, which very forcefully presents the case against capital punishment, has become a classic.

"Convicting the Innocent," Edwin M. Borchard in collaboration with E. Russell Lutz, New Haven, Yale University Press (1932). A most interesting account of the miscarriage of justice in 65 cases.

"Not Guilty," Jerome Frank and Barbara Frank, New York, Doubleday & Co. (1957). More cases of the miscarriage of justice.

"Reflections on Hanging," Arthur Koestler, New York, The Macmillan Co., (1957). This book, in a sense, is a popularization of the report of the Royal Commission, but it is an extremely superior popularization, and highly readable. It is an excellent piece of work, well-documented and balanced, and reveals, quite rightly, the indignation of a man who feels strongly against capital punishment.

"A Life for a Life?" Sir Ernest Gowers, London, Chatto & Windus (1956). A brief statement of the case against the death penalty by the Chairman of the Royal Commission, 1949-53.

"Capital Punishment as a Deterrent: and the Alternative," Gerald Gardiner, London, Victor Gollancz (1956). This work of less than a hundred pages may be useful to those who wish a rapid review of the problems.

"Reflections on the Guillotine," Albert Camus, Michigan City, Ind., Fridtjok-Karla Publications (1959). "To assert, in any case, that a man must be absolutely cut off from society because he is absolutely wicked is the same as saying that society is absolutely good, which no sensible person will believe today." An essay on capital punishment by the 1957 Nobel Prize winner.

"The Offenders," Giles Playfair and Derrick Singleton, New York, Simon & Schuster (1957). The authors relate the stories of six crimes which serve as a basis to present the case against legal vengeance.

"Star Wormwood," Curtis Bok, New York, Alfred A. Knopf (1959). Part novel, part tract, this is the story of a young man charged with murder, a story interspersed with essays on such subjects as legal insanity and medical insanity and the futility of capital punishment.

"The Man on Your Conscience," Michael Eddowes, London, Cassell & Co. (1955). A study of the Evans murder trial.

"Hanged—and Innocent?" R. T. Paget and S. S. Silverman, London, Victor Gollancz, London (1953). A study of the Rowland, Bentley, and Evans cases.

"Report and Recommendations of the Special Commission Established for the Purpose of Investigating and Studying the Abolition of the Death Penalty in Capital Cases," the Commonwealth of Massachusetts, House Document No. 2575, Boston (1959).

A Thing of Beauty

EXTENSION OF REMARKS

OF

HON. ROBERT C. BYRD

OF WEST VIRGINIA

IN THE SENATE OF THE UNITED STATES

Monday, March 7, 1960

Mr. BYRD of West Virginia. Mr. President, poetry is the language of the soul. Too seldom do we commit it to memory, read it, and rejoice in it as a source of strength. In the lines of a poem we touch hands with the great.

I sometimes fear that we are losing our appreciation and love for poetry and prose, and perhaps, if this be true, it is a symptom of the weakening of the moral and spiritual fiber which is becoming so apparent in our national life. I have always been a lover of verse. I cannot write it, but I can cherish it and learn from it. Poetry serves to strengthen my ideals, my pride in American's past, my hope in her future. It gives me a closer tie with my Maker and

my fellow man. I believe that it can have the same effect upon others.

Mr. President, today and from time to time in the days and years ahead I shall supply for the record bits of verse and prose which, having given me strength for the day and courage for the trials, may do the same for others. Today, I think it best to reflect, if we might for a moment, upon the beauty of some well-known lines by John Keats; which I ask unanimous consent to have printed in the Appendix.

There being no objection, the lines were ordered to be printed in the RECORD, as follows:

A thing of beauty is a joy forever:
Its loveliness increases; it will never
Pass into nothingness; but still will keep
A bower quiet for us, and a sleep
Full of sweet dreams, and health, and quiet
breathing.

Therefore, on every morning, are we wreathing
A flower band to bind us to the earth,
Spite of despondence, of the inhuman dearth
Of noble natures, of the gloomy days,
Of all the unhealthy and o'er-darkened ways
Made for our searching: Yes, in spite of all,
Some shape of beauty moves away the pall
From our dark spirits. Such the sun, the
moon,

Trees old and young, sprouting a shady boon
For simple sheep; and such are daffodils
With the green world they live in; and clear
rills

That for themselves a cooling cover make
'Gainst the hot season; the midforest brake,
Rich with a sprinkling of fair musk-rose
blooms:

And such too is the grandeur of the dooms
We have imagined for the mighty dead;
All lovely tales that we have heard or read:
An endless fountain of immortal drink,
Pouring unto us from the heaven's brink.

An Adequate Little Red Deterrent

EXTENSION OF REMARKS

OF

HON. CLAIR ENGLE

OF CALIFORNIA

IN THE SENATE OF THE UNITED STATES

Monday, March 7, 1960

Mr. ENGLE. Mr. President, I have just read an excellent editorial in the March issue of the Air Force magazine relating to the current debate on the adequacy of our national defense. Mr. John F. Loosbrock, editor of the magazine, does a fine job of assessing the situation. He opens his statement with the astute observation that "perhaps the one encouraging aspect of the current debate over the national defense program is that it is occurring at all." The editorial concludes on the warning note that "adequacy is synonymous with mediocrity."

I commend the editorial to the attention of my colleagues, and ask unanimous consent that it be printed in the Appendix of the RECORD.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

[From the Air Force magazine, March 1960]

AN ADEQUATE LITTLE RED DETERRENT

(By John F. Loosbrock, editor)

Perhaps the one encouraging aspect of the current debate over the national defense pro-

gram is that it is occurring at all. Only a few months ago it appeared that the subject, as a matter of political debate, would be lost in the fog of peace and prosperity. Indeed, only an incurable optimist would conclude that the defense issue will rate very high in the political ledger for very long. But a useful purpose is being served by the current discussion. No one wants defense to become a political football, but it is a matter of the public interest and therefore deserves and demands full and complete public airing.

Quite apart from the exigencies of partisan politics, which are obvious and comparatively easy to sift out, three major factors tend to hide or confuse the central issues:

The President's personal assumption of the role of the Nation's most highly qualified military expert.

The separation into neat boxes, marked respectively "war and military" and "peace and civilian," of vital problems which cannot be solved satisfactorily so long as they are thus separated.

The obvious conviction of the administration that private prosperity is synonymous with national power and, further, that achievement of private prosperity should rank No. 1 on the list of national goals, with peace and security following as natural afterthoughts.

No analysis of the welter of conflicting facts and opinions that are being offered as evidence in support of, or attack on, current defense policies can be useful unless these factors are given full weight in assessing the arguments in the debate.

In the first instance, the President has defended his program by pointing to his personal expertise in military matters and has attacked the views of responsible military leaders who disagree with him as "parochial." Both positions are open to question in the context of the situation to which they were addressed. Military experience must be added up in terms of when it was acquired and under what conditions. Experience gained during and before World War II does not necessarily contribute significantly to solving strategic problems of today. It cannot be dismissed out of hand, but it is manifestly unfair to draw upon it to criticize today's military experts as parochial whippersnappers. Today's generals are not necessarily right. Indeed, they do not agree completely among themselves. But neither should they be dismissed with the cavalier implication that they are necessarily wrong. If it is to be a matter of an ex-general's military judgment against that of the current crop, the very least the public is entitled to is an assessment of what might happen to it should the President prove to be wrong.

As to the second factor, the artificial and arbitrary dichotomy established between military and civilian requirements in certain important areas is serving only to compromise both requirements and needlessly confuse the American people. There are many examples, the one that first leaps to mind being the uneasy and unprofitable cleavage between the exploitation of space as necessary means to military ends and its exploration for peaceful, civilian purposes. The cleavage exists in other areas, such as the battle of well-meaning but shortsighted groups to preserve the freedom of the airways for the Piper Cub, with small regard to the defense needs of the Nation. It exists in the relegation of the problems of arms control to those who have only a hazy understanding of the nature of modern arms. It erodes our overall deterrent posture by placing shelter against radioactive fallout in a neat pigeonhole labeled "civil" defense, as if it had nothing to do with the avoidance of, as well as the survival after, a future war.

Perhaps the foregoing are but symptoms of a more insidious disease which is ravaging our national fiber—the idea that we can somehow reap the fruits of private compe-

tion and personal freedom while neglecting the will to win in the public and international arenas. We are told about the "adequacy" of our defenses. We are told not to worry about being second best in missiles and space—that "you can't win 'em all." We are told that the steps needed to maintain this Nation in first place militarily, educationally, economically, and technologically are too expensive, that they will encroach on our personal liberty and turn the Nation into an armed camp.

Well intentioned as this position may be, it is dangerous and misleading. Worse, it evidences a lack of understanding as to where the true roots of national power lie. One does not assess the true strength of a nation by the wealth of its inhabitants, by the numbers of chickens in the pot, cars in the garage, or even by the prospect, as a recent magazine advertisement put it, that "every family should have a second home."

We should be proud of a system that has produced so much good for so many people. But in our pride we cannot balk at whatever sacrifices might be required to protect our system. We cannot become so obsessed with picking the fruit that we neglect to fertilize the roots. We cannot give the same weight in the national power equation to the plastic franistan that we give to an equivalent dollar's worth of missiles, or classrooms, or digital computers.

Regardless of what the various indexes of wealth indicate, a nation that looks on them as guides to greatness has taken the first step downward. In Greek mythology, the maiden Atalanta challenged would-be suitors to a footrace—the prize to be Atalanta herself or death. She bested all comers until shrewd Hippomenes distracted her with the three golden apples of Venus. Right now we are so busy picking up the apples that we forget there's a race to be won, with death the loser's prize.

Wine connoisseurs call a worthy vintage great or noble. Adequacy is synonymous with mediocrity. Let's not rest easy then when we're told not to worry, when we're told that, after all, we still have an adequate little Red deterrent.

Solutions to Farm Issue Numerous but Elusive

EXTENSION OF REMARKS OF

Hon. EVERETT MCKINLEY DIRKSEN
OF ILLINOIS

IN THE SENATE OF THE UNITED STATES
Monday, March 7, 1960

Mr. DIRKSEN. Mr. President, Mr. John Knight, the very distinguished former publisher of the Chicago Daily News, who still is the publisher of a very distinguished number of newspapers in Michigan, Ohio, and Florida, on Saturday of each week writes what is known as "John S. Knight's Notebook," for the editorial columns. One of his recent "Notebooks" bears the heading "Solutions to Farm Issue Numerous but Elusive." I ask unanimous consent that the editorial be printed in the Appendix of the RECORD.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

JOHN S. KNIGHT'S NOTEBOOK—SOLUTIONS TO FARM ISSUE NUMEROUS BUT ELUSIVE

A charming city lady who knows a thing or two about public affairs said to me the other evening:

"I read your editorial on the farm question and didn't understand a word of it."

The remark was understandable, since few people, including most urbanites, politicians, and editors, have the faintest comprehension of this much belabored subject.

But since the editorial appeared, we have been deluged (in a newspaper office that means 25 to 30 letters) with communications from farmers and others who have positive, if not always clear, views on every aspect of the farm problem.

Last week, Editor Bob Myers of the Lapeer (Mich.) County Press cited Michigan State University statistics to show that better-than-average farmers in his State made only about \$2,400 in labor income during the good year of 1958.

Bob resents attacks on farm subsidies, since "little is said about the much greater subsidies we pay to labor in the form of minimum wages, unemployment pay, tariffs on competing foreign manufactured products and featherbedding."

TWENTY-FIVE-THOUSAND-DOLLAR LIMIT ON SUBSIDIES

In asking Bob Myers and other interested reader to offer possible solutions for abuses of the farm subsidy system, it seems we started something.

Most of the letters are too long for printing in their entirety, but here are excerpts which reflect the thinking of these readers.

C. D. Jones of Lauderdale says that subsidies should be limited—possibly to \$25,000. He concedes this would require close policing of dummy corporations but says wryly that the bureaucrats would like it, since more workers could be put on the Government payroll.

Speaking of the "ridiculous uses" of the soil bank plan, Mr. Jones thinks land should have a previous record of cultivation to qualify for payments. He would encourage marginal farmers, through education, to move into other occupations.

FERTILIZER LOBBY HAS AN ACCUSER

R. A. Hill, of Detroit, attributes the "farm subsidy scandal" to the lobbyists, "a brand of microbe" operating with money supplied by the chemical fertilizer companies.

Mr. Hill says they talked the "spineless politicians" into making the farm laws read acres * * * when it should have read bushels, tons, or bales. He accuses these same lobbyists of promoting poison sprays which he says are killing off all our wildlife.

Another view comes from Urban Meyer, of Lombard, Ill. Mr. Meyer says his biggest complaint is that "farm subsidies do not consider individual needs as do unemployment compensation, minimum wages, and tariffs. The farm subsidy is like paying a corporation president unemployment relief because his company shows low profits."

Mr. Meyer, who is in the coal and fuel oil business, thinks the law of supply and demand should apply to farmers. If they can't make it, let them close up. "Why," he continues, "should they have more help than the coal man?"

CANADIAN FOOD EXPORTS BLAMED

Now 68-year-old Arthur Simmons, of Kingston, Ill., has his say.

Mr. Simmons discusses inflated land values, and says it is impossible today for a young man to buy a farm as they did in his time with the help of a friendly banker.

"Your Michigan friend was right," adds Mr. Simmons, "your Sylvia Porters and all the rest sit idly by and condone higher steel costs and every other cost while the farm population is dropping into the serf class."

Mr. Simmons' suggestion is that every farmer should cut production of corn by 10 percent, but thinks the Government should pay taxes on land taken out of production.

G. L. Weber, a farm appraiser from Flint, Mich., deplors the way "both political parties

have bartered and traded millions of dollars to gain the farmers' vote over the years."

He is critical, too, of importing agricultural commodities from Canada "when we have such staggering surpluses in this country."

Note: It costs \$1,500,000 a day to stabilize wheat prices.

Mr. Weber believes a farmer must have at least 177 to 209 tillable acres * * * "to make a decent profit from his operations." He says the farmer should have more protection from the Michigan Highway Department which takes over farming land for road development and pays unfair and inadequate damages.

Harry Dibell, contemptuous of Government procedures, offers "my most sincere contribution" for the farm mess. "Buy a good 18-inch scoop," he says, "and give it to a man of courage and strength to use on the Agriculture Department even though the building collapses."

"If you think," he continues, "that the mess isn't in the Department, and hasn't accumulated over the last 7 years, I will be glad to have you interview some bankers, agricultural agents, farmers, and grainmen."

Mr. Dibell is from Wolcott, Ind.

Then we have Howard Reich, of Unionville, Mich., who says he is "a small, full-time dirt farmer." Mr. Reich says: "I don't have an answer for the farm problem either, but I think the farmer gets blamed for a lot he cannot help."

Mr. Reich recalls an article in the Readers Digest showing how, as he remembers it, "the six largest payments to farmers were over \$300,000 each while the average for the entire United States was less than \$100."

CORPORATE FARMS HOG THE SUBSIDIES

Enclosed with Mr. Reich's letter is an article by Arthur Mauch of Michigan State, analyzing the \$6.8 billion budget for the Department of Agriculture.

Mr. Mauch claims that less than a third of this budget "can be charged directly to the farm program," although he concedes that another \$1.4 billion goes into farm research, loans to farmers and conservation programs.

The rest of the budget, Mr. Mauch contends, should be charged to the Departments of State or Welfare, since nearly \$3.3 billion is spent in foreign disposal, storage costs, and interest, donations to needy people at home and abroad and for school lunch programs.

Mr. Mauch concludes his article with this admission: "These facts do not answer the questions of whether we are spending too much or whether we are getting our money's worth—but they do throw some light on who gets the benefit."

FARMER FAVORS LICENSE SYSTEM

A final contributor to our forum on the farm problem is Kenneth Geiger, of Clinton, Mich.

Mr. Geiger, like the rest, sees the farm question as a prime example of political bungling.

He considers the farmer to be unfairly taxed, and the victim of unfair competition from hobby farms which need not show a profit to stay in business.

Without pretending to have the answer, Mr. Geiger suggests three things:

1. Government licensing of all full-time farmers. He says this would eliminate most of the unfair competition and is no more un-American than the closed shop in industry.

2. An overhaul of the tax system to put farmers on an equal basis with urban neighbors.

3. Make farmers immune from antitrust laws which prohibit him from protecting himself through organization.

Then oddly enough, Mr. Geiger says these suggestions are "a place to start the long

process of getting the Government out of agriculture."

ONE THING CLEAR: THE PAY IS POOR

So there you have it from the grass roots. After reading these contributions, I share the confusion of the city lady who "didn't understand" last week's farm editorial.

Still, it is fair to conclude that the average full-time farmer isn't getting rich at the taxpayers' expense. For all his labors, he earns less than school teachers or factory workers.

Secondly, the subsidies paid to big farmers constitute a national scandal, as do the Federal income tax exemptions granted to huge farm cooperatives such as the Farmers Union Grain Terminal Association of St. Paul.

According to Time, this group began with only \$30,000 in capital and now has a net worth of \$40 million. It has bought out privately owned, taxpaying businesses unable to compete and FUGTA annual reports reveal \$29 million in profits since 1950.

STOP BLAMING THE LITTLE GUY

I suspect the people of this country will still be discussing the farm problem years after this administration and a long line of succeeding administrations have departed.

At this moment, there appear to be some solutions in sight for the more flagrant abuses of the farm subsidy system.

But which party, or which politician other than the President, has the guts to apply the drastic corrective measures which are needed?

Until reasonable limits are placed upon the size of Government subsidies received by the big landowners, often not in residence, let's stop carping at the little guy whose full-time farm operation enables him to make a living, and not much else.

The Ninth Green

EXTENSION OF REMARKS

OF

HON. GEORGE M. WALLHAUSER

OF NEW JERSEY

IN THE HOUSE OF REPRESENTATIVES

Monday, March 7, 1960

Mr. WALLHAUSER. Mr. Speaker, President Eisenhower's trip to Latin America, ending today, has surely created a better climate of understanding between the countries of South America and ourselves.

Vast responsibilities lay ahead for him, but the kind of service that he is rendering is of incalculable aid in strengthening our ties of friendship throughout the world.

These sentiments are ably spelled out in the accompanying editorial, which appeared in the New York Times of Sunday, March 6, 1960, and I believe we should all read the well written words of the editorial writer:

THE NINTH GREEN

When President Eisenhower got out of his helicopter at the ninth green of the Dorado Beach Club on Friday he was, as he said, "bushed." He was also, as he showed when he addressed the Caribbean Assembly after lunch, somewhat hoarse. The fatigue and the hoarseness came from his exacting trip to four Latin-American countries. If his voice was poor it was, as he explained, because he had "left it all in South America."

He had left other things in South America. He had left a new kind of friendship which everybody, except a few hundred or a few dozen youthful fanatics, fully understood. He had made no startling new proposals. There is nothing new, for example, in the wording of the so-called Declaration of Montevideo which says that "both countries will endeavor to increase their economic, social, and cultural cooperation directly and through international organizations."

Yet the feeling persisted that there was something fresh in the Eisenhower message, as explained during the preceding 10 or 11 days. Ambassador German Arciniegas, who represents Colombia in Italy, told the Caribbean Assembly that the President's recent statements "give hope of a radical change in policy toward Latin America."

As far as the President's speeches went, there may have been a change in attitude rather than in policy. We are no longer the indulgent but domineering elder brother, if ever we were such. At Dorado Beach the President emphatically rejected "any thought of the United States alone developing a so-called master plan for raising living standards throughout the hemisphere." He did not deny that "the countries of Latin America desperately need long-term financing of their development projects, technical assistance in their planning and execution, escape from dependence on one crop or one mineral . . . and an end to inflation." But what he seemed to have in mind was that they wouldn't have to sell pencils to get these things. As in other parts of the democratic world any aid we may give to Latin America should be, as one reads the President's speeches, cooperative and for our mutual good.

The ninth green at the Dorado Club is approximately a halfway point in the President's final rounds of diplomatic golf. He still has to attend a summit conference in Paris. He still has to go to Moscow and return Premier Khrushchev's visit. He hopes to go to Tokyo. There is much journeying ahead for him, much fatigue and no doubt some hoarseness as he breathes the dust of half a dozen new countries.

But he is rendering in his last year in office a kind of service for which he is temperamentally fitted and for which he seems now to have the necessary physical strength. Others will work out the details of policy. In his arduous journeyings he has created a better climate for the diplomatic tasks that still lie ahead.

Creation of State Orchestra in Wisconsin

EXTENSION OF REMARKS

OF

HON. WILLIAM PROXMIRE

OF WISCONSIN

IN THE SENATE OF THE UNITED STATES

Monday, March 7, 1960

Mr. PROXMIRE. Mr. President, in recent months the University of Wisconsin has been formulating plans for a praiseworthy cultural adventure, the creation of a symphony orchestra for the State of Wisconsin. Such an ensemble would bring the pleasures of high quality orchestra music to cities all over the State while providing the benefits of a resident orchestra to population centers like Madison and Milwaukee. The orchestra would be attached to the University of Wisconsin, which has earned a

national reputation for its hospitality to the arts through its artists-in-residence program which in recent years has included the Pro Arte String Quartet, concert pianist Gunnar Johansen, and painter Aaron Bohrod, who have won international acclaim for their accomplishments. This new concept of a State orchestra would bring further benefits to the State.

In the New York Times for March 6, 1960, their chief music critic, Howard Taubman, describes and praises what he terms this "bold plan for the creation of a State orchestra." Mr. President, I ask unanimous consent for Mr. Taubman's article to be printed in the Appendix of the RECORD.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

ORCHESTRA FOR A STATE—UNIVERSITY OF WISCONSIN HAS BOLD PLAN FOR CREATING BIG ENSEMBLE TO SERVE COMMUNITIES IN WISCONSIN

(By Howard Taubman)

A bold plan for the creation of a State orchestra has been formulated at the University of Wisconsin. It has not yet been implemented because it requires substantial sums of money. But its merits are so great that it would be a pity if the scheme were not translated into reality.

Wisconsin looks like a promising testing ground of an ensemble formed to serve a State instead of a single city. It has, despite its producing a shabby, reactionary adventurer like Joseph McCarthy, a tradition of openmindedness. Its university has for years maintained a pianist, a string quartet, and a painter in residence. In various communities there are 22 civic orchestras, which, though almost entirely amateur, offer proof that music has numerous practitioners and admirers.

The position of Milwaukee, the largest city, is a key consideration. For a long time it has relied on the visits of the Chicago Orchestra for symphonic performances of professional caliber. Although a Milwaukee ensemble has been formed recently, it is a modest affair. When you consider that the city prides itself on being the home of the Braves, you wonder that it has lacked the vigor to build its own major-league orchestra. Indeed, if you run down the names of cities that will maintain major-league baseball this year, you find that only Milwaukee is without a professional orchestra of similar pretensions.

Aware of its backward situation, Milwaukee apparently has endorsed the notion of a State orchestra. The city, which could organize its own professional ensemble if it chose, evidently is willing to integrate its needs with those of the State. If this is true, it should be a decided impetus to the plan. Milwaukee has invaluable resources to contribute.

The principal inspiration, however, has come from the University of Wisconsin. Its faculty has done most of the planning. Its president and regents have voted their approval. Its facilities would be at the orchestra's disposal.

The proposal grew out of the Peninsula Musical Festival held in Fish Creek each August. For 3 weeks Thor Johnson and a professional orchestra present a series of programs that has won the support of summer residents in Door County as well as visitors who come specially for the concerts. The festival draws its financial sustenance from local business and individuals. Why could not many Wisconsin communities join to support a statewide orchestra that would serve them all?

The idea of centering the effort in the university is well conceived. The university has functioned on the principle that "the limits of the campus are the boundaries of the State." In many fields such as agriculture, conservation, business, and government, this theory has been realized in practice.

AVAILABLE TO STATE

Thanks to its recent expansion, the university is prepared to help make an orchestra available to the State. Besides its chief base in Madison, the university has a second campus in Milwaukee, an active extension division, 8 branches where regular courses are given, a noncommercial network of 10 AM and FM radio stations and an experimental television station serving the Madison area at present but likely to offer State coverage eventually.

The plan calls for turning over the responsibility of operating the orchestra to the university, which would act as sponsor and guarantor, would receive and spend all funds, would define general policies, and would administer all activities. Conductor and instrumentalists would be employees of the university. They would be engaged on a year-round basis, integrated into its table of organization, and teach as well as perform.

In cities like Milwaukee and Madison there would be extended series of concerts each year. In medium-size towns there would be modest series. Small places would have occasional visits for children's concerts or events designed for adults or possibly both. College towns would certainly be on the orchestra's annual itinerary either for single concerts or series. The peninsula festival would be among the ensemble's assignments.

In the original draft of the plan, a membership of about 40 to 45 players was envisaged. With such a unit the baroque, classic, and early romantic repertoires could be encompassed, as could a good deal of the modern. Big works requiring a large instrumental apparatus would be bypassed except on special occasions when additional players could be hired.

It is easy to sympathize with the planners who foresaw that such an ensemble could be of notable service in "extending and raising the level of music culture" and "giving instructional service of high caliber."

In the latter category the orchestra, it has been predicted, would open up the following possibilities that cannot be pursued sufficiently, if at all, with student groups: accompanying oratorios by campus choral groups; supplying orchestral accompaniments to student and adult opera presentations; playing concertos with advanced student performers and serving as a laboratory group for advanced instruction in conducting; trial of new works, and experimentation in orchestration.

PROBLEM OF FINANCING

Like so many noble plans, this one has not yet solved the problem of financing. Its assumption has been that the money, something like \$370,000 for a year's budget, could be raised from receipts at the box office, donations from industry and individuals and grants from National and Wisconsin foundations.

It is one thing to list sources of income; it is a graver challenge to tap them. For the moment the plan remains on paper because its drafters have not found the funds with which to start activities. Because they have not been insured a large initial sum, they now are thinking of starting more modestly with an ensemble of 20 to 25. They believe that the reduced budget, about half of the original estimate, could be met in Wisconsin.

A less ambitious beginning would be better than none. But one regrets that a brave idea must be diminished at the outset. There ought to be money for this plan. It ought to be forthcoming from State and

municipal treasuries in Wisconsin as well as private sources in the State. The national foundations should also welcome a chance to back a scheme that might become a model for other States without professional ensembles.

An orchestra built to serve an entire State could become as proud a possession as a major-league ball club. And making it part of the State university is in accord with the growing trend to have these institutions become sturdy guardians of the arts as well as propagators of mighty football aggregations.

Rumanian Enslavement

EXTENSION OF REMARKS

OF

HON. RAY J. MADDEN

OF INDIANA

IN THE HOUSE OF REPRESENTATIVES

Monday, March 7, 1960

Mr. MADDEN. Mr. Speaker, on March 6, 1945, 15 years ago yesterday, the Communist tyrants seized control of Rumania. As a member of the special congressional committee investigating Communist aggression in 1954 I heard the testimony of hundreds of witnesses at our hearing in this country and Europe all exposing the Soviet aggressions.

The coming meeting at the summit the No. 1 question on the agenda should be "freedom for the captive nations."

On August 9, 1954, our committee submitted 12 major findings based on the testimony. These facts are as true today as they were 6 years ago.

I hereby submit seven of those findings:

PRELIMINARY FINDINGS

Based upon the testimony and other evidence thus far presented to the committee, at hearings held in Chicago, New York, London, Munich, and Berlin, the committee makes the following preliminary findings:

1. Communism never has come to power by legal or by democratic processes in any of the areas now under its ruthless domination. It uses the tactics of penetration, subversion, threat of military invasion, and finally occupation by military and political elements under the direction and control of the Kremlin.

2. Once communism seizes control it immediately seeks to clothe itself with respectability and legality by conducting so-called elections which are in no sense of the word free elections guaranteed by the secret ballot. Moreover, the results are predetermined long in advance of the first vote cast.

3. Communism is able to maintain control over the peoples it enslaves only by the exercise of the most brutal and inhuman methods known to mankind, such as wholesale arrests and deportations, forced famines, mass killings, and the crime of genocide against entire nations. The former Crimean Autonomous Republic (Crimean-Tatar Republic) and the former autonomous Republic of Chechen-Ingush and Kalmuk are specific examples of the crime of genocide.

4. Life under communism is one of ruthless and absolute tyranny. The state is god. The dignity and inherent rights of man have no place under communism. The free world is losing the battle for the minds and allegiance of youth in the countries and areas under Communist domination.

5. As far as the Communists are concerned, treaties, mutual-assistance pacts, nonaggression

pacts, or solemn covenants are mere scraps of paper. Agreements or pledges made at the conference table are broken any time such action serves the Communist table for world conquest.

6. Communism is a conspiracy which utilizes an extensive and complex international criminal mechanism. It seeks to destroy all free nations and to replace them with a system of Red colonialism.

7. The peoples of the captive nations and other areas under Communist control are by tradition overwhelmingly anti-Communist. They desire their national independence and are still friendly to the free world. However, witness after witness testified that time is working against us and that in many important respects anti-Communist-sponsored programs and activities were not producing the desired results.

Mr. Speaker, it is interesting to learn the thoughts of Ana Pauker, the Communist leader of Rumania, at that time. The following is verbatim from our committee report:

This being the plan the Communists are working to prepare the new generations in the subjugated countries for the fight against the West. At the same hearings, Princess Helena added the following:

"Ana Pauker explained to me that you looked at a country as at a field which you wanted to plant with new seed, and therefore you had to work it all over and burn everything on it and then plant new seed. And she said, 'Of course this takes a long time. Therefore we have to terrorize the older generations into silence, so that they do not dare to speak to the young ones and to remember, so that the young ones would not have any memory whatsoever of times past; that their minds should be absolutely empty of anything but what the Communist regime wanted to plant in it. And that is why,' she explained to me, 'they had to use torture, imprisonment,' because I asked her whether she thought she was convincing anybody. She said she was not interested in convincing anybody, that that was a waste of time, and that they did not try to convince. That was a thing they used only in the so-called free countries but in the country which they occupied, they were not going to be bothered with convincing."

Mr. Speaker, I also submit for the RECORD a letter I received last week from Mihail Farcasanu, president of the League of Free Romanians:

THE LEAGUE OF FREE ROMANIANS,

New York, N.Y., March 2, 1960.

The Honorable RAY J. MADDEN,
U.S. Representative From Indiana.

DEAR MR. MADDEN: We will be deeply grateful to you if you could, as you have always so kindly and understandingly done in the past, call to the attention of the House the plight of the enslaved Romanian people.

This 6th of March 15 years will have elapsed since the Soviets installed through fraud and violence the Communist puppet government which still tyrannizes the country. The absence of any firm stand on the part of the Western allies against Russian aggressive encroachments in Europe, led to the consolidation and international acceptance of this subjugation. Churchill's memoirs even state that in the case of Romania an agreement took place between London and Moscow by which the Russian domination of the country was assured. Let us hope that in the future memoirs of Mr. Macmillan there will not be found the same sort of deal with Moscow regarding Germany, which could legitimately be feared by what the columnist Joseph Alsop (Washington Post, Feb. 29, 1960) has defined as the British permanent pleading "for a do-nothing policy at turn after turn of the unfolding Berlin crisis."

The strengthening through recognition of the Communist government in Romania has been followed by one of the most cruel pages of Communist oppression in a formerly free nation. To give merely two examples: the Catholic Church was abolished wholesale and its hierarchy doomed through the process of imprisonment and other Soviet liquidation methods; the democratic leaders of Romanian political and civic life were also the victims of the same extermination tactics, of which deportation and forced-labor camps were among the principal means.

The Congress of the United States reacted to those horrors and the underlying political issues by its investigations and recommendations of the Select Committee on Communist Aggression, of which you, Mr. MADDEN, have been an outstanding member. The recommendations of your committee have never been acted on in any way. But strangely enough the administration's policy in this matter was finally expressed as a liberation through peaceful means. What those peaceful means were and are is, as in Churchill's words, an enigma wrapped in a mystery.

Instead of the peaceful means recommended by your committee as a road to liberation from communism, the administration took the opposite, that of consolidating communism in the subjugated countries.

Has continued recognition of nonrepresentative Soviet stooge governments been a peaceful means of liberating the enslaved peoples? Has the acceptance of these same puppet governments in the United Nations after their constant violation of the U.N. charter, been another peaceful means of liberation? Have trade, cultural relations or other exchanges with the Communist oppressors, helped the liberation of the oppressed people? Will the further enhancement of the international status of the Soviet stooge governments by their equation at the conference table with the Western powers in Geneva, March 15, be a new peaceful means of liberation?

Unfortunately the whole policy of the West toward the former free nations has had nothing to do with their liberation, but have served to peacefully strengthen the Russian dominion over a large part of Europe.

At this sad anniversary, we Rumanians, as well as the other East Europeans, fervently hope that the political recommendations of the Committee on Communist Aggression will at least be taken into consideration at this crucial moment of an approaching Summit Conference. This would be the wise course you have so strongly advocated during the last 5 years.

We warmly thank you for your unfailing sympathy and understanding.

I remain yours respectfully,

MIHAIL FARCASANU,
President.

"Reaffirmation of Our Faith in the Nation": Creed Adopted by National Baptist Convention, U.S.A.

EXTENSION OF REMARKS

OF

HON. PAUL H. DOUGLAS

OF ILLINOIS

IN THE SENATE OF THE UNITED STATES

Monday, March 7, 1960

Mr. DOUGLAS. Mr. President, on September 12, 1959, the National Baptist Convention, U.S.A., which comprises

a constituency of 5 million American citizens, or about a third of the Negro population of our country, adopted a "Reaffirmation of Our Faith in the Nation." Because of its deep rootage in our finest religious precepts and its clear expression of their hope and determination to work for freedom, the dignity of man and equality of opportunity for all, I ask unanimous consent that this creed be printed in the Appendix of the RECORD.

There being no objection, the statement was ordered to be printed in the RECORD, as follows:

REAFFIRMATION OF OUR FAITH IN THE NATION

(By J. H. Jackson, president, National Baptist Convention, U.S.A., Inc., pastor, Olivet Baptist Church, Chicago, Ill., Sept. 3, 1959)

THE CREED

1. We believe in the United States of America: land of opportunity, a country dedicated to freedom and democracy.

2. We believe in its Constitution: the supreme law of the land.

3. We believe in the right of all citizens to participate equally according to their several abilities in all the cultural privileges, in all the political and economic affairs of this great Republic.

4. We believe that all citizens should take their full share of the responsibility in building a greater, stronger, and better America for the weal of man and to the glory of God.

5. We believe that segregation and discrimination based upon race, national origins, or religion are not only sins against the fundamental laws of the land, but also against the Supreme Law Giver. We must continue to fight the sins against human freedom without apology, without compromise.

6. We are convinced that every State has far more to gain by applying the principles and the ideals of the Federal Constitution at the local level.

7. We believe that no race or group should be discouraged for seeking to improve their mental, economic, political, and moral status but rather should be encouraged and guided since the development of a part contributes to the enrichment of the whole. To neglect a minority greatly weakens the Nation as a whole handicapping the majority and penalizing those in places of power and influence.

8. We believe that a voluntary togetherness of the race based upon constructive and creative ventures is desired and should be encouraged in the interest of the preservation of racial values and the growth of the group as a whole within the democratic framework of the Nation.

9. We believe that our leaders, our organizations, and our press should more and more recognize the presence and the positions of a vast number of white people who are dedicated to the laws of this land, who are ashamed of the sins being committed against the soul of the Nation, who are working for the growth of democracy and who are suffering for the fulfillment of America's dream of freedom.

10. We also believe that all minority groups should be willing to cooperate with other people of good will whenever and wherever they are committed to the task of upholding the laws of the land, defending the country's cause, working for complete democracy, and a full victory for freedom.

11. We believe that the battle for freedom is not only America's battle but also the battle of all humanity supported by the moral laws of the universe and by the God who made out of one blood all races of men to dwell in peace on the face of the earth.

And the struggle must move forward to victory since right is right and God is God.

12. We believe that first-class citizenship is essential for the realization of a first-class democracy and that a first-class democracy will give first-class freedom in which will be developed first-class personalities, first-class people, first-class thinkers, and first-class statesmen; all of these working together will build a first-class social order of good will, justice, understanding, and peace.

13. While we believe in the separation of Church and State, we believe in the Christian Church not only as a community of believers held together by a common loyalty to Jesus Christ but also a redemptive influence and a vital part of the soul of the Nation.

14. We believe in God, the Creator of heaven and earth; we believe in the dignity of man, in the triumph of justice, and in the victory of truth.

Sewage-Aid Bill

EXTENSION OF REMARKS

OF

HON. H. R. GROSS

OF IOWA

IN THE HOUSE OF REPRESENTATIVES

Monday, March 7, 1960

Mr. GROSS. Mr. Speaker, editorial support is expressed by the Waterloo (Iowa) Courier for the action of this body in sustaining the President's veto of H.R. 3610, the so-called water pollution control bill. As one who voted to sustain the veto, I am glad to include as part of my remarks the following editorial, which appeared in the February 28 edition of the Courier:

THIN LINE HOLDS TO SELF-RELIANCE

The only possible justification for a Federal sewage control program would be Washington's responsibility for the coordinated improvement of watercourses which cross State boundaries.

Yet during debate on the Democratic bill to raise to \$900 million the amount of Federal funds to be spent for this program, critics proved that most of the money in the past had merely been used to help cities build treatment plants which they should have built without Federal help.

Minority Leader HALLECK, for example, showed that 571 projects previously approved for Federal grants, only 12 involved interstate, coastal and Great Lakes waters.

"I challenge anybody to get up here and deny that project after project has been approved over the country that involved the construction of sewage plants that had absolutely no connection with any sort of stream on which you could catch a fish or run a boat," HALLECK declared.

Nobody challenged his statement. And apparently the economy bloc which functioned last year is again in operation (although somewhat weakened by election-year fears). For the House failed by 22 votes to override President Eisenhower's veto of the extravagant and unnecessary sewage-aid bill.

We would rather have Federal aid for sewage treatment plants (where Federal control would be no issue) than Federal aid for schools. But the constant attempt to pass local problems to Washington represents a breakdown in the character of the people. Self-reliance was formerly an American trait. Now it can be promoted only with a Presidential veto.

Drug Probers Hunt Headlines

EXTENSION OF REMARKS

OF

Hon. EVERETT MCKINLEY DIRKSEN

OF ILLINOIS

IN THE SENATE OF THE UNITED STATES

Monday, March 7, 1960

Mr. DIRKSEN. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an article entitled "Drug Probers Hunt Headlines." The article was written by Donald I. Rogers, business and financial editor of the New York Herald Tribune, and was published on February 21, 1960.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

DRUG PROBES HUNT HEADLINES

(By Donald I. Rogers)

A few weeks ago this column revealed the tactics of press agency employed by the Federal Trade Commission and the Justice Department in dropping a 7-year-old charge of conspiracy against the Socony Mobil Oil Co. and we moralized to the effect that the Government seems to feel privileged to cast doubts on the integrity of any American industry, but never obliged to omit its error when proved wrong. In the case of Socony, after the Government lost its case, it revealed the court decision over the 4-day New Year's weekend, thus insuring that the story would be played down in most newspapers and missed by most readers.

Industry, which keeps most of us employed, pays most of our taxes, has contributed mightily to our freedom and is directly responsible for the high standard of living in this country, is at a distinct disadvantage any time it deals with many branches of the American Government, a phenomenon which must not only astound but please the enemies of the enterprise system.

The latest incident is clearly demonstrated by the recent conduct of Senator ESTES KEFAUVER, Democrat, of Tennessee, that experienced adversary of capitalism who, as chairman of the Senate Antitrust and Monopoly Subcommittee, has been "probing" prices set by the drug industry. His tactics leave the lingering suspicion that he is less interested in learning the truth about drug prices than he is about garnering headlines which, while discrediting the drug industry, portray KEFAUVER as the shining hero.

RESPONSIVE DUPES

As in the case of the Federal Trade Commission, the newspapers of America are responsive if not willing dupes in the conspiracy to mislead the public. And this, too, is strange for Time magazine in its current issue, reveals that there are 1,361 working reporters in Washington, the largest number assembled at any point in the world. Time also suggests that many, if not most, of them lean to the political left, which may account for some of the great gaps in coverage.

Like all other congressional committees, the Kefauver group selects its witnesses carefully to assure getting articulate people with strong leanings. The public expects this. What the public may not suspect, however, is that the appearance of the witnesses is timed to coincide with newspaper deadlines, thus assuring coverage for those who espouse the favorite point of view, and effectively silencing those who do not.

A case in point was the calling before the Kefauver subcommittee of one Mike Gorman, a former newspaperman who now

serves as executive director of the National Committee Against Mental Illness. Gorman was called to talk about tranquilizers, a misnomer for these drug items are anything but a placid subject in this political year.

Urged by KEFAUVER, Gorman immediately soared off his launching pad, slashing into the high cost of drugs and the general deterioration of the pharmaceutical manufacturers.

WINS HIS HEADLINES

For the record, Gorman is a layman. He knows no more about tranquilizers than you do. He has no background to entitle him to speak as an authority.

His charges were covered widely and indeed wildly in the afternoon newspapers and were picked up by the morning papers the following day. KEFAUVER had won his headlines.

Late in the afternoon of the same day that Gorman testified, the subcommittee listened to Dr. Henry Brill, Deputy Commissioner of Hygiene of New York State. Dr. Brill, a national medical authority, wasn't at all critical of the drug industry and had some nice things to say about it.

But his appearance was late and his testimony failed to make most of the morning newspapers the following day. Since his was a "second-day story," it appeared in only a smaller number of afternoon newspapers.

This seems strange when Gorman himself described Brill as "one of the Nation's outstanding authorities on drugs, without dispute."

The contrast between the views of the layman, which were widely reported, and those of the expert, which were not, are something for you, the voter and the consumer, to contemplate. After having done so, you may judge whether Senator KEFAUVER, who is being paid with your tax money, is acting sincerely in your behalf. Certainly, you may feel that because of the "timing" of witnesses, something that is controlled by KEFAUVER, you are not getting both sides of the story.

CHARGES VERSUS REBUTTAL

Gorman charged, among other things, that the "high price of tranquilizing drugs at the corner drugstore has a disastrous effect upon thousands of mental patients." He added: "Mr. Chairman, with a full realization of the seriousness of this charge, I accuse the pharmaceutical industry of America of contributing to the return of thousands of mental patients to mental hospitals, because of the high price of tranquilizing drugs."

Late in the day, after the subcommittee had won its publicity and scored its point in the gullible press, Dr. Brill gave the other side of the story—the one that the American public didn't get to read.

In New York State, Dr. Brill said, the traditional annual increase in numbers of mental patients was "suddenly reversed" after the start of large-scale treatment with tranquilizers several years ago. "The favorable change has continued," he said, "and has advanced during the next 4 years, and we find now that both for inpatient and outpatient work, tranquilizing drugs are indispensable to the operation of a mental hospital system."

PRICES GOING DOWN

About the prices of tranquilizers, Dr. Brill said, "there has been a definite tendency for the cost of each medication to fall at least somewhat during the passage of time."

It costs, at State prices, about \$50 a year to treat the average out-patient with tranquilizing drugs, compared with about \$1,500 to keep him hospitalized, Dr. Brill said. Patients who are dismissed from State hospitals can obtain needed tranquilizers at a retail price averaging \$3 to \$5 a week. When

this cost is too high, he said, the State is willing to supply the drug to the patient without charge.

He added that many discharged patients, who give the cost of drugs as a partial reason for being readmitted to mental hospitals, are, as mental patients, engaging in what he called "rationalization."

In other words, they're nuts.

The Voice of Democracy

EXTENSION OF REMARKS

OF

Hon. WILLIAM K. VAN PELT

OF WISCONSIN

IN THE HOUSE OF REPRESENTATIVES

Monday, March 7, 1960

Mr. VAN PELT. Mr. Speaker, under leave to extend my own remarks in the Appendix of the RECORD I include a speech written and made by Miss Judith Kester, a senior student in the Oshkosh (Wis.) High School, entitled "The Voice of Democracy."

Miss Kester represented the State of Wisconsin at a dinner given in Washington recently for the 50 State winners who participated in the 13th annual voice of democracy broadcasting script-writing contest.

The speech follows:

Democracy is a mighty word,
A strong and powerful word;
Its nine letters capture the basic elements
Which are America,
Forming them into Democracy,
Creating the life-blood of our existence,
The pulse of our American way of life.
I am an American;
I speak for Democracy;
D is the beginning of Democracy—
D means, to me, Decision,
An unwavering determination to work for
Democracy—
To stand our ground;
Seeing a Khrushchev swagger and pout and
proselytize
Makes us thank God for freedom, and
strength to resist, and a free press.
We guard against inner decay and outward
aggression,
Because sincerely and surely, my heart says
Democracy does the most, cares the most,
means the most.
D is Decision.
E means Enthusiasm,
The pride we show in our Democracy;
"My country, 'tis of thee"—
Yes, I sing of Democracy.
In schoolrooms all over the land, children
sing enthusiastically of Democracy,
Only half-comprehending, yet feeling the
wonder, the power of it—
Not mere flag-waving and parade-watching,
But a creative, constructive enthusiasm.
M is for Maintenance,
What I must do to maintain the priceless
gifts
Earned by the
Battles and bloodshed,
Fortitude and fearlessness,
Sweat and toil,
Tears and love of our forefathers.
"Vigilance is the price of survival"—
This thought must dwell with me every day;
I must remain steadfast
In the midst of hot words, cold wars, and
international strife.

O stands for Opportunity,
The chance we, as Americans, have
To grow, to learn, to think, and to earn for
ourselves,
Baby-sit, wait on tables, earn a million
dollars;
But we conform only when personal princi-
ple is not sacrificed;
Our talents find release:
We can become artists, teachers, farmers,
ministers, doctors,
On the basis of personal qualification;
Ambition and skill are all-important,
Not the arbitrary dictates of a self-appointed
power.

C is for the Constitution,
A written guarantee,
Like an insurance policy,
Entitling each of us to rights and privileges;
But the strength of a Constitution
Depends upon the willingness of the people
to support it;

And we are the people.
What must it have cost
Those courageous ones who framed it
That we might speak freely, write without
unreasonable censorship, worship as
we choose.

Because—
We are Americans.

R is for Responsibility;
The obligations each of us has
To pull the voting lever after intelligent
thought,
To support our schools,
To take part in government;
Realization of our responsibility animates
Democracy.

A is for Abundance—
Material abundance, seen in
Sun-kissed fields of swaying grain,
Milk bottles at the back door,
Crowded dime store windows,
Fresh laundry,
Hamburgers and ice cream,
TV sets and golf clubs.
Spiritual abundance, felt and heard in
Prayers and smiles,
Songs and sympathy,
Charity and friendship,
Church bells and weddings,
Handclaps and security.

C is for Citizenship,
The realization that all good things require
effort;

Not only making rules, but living by them;
Taking an active interest in the community;
Being flexible, but not radical,
Being openminded,
Shattering prejudice,
Choking corruption,
Voicing opinions.

Y is for youth.
Let Youth be thinkers and doers,
Not branded and classified
Beatnik, defeatist, delinquent—
Let youth learn to know and to love the
great land that we live in;
For soon we shall stand in the high places,
holding the reins;
Today but a whisper, tomorrow youth's
voice shall be heard as Democracy's
shout.

"Champions of Liberty"—Thomas G. Masaryk

EXTENSION OF REMARKS
OF

HON. FRANK J. LAUSCHE

OF OHIO

IN THE SENATE OF THE UNITED STATES
Monday, March 7, 1960

Mr. LAUSCHE. Mr. President, today,
Monday, March 7 marks the 110th anni-

versary of the birth of Thomas G. Masaryk, the founder-first President of Czechoslovakia. Our Government, in recognition of Masaryk's fight for Czechoslovak democracy, authorized that the sixth of the "champions of liberty" postage stamp series honor this great patriot, and it is very fitting that these stamps be first placed on sale here in Washington today.

Mr. President, I ask unanimous consent that a statement I gave to the Masaryk Champion of Liberty Commemorative Committee and to the Czechoslovak National Council of America be printed in the RECORD.

There being no objection, the statement was ordered to be printed in the RECORD, as follows:

STATEMENT BY SENATOR LAUSCHE

I am happy to join with all of the members of the Czechoslovak Societies of the United States on the occasion of the 110th anniversary of the birth of Thomas G. Masaryk, the founder—first President of Czechoslovakia.

Today, Czechoslovaks and friends of the Czechoslovak democratic spirit recall the dramatic rise of Thomas G. Masaryk from a humble Czech and Slovak parentage to respected professor of philosophy at Charles University in Prague, and his meteoric career as representative of his people in the Austrian Parliament while the Czech and Slovak lands were part of the Austro-Hungarian Empire.

His leadership during World War I, along with the assistance of Eduard Benes, a Czech, and Milan Stefanik, a Slovak, and other fighters for freedom, led to the uniting of efforts to secure an independent Czechoslovakia.

On October 28, 1918, diplomatic support and world public opinion crowned with success his efforts when the Czechoslovak National Committee in Prague made effective a declaration of Czechoslovak independence. We recall that under his presidency, 1918-35, the Czechoslovak Republic, although beset by many internal and external difficulties, became a notable example of a modern state pursuing social progress through democratic methods and playing an important part as a small nation in international affairs.

Today, we revere his memory as the father of the Czechoslovak Republic, and although the Czech and Slovak peoples do not now enjoy the internal democratic freedoms they once had, I feel certain that his aspirations and his love of liberty are part of the national heritage of all Czechoslovaks and will never be forgotten by those who love freedom.

Thomas G. Masaryk

EXTENSION OF REMARKS
OF

HON. CLARENCE J. BROWN

OF OHIO

IN THE HOUSE OF REPRESENTATIVES
Monday, March 7, 1960

Mr. BROWN of Ohio. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following tribute to Thomas G. Masaryk, founder and first President of Czechoslovakia on the occasion of his 110th birthday, March 7, 1960:

It is a privilege for me to join with the large number of my colleagues who are today, March 7, paying tribute to the

life of service and to the memory of Thomas G. Masaryk, the founder and first President of Czechoslovakia on the 110th anniversary of his birth.

No man in modern European history has made a greater contribution to the cause of freedom than did President Masaryk. His sacrifice and his work in behalf of democracy and human liberty should not only be an inspiration to his enslaved fellow countrymen in Czechoslovakia, but to all of us in the Western World, as well.

It is my hope that his spirit shall continue to live in the hearts and in the minds of all Czechoslovaks, as well as all other freedom-loving people everywhere in the world.

What Kind of Farm Program Do Farmers Want?

EXTENSION OF REMARKS
OF

HON. ALEXANDER WILEY

OF WISCONSIN

IN THE SENATE OF THE UNITED STATES
Monday, March 7, 1960

Mr. WILEY. Mr. President, we recognize that over the years the task of finding a solution to the farm problem has become increasingly difficult.

As we well know, there have been efforts to solve it by legislation; too, there have been—and still are—attempts to make it a political football.

Fundamentally, however, I believe the job can be done only by applying sound economic principles to the farm situation.

The laws of supply and demand must again be allowed to find their way to the top of the heap, if there is to be a real lasting solution.

We realize, of course, that the stimulus to production created by Federal programs during the national crisis contributes to our current condition. However, the crisis has been over for almost 15 years. Yet, we have not succeeded in finding our way back to a sound agricultural program.

Because of the significance of a healthy agriculture, not only to our farmers, but to the whole economy, we cannot afford to pull the rug out from under our farm people. However, it is high time we found a realistic solution to the farm problem, based on sound economic principles.

In attempting to meet the challenge, it is of course important that we seek from the farmers themselves their ideas on what should be done.

Recently, the Wisconsin Agriculturist—a 110-year-old "voice of agriculture," with a long history of farm opinion polls—published the results of a poll among farmers on the question: "What kind of farm program do farmers want?" Recognizing the need for closely staying attuned to the farmer himself on these matters, I ask unanimous consent to have the poll printed in the Appendix of the RECORD.

There being no objection, the poll was ordered to be printed in the RECORD, as follows:

WHAT KIND OF FARM PROGRAM DO FARMERS WANT?

What do farm folks think about farm programs? What kind of farm programs would they like to have? To find out the Wisconsin Agricultural Poll asked a cross section of Wisconsin farmers the following questions about farm programs.

Here are the questions and their answers:

Question: "Farmers hear a lot of talk about new farm legislation and about other efforts to help farm product prices. Which one of the following statements comes closest to what you think ought to be done?"

Answers:	Men	Women
(percent)		
"Nothing needs to be done, except to get the Government out of farming. Let supply and demand take care of things....."	21	12
Farmers should advertise farm products, at home and abroad, as business does and so avoid need for Government help.....	15	16
Government should stop trying to support farm prices and instead give farmers themselves the power to bargain and run their own programs.....	17	12
While farmers need more bargaining power they will also need some Government help such as buying up some surpluses.....	17	16
Federal farm programs of many kinds are needed if farm incomes are to be kept at a satisfactory level.....	15	15
Undecided.....	15	29

Women were more hesitant than men to say that everything would be all right if Government got out of farming. Seventy-nine percent of the men and 88 percent of the women thought some kind of action was needed.

Forty-nine percent of the men and 43 percent of the women felt that some form of Government program or a self-help program was needed for agriculture.

In general more men over 50 years of age thought that agriculture would be all right if Government got out.

More of the younger group said that "while farmers need more bargaining power they will also need some Government help, such as buying up surpluses." This question got about 20 percent of the vote of those under 50 but only 10 percent for those over 50.

The gross income farm folks make seemed to have very little influence on their preferences in what should be done.

Those who voted Republican in the last senatorial election had a larger percentage who thought Government should get out of farming. Fewer who voted Democratic felt this way.

Many folks expressed their own ideas about farm programs. "If the Government could fix the price of what the farmer sells to equal the price of what he buys, it would keep farmer and laborer on an equal basis," said a Dunn County woman.

"Farmers would buy more and this in turn would help labor. As it now stands I wouldn't want my boy to be a farmer when he finishes school. Farmers today just have to work too hard."

"I feel that we need to control the output rather than to support the price," said a Dunn County man.

"If we don't get support and control production, farmers will have to quit farming," said a man from Taylor County.

A woman in Wood County told the poll taker, "If the Government had never started this subsidy business in the first place, farming wouldn't be in the mess it is now."

A Dodge County man told the poll taker, "It will be rough going for a while, but the Government must step out. The transitional period will be hard. But eventually things will be all right. Farmers should have their own distribution system and produce by contract."

Several people had a good deal to say about advertising. A Polk County man thought if the dairy farmer advertised his products "like the big tobacco companies do, we wouldn't have any surplus to worry about."

Several folks said they thought advertising was important but wasn't the whole answer. "The farmer should advertise more," said a young Buffalo county farmer, "but the Government is in the best position to really handle the farm problem."

"I don't like Government programs. They seem to help the big farmers to get bigger and they hurt the medium-sized farmer," said a farm owner in Shawano County.

HELP TO LEAVE THE FARM?

Some farm economists have recommended a Federal program that would help farm people get out of agriculture. If we had fewer farmers, they say, then it would mean that each farm family left would get a larger share of the total farm income.

Here's what Wisconsin farm people said when the poll takers asked them the question:

Question: "Do you think the Federal Government should help farm folks who want to leave the farm and move to jobs in town? This could be loans, job training, and the like."

Answers:	Percent
"Yes, should be done....."	22
No, isn't needed.....	48
Undecided.....	30

"They should help farmers who need to move off submarginal land to a job in town where they can make a living. It would be just a drop in the bucket compared to all the other farm subsidies they are handing out to keep the people there," said a Wood County man.

But a Jackson County woman didn't agree. "The Government would go broke if they did that," she said.

Some of the folks said "yes" with qualifications.

"I feel that if they just want to leave the farm, no help. But if they have to for some good reason, yes, give them help in the form of a loan," said a Dunn County woman.

Apparently a majority of those asked felt such a program isn't needed.

"Too many are leaving the farm now going to town," said a Jefferson County man. "There should be more family-sized farms, not more and more big ones."

DO WE NEED A DAIRY PROGRAM?

What do Wisconsin farm folks think of dairy programs?

To find out the Wisconsin agriculturist poll asked:

Question: "Do you feel dairy farmers need some kind of Government program for dairy products?"

Answers:	Men	Women
(percent)	(percent)	(percent)
"Yes, need it....."	47	43
No, do not.....	38	29
Undecided.....	15	28

Among both men and women, more of the younger group felt that some kind of dairy program was needed. And more farm folks milking larger herds favored some kind of Government program.

Considerably more farm people who voted Democratic in the last election thought a dairy farm program was needed than those who voted Republican.

"I tried farming with a fair sized herd of cows," said a Taylor County farmer. "I just couldn't come out. So I sold all but two cows and got a job off the farm. We definitely need some kind of Government support in order to make a go at farming."

"As long as they support grain they've got to support the rest," said a farmer in Vilas County.

Of the farm folks who think we need some kind of dairy program, what kind would they prefer?

Here are the questions poll takers asked and how farm folks answered:

The Government should continue to buy up milk products to maintain prices (even though you may not agree as to the present support level)—agree, 76 percent; disagree, 6 percent; undecided, 18 percent.

Strict Government quotas on the amount of milk each producer can sell—agree, 24 percent; disagree, 57 percent; undecided, 19 percent.

Government should make production payments directly to farmers to make up the difference between the support price and the market price—agree, 54 percent; disagree, 21 percent; undecided, 25 percent.

What we need is the right kind of feed grain programs. With supply of feed grain cut down, we wouldn't have to worry much about overproduction of milk—agree, 17 percent; disagree, 45 percent; undecided, 38 percent.

In spite of much criticism of the present milk program, it would apparently get an overwhelming majority of the votes from those who favor some government action.

Since the purpose of asking the question was to determine what kind of program farm folks wanted, the poll made no attempt to find out at what levels Wisconsin farm folks thought milk should be supported.

FOOD FOR THE POOR?

Frequently it is argued that we could get rid of more dairy surpluses in our own country by expanding our present domestic disposal programs and inaugurating a food stamp plan. Here's how Wisconsin farm people felt about this question:

Question: "Some folks say we need to speed up government surplus disposal by such programs as a food stamp plan for the needy, expanded school lunch and State institution food programs. What do you think?"

Answers:	Percent
"Yes, need to expand them....."	75
No, wouldn't help much.....	6
Don't believe in such programs.....	4
Undecided.....	14

Apparently a majority of Wisconsin farm folks agree with the young Brown County woman who said, "If they buy up all those surpluses why not give them to schools, institutions, and the needy. At least it wouldn't be going to waste and we'd save the storage costs."

SHOULD WE SHIP FOOD OVERSEAS

A majority of farm folks asked favored a food-for-peace plan. At present large amounts of surplus food are moved overseas under Public Law 480. Here's how Wisconsin farm people answered the following question:

Question: "Do you think we should sell farm surpluses to underdeveloped, friendly, foreign countries at reduced prices, as loans, or in some cases as gifts—providing this does not replace regular sales by ourselves or other friendly nations?"

Answers:	Percent
"Yes, good idea....."	61
No, don't approve.....	17
Undecided.....	22

While only 17 percent said they disapproved of the program, many of them were quite emphatic about it.

"I know two families who have a large milk bill every month and their children could drink a lot more if they had it. Let the 'brains behind the desk' figure out a way so large families in cities can get more milk. Let's feed our own poor first," said a woman in Sauk County.

"We're making fools of ourselves," said a man in Wood County.

"Why should we give away all the time like a Santa Claus. That's what they think we are now—Santa Claus," said a man in Vilas County.

But apparently most Wisconsin farm folks would come near to agreeing with the Langlade County woman who told the poll taker, "If we give part of the surplus to the needy in Europe and Asia regardless of whether they are allies, it will build friendship. And they will know we haven't any desire for war. Maybe they will be convinced that our way of life is best."

HOW CAN THE GOVERNMENT HELP FARMERS?

Kind of action:	Percent
1. Get Government out of farming. Let supply and demand set the prices.....	16
2. Let farmers advertise their own products and Government help won't be needed.....	16
3. Stop supports. Give farmers power to do their own bargaining.....	15
4. Let farmers bargain, but have Government buy up some surpluses.....	16
5. Have many kinds of programs to keep farm incomes up.....	15
6. Undecided.....	22
Total.....	100

Pony Express Centennial

SPEECH
OF

HON. WILLIAM H. AVERY

OF KANSAS

IN THE HOUSE OF REPRESENTATIVES

Monday, March 7, 1960

Mr. AVERY. Mr. Speaker, as you know, this year marks the 100th anniversary of the pony express. I am proud to state that the portion of the pony express which goes through the State of Kansas is located entirely within my congressional district.

This year's centennial celebrations of the famous pony express will be largely a tribute to American youth.

Most of the daring riders of the famous mail-carrying service which began April 3, 1860, between St. Joseph, Mo., and Sacramento, Calif., were very young men—many of them in their teens.

An advertisement of the times in San Francisco, seeking pony express riders, stated: "Wanted—Young, skinny, wiry fellows not over 18. Must be expert riders, willing to risk death daily. Orphans preferred. Wages \$25 a week."

Young men entering Pony Express service, operated by the famous transportation firm of Russell, Majors & Waddell, were given a Bible. These are very rare today.

Riders were required also to take this oath upon entering service:

I hereby swear, before the great and living God, that, during my engagement, and while I am an employee of Russell, Majors & Waddell, I will, under no circumstances, use

profane language; that I will drink no intoxicating liquors; that I will not quarrel or fight with any other employee of the firm, and that in every respect I will conduct myself honestly, be faithful to my duties, and so direct all my acts as to win the confidence of my employers. So help me God.

The youthful pony express riders consistently outran Indian pursuers while carrying the mails through the wilderness, often through blinding snows and howling storms, and in extremes of heat and cold. Only one pony express rider was lost to the Indians.

Johnnie Fry—or "Frey" according to some writers—is credited by some accounts with being the first pony express rider to leave St. Joseph on April 3, 1860. He was little more than a boy when he entered the express service. He was a native Missourian, weighing less than 125 pounds. An early account states:

Though small in stature, he was every inch a man. His run was from St. Joseph to Seneca, Kans., about 80 miles, which he covered in an average of 12½ miles an hour, including all stops.

He later entered the Union Army, and was killed in 1863 in a hand-to-hand fight in which he was credited with killing five assailants before he was killed himself.

William "Bill" James, a native Virginian, was credited at 18 with being one of the best of the pony express riders over a route in Nevada through some of the most savage Indian country.

According to Alexander Majors of the Russell, Majors & Waddell firm, in a book published in 1893—"Seventy Years on the Frontier"—William F. "Bill" Cody was a pony express rider, in his early teens, when he entered the famous mail service. Cody is credited with many notable feats, including a ride aggregating 384 miles without any real rest period, which is referred to by some authorities as probably the longest continuous performance of its kind not only in the annals of the pony express but in any other courier service in history.

None of the pony express young men had an opportunity to grow old in the service. In October 1861 the cross-country telegraph was completed and the pony express was terminated. Despite its short life, it was credited with many important contributions, including the fact that it helped to keep East and West joined during the early crucial days of the Civil War.

Although the pony express was short lived, it will be very much alive this year.

Many pageants, celebrations, and other activities memorializing the pony express are planned for this 1960 centennial year.

As a part of centennial year celebrations, the Post Office Department will issue a new pony express commemorative postage stamp next July 19 at Sacramento, together with a new commemorative stamped envelope to be issued at St. Joseph.

On the same date, as one of the major memorial events scheduled during the vacation season this year, the National Pony Express Centennial Association plans to reenact the Pony Express runs, starting out—just as the pony express

did approximately 100 years ago—from both St. Joseph and Sacramento.

The reenactments are expected to require about 9 days each for both the eastward and westward runs. The original pony express runs, across the 1,966-mile original route, required an average of about 10 days, although it frequently took less time. Lincoln's inaugural address in 1861, for example, was carried by the pony express in less than 8 days.

The eight States through which the pony express ran are Missouri, Kansas, Nebraska, Colorado, Wyoming, Utah, Nevada, and California.

Ike's Latin American Trip an Outstanding Success

EXTENSION OF REMARKS
OF

HON. ALEXANDER WILEY

OF WISCONSIN

IN THE SENATE OF THE UNITED STATES

Monday, March 7, 1960

Mr. WILEY. Mr. President, as we know, President Eisenhower today returns from his Latin American trip. The good will mission—although not without its drawbacks—was, I believe, according to realistic standards—a great success.

As we recall, the original purposes of the tour were: First, to reflect the deep interest of the United States promoting better relations with our Latin American neighbors, and second, to encourage further development of an inter-American system for meeting the aspirations of the people of the Americas and demonstrating peaceful cooperation.

The questions now confronting the Nation include: What kind of follow-up action is essential to further cement relations with Latin America?—and: What is the proper U.S. role in stimulating economic progress among these southern countries—now striving diligently to move ahead economically, socially, and nationally.

We recognize that it is relatively simple to voice adherence to general principles of cooperation and efforts toward mutual development.

However, the real challenge now is to turn the microscope on our inter-American policies to find specific ways and means by which to improve trade; open new channels of social, educational, political and economic interchanges between our countries; give encouragement to these people striving to improve themselves economically, as well as to solidify political systems in which the people themselves have a real voice. Specific actions may well include: First, further improving sources of loans to Latin American countries for necessary development projects; second, improving the climate for further private investment in those countries; third, a more effective effort to obtain the understanding of U.S. policies among the Latin Americas, particularly in the light of the anti-U.S. propaganda by the Communists, and fourth, a greater effort

to give merited recognition to these nations for their individual significance to the collective security of the Western Hemisphere.

Yesterday the Washington Post published an article by Murrey Marder entitled "Ike Aides Appraise Latin Trip a Success." The article reviews some of the significant factors, not only relating to the trip, but also pertaining to important decisions that must now be made in further improving our Latin American relations.

I ask unanimous consent that the article be printed following my remarks in the Appendix of the RECORD.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

IKE AIDES APPRAISE LATIN TRIP A SUCCESS
(By Murrey Marder)

RAMEY AIR FORCE BASE, P.R., March 5.—President Eisenhower returns to Washington Monday with the immediate impact of his American trip scored as a major personal success. But a heavy question mark hangs over its long-term significance.

If the President's own image of good faith and sincerity leaves the Latins with a warm glow of affection for the United States, the physically grueling trip will have accomplished its purpose.

But it will be months before that can be known in any positive form. The only quick test of the trip can come in a negative way: If the impatient-for-progress Latin Republics he visited should flare up in disappointment at unfulfilled expectations.

Members of the President's party are optimistic about the end result. They are using their own measuring rod.

Before the President left for Brazil, Argentina, Chile, and Uruguay, they point out, he set very generalized goals.

TWO ANNOUNCED PURPOSES

The trip, the White House announced, would have two purposes. It would "publicly reflect his deep interest in all the countries of the new world." Secondly, it would seek to "encourage further development of the inter-American system" for meeting the aspirations of the peoples of the Americas and demonstrating peaceful cooperation.

Anyone who participated in the over-packed, over-rushed 10-day schedule in South America can testify that the President worked hard to accomplish purpose No. 1.

He saw several million welcoming people in those 10 days. Most of them cheered him warmly, some were only curious, but numerically, in the few counter-demonstrations, only a tiny percentage were hostile.

What is less certain at this point is the President's success in the second part of his announced goal—encouraging inter-American cooperation.

From the U.S. standpoint, officials along on the trip are understood to regard it as a tremendous, unqualified success on these grounds as well. But American newsmen who got a chance during the trip to speak to the Latins themselves generally received this response: "The real result of the trip depends on your government's follow through."

NO NEW PLAN INTENDED

Ever since the trip began the official participants have tended to blink in surprise when questioned about any new program which might emerge from it.

The announced purpose of the trip, they note, did not contemplate any new approach to Latin-American problems. They are literally correct in this. The question is, did the Latins understand that?

There are strong reasons to believe that many did not. In Chile, for example, Presi-

dent Jorge Alessandri was happy to hear President Eisenhower say the United States does not contemplate liquidating its huge stockpiles of copper—which would knock the bottom out of the world market price. When Alessandri then asked if the United States could remove its duty on Chilean copper imports, Mr. Eisenhower sidestepped the question by saying he was unfamiliar with the details and would have to study them. Nevertheless Chilean newspapers the next morning leaped to the conclusion that the United States was contemplating removal of the copper duties.

Similarly in Chile President Eisenhower praised Alessandri's statesmanship in proposing a moratorium on arms levels in Latin America, with the money saved to be used for economic development. This, too, was hailed as an American endorsement. But Mr. Eisenhower went on to say each sovereign nation obviously would insist on the right to determine its own arms levels. President Eisenhower's main emphasis in this discussion with Alessandri, according to official sources, was reassurance of "the U.S. commitment in the Rio Treaty of 1947. It pledges each American republic to assist any sister republic subjected to armed attack.

Equally, in Brazil, Argentina, and Uruguay the visiting U.S. officials avoided specific commitments, according to a reliable source here.

NO GO-IT-ALONE PLAN

There are no big new loans or credits dependent on the outcome of the President's trip, informed sources said. President Eisenhower, in a speech here yesterday, specifically ruled out "any thought of the United States alone developing a so-called master plan for the raising of living standards throughout the hemisphere." He said the Latin American leaders he consulted agreed.

They did, but the manner in which the President posed the question ducked the point. There is no serious talk in Latin America of the United States "alone" planning its economic future.

AID CONCEPT HELD ADEQUATE

In substance, the U.S. position at the end of this trip is that the present concept of U.S. multiple loan and credit aids to Latin America is adequate. This does not necessarily mean, an informed source said, that any increase is ruled out.

The new billion dollar Inter-American Development Bank is due to start operations in April. With this fund and continuing aid from such sources as the Export-Import Bank and International Monetary Fund, plus technical and agricultural assistance, the Eisenhower administration is disposed to leave the bulk of Latin American development to private investment.

PACE OF AID QUESTION

The overriding question which remains is whether this pace of assistance is adequate.

Time is pressing in Latin America, said the Caribbean group of the American Assembly in a report issued here yesterday. The group has a membership of public and private experts of varied political orientation.

Right now, said the Assembly—and reports by other bodies echo the same theme—with Latin America emerging from an era of dictatorships "nationalism is exceptionally strong" everywhere.

Communism "is making headway in parts of Latin America," said the report, and "there is a tendency in Latin America to underestimate the danger."

A prime example of the Latin problem in the Assembly's report was Cuba. President Eisenhower, in each country he visited, was urged to exercise patience and restraint toward the Cuban revolution, and was commended for doing so.

"Communists are working hard in Cuba and appear to be gaining influence," said

the report, "but a final judgment on the prospects of Communist control therein would be premature." The report commended the restraint of U.S. policy in Cuba.

Inside Policy: The Harlem Story

**EXTENSION OF REMARKS
OF**

HON. ADAM C. POWELL

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Monday, March 7, 1960

Mr. POWELL. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following:

[From the New York Post, Mar. 3, 1960]

INSIDE POLICY: THE HARLEM STORY
(By Ted Poston with Alfred Hendricks, Irving Lieberman, and Richard Montague)
Times do change.

In the old days you couldn't pay the average policeman to work voluntarily in Harlem. Today, for those of the vice squad boys who operate the pad—the multimillion-dollar protection racket for the numbers game—Harlem is the happy hunting ground.

Why? Well, say you are on the take. And say, for instance, that you are transferred from some other assignment to a vice squad in Harlem.

Then you know that on your first tour of duty there will be \$250 waiting you—a welcome-to-our-neighborhood gift of \$50 each from five major East Harlem banks which dominate the numbers racket throughout the city, but especially in Harlem.

And, of course, as soon as the OK is given by your immediate superior, you go on the pad, cut in for your monthly share of the phenomenal tribute which crooked vice squad cops levy on policy operators who must maintain public spots where the bettors can buck the numbers without police molestation.

But whereas the division pad for a regular spot in the rest of the city is usually \$350 a month, the take in a Harlem division is now \$615. And whereas "full pad coverage" (from the cop on the beat all the way up to the special squads in headquarters) usually averages around \$2,500 per month per spot for the rest of the city, a full open spot in Harlem may be down for as much as \$4,500, depending on the play it handles.

The Post looked closely into the Harlem operation because of Representative ADAM CLAYTON POWELL's charge that white racketeers, mainly Italian, were taking over the game from Negro bankers there—with police connivance.

In his original press conference—attended by ranking police brass—Powell named Louis (Louie the Gimp) Avitabile, owner of a supermarket at 539 Lenox Avenue, as "top man of the Harlem operation."

The Post found that Louis the Gimp was indeed a big man in the Harlem policy racket, but he is by no means the "top man" in the syndicate, which has muscled into the community.

The most powerful figure in Harlem, in the matter both of influence and the most protected spots, is Anthony (Punchy) Salerno, an East Harlem hoodlum whom the newspapers nicknamed "Fat Tony" when he was exposed as the "Mr. X" who bankrolled the Patterson-Johansson title fight.

Salerno, who managed a phenomenal rise from punk to dope peddler to Dutchess County squire in less than a decade, operates 37 "full open spots" in Harlem—from which grafting cops receive an estimated rakeoff of nearly \$100,000 a month.

A former Negro numbers banker, reduced to controller for a white policy bank when he could no longer meet The Pad, explained the importance of Salerno's position.

"Because Tony's operation is so tightly organized," he said, "the cops don't need a lot of pickup men like that Joe Luberda to go around to individual spots. Tony's bank, for instance, can assemble about \$45,000 a month for four special squads above the Division level and turn it over to just one bagman. That way, there's less chance of a slip-up."

THE "OK" BOYS

"Salerno is so big that he has the right to give the 'OK' for any new spot to be placed on the pad. There used to be a half dozen Negro bagmen or bankers who could give the 'OK,' but today there aren't more than two Negroes in all Harlem who can 'OK' you to the cops for a place on the pad, and I doubt that any Negro now can 'OK' a full pad."

Next to Salerno in power in this respect, the Post investigation indicated, is Louis the Gimp Avitabile, who started out with his three brothers as pushcart peddlers in Harlem around 1938, rose so rapidly in the numbers business that by 1951 the Bureau of Internal Revenue had him down for \$807,000 in unpaid taxes.

Until the heat went on, following Powell's charges, Avitabile had 14 full open spots, for which he was assessed a monthly police take of about \$2,470 each.

Assistant Chief Inspector Burns, who attended Powell's press conference, quickly pointed out to reporters that the Gimp was officially listed as a "known gambler" and that two of the four addresses listed by the clergyman had been raided and were at that moment "suspected premises."

Burns could have gone further by noting that Avitabile's main headquarters, his Lenox Avenue supermarket, had been officially made a "raided premises," with a patrolman stationed there since last July 2 to prevent any policy operations.

Actually, the Gimp's main business had moved into a basement right around the corner and his 13 other spots were even at that moment in full operation. The main one was still in action when the Post team went around Harlem. Avitabile's partner, Solly Appuzzo, was running it in his absence.

Close behind Avitabile in the East Side hierarchy are the Villigante brothers, Louis, Tony, and Charlie. The Villigantes, who have their headquarters at 95th Street and Second Avenue, plus extensive policy interests elsewhere, pay for 11 full open spots in Harlem.

Louis Villigante, the boss of the outfit, has three policy convictions. Like Avitabile, he was listed on the pad carried by retired cop Joseph Luberda, the Harlem bagman now serving time for refusing to name his police department associates in the protection operation.

There are other Italian operators who have sizable slices of the Harlem numbers game such as Felice and James Falca, both known gamblers with more than 30 arrests for policy between them. Luberda had them listed as Phil and Jim Black.

A nice tribute to the lushness of the Harlem policy play came in the Post's discovery that Sammy Schlitz, the most powerful non-Italian policy figure in the East Harlem syndicate and boss of policy in the Bronx, pays for seven protected spots in Harlem.

Schlitz, born Sam Schlitten on January 14, 1910, son of a respectable trucker, was only 18 when he started a long police and prison record which included arrests for robbery, bootlegging tax-free liquor, consorting with known criminals, and felonious assault.

At the time of his bootlegging arrest in 1938, Schlitz boasted that he was a member in good standing of the Bronx Pigeon Fanciers' Association. The police paid no attention to that item at the time but in 1953

they discovered that the congenial little racketeer was making ingenious use of the hundreds of pigeons who roosted in elaborate coops atop his Bronx home.

Schlitz had pigeons delivered each morning to the scores of controllers in his Bronx policy operation, and each homing pigeon would carry the day's business slips back to him before the third race was run at the designated numbers racetrack.

The ingeniousness of this plan evidently brought Schlitz to the East Harlem syndicate's attention, and when that mob decided to supervise the major policy operations for the whole city (for a percentage of the gross take) he was left to continue to run the Bronx operation in the new combine.

"Unless Sammy gives the OK," non-syndicate operators told the Post, "nobody can get the pad anywhere in the Bronx (today)."

But Schlitz is still subordinate to Punchy Salerno in the overall operations of the syndicate's policy game, as he is to Salerno in the number of protected spots in Harlem, for Salerno stands secure among the current policy kings. His story is pure rags-to-riches.

Born and reared in the East Harlem neighborhood where he still operates his bank (in absentia) on East 116th Street between First and Pleasant Avenues, he earned his nickname Punchy as an amateur club fighter.

Punchy's fistic career was cut short in October of 1932 when he was sent to Elmira Reformatory, at 18, for armed robbery. Released on probation, he worked as a rouser around the fruit markets. When World War II came, he was classified 4-F because he had two deformed fingers on each hand and webbed feet.

It was around this period that the Narcotics Bureau first took note of Salerno. For when wartime restrictions created a short of cocaine, the word was out in East Harlem that Punchy could get it for you at a price.

Salerno was picked up on a charge of extortion, later dismissed, in 1951, but had no other trouble with the law despite the narcotics agents' suspicions.

In 1953, however, the Narcotic Bureau finally assembled evidence which resulted in Salerno's indictment for unlawful sale of heroin and conspiracy to violate Narcotic laws. Salerno thereupon vanished. He was not arrested until a year later and maintained a not-guilty plea as his case dragged through the courts. Finally, 4 years and 10 days after his indictment, he pleaded guilty to two of the three narcotics counts in the case.

In the intervening year, the once small-time hood had risen fast in the east Harlem hierarchy.

As a close pal now of Trigger Mike Coppola and Joseph (Joe Stretch) Stracci, he was the unchallenged director of the east Harlem operations of the syndicate, then steadily gulping up the policy game in west Harlem, and also operated the mob's lending bank which financed jukebox and other rackets.

And although he paid less than \$600 income tax in 1957, Salerno was able to buy a plush home in Miami Beach—later sold to Capone gangster, Paul (the Waiter) Ricca for \$75,000—and a \$100,000 estate called Spruce Bar Ranch in Rhinebeck, N.Y.

"IT'S A LIVING"

Salerno's rapid rise in the numbers game in east and west Harlem coincided with the collapse of most of the Negro banks which had dominated the game in the latter community for decades.

But it did not result, as POWELL charged, in the complete elimination of "every Negro banker in the community." The Post found at least a half dozen Negro banks still in full operation, although one or two are believed to be under syndicate direction.

The largest of these is a Negro-Puerto Rican operation run by Henry Lawrence and Spanish Raymond Marquez, whose bank pays for 10 spots. Lawrence, last arrested a year ago for policy and listed as "Henry" on the Luberda pad, operates daily in the area of 148th Street and 8th Avenue. He fronts as a tailor shop owner and is regarded as one of the two Negroes who can OK a new spot for the pad.

Marquez, ostensibly a theatrical producer, handles the bank's spots and business in the lower 8th Avenue area embracing 112th and 113th Streets.

A somewhat smaller operation is located in the Lenox Avenue area around 140th Street. This bank is operated by the big five—Boo Marshall, Sid Thompson, Fritz Devinish, Pat Hogan, and Crappy Hale.

And still smaller is the action of the big three—Walter Smith, Carlyle Williams, and Crip Martin at 127th Street and Lenox Avenue.

There are also several Negro combinations, including one organized by one of the original Harlem policy barons. In these, the partners establish a bank on prorated shares and accept a weekly salary from its earnings.

In most cases, the combinations operate no spots, but handle their business through runners and controllers. These banks establish private pads with police and pay off on a precinct level when possible.

"It's a living," one such operator told the Post, "and the headaches are sometimes a few less. But still it is better than being on the full pad. Only the east Harlem boys have got enough money to keep these greedy cops at bay."

Tribute to Parliamentary Lewis Deschler

SPEECH

OF

CLARE E. HOFFMAN

OF MICHIGAN

IN THE HOUSE OF REPRESENTATIVES

Thursday, March 3, 1960

Mr. HOFFMAN of Michigan. Mr. Speaker, will the gentleman yield?

Mr. McCORMACK. I yield to the gentleman from Michigan.

Mr. HOFFMAN of Michigan. Mr. Speaker, permit me to join in endorsing all the complimentary statements which were made by the majority leader and others, and which referred to the outstanding ability of our Parliamentarian, Mr. Lewis Deschler.

Longtime familiarity with our rules, profound knowledge, not only of parliamentary procedure but of the common law itself, has equipped our Parliamentarian to, on almost all occasions—the exceptions are very, very few—come up with an accurate decision without consulting either the rule book or the precedents.

Moreover, as one who has served here for 25 years, and has, during that time, probably caused the Parliamentarian more justified perplexity than any other Member, it is a pleasure to say that even though his decisions on occasion are adverse to views entertained by the seeker of knowledge, they are always rendered in such a way as to be convincing—convincing without question or resentment.

My almost lifelong experience with judges, Justices, and Parliamentarians

prompts the statement that I have met and listened to none who could ruin my convictions and make me like it with less resentment than Lewis Deschler. Very, very few in this world have the ability to, while clearly pointing out your error, send you away satisfied and sometimes delighted with the new knowledge as does our Parliamentarian.

He has sometimes pointed out my lack of information on some parliamentary issue so convincingly and so eloquently that I really enjoyed his adverse decision—an ability which surely is exceptional and one greatly to be desired, but possessed by few.

Let's Not Bury American Textile Industry

EXTENSION OF REMARKS

OF

HON. KENNETH A. ROBERTS

OF ALABAMA

IN THE HOUSE OF REPRESENTATIVES

Monday, March 7, 1960

Mr. ROBERTS. Mr. Speaker, recently I presented a statement to the U.S. Tariff Commission on the problems besetting the American textile industry.

Because there are many here who are interested in this matter, I wish to include in the RECORD this statement.

The statement follows:

STATEMENT OF HON. KENNETH A. ROBERTS, A REPRESENTATIVE IN CONGRESS FROM THE FOURTH DISTRICT OF ALABAMA, TO THE U.S. TARIFF COMMISSION, MARCH 3, 1960.

Mr. Chairman, I appreciate the opportunity of appearing with my colleagues in support of appropriate safeguards to alleviate the unfair and, in some instances, intolerable situation under which many segments of the domestic cotton industry now are laboring.

I will not belabor the points which have been clearly and cogently presented by the National Cotton Council and the other friends of domestic industry in pointing out the seriousness of the problem.

I wish to be associated with the remarks of these gentlemen.

Coming from a State which has some 45,000 textile workers and representing a district where textiles constitute the largest industry, I am personally very much aware of the pressure being exerted by imports of cotton products.

During the past decade, the textile industry has lost some 325,000 jobs. This was not during a time of depression; rather, this occurred during a period of economic development in most industries and a tremendous growth in gross national product. During this period, the United States lost 717 textile mills.

I believe a great part of this is directly traceable to the continuing and increasing inequity in the trade policies of this country with other countries. While the figures for imports of cotton yarn and cloth have steadily climbed during the past decade and are now more than seven times the total imports for 1948, the exports of cotton in the form of yarn and cloth have been in steep decline.

Further inequity has developed by the increase in the subsidy on exported raw cotton from 6 to 8 cents per pound. Now, raw cotton produced in this country is available to the foreign textile mills which

are putting our mills out of business at a substantial discount under U.S. domestic mill prices.

Last August, I joined my colleagues in the Alabama delegation in urging the Secretary of Agriculture to approve a petition seeking relief for the domestic industry under section 22 of the Agricultural Adjustment Act, as amended. Of course, I was delighted when the Secretary recommended action and the President requested the Tariff Commission to make an investigation.

I was, however, disturbed very greatly by the implications of limitation in the President's order to this Commission. I cannot interpret the order any other way but that he wishes to restrict the Commission to no more than an 8-cents-a-pound fee imposition on the cotton content of imported articles.

Now this, in my estimation, is a flagrant misuse of section 22 as enacted by Congress.

The section Congress approved contemplated that the Commission would recommend the relief it deemed necessary when it was determined that imports materially interfered with the domestic cotton program.

Certainly it was not the intent of Congress to limit the considerations involved in one of these cases, or to do anything prejudicial to full and complete relief where it is indicated.

In the past, in every instance section 22 has been interpreted, properly I believe, in the broad and complete sense, and I can see no justification for limiting its application in this instance.

I want to commend the Tariff Commission for the cooperative and conscientious manner in which it has approached these hearings, for receiving all the testimony, and for covering the wide range of this complex problem.

I urge the Commission now to recommend relief appropriate to the problem, unfettered by any administration decrees. Certainly the Commission should not feel bound by any means by such decrees.

My parting remarks will be to implore you not to bury the American textile industry. It needs help desperately.

Thank you.

A Report on Voters' Attitudes Toward the Mutual Security Program

EXTENSION OF REMARKS

OF

HON. WILLIAM H. AVERY

OF KANSAS

IN THE HOUSE OF REPRESENTATIVES

Monday, March 7, 1960

Mr. AVERY. Mr. Speaker, this office conducts a special, nonpartisan educational project for college juniors entitled "A Week in Washington." The students are selected by four colleges and universities in Kansas. The students come to Washington for a week to see Government in action first hand. The major portion of their expenses are defrayed by funds received from this office in consideration for projects done for this office in the public interest.

One of the students, Ray L. Nichols, Lawrence, Kans., student at the University of Kansas, conducted a survey in the State on the mutual security program. The following is the report verbatim as Mr. Nichols prepared such:

A REPORT ON VOTERS' ATTITUDES TOWARD THE MUTUAL SECURITY PROGRAM, JULY 1959: BASED ON A SURVEY CONDUCTED IN ATCHISON, DOUGLAS, AND LEAVENWORTH COUNTIES OF EASTERN KANSAS.

(By Ray L. Nichols, the University of Kansas)

The interviews on which this summary report is based were compiled in a survey taken in the counties of Atchison and Leavenworth (First Congressional District) and Douglas (Second Congressional District), in the eastern portion of the State of Kansas, during the summer of 1959. The purpose was to determine the general attitudes of Kansas voters toward the mutual security program (foreign-aid program) of the U.S. Government, currently a mainstay of American foreign policy. It was hoped that the survey would thus reveal public concepts of the nature, accomplishments, weaknesses, and other aspects of the MSP.

METHODS

Because of the limited time in which the survey was to be completed, it was impossible to establish a rigorously scientific method of picking a random sample. However, the investigator did attempt to interview an equal number of people of voting age above and below the age of 45 (the approximate breaking line in terms of votes actually cast by the electorate), and to gain a roughly proportional representation of different income-occupational groups. These groups were "labor," "farmers," "professional" (lawyers, administrators, local government officials, etc.), "students" (university—graduate and undergraduate, of voting age), "white-collar employees" (secretaries, clerks, etc.), "business" (shopkeepers, bankers, executives, managers), and "housewives." Each of these groups was tabulated, and a separate tabulation was then compiled in addition, comparing men with women. An attempt was also made to make a proportional selection of urban and rural (including towns with less than 5,000 population) voters.

The survey covered 200 eastern Kansas voters in the above-mentioned counties. Those interviewed were chosen in part by going to the local newspaper editor, where available, and asking him for the names of local citizens in the various occupational divisions and subdivisions listed above. These in turn were asked to suggest other individuals. Otherwise, a random sampling technique was used: every third store in business sections, and two-block sections in residential areas were surveyed, insofar as possible.

The original questionnaire discussed the mutual security program of the United States, using that official title with reference to the program. When it was found, however, that continued use of that term alone would produce only confusion in the minds of those interviewed—since the official title was not equated by the vast majority with the foreign aid program—the phrase "foreign aid" was substituted for MSP in all questions following No. 5. Question No. 3 was then given as the first one, followed later by question No. 1. (For an explanation in detail, see the attached sample questionnaire form.) In tabulating, percentages were rounded off to tenths.

RESULTS

For purposes of tabulation, the 10 most indicative questions were exactly computed, answers on the others being of too diverse a nature or too nearly unanimous to warrant such calculations. (Where questions are referred to by number in the following passages, the number used is that found on the original printed questionnaire—the questions are referred to in the sequence in which they appear, without alterations.)

To the first question ("What is your position on the foreign aid program of the U.S. Government?"), the majority of every group interviewed answered that it was in favor. The housewives group led, with 100 percent in favor, while the business sample was last (73.8 percent); 80 percent of the women interviewed answered in favor of foreign aid, compared to almost 83 percent of the men; overall, 82 percent supported foreign aid, with only 12.5 percent actually against the program.

To the question (3), "What do you understand as the intent of the mutual security program?", only 10.5 percent of all those interviewed identified MSP as the foreign aid program, while over 41 percent did not know. To the next question (4), however, which asked if MSP and foreign aid were the same, the percentage of those correctly answering (in the affirmative) rose to 16.3, while that of those answering negatively also rose, to 65. No farmer correctly related the two programs, while labor led with over 39 percent identifying MSP and foreign aid as the same.

Of those who believed the two programs to be different, the nearly unanimous answer (5) was that MSP was related to defense pacts such as NATO and was mutual insofar as defense obligations were reciprocal; while foreign aid was aimed at economic development, without benefits to the United States in return. A few individuals made a broader distinction, asserting that both programs helped the United States, MSP in a military way, and foreign aid in an economic way (through defeating communism and expanding U.S. export markets).

When asked from what source(s) they obtained most of their information on matters such as the foreign aid program, well over 60 percent of those interviewed cited newspapers first, followed by television (especially the Sunday panel-discussion programs). The rest mentioned television, magazines, and radio, in descending order.

To questions (8) and (9), dealing with economic benefits to local communities and to the State of Kansas in general as a result of aid given to foreign countries, the vast majority of those surveyed knew of no such gains. Others (perhaps 20 percent) thought that increased trade and production relative to aid materials might have helped indirectly. A few in Leavenworth mentioned foreign army officers brought to the United States for training at the Army Command and General Staff College, and some in Lawrence (Douglas County) referred to foreign students attending the University of Kansas. Such latter answers, however, showed hesitancy about the relevancy of the subjects mentioned.

On question (10), however, dealing with possible benefits to farmers as a result of U.S. foreign aid, about 60 percent mentioned the giving of surplus agricultural commodities as an example—although one farmer added that he "doubted we've been helped—we've only just about held even as a result of that [the surplus export program]."

Despite the answers to questions (8-10) nearly half of those interviewed responded in the affirmative to question (7): "Have you heard of any examples of benefit or good the United States has received as a result of our foreign aid program?" Forty-four percent answered "no", however, while 9 percent were uncertain.

Question (12) asked: "Do you think the average person understands the program and its intent?" To this, an overwhelming 87.7 percent answered in the negative. When (13) suggestions were elicited as to how the program could be explained better to people, most of those answering mentioned television, with newspapers placing second. The emphasis was upon clear, concise explanation, presented in an interesting and non-

technical form. A significant minority, however (approximately 20 percent) suggested that little could perhaps be done: the public was in general apathetic and uninterested in such matters unless—in the words of one businessman—"it hits them where it hurts, in the pocketbook."

In the next two questions (14-15), people were asked if they believed that the majority of people in their community, and in the State, agreed with their general thinking on the matter of the foreign aid program. In each case, 60 percent made no comment and 30 percent answered "no". There were, however, a few more individuals who believed opinion in their community agreed with them than there were those who felt the same about the state in general.

When suggestions for improvements in the foreign aid program were solicited (17), the great majority had no comment to offer, the general feeling being expressed by one lady who stated that "I simply don't know enough about the thing to tell them [the Government] how to make it better." Of those who did make suggestions, nearly all proposed more efficient administration and selection of better trained officials. Some mentioned shifting away from grants to loans and use of more surpluses.

On a more specific query, however, answers were more readily forthcoming. The next question asked if waste and inefficiency in the foreign aid program was typical of the general pattern of the program, or rather unusual. Only 72.6 percent of the total thought that the problems were typical—but most of those (42.6 percent of the total) blamed the situation on the nature of big organizations, particularly American Government. Several of these (perhaps 5 percent of the total) specifically added that, in the words of one man, "this really doesn't hurt the successfulness of the program much. We still need it." In response to the next question, which called for ideas on how to alleviate such problems of waste and inefficiency, most people (17) replied as they had to, that better administrators and perhaps more centralized control was needed. Two people specifically commented in favor of proposals which they had read in newspapers, for a central board to oversee all U.S. aid programs.

Question (20) asked those interviewed how much importance they would give foreign aid compared to our national defense programs. While only 10.4 percent believed that aid was more important as compared to 35.5 percent who favored national defense, 43.6 percent thought that the two programs were of approximately equal importance. One professional man commented that "You really can't separate the two. Aid is long range and national defense is more short range. We need both of them."

The following question drew responses similar to those of (17): Most offered no suggestions. However, 2 percent of the total did suggest greater relaxation of trade barriers to at least greatly supplant foreign aid. An even smaller number called for greater private investment in foreign countries as a substitute.

To (22)—"Do you believe this Nation can promote peace and freedom without the necessity of having the foreign aid program?"—only 21 percent said, "Yes," and 9 percent were uncertain. The weight in favor of foreign aid was even greater on the next question (23), which asked if anything in the nature of foreign aid was necessary: 87 percent said, "Yes," while only 8 percent answered "No."

Question (25) solicited comments on any other subject pertaining to the Federal Government. By far the most commented-upon issue was Federal spending, with such emphasis upon waste of money in the military services—and the frequent desire that they

be unified—and the farm program. Most farmers were clearly dissatisfied with their situation, but suggestions ranged from "Get rid of Benson and establish 100 percent of parity," to "Just abolish price supports and supply and demand will work again—give me a free market." Businessmen frequently complained about redtape in forms which they were required to fill out for different purposes: They charged that so much time was required for such tasks that their businesses themselves were in fact neglected. Another general comment was a desire for Washington to clean up labor. Others individually called for increasing wages of postal employees and Army personnel, forestalling cuts in allocations of funds to the Veterans' Administration, and other such personal matters. One person spoke out sharply against the proposed new GI bill, although he himself would benefit from it. Among university people, sentiment was almost unanimous in favor of Federal aid to education. A few individuals supported the administration's "tough" policy (re: Little Rock) on segregation in the schools.

The last question (26), asking whether or not those interviewed would be interested in a brief synopsis of the findings of the survey, brought widely varying responses. Overall, however, 73 percent indicated that they would like such a synopsis sent to them.

SUMMARY AND CONCLUSIONS

In general, the voting population of eastern Kansas represented by the sample taken by means of the survey is in favor of the U.S. foreign aid program. This favorable attitude was prompted in most cases by a belief that the program will promote world peace—and of the people holding this attitude, most of them spoke specifically of averting the spread of communism to underdeveloped lands. Motives of the rest of those interviewed (and in favor of the program) were vaguely humanitarian: three individuals mentioned the need for "neighborliness" to other nations, just as to people. Some, however, saw foreign aid as a means for expanding U.S. export markets.

On the other side, most of those opposed to the program felt that "You can't buy friends," and added that foreign aid was "money poured down a rathole." A few mentioned their fear that the development of industries in other countries with the help of U.S. aid was merely increasing unfavorable competition for our own industries. This view was expressed almost entirely by businessmen.

Interestingly, while 21 percent felt that the United States could promote peace and freedom without giving foreign aid (although four individuals argued that this was not our "mission"), an overwhelming 87 percent felt that something along the line of foreign aid was necessary for some reason or other. The fact that this figure was larger than that of those favoring foreign aid itself (82 percent), when coupled with other figures, indicates some disenchantment with the present foreign aid program. Indeed, even those favoring the program expressed reservations: many qualified their support with phrases such as "if it's administered well," "if it goes only to those who need it," "so long as we don't plan to help them forever—they've got to learn to help themselves." As large a portion favoring aid as 10 percent of the total number interviewed believed that we should substantially reduce the amounts of aid given, although some help was necessary, both to protect the United States and out of humanitarian instincts.

Women appeared to favor the aid program substantially more than did men, and they also more generally desired to receive summaries of the report based on the interviews than did men.

Laborers were the least interested in obtaining summary reports—a lack of interest perhaps reflected in their uncertainty as to the answers to several of the major questions of the interview. In addition, their support of foreign aid seemed to be least influenced by considerations of U.S. foreign policy goals, and most by vague feelings of sympathy for the underprivileged of other countries.

Farmers also were somewhat uninformed on certain points, but all the farm sample requested summary reports. Professional people, while failing to identify MSP as foreign aid seemed well informed and interested. Students' responses were quite similar to those of people in the professions. White-collar employees showed the highest percentage score on identifying the purpose of MSP—and scored rather highly on recognizing the identity of MSP and foreign aid. Business people had the highest percentage opposed to foreign aid and the highest believing that nothing along the line of foreign aid was necessary at all. Housewives were 100 percent in favor of aid, and scored highest overall both in ranking aid more important than defense and in ranking it equally important as defense.

Data at this time appear to be too incomplete for any conclusions to be definitely drawn in explanation of the results of this survey. Several questions can be raised at

this time however, as subjects for further study. First among these is that of refusals (people who preferred not to be interviewed at all). Fully 60 percent of all women declined, as did 9 percent of all men. The researcher's tentative conclusion, based upon the comments of those who refused, would be that women feared showing their lack of information more than did men. Another reason, apparent to some degree in both groups (at least from the appearance of some refusal answers), would be a general aversion to politics. Sample: "No * * * My business * * * well, I run a store so I can't meddle in politics at all."

Another question concerns the reason for women's extreme favoritism toward the foreign aid program. A third relates to the surprising correlation between the answers of the two diverse groups, labor and business, which ranked first and second in opposition to foreign aid, as well as in having heard of no benefits coming to the United States from foreign aid, and in the belief that nothing of the nature of foreign aid was at all necessary. It is this researcher's suspicion, thus far unproven, that this correlation is traceable to the preoccupation of both groups (labor and business) with daily affairs relative to wage earning, concentrating the attention upon local economics, and not upon broader national issues. This might, indeed, explain the relatively better

informed position of students, and of professionals. It leaves unanswered the problem of the position of the farmers, housewives, and white-collar employees, however.

From the above it should be obvious that the problem of what shapes public attitudes is an extremely complex one. This report has not attempted to provide any lasting solution to that problem, but merely to present the attitudes as they are toward a particular governmental policy and to indicate opportunities for further research toward explaining the situation.

One final comment relative to the formation of public attitudes might, however, be in order. The researcher spent some time reviewing recent newspapers circulated in the area, and in speaking with newspaper editors. Only in two editorials (in the Kansas City Star) did he find mention of the mutual security program under its official title—and in both instances the editorial's caption included the words "foreign aid." This is doubtless one factor leading to the public misunderstanding of the relationship of the two programs, which are in fact one and the same.

This writer hopes that this report, including the tables immediately following, will be of use in the examination of the U.S. mutual security program by the Congress.

Respectfully submitted.

RAY L. NICHOLS.

Report on voters' attitudes toward the mutual security program, July 1959

[Percentages of the total number interviewed and in each division]

	(1) What is your position on the foreign aid program of the U.S. Government?			(3) What do you understand as the intent of the mutual security program of the U.S. Government?			(4) Do you believe the mutual security program and foreign aid are the same?			(7) Have you heard of any benefits or good that the United States has received from the foreign aid program?			(12) Do you believe the average person understands the foreign aid program and its intent?		
	For	Against	?	Right	Wrong	?	Yes	No	?	Yes	No	?	Yes	No	?
Labor	87.0	13.0	-----	4.2	43.5	52.3	39.2	30.4	30.4	39.2	60.8	-----	84.8	15.2	-----
Farm	90.0	10.0	-----	-----	40.0	60.0	-----	60.0	40.0	40.5	59.5	-----	90.0	10.0	-----
Professional	92.8	7.2	-----	4.8	71.2	24.0	12.0	73.6	14.4	71.2	24.0	4.8	7.2	83.2	9.6

Inside the Policy Racket: How the Mobs Moved In

EXTENSION OF REMARKS

OF

HON. ADAM C. POWELL

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Monday, March 7, 1960

Mr. POWELL. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following article:

INSIDE THE POLICY RACKET: HOW THE MOBS MOVED IN

(By Ted Poston (with Alfred Hendricks, Irving Lieberman, and Richard Montague))

One inevitable result of the operation of the pad—the multimillion-dollar police protection set-up in the numbers game—has been to give major control of the policy racket to the underworld here.

Call them what you like—the east Harlem mob—the syndicate, the Mafia—the Post's investigation of policy showed that these are the people who now control what once was a comparatively harmless, penny-ante lottery and is now a major racket.

Today, for the first time in the 150 years that it has existed here in one form or another, the numbers game is now a means as well as an end.

The end is obvious—the once fabulous profits reaped by numbers bankers from suckers who take a 1,000 to 1 chance on picking a number in the hope of getting a 600 to 1 payoff if they're lucky enough to win.

The profits are still there but the rigidly organized graft of dishonest vice squad policemen has made a heavy dent in the take enjoyed by the policy banks.

The means became equally obvious when Post reporters began a 2-month investigation of the numbers game here in the wake of Representative ADAM CLAYTON POWELL's charges that Negro numbers bankers were being forced out of the game by the police so that whites—mainly Italians—could take over.

For the numbers industry—with its thousands of collectors, hundreds of controllers and other thousands of full and part-time employees—provides an already established apparatus for other uses by unscrupulous racket bosses.

Here is what the Brooklyn grand jury reported last year after its investigation of gambling and police corruption:

"If you scratch the professional operator of gambling ventures you will find the narcotics peddler, the loan shark, the dice game operator, the murderer.

"Brooklyn has been the scene of a number of unsolved gangland homicides over the past few years. Almost every one of those killings is involved with gambling ventures in one form or another.

"In one case where seven leading narcotics dealers were convicted in Kings County last year, six were actively engaged in gambling activities, including bookmaking and policy, which they used as the source of funds for their deadly trade in narcotics."

A veteran numbers banker who insisted on using an obviously fictitious name told the Post a story which vividly illustrated the grand jury's findings.

"It happened around Christmas a year or so ago," this man said "I was paid up on the pad (the list of police-protected policy spots) and would've been in good shape if all the cops on the pad, past and present, hadn't doubled back for a 'Christmas taste.' I had to shell out.

"And then, just before New Year's, I get hit heavy by some of my biggest players. I was out about \$18,000 and I just couldn't

raise that kind of money. Then the bagman for one of the special squads set up a meet for me with the East Harlem boys. He said they'd let me have the money until I got back on my feet.

"But when we finally had our meet, I found they wanted something in return. They said that if I would use my setup to handle about \$18,000 worth of hoes (heroin) that I wouldn't even have to pay any interest on the \$18,000 they were lending me.

"Well, I wasn't going to get mixed up in that kind of rap this late in life. So I just walked out. They didn't like it a bit, and the bagman told me later I was a fool. Of course, they took over my bank anyhow—and they've still got it."

Unfortunately, other bankers, pressed to the wall by limited capital and mounting vice squad graft demands, evidently have taken the other road. During its investigation, the Post found strong indications that at least one major "independent" bank in Manhattan is closely allied with the narcotics trade, as is another in Brooklyn and at least two in the Bronx.

The connection is becoming increasingly evident as narcotic agents more frequently find themselves tracking down dope-peddling suspects only to find them also employed in numbers operations.

The syndicate, or Mafia, has long been active in the numbers game on the waterfront, but policy then was only an adjunct to such other activities as loan sharking and other waterfront rackets.

It was not until 1949 or so that the late Albert Anastasia, chief assassin of Murder, Inc., decided to expand from the waterfront and take over the policy game in other profitable areas.

A KING LOSES HIS CROWN

First to feel the weight of the new decision was Louis Weber, Brooklyn's then admitted policy king and a pal of James Moran, Mayor O'Dwyer's right-hand man and a political power in his own right in Kings County.

One night in 1949, Weber received a visit in a South Brooklyn tavern from Anastasia and Frank (Frankie Shots) Abbatemarco, who had handled the policy operation for Anastasia's syndicate on the Brooklyn and Staten Island waterfronts.

The conversation was short and to the point. Weber was out; Frankie Shots was taking over.

Weber was a man of standing. He had a vice squad payroll nearing that of Harry Gross' still-to-be-exposed bookmaking empire. He had defied a long list of district attorneys (when defiance was necessary) and could depend on the immense political power of Moran in the O'Dwyer administration.

But Weber knew this was all to no avail when the syndicate decided to move in. So he gave up a lifelong policy empire in Brooklyn without an argument and fled to West Harlem to try to reestablish himself. He never attained his former eminence.

For the next decade Frankie Shots, a boastful, high-living thug, became Brooklyn's biggest policy operator, although the real power for the borough's operation was held by Carmine Lombardozi, a representative of the East Harlem mob which even then was consolidating its spreading policy power.

Lombardozi, soft spoken and unobtrusive, was only faintly known to the public until his participation in the 1957 underworld conclave at Apalachin put him on the front pages.

Brooklyn underworld sources said that Lombardozi was demoted after Apalachin, presumably for not being diligent in pushing the syndicate to take over all the major policy banks in Brooklyn, and Mike Miranda, still a major policy figure in Brooklyn, took over his behind-the-scenes role.

(Frankie Shots, loud-mouthed to the end, wasn't as lucky as Lombardozi. Suspected

of holding out on the syndicate, he was mowed down in Brooklyn by two gunmen on November 4, 1959, in the very same tavern where Louis Weber had been handed his walking papers.)

The syndicate's plan, duplicated in other boroughs, was quite simple. The major banks were swept up by the mob, with all direction coming from the East Harlem empire of Vito Genovese, Anthony (Fat Tony) Salerno, Trigger Mike Coppola, and Joseph (Joe Stretch) Stracci.

The remaining "independent" banks, run mainly by veteran Negro and Puerto Rican bankers, were to be supervised by the syndicate at a flat fee of 1 percent of the gross take.

Each "independent" bank had to permit a syndicate representative to check its "ribbon" (the daily adding-machine tabulation of the total play) so that the syndicate could be assured of its 1 percent "off the top."

At the same time, the mob undertook to put all policy spots and locations on "the pad"—the vice squad's list of police-protected places.

POLICY: THE MOBS MOVE IN

The conquest of Brooklyn by the syndicate was almost complete by early 1958 when District Attorney Edward Silver began a secret 2-month investigation which in April of that year led to the smashing of the \$5 million bank of Angel F. Calder, the city's largest Puerto Rican policy banker. The raid also revealed an open connection between Calder's bank and what Silver called the Manhattan Syndicate.

Working so quietly that even the clerical staff in his office didn't know when he planned to act, Silver assembled 82 detectives and picked plainclothesmen on April 1, 1958, and made a series of simultaneous mass raids which netted Calder and 67 of his associates, along with policy paraphernalia, the day's play, and several thousand dollars in cash.

The prize catch of the raid proved to be an obscure East Side mobster, Emmanuel (Nappy) Frazetta, 40, of 160 Mott Street. Frazetta was seized in the basement of a three-story brownstone at 693 Lafayette Street in Bedford-Stuyvesant, which Silver said was the temporary headquarters of Calder's main bank. The raiders found Frazetta holding the "ribbon" for the day's policy play and surmised that he was checking for the syndicate to guarantee its 1 percent take.

Frazetta would only admit that he was a messenger sent over from Manhattan to pick up something to turn over to somebody in a subway.

Urbano (Benny) DeMucci, 41, seized while checking the take there at a Calder annex, also was suspected to be a syndicate representative.

Calder himself, along with his son, Angelo, and his brother, Julio (One-Eyed Red) Calder, was charged with contriving a lottery—a felony—and released in \$25,000 bail each.

Forty-four other persons seized among the 68 with the Calderes were also booked and released in bail. Most of them went directly back into business.

On April 9, just 8 days after the big April Fool's Day raid, Silver's rackets bureau detectives struck again—in the absence of any action by the police who regularly covered the area.

The DA's men seized Otis Spain, Jr., of 110 Cambridge Place, and charged him with possession of 22 numbers slips containing 1,800 plays. One of the 45 booked in the big Brooklyn raid, Spain had been plying his trade industriously since his release on bail.

With Spain in custody, the rackets bureau detectives struck again that night at 924 Lafayette Street, just three blocks from the basement at 693 Lafayette where Calder's main bank had been smashed.

The raiders acted on information that 20 of Calder's controllers and runners were assembled there to set up a new operation, but apparently the policy boys had been tipped by their own sources, for the DA's squad found just 2 men there.

But the raid was not in vain. One of the two men turned out to be the aforementioned Angel Calder himself, a durable veteran of 22 years in the business and the other was Fitz Sealy, 70, another old-time policy operator.

The 45 men seized in the Calder ring are still awaiting trial after 2 years.

Silver and Assistant District Attorney Koota told the Post this week that the trial was being held up awaiting clarification of a 1957 U.S. Supreme Court decision which indicated that evidence obtained by wiretapping might not be admissible in local courts.

BUSINESS AS USUAL

One year after the raid, the State Court of Appeals upheld the use of wiretap evidence in State courts, but Koota pointed out that the Court of Appeals did not rule on the legality of wiretapping under section 605 of the Federal Communications Act, on which the Supreme Court based its ruling.

"We are still concerned," Koota said, "about the possibility of having a policeman admit to an act which the U.S. Supreme Court has held to be illegal. Such testimony by a policeman might expose him to possible indictment by a Federal Grand Jury."

Meanwhile, it can be assumed that the Calder bank is back in business as usual—probably trying to lay up a reserve for the day when the court showdown finally comes and Silver—as he expects—sends most of the 45 to jail.

But a Brooklyn Negro policy banker, whose operation was once closely associated with that of Calder, predicted that there wouldn't be much reserve left.

"The only boys who made anything out of the Calder business," he said, "are the vice squad boys on the pad. They were around the day after the first raid to say that everybody's payments had to go up because 'We're taking more chances now.' And I'll be damned if they didn't try to get a second hike just 8 days later when Calder was picked up again."

"So the old man will be lucky if he can keep his head above water until the trial comes up. I doubt if they'll leave him much more than that."

The Nature of Our Constitution

EXTENSION OF REMARKS OF

HON. J. ARTHUR YOUNGER

OF CALIFORNIA

IN THE HOUSE OF REPRESENTATIVES

Monday, March 7, 1960

Mr. YOUNGER. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following speech on our Constitution by Mrs. Merritt R. Hosmer, president of the California Federation of Republican Women, Northern Division:

THE NATURE OF OUR CONSTITUTION (By Lucille Hosmer)

"The highest glory of the American Revolution was this: That it connected with one indissoluble bond the principles of civil government with the principles of Christianity."

This quotation from John Quincy Adams is found in the preface to "The Pulpit of the American Revolution" by J. Wingate Thornton (1860).

In a later paragraph he says, "It is the duty of all Christian people to inform themselves what it is their religion teaches concerning that subjection which they owe to the higher power."

This our ancestors did most carefully. Their knowledge of the Scripture and their adherence to its teachings was reflected in our Declaration of Independence and our Constitution. Their understanding and comprehension of history and government far surpassed the knowledge that we have today on those same subjects.

In other words they were keenly aware of the various forces which had combined to result in the establishment of our Constitutional Republic here in America.

Three times in the history of mankind outstanding attempts have been made to establish the freedom of the individual:

First, in the days of Abraham when he recognized that there was only one God of all things and that man was free and self-controlling; and responsible for his own actions. His people prospered for a time under this concept; but once they permitted others to make their decisions for them and denied their rights of self-government and took subsidies from the Pharaohs for work that they did not do and once they refused to stand firm for their convictions as free men, they returned to serfdom and slavery.

Moses came, centuries later, and took them out of the bondage and slavery into which they had placed themselves. Most of them had forgotten what it meant to be free. They abused and heckled Moses continually. He endured it because he knew the truth about God and man. Finally, he gave them the Ten Commandments, hoping that it would serve as a moral code until such time as they became capable of understanding its deeper spiritual meaning.

It took many centuries of living with and under the Ten Commandments before mankind was ready for the advent of Jesus and His teachings of Christianity. Even then there was only a fragment of the people who understood His message.

Jesus never taught "mass salvation" nor "group salvation." His very explicit rule was "work out your own salvation" * * * as an individual. He did not feel that it was the job of the state or Caesar to do it for the individual. For 300 years after His coming there was great growth in the freedom of the individual and the recognition of his worth and dignity. Once again, however, men refused to accept their responsibilities as free individuals: they accepted patronage and protection from the pagan Emperor Constantine instead of relying on God. Through their refusal to stand firm for their Christian principles, they helped to plunge the world into an era known as the Dark Ages.

The only glimmer of light relative to the rights of man in the centuries that followed was in the year 1215 when the Magna Carta was wrung from King John and some of the rights were for the first time in history put into writing.

When the Republic of the United States was established and its Constitution adopted, some centuries later, the third outstanding attempt to establish the freedom of the individual was made.

Today and in the days ahead we face the menace of dictatorship as our forefathers faced and feared the menace of monarchies. We recognize that life has become more complex and involved but we also recognize that it is worth living so long as we preserve and protect our rights and freedoms as individuals. New dangers to liberty are appearing every day from many new avenues.

Our Constitution, in the days ahead as in the past, will be our bulwark of defense only if it is understood and adhered to. We then will find that it is indispensable to our rights and freedoms. It must be understood and appreciated and protected with increased energy and vigilance.

The very basis of our Constitution is our Ten Commandments and its fundamental structure is derived from Christian principles. It is readily apparent to those who have made a study of the historic origin of our Constitution that here in America, as nowhere else on earth, the higher law from our Divine Lawgiver has been written into our Constitution. Everywhere else in the world manmade law is accepted as supreme.

Our forefathers were disciples of John Locke, the 17th century philosopher, who first declared in his treatise on Civil Government (1714) that "no law could be held valid unless it was in harmony with the laws of nature or Divine Law." Locke was the authority to whom our leaders of the American Revolution looked for guidance. Nearly every writer of that period quoted his words and arguments. Many of the phrases in the Declaration of Independence may be found in Locke's Treatise.

In spite of the manner in which many modern writers have interpreted John Locke and his writings; Locke was a sincere and devout Christian. How else could he have written on the "Reasonableness of Christianity" or the "Epistles of St. Paul"? Locke's works were considered the "Political Bible" of the American Revolution and the Founding Fathers.

Divine Law or the Laws of God were, in the eyes of Locke and our Founding Fathers, the Ten Commandments and the teachings of the Master Christian. The Ten Commandments have always been considered the basis of all law in America.

The First Commandment, "Thou shalt have no other Gods before me", was clearly understood by Locke and his students to mean that no individual must allow the love of power, of money, of self, or ambition, to come between him and his recognition of the all-power of God. This love and loyalty and recognition of God's supreme power broke the fear of tyranny and oppression. It gave man his first inkling into his right of self-government 'under God.' They knew that the other nine Commandments were what the individual should not do in order to obey the First Commandment. They recognized that all law came from the Bible.

Jesus said that He had come "to fulfill the law." Christianity includes the Ten Commandments plus the grace and truth and compassion of the teachings of Christ. His command "Love thy neighbor as thyself" as well as the Beatitudes were all accepted by our Founding Fathers as the moral law upon which should be established our Constitutional Republic.

The First Commandment was accepted as the truth of the sanctity of the individual "under God"; and that no man or State had the right to enslave or rule him in any way which would force him to deny the supremacy of God. The very first article of the Bill of Rights of our Constitution says: "Congress shall make no law respecting the establishment of religion, or prohibiting the free exercise thereof." Because the Founding Fathers were Christians, they were determined that the power of government (the State or Caesar) should never be used to force the individual to "bow down" to any supreme State or power other than God. As Christians, these architects of our Constitution believed in the principle that every man shall be permitted to worship God in his own way, according to the dictates of his own conscience.

Many of the colonists had suffered cruel persecution at the hands of bigots because

of their religious beliefs. That had been the history of religion for hundreds of years. Our Founding Fathers wrote into our Constitution this provision so that all Americans, always, would have their freedom of worship. The command of Jesus "Render unto Caesar the things that are Caesar's and to God the things that are God's," is enforced by this article of the Bill of Rights. The government (Caesar) has no power to suppress, control, or to act upon religion in any way.

Chief Justice Joseph Story in his "Commentaries on the Constitution of the United States" (1833) stated:

"It was under a solemn consciousness of the dangers from ecclesiastical ambition, the bigotry of spiritual pride, and the intolerance of sects, thus exemplified in our domestic as well as in foreign annals, that it was deemed advisable to exclude from the National Government all powers to act upon the subject of religion and the 'things that are God's.'"

Jesus taught the principle that "Ye shall know the truth and the truth shall make you free." In order to be free in either this world or the next, the individual must know the truth. Unless we have access to the experiences of our forebears and knowledge which they accumulated and unless we can know and understand the results of those experiences, both past and present, we could not "know the truth." Denial of freedom of speech or freedom of the press, the denial of the right of every individual to be free to study and research where he will on any subject, prohibits the right of man to search for the knowledge which may lead him to truth. We appreciate the protection of this article more when we recognize that all attempts to crush Christianity or man's rights and freedoms as an individual have always depended upon the ability of government to suppress freedom of speech and freedom of the press.

When our Founding Fathers wrote this article into our Bill of Rights, to insure our religious liberty, they included in this same article the tenets of freedom of speech and freedom of the press. They knew that the freedom to communicate one's belief is as sacred as the freedom to have one's belief according to the dictates of one's own conscience. They are our inherent rights, or as our Declaration of Independence states: inalienable rights given to us by our Creator.

Justice Story, in discussing the first article of the Bill of Rights, quotes John Locke as saying "No man or society of men have any authority to impose their opinions or interpretation on any other, even the meanest of Christians: since in the matters of religion every man must know and believe and give an account for himself."

Justice Story continues: "The rights of conscience are, indeed, beyond the just reach of human power. They are given by God and cannot be encroached upon by human authority."

"No person shall be deprived of life, liberty, or property without due process of law; nor shall private property be taken for public use without just compensation." (Art. V, Bill of Rights.) This "due process of law" clause in our Constitution is considered one of its most vital clauses.

Chief Justice Story said "It is founded on natural equity and is laid down by jurists as a principle of universal law."

This article is in keeping with the commandments, "Thou shalt not kill" and "Thou shalt not steal."

Obviously, our Founding Fathers felt that murder and theft were still wrong, even if committed by government. This clause was written to protect the rights of the minorities and individuals against the power of the majority as well as against the public officials who went beyond their lawful authority in the name of government. In providing that no man shall be unjustly de-

prived of life, liberty, or property, our Constitution recognized that there is a higher law than that which may be set up from time to time by human lawmakers. Even under the guise of the general welfare, Congress may not confiscate wealth for the purpose of redistributing it. That would be taking property without "due process of law" and that is in violation of the divine law, "Thou shalt not steal." In many cases, tried under this clause, the Supreme Court has upheld the divine command, given to Moses, that not only must the law be righteous, but that no "unrighteousness in judgment" must be done under the law. (Lev. 19:15.) They recognized that the law must be administered equally by public authority to all.

The command, "Thou shalt not steal" applies to everyone, in every class, under every condition. It does not say, "Thou shalt not steal, except to promote the general welfare or keep the peace"; or "Thou shalt not steal, except to take money from a rich man and give it to someone who is poorer." Nothing can be found, either in the commandment or the Constitution which provides a way by which robbery or stealing can be legalized.

Man cannot be deprived of life "without due process of law," "Thou shalt not kill."

Our Constitution stipulates that Congress, itself, cannot declare an exception; cannot make life cheap in the name of an emergency; cannot authorize the taking of life arbitrarily.

However, life can be taken from us by depriving us of liberty. Jefferson said "The God that gave us life gave us liberty at the same time." When we are deprived of our rights and freedoms as individuals, the right to choose when and where and how we work, the right to direct our own affairs and make our own decisions, and handle our own money; our life activity is lessened and we are being limited in our right to material, mental, and spiritual advancement which are our inherent rights.

James Wilson, one of the signers of the Declaration of Independence and a student of John Locke, was the foremost lawyer at the Constitutional Convention. He said in one of his speeches, "The laws of God and so-called natural law are to be regarded as true law and all temporal legislation is considered to be binding only so far as it is the expression of this law."

For the first time in history a nation, our Republic, was established which considered all human laws null and void which transgressed the divine law. Europe was shocked. To them manmade law and the divine right of kings was supreme. To our newly developed sense of government, no legislature had the power to pass any laws which were not in harmony with the divine law.

Our Constitution laid down the fundamental and immutable laws for our Government and provided that if any act of Government shall violate these fundamental laws of justice, it shall be set aside.

The principle that any and all laws which deny or destroy our "inalienable rights" given us by God are null and void is exclusively Christian. It is, also, exclusively American. It is an application of the Christian principle that man should not "render unto Caesar" the things "that are God's." This principle was their reason for providing for a government of "limited powers." Caesar (government) must have no supremacy over the souls of men.

James Otis, another founder of our constitutional Republic, believed that "thus far and no farther" could manmade law go. He, too, was a follower of John Locke. The Founding Fathers intended that our Constitution should control or limit government. They believe that it should be kept within its legitimate area to secure or protect the rights and the freedoms of the individual.

George Mason, another of our great revolutionary statesmen echoed the teachings of

John Locke when he said that "both people and judges were, in conscience bound to disobey all enactments which contradict the laws of nature and the laws of God." Continuing with Locke's thesis, Mason said "The laws of nature are the laws of God, whose authority can be superseded by no power on earth. A legislature must not obstruct our obedience to Him from whose punishment they cannot protect us."

Even before communism and socialism and their totalitarian forms of government, European nations were ruled by the pagan philosophy that there is no higher moral law than the state. Today, we are told that there is no higher moral law than the whim or will of the majority. This is a denial of the Christian principle that all lawmakers must follow the pattern of the divine law or else their law is null and void.

The Constitution of the United States embodies and expresses the eternal moral principles which require obedience from all individual citizens and lawmakers alike.

Justice Davis of the U.S. Supreme Court (1862-1877) once said "The Constitution is a statement of eternal moral principles as changeless as their Author." In one sense our Revolution and the writing of our Constitution was an effort to prove the right of the authority of the divine law over all man-made law.

The authors of our Constitution believed that neither men nor government (Caesar) had the right to take away from man what God had given him—his inalienable rights. Justice McReynolds of the U.S. Supreme Court (1914-1941) once said that the guarantee of liberty embraced the right of the individual to "engage in any of the common occupations of life, to acquire useful knowledge, to marry, to establish a home, to bring up children, to worship God according to the dictates of his own conscience and generally to enjoy those privileges recognized as essential to the orderly pursuit of happiness by freemen."

James Otis said that "Liberty is the gift of God and cannot be annihilated."

John Adams said that "Liberty is a moral right derived from the great Legislator of the universe. Liberty, as the gift of God is for all men, at all times, under all circumstances." One of the main purposes of our Constitution was to secure its blessings to every American and his posterity.

Christ taught that the Ten Commandments are a statement of moral law as eternal as His Father who gave them. He did not believe that more complex and complicated ways of living would require the revision of the Ten Commandments or the principles which he taught.

The architects of our Constitution believed that the moral laws laid down in the Bible and taught by Jesus were fixed and eternal.

Their purpose was to incorporate those principles in our Constitution so that its spirit would be forever in keeping with the "Spirit of the Lord", where, they knew, "is liberty". The underlying moral principles which sustain our Constitution and maintain our liberty and freedom as individuals is under constant attack today.

The belief that the government or the majority can deny divine law or the moral code of the Ten Commandments is assailing us on all sides. We are being told that moral truth does not apply to this age and that the teachings of the Christ, which are endorsed and upheld by our Constitution, are outmoded and old fashioned.

The pseudointellectuals tell us that what is right in one age is wrong in the next. They tell us that all morals are manmade and as men change their morals must change with them. In other words, the morals demanded by the Ten Commandments and the rules of conduct given to us by Jesus were all right for our fathers but we have outgrown them.

These same pseudointellectuals will tell us that our Constitution deserves no respect or obedience and that it must be made to conform to the new concept of government, where man becomes a dependent on the state, loses his rights and freedoms as an individual, and man-made law is once more supreme.

The present attack upon our Constitution is the outcome of the effort of many pseudointellectuals started decades ago to destroy faith and confidence in the Bible, the Ten Commandments, and the teachings of Jesus. The founders of our constitutional Republic believed that in those sources they had found the absolute and eternal moral principles upon which all good government is based.

Our Constitution recognized the truths stated in the Declaration of Independence that "all men are created equal" and that all men are "endowed by their Creator with certain inalienable rights," including "life, liberty and the pursuit of happiness." Jesus taught that the will of His Father in Heaven was a higher law than any man made law or even that of a majority.

In either case, if it was not in harmony with the Ten Commandments or the moral principles which He taught, the law of man must be set aside. Our Constitution upholds this teaching that the individual has "inalienable rights" and it denies the present day philosophy that right or wrong the majority has a "right" to do anything it wants to do.

The laws of most governments are man-made and they recognize no law higher than that which they make themselves. They believe only in force, that might makes right whether that force is embodied as a dictator, a legislative body or a mob (majority rule).

Jedidiah Morse, in 1824 wrote "The Annals of the American Revolution or a Record of the Causes and Events Which Produced and Terminated in the Establishment and Independence of the American Republic." In his chapter on the "View of the Principles of the Constitution and Government of the United States," he asks "what is government?"

He answers: "It is power or force applied to a certain object; and the administration of government is the exercise of this power. This power is of different kinds and exists in different forms or modifications; but in all cases it must be essentially of one or two kinds, either moral or physical; and hence governments are most properly and naturally divided into two classes, those in which power is essentially physical and those in which it is essentially moral; the latter is a government of reason in which the just powers of the government are derived from the consent of the governed and are exercised in conformity to their will, constitutionally expressed."

"The definition of free government is that it is the substitution of moral for physical force." This frame of government, in modern language is called a constitution—it constitutes the supreme authority—and is above the reach of the ordinary legislature and as much binding thereon as upon individuals. This may truly be said to be the authority of law in contradistinction to that of man.

He continues "The world owes a debt of gratitude to the American Republic for the establishment of this system." Our constitutional Republic was established on this different, this revolutionary principle. This principle of moral force crystallized in the Declaration of Independence and formalized and endorsed in our Constitution. Our Founding Fathers believed that by incorporating into the Constitution these principles that "all law must be in harmony with

the divine law to be valid" and that the law-maker as well as the individual citizen must be subject to the law—these standards would incur the rights and freedoms of the individual for all times.

Unless we accept our responsibility to develop and encourage and cultivate a deeper understanding and appreciation of the true nature of our Constitution, we face the danger of destroying the very fortress that protects our rights and freedoms. Our Constitution, by its very nature places these rights and freedoms beyond the reach of either the will of the majority or government. Its basis is the fundamental principle of moral law which reflects the divine law.

Let us go forward into the new decade with the inspiring words from the Battle Hymn of the Republic ringing in our ears:

"He has sounded forth the trumpet that shall never call retreat:
He is sifting out the souls of men before His judgment seat
Be swift my soul to answer Him. Be jubilant my feet
Our God is marching on."

Nobody Pays Taxes but the People

EXTENSION OF REMARKS

OF

HON. JOHN DOWDY

OF TEXAS

IN THE HOUSE OF REPRESENTATIVES

Monday, March 7, 1960

Mr. DOWDY. Mr. Speaker, ABC Commentator Paul Harvey made a most enlightening statement in a radio broadcast which I request be incorporated in the RECORD as a part of my remarks. His subject concerns, and should be of interest to, every person—even those who think they do not pay taxes. It should certainly interest every Member of Congress who has any sense of fiscal responsibility. Mr. Harvey will open their eyes. Direct taxes are oppressively high; but when compared to hidden taxes, direct taxes are the lesser evil.

When I was elected to Congress, I promised the people of my district that I would vote on each issue as would be best for our district, State, and Nation. I promised that my vote would not be controlled by party "bosses," nor by any other vested interest. I promised that I would not compromise principle for either party or politics.

I represent the people, and have kept myself independent of entanglements so there could be conflict of interest. As a result, I am criticized for not blindly following the dictates of the radical northern branch of the Democratic Party. I am a lifelong member of the Democratic Party; I will not betray the trust of my people by following the demands of the radical wing of our great party. The radical "bosses" are wrong. I will not follow anybody who is wrong. The people of the district I represent still subscribe to true Democratic principles, and so long as I am here, I will live up to those principles. They know I will not let them down.

The radicals criticize me for voting contrary to dictation when I oppose the foreign aid program. I oppose it not only because the money could be put to better use in our own country, but because it costs each family in our districts a minimum of \$200 per year in hidden taxes, as disclosed by Mr. Harvey in easily understood language. The radicals support it because it provides patronage jobs for them to fill. Another item I opposed was the appropriation to pay for the President's sending the troops to Little Rock. The radicals supported it because they thought it meant votes for them. There are numerous examples of these giant spending programs and proposals, but you know them as well as I do. For each billion dollars that is spent, each small family has to dig up an additional \$25 for hidden taxes, in addition to direct taxes. For larger families, the cost is more. To truly represent my people, I must oppose the northern radicals, and say "No" to those who demand that I submit to their dictation.

History discloses that when any nation taxes its people more than 25 percent of their income, that nation is eating its seed corn and is headed for ruin. We have already reached nearly 35 percent. When somebody complains that I have opposed the radicals—when somebody attacks me because I have tried to cut out useless and unnecessary spending—when somebody proposes a new spending program, just remember that if more money is spent, it will be your money—you will have to pay more taxes.

At this point, I ask to include Mr. Harvey's statement. Here is Paul Harvey, radio commentator, newspaperman, farmer, and author, who reveals that nobody pays taxes but the people, because all taxes are added to the price of the things that are sold:

WHO'S DOUBLING THE PRICE YOU PAY FOR YOUR DAILY BREAD? PAUL HARVEY NAMES THE CULPRIT IN "ONLY PEOPLE PAY TAXES"

Americans, 2 weeks ago, I, Paul Harvey, started out chasing a sneak thief and I ended up with the detection of public enemy No. 1. I have been 2 weeks on the trail.

I am very tired. But the job is done. No conviction yet. But I can name him now. And he is yours to prosecute as you see fit. Before I tell you his name. * * *

Here's what happened. Two weeks ago I got a letter from a farmer on the subject of the last election.

But he included this question, "Who is the middle man who is getting rich off the farmer?"

He said he sells a bushel of wheat for \$1.73.

By the time that bushel of wheat is made into 66 loaves of bread it costs housewives \$15.84. Whoa, there.

"Who's getting rich on me?" the farmer wanted to know.

Well, I've heard that question repeated so often that I had stopped listening to it.

But suddenly I decided the one way to silence that noisome question—nobody had tried—and that was to answer it.

Well, with my limited staff we started playing detective.

For the wheat in a loaf of bread the farmer gets 2½ cents.

But you pay 24 cents.

So you are both being robbed by somebody. Who?

I figured I'd backtrack on the culprit. So I went to the grocery store. "How much do you take out, Mr. Grocer, when you sell a loaf of bread?" I said. "There's more than 20 cents missing that somebody's getting. Is it you?"

Well the grocer showed me that his markup is confined by competition to only 3 cents.

In view of his salaries, overhead, that markup seemed fair enough, especially when he explained that he has to pay more than half of it back in corporate income taxes not covered in the sales tax.

And also he contributes to the social security and unemployment taxes of his employees.

He pays an electric bill every month plus a tax on it. And his delivery truck was taxed when he bought it and the gasoline it uses and the license plates it wears are all taxed.

So all this overhead, not to mention his own income taxes, made 3 cents seem a fair enough profit for the grocer to make on that loaf of bread.

Anyway, he was not the robber I was looking for.

I went to the wholesaler and rode on one of the trucks that delivers the bread.

Maybe this driver was the boy who's been picking the farmer's pocket.

After all, the teamsters union, you know.

But I divided the number of loaves of bread the man delivers by his wages per week and his take is less than one-twentieth of 1 cent a loaf. So he's doing all right. But he's not stealing anything.

There's too much spread between the price and the cost of a loaf of bread. The guy I was looking for doesn't have just a finger in the kitty.

He's in there with both fists.

I kept looking.

There were two tedious days of sleuthing for this sneak thief before I backtracked on that loaf of bread as far as the flour mill. But I made sure that I didn't miss any possible middlemen in the bakery or in the railroad that hauled the flour, or anywhere.

And not one was getting away with anything. I mean the profit slice which each took for his services was an infinitesimal fraction of one-tenth of 1 penny per loaf. Not even measurable.

Then I got a tip. Check the sugar source. If nobody in the wheat-flour ingredient was robbing us—maybe the sugar people. I backtracked to a New Orleans refiner and it was another deadend. The price you pay for the sugar and the salt and the yeast and the milk solids and the shortening in the loaf of bread—all put together—come to less than one-fourth of 1 cent per loaf.

So...

And here is where I stubbed my toe. By the time I added everybody's profit for handling the materials and the finished product plus the cost of the ingredients—I figured it all up—and it came to 12 cents for a loaf of bread. You should be paying 12 cents for a loaf of bread.

But I can't get my grocer to sell me a loaf for less than 24 cents.

Who's doubling the price of my loaf of bread?

Who's getting away with that other 12 cents?

I had figured every handler's wage down to the most minute fraction. My figures could not be wrong.

But a loaf of bread added up to 12 cents and it's still selling for 24 cents. I was getting as angry as the farmer who'd written me that letter. It's frustrating to have your wife go to the grocery store and—somewhere in there—get robbed by a ghost.

Well I went back to the farmer. I decided to start all over again, but working forward from the farmer. The research

went faster this time because I knew the direction.

And this time I caught him. Red handed. The guy who's picked your pocket every time you buy a loaf of bread. And he's been dealing himself in when you buy milk, too. There are 206 separate transactions involved in getting a quart of milk from the pasture to your doorstep. And sure enough, I found the same guy doubling the price. The syndicate he operates is so smooth and so subtle that it's little wonder he's escaped the rap for this before.

But I'm going to name him tonight. Because he's gradually aiming to double the price of your loaf of bread again.

And again.

While the farmer fusses and fumes and shadowboxes with imaginary villains, the real one has been in hiding.

I took that farmer's bushel of wheat to market. The farmer got \$1.73 for it. Two and one-half cents per loaf of bread.

But when flour mill added its fraction for milling—wait a minute—the flour to make one loaf of bread has suddenly doubled. It comes out of the mill costing 5 cents. Not 2½. Still the mill is getting only a minute fraction of a penny for itself.

But the mill is required to pay. Now the trail gets warm.

The mill has to add on seven Federal taxes and eight separate State taxes.

The railroad which hauls the finished flour—now the trail gets hot—keeps only a tiny fraction of a penny for its services—but it adds on 2 pennies to pay five Federal taxes, plus State taxes in every State through which the shipment passed.

In this case there were three.

Jumping Jehoshaphat.

I thought taxes just soaked the rich.

This is soaking anybody who buys a loaf of bread.

And when I backtracked on those other ingredients, I found the sugar refiner paid eight Federal taxes and six Louisiana State taxes. The railroad that hauled the sugar paid taxes. The warehouse where the salt was stored in Chicago paid taxes. The shortening manufacturer and the yeast factory and the producer of the milk solids.

Each was keeping for himself such a minute profit that the total cost of the ingredients had added only 2 pennies. But the taxes had pyramided to more than twice that.

I am an amateur detective. But I did the best I could. And when I finally retracted the loaf of bread back to the grocer's shelf I understood why that price tag is more than 10 times what the wheat farmer gets.

Because here are 151 separate taxes on that loaf of bread.

You and I have been complaining, however feebly, about the whack the income tax takes out of our weekly paycheck. While we were watching our wallet pocket the hidden tax has been emptying our coin purse. And again and again and again. After all, we've consoled ourselves, the tax man gets only 20 percent of my income. It's worth that to live in America.

But that's a lie and a delusion. The tax man has been picking your pocket for 12 cents every time you buy one loaf of bread. But with such clever slight of hand—by such an involved and complicated multiplicity of hidden taxes—that his hand was quicker than our eye.

You think you pay a hundred dollars tax when you buy a new \$2,000 car. Listen: There have been \$288 in hidden taxes collected on that car before it ever leaves the factory.

And then there are all the taxes the dealer pays, taxes on income, property, taxes when you transfer the title, when you pay the State tax. So when you pay \$2,000 for a car—more than one-fourth of that price is just taxes.

You've been figuring the corporation tax would cost only the big corporations. But look what happened. They added it to the price of the car.

We pay it.

The grocer, the trucker, the baker, the miller, they don't pay their taxes. We do.

When we buy that loaf of bread.

Railroads don't pay taxes. Corporations don't pay taxes.

Just people pay taxes.

All the rest of those fellows add their taxes onto the stuff they sell us.

Only people pay taxes.

We can hear that our Federal Government is sending a billion dollars to Tito. * * *

And we figure "so what * * *."

But every time our Government spends a billion it taxes the average American family another \$25.

Only people pay. How much different it might have been if our Government had said it that other way. That "every American family is asked to chip in \$25 this year for Tito." Wow.

Conversely, every billion dollars which our Government saves—every billion dollars less that it spends—decreases the tax load for the American family of four by \$25. Wow.

I'm going to remember that. Every time the Washington or the State spenders speak of spending another billion for something or other, I'm going to remember it's 25 of my dollars they're spending. It'll make a difference.

There you have it. That is what takes your money—the reason for the high cost of living. The hidden tax is far more costly to the wage earner than is the income tax—and every new giveaway spending program makes it worse. You never hear one of the free spenders offer any idea about where the money is coming from—but you and I know we have to pay it—and the old folks on small pensions and others with small income are the hardest hit of all through the increasing hidden taxes.

A great majority of the people of my district would vote just as I do, in opposing the radical northern usurpers. How do you vote?

Kiwanis Clubs Are Spearheading Challenging New Individual Citizenship Program Called the C Q Program

EXTENSION OF REMARKS

OF

HON. FRANK W. BOYKIN

OF ALABAMA

IN THE HOUSE OF REPRESENTATIVES

Monday, March 7, 1960

Mr. BOYKIN. Mr. Speaker, under leave to extend my remarks in the RECORD, I include a release of the public relations department of Kiwanis International. My good friend and constituent, Hon. Albert J. Tully of Mobile, Ala., is now president of this great organization, and I had the pleasure of introducing Albert at a luncheon at the Mayflower Hotel in Washington, honoring him, on February 23. We are proud of Albert Tully in Alabama; he is one of our outstanding citizens and is performing a fine job as president of Kiwanis International. Kiwanis is to be com-

mended on their new "C Q program." As President Tully states:

During the past few years it has become more and more evident to more people that the assumption of individual responsibility and concern for good government, strengthened moral fiber, and even North American freedom itself, has become a must if we are to continue as strong, healthy, free nations.

KIWANIS CLUBS ARE SPEARHEADING CHALLENGING NEW INDIVIDUAL CITIZENSHIP PROGRAM CALLED THE C Q PROGRAM

CHICAGO, ILL.—Kiwaniis Clubs on both sides of the United States-Canadian border are currently spearheading a dramatic new good-citizenship program for the individual called the C Q program. The name inspired by the international code signal identify yourself means, literally "Citizenship Quotient." The aim of the program is to challenge each individual of each community to appraise his personal C Q, and to determine through that appraisal his own acceptance of citizenship responsibilities. "It is hoped that, if he finds himself deficient, he will set about improving his C Q, and thus his community and his Nation," said Albert J. Tully, Mobile, Ala., attorney, and president of Kiwanis International.

Mr. Tully added that "the program is in no way an effort by Kiwanis, itself to rate either its members or its fellow citizens. Instead, it seeks to encourage them to rate themselves in keeping with the true concept of individual responsibility."

The C Q program is especially appropriate now because of the year—in the United States—devoted to selecting and electing new governmental leaders.

Kiwanis clubs in many communities have already established local C Q committees which are bringing the "C Q story" to their fellow citizens through publicity, and through gatherings of various types.

"The idea for the C Q program has been long in the making," said Tully. "During the past few years it has become more and more evident to more people that the assumption of individual responsibility and concern for good government, strengthened moral fiber, and even North American freedom, itself, has become a 'must' if we are to continue as strong, healthy free nations." President Eisenhower, himself, pinpointed the need for this assumption of responsibility when he said at a recent press conference in Washington, "I just want to say this—the Americans, the American's rights and privileges are going to be maintained only if he exhibits a commensurate responsibility of his own."

"For the past 2 years, Kiwanis' annual theme has pledged Kiwanians to assume greater personal responsibility in community affairs of every kind, so the C Q program was a 'natural,'" Tully continued.

That the program has wide appeal, and is badly needed is attested to by such comments as those of Senator KARL MUNDT of South Dakota, Mr. Charles Dudley, Atlanta attorney and former executive secretary of the Associated Industries of Georgia, and Mr. John A. Labree, Pacific district manager, Extension Division, the Du Pont Co.

Senator MUNDT said "Increasingly, Kiwanis International is impressing upon the Members of Congress through such programs as CQ that it is an action organization, vigorously interested in the preservation of our American freedoms and determined to do its part to preserve those basic American institutions which have made us great and keep us strong."

Mr. Dudley said, "I appraise the CQ program as one of the most comprehensive and challenging programs ever presented by Kiwanis. It loads the 'action gun.' If put into action by Kiwanis Clubs and the communities in which they serve, this recognition of citizenship responsibility and the

individual discharge thereof would, indeed, bring us to a new day in America, and put an end to the alarming drift toward Statism."

Mr. Labree said "Your aim to develop the individual and his citizenship quotient is sound, dynamic and workable. May your efforts be rewarded with 100 percent success."

Perhaps the most powerful statement of the need for the assumption of individual responsibility comes in the words of Mr. Walter Wiesman, a former sergeant in the German Air Force (World War II) now a newly naturalized American citizen. Mr. Wiesman said:

"The newcomer realizes that as an individual he becomes part of the Government—a sensation never before experienced—the feeling that he can do his part to determine what should be done for the welfare of community, State, and Nation not just by enjoying the privilege to vote but by expressing his views in the proper form to the proper people. This is something millions in this world are dreaming about and hoping for. And we have it right here."

"But the newcomer also sees alarming signs which he just cannot understand. He finds that a great number of citizens in this country enjoy all the privileges without realizing the duties of a citizen in a democracy such as ours. He finds a complete apathy toward the affairs of our Government—a complacency which spells death to any free and self-governing system. He detects that many people do not appreciate the advantages offered to any member of this great family called the United States."

"It is precisely this trend, plus what is called 'the weakening of our moral fibre' that the CQ program is aimed at helping to stem, and to reverse," said President Tully.

Politics and the People

EXTENSION OF REMARKS

OF

HON. DANTE B. FASCELL

OF FLORIDA

IN THE HOUSE OF REPRESENTATIVES

Monday, March 7, 1960

Mr. FASCELL. Mr. Speaker, at one time or another, many of us have given serious thought to ways in which the base of participation in our two party system might be broadened—ways in which more of our people could be motivated to take an active interest in politics, which is the science of governmental operation.

We also have given serious thought to the consequences of having either one or both of our major political parties derive principle financial support from a small group, or groups, of contributors.

We have seen nonpartisan, civic organizations, such as the American Heritage Foundation, launch programs designed to stimulate general participation in and financial contribution to political parties.

With these facts in mind, I submit an editorial from the St. Petersburg (Fla.) Times commenting on a proposal of ESTES KEFAUVER, the distinguished Senator from Tennessee, on this subject.

The editorial speaks for itself and I commend it to all my colleagues:

A DIFFERENCE IN POINT OF VIEW

When the clean elections bill, which so closely resembles Florida's who-gave-it-who-

got-it? law was being debated in the U.S. Senate, one important and little noticed amendment got sidetracked—only temporarily, we hope.

This was a proposal sponsored by Senator ESTES KEFAUVER, with strong support from such others as Senators NEUBERGER, HENNING, CLARK, and JAVITS, to permit an income tax credit, or alternatively a deduction, for small campaign contributions.

Specifically, the Kefauver formula would have permitted a 50 percent tax credit on contributions up to \$20, or, if the taxpayer preferred, he could take a deduction up to \$100, just as he does on gifts to charity.

It is important to understand the distinction in these alternatives. The first—the 50 percent credit—would apply to every taxpayer, whatever his income. Thus it would encourage a great many small campaign contributions.

But in order for the taxpayer to get as good a break on the alternative of a deduction, he would have to be in the 50 percent tax bracket—which is to say, with a net taxable income about \$15,000.

From that level on up, the deduction would be preferable. The taxpayer with an income of \$50,000, for example, would save \$75 of his \$100 deduction. Anyone with \$200,000 or more would save \$91 of the \$100.

And here there was revealed a rather significant party difference. The opinions of the two national chairmen—Paul Butler for the Democrats and Sen. THURSTON MORTON for the Republicans—was solicited.

Both chairmen liked the idea of a tax incentive to encourage more campaign contributions. However, while Democratic Chairman Butler endorsed the Kefauver plan of either a credit or a deduction, so as to give an even shake to everyone, whatever his income, not so Republican Chairman MORTON.

The GOP chieftain was all in favor of the tax deduction, which means the bigger the income the bigger the break for the contributor. But he expressed powerful opposition to the tax credit for the small giver.

Our readers can draw their own moral from these two viewpoints.

As to the whole idea, the Senators dropped it because they feared the House would consider its constitutional rights of originating tax measures were being invaded.

If the House ever gets around to the Senate bill, we hope the tax incentive plan will be added there—and that it will include both the credit and the deduction.

Cardinal Cushing Airs Views on Christian and Community

EXTENSION OF REMARKS

OF

HON. THOMAS J. LANE

OF MASSACHUSETTS

IN THE HOUSE OF REPRESENTATIVES

Tuesday, February 9, 1960

Mr. LANE. Mr. Speaker, under leave to extend my remarks in the RECORD, I wish to include the Cardinal's first pastoral letter which reveals his views on a variety of topics:

[From the Boston Herald, Mar. 6, 1960]
CARDINAL AIRS VIEWS ON CHRISTIAN AND COMMUNITY

Richard Cardinal Cushing has issued his first pastoral letter which will be announced to Catholics throughout the archdiocese today at all masses.

The pastoral letter, titled "The Christian and the Community," reveals the views of His Eminence on a variety of social topics,

including the family, marriage, children, public and parochial education, men in elective offices, labor and management, the use of leisure and interreligious cooperation.

While the pastoral letter is the first since Cardinal Cushing took over as shepherd of the archdiocese in 1944, such letters are common in other dioceses. They are considered the official views of the head of an archdiocese under his teaching authority as a bishop.

AMONG HIGHLIGHTS OF PASTORAL

Among the highlights of the pastoral are the following:

Referring to the "sad image of public morality," the cardinal noted that "widespread crime and deep corruption trouble the community in many places" and that "the slick and the doubledealing use the public confidence for their own purposes." He said that the breakdown of the moral demands of an earlier time in private life has brought about a situation wherein "the sacred values which the Christian Church has fostered are not merely challenged, they are ignored, as if ancient relics of a bygone era."

"I write this letter," an introduction to the pastoral says, "in the hope that my voice will encourage the persevering, recall the wandering, solace the suffering, and bring lost souls back to the love of God." The 32-page, 13,000-word letter, issued in booklet form for distribution in the churches of the archdiocese, is divided into five sections, each one reflecting on certain problems facing the believer in the area of his personal life, the life of the family, the area of civil action, and the international scene.

Under the heading of "human dignity," the pastoral refers to certain "techniques of degradation" which unconsciously repeat the "brainwashing" of the Reds by more subtle means when "the art of persuasion becomes the art of seduction. We do not present an alternate worthy of man, the pastoral points out, when we substitute for the 'socialized mass in service of the supreme state, . . . an arrogant individualism which denies to others the rights and privileges which it demands for itself."

The portion of the pastoral letter which deals with the Christian family speaks strongly of the holiness and permanence of marriage as well as the "devastating impact on society" called by the public acceptance of separations and divorce. In a strong passage on parental discipline, the cardinal urged a return to the traditional notion of punishment—"reasonably inflicted and charitably motivated—as a necessary and logical part of any system of character building which recognizes that corrections regarding moral matters must be developed side by side with the growth of intelligence."

Commenting on housing and the problems of mixed neighborhoods, the pastoral urges Catholics to "see Christ in every present and prospective neighbor" and pointed out that the "unity of the human family" has too long been outraged "in our present housing practices."

FOR BETTER USE OF LEISURE TIME

A strong call for a more creative use of leisure time was issued by the cardinal who warned against the "unhealthy climate of a society where those hours which are given to man as his own are thrown away in a dissipation of mind and body that cannot fail to lead to debility and degeneration." He urges the intelligent use of new-found leisure in a manner that "would bring to success the higher possibilities of our own personality."

An especially powerful part of the Lenten pastoral touched upon the political community and the responsibility of citizens and officeholders for producing a better society. It says: "the good society—free of organized crime and official corruption—reflects the serious will of good citizens to provide a

healthy framework for the advancement of virtue and the promotion of progress. Nothing less will satisfy the committed Christian, nothing less will be tolerated." The letter clearly acknowledged that public virtue, far from being realized, seems to be still an elusive ideal.

On the topic of religious pluralism and interreligious cooperation, the cardinal's letter dwelled in a special way on the historic kinship between the Orthodox and Catholic churches and urged prayers for religious unity. In a similar manner a continuation of the dialogue with Protestants was urged as a means of bridging the great gulf which either a great silence or a species of embittered argument placed between the two groups. Finally an expression of affection and sympathy was directed to the Jewish people who have been afflicted recently here and throughout the world.

An appeal to assist the peoples of other lands emphasized the religious reasons for international solidarity and urged all to accept the implications of a truly international community.

"Powerful and prosperous nations," the cardinal said, "cannot consider themselves in isolation or independence, but must bring the particular interests of their own nations into harmony with that wider good which is that of the great community of mankind itself."

In concluding, the letter the cardinal emphasized that the newest of problems often look to the oldest of principles for their understanding and solution. For this reason "you have seen in these pages an appeal to the spiritual dignity of man, the sacred character of marriage, the responsibilities of the citizen in national and international life, and the call to holiness which each of us has received from the revelation of Christ." Excerpts follow:

MORAL BREAKDOWN A CHALLENGE

Widespread crime and deep corruption trouble the community in many places; more often than we like to admit it evil goes unpunished and the wicked are permitted to prosper. Government and social institutions are no exception to all of this and the slick and the double-dealing use the public confidence for their own purposes and their private interests. Not a week passes but new scandals rock the community, until even the sensitive begin to believe that this is part of our way of life.

In the realm of personal ethics, the breakdown of the moral demands which our fathers respected has progressed so far as to make our current American ethic totally incompatible with that of an earlier time. The sacred values which the Christian church has fostered are not merely challenged, they are in large measure ignored, as if ancient relics of a bygone era. For many they simply no longer apply to the realities of life as we are living it. Instead of creativity men seek excitement; instead of accomplishment, satisfaction; instead of happiness, security; instead of virtue, ease; instead of sanctity, adjustment. For the Christian it is a topsyturvy world and someone must set it right.

I know that these are days of what is called religious revival, that everywhere the churches are crowded and works of piety seem to abound. There is, however, some evidence to suggest that much that passes for religion is no more than religiosity, and much that appears to be piety is only a routine religious practice. Indifference and materialism take their toll on every side and our best efforts fall short of what the times require of us; we fail to make the faith so decisive as to break down the obstacles that dam up the flow of divine grace among men, obstacles that so effectively keep God out of the world he has created.

Most painful to the church—and probably a serious source of disinterest and defec-

tion—is the divorce so often existing between the Christian faithful and the Liturgy. We need only repeat the strong insistence of Pius XI, of blessed memory, that the faithful should not assist at the sacred rites "as if they were outsiders or silent onlookers"; or we may recall the wise teaching of St. Pius X that the first and indispensable source of the Christian spirit is to be found in "active participation in the most holy mysteries and in the public and solemn prayer of the church."

Every effort must be made to break down any barrier that time and custom has placed between priest and people in the act of worship. We speak of "attending" mass, but we should actually speak of "offering" mass in order to emphasize our oneness with the priest in the eucharistic sacrifice. There are no silent observers, both priest and people offer a single sacrifice to God.

HUMAN DIGNITY, MARRIAGE, DIVORCE

The problems of society then cannot be faced as though they were difficulties which could be resolved solely through technical means. To a great degree they are problems of interpersonal relationships and their solution could be aided immeasurably if we were continually conscious of the worth of each individual as a child of God. This presents to us the task of creating communities in which the desires and purposes of the individual must be achieved in harmony with the similar legitimate desires of other individuals.

We know from the bitter experience of contemporary history, the debasement both of the body and spirit of man which results from those systems which dissolve individuals into a socialized mass in service of the supreme state. On the other hand, an arrogant individualism which denies to others the rights and the privileges which it demands for itself, sins equally against the dignity of man.

The purposes of marriage, which include the personal satisfaction of those who enter into it, must be regarded primarily from the point of view of the family, and of the community into which family life must be integrated. The church has adhered firmly to this teaching, against increasing opposition from those who would see in sexual pleasure a value which the individual may and should seek for his own benefit. Longstanding ideals of personal purity have been condemned as impossible of realization. The purpose of married life has been presented only from the point of view of the married partners themselves, in such a way as to justify any excess which caters to individual desire.

The Christian, however, must defend and stress the teachings of the church relating to the pleasure which accompanies sexual activity. This pleasure forms a part of a larger series of events by which the perpetuation of the human race is assured. Sexual pleasure has its only meaning in this context.

Recently a group of religious leaders of every denomination joined in a plea against mixed marriages. In these marriages so much is lost of the spirit of the community between husband and wife, that the risk of divorce is more than doubled, not to mention the tremendous loss to the faith of children brought up in an atmosphere of religious bickering and indifference. I raise my voice again to urge that Catholics marry Catholics, and hence avoid the many frictions which the best will in the world and a sincere love are often unable to overcome.

Separation and divorce are having a devastating impact on society. Here we must regret the absence today of that social sanction which a few generations ago forbade them under whatever guise. The more insecure the institution of marriage becomes,

the more insecure the emotional life of the children, the more ready the married couple to seize upon the least of excuses as a cause for separation or divorce.

I exhort you all sincerely to pray with increasing regularity for the needful gifts of patience, understanding, and mutual love that must support a couple throughout their married lives. The obligation of living together which arises from marriage cannot be set aside according to the whim or caprice of either or both parties, and it is unlawful for married Catholics to separate on their own initiative and without submitting the matter to proper ecclesiastical authority.

CONCERNING CHILDREN AND AGED

Each of us has a responsibility to the children over whom we exercise guidance or care. We must remember always, we of the adult generation, that tomorrow is living beside us, as well as ahead of us. Tomorrow lives in the youth of our land to whom it is our duty to give a Christian upbringing, a sense of personal worth, and a standard of values for time and eternity.

The external forces of social environment are not all-powerful and each child, as an individual person, must be assisted in achieving that independence which, in his adult life, is the indispensable condition for the exercise of his human rights. This personal freedom implies also personal responsibility; it means that a man must give an account of himself. Punishment, reasonably inflicted and charitably motivated, is a necessary and logical part of any system of character-building which recognizes that convictions regarding moral matters must be developed side by side with the growth of intelligence.

We do not punish children in order to repress them, or to frustrate their natural desires. We punish them in order that they may look for and find in their environment the influences which will move them toward the healthy maturity for which they are naturally destined. We punish them in order that they may better understand the dangers with which punishment is associated, and which dangers they are unable to discern.

We punish them that they may learn to do by their own effort the things which are necessary for their normal development as self-determining members of the community. "Spare the rod and spoil the child"—this axiom of commonsense, called into question by some, proves upon deeper reflection to be in conformity with the fundamental principles of human wisdom.

There can be a quite unconscious tyranny of youth toward the aging or the elderly, so that older people will often have a sense of intrusion even where they most have a right to be present. But please, do not neglect them. Give them the care, the attention, the love that they deserve, and that we ourselves will need in the sunset years of our own lives.

While the church lives in every society where its freedom is respected, nonetheless it can pass judgment on social realities. Not only atheistic communism and materialistic socialism have been condemned. "Where capitalism has based itself on false principles and laid claim to absolute authority on property, beyond its subordination to the common good, the church has always condemned it as contrary to the Natural Law." (Pius XII).

LEISURE, POLITICS, OTHER TOPICS

Certainly our leisure must be used in some measure for recreation and for relaxation; the human personality requires some lighter moments when the pressure of life is less strenuous and the happy company of friends dispels our cares. What we are experiencing is something quite different and something immensely dangerous for our own personal development.

The inferior quality of so much that passes as literature, the mediocrity of mass entertainment, the frivolous nature of so much socializing, the excessive seeking after excitement—all of these, and so many other factors as well, dull the truly creative powers of man, break down the disciplines of virtue, and give an example to the young that puts all spiritual values in jeopardy.

I cannot warn too strongly against the unhealthy climate of a society where those hours which are given to man as his own are thrown away in a dissipation of mind and body that cannot fail to lead to debility and degeneration.

Let no one say that I speak too strongly until he has surveyed with precision the mental and physical health of both man and society, until he has counted the vacant minds and nerve-shattered bodies, the broken families, and the mounting crime. It is not likely that anyone in our age will work himself to death, but how many hundreds of thousands have played themselves into madness.

The citizen, especially when he is also a believer, will be particularly concerned about the ability and integrity of those selected for public service. To elect an incompetent or dishonest candidate to office is a woeful reflection on the careful judgment of the citizenry, but to return such a one when his incapacities are exposed is surely inexcusable.

If a community—any community—is stricken with the infections of corruption, if law is ignored and enforcement is neglected, a dread judgment rests on the people whose lassitude and inaction amounts to a silent approval.

The good society—free of organized crime and official corruption—reflects the serious will of good citizens to provide a healthy framework for the advancement of virtue and the promotion of progress. Nothing less will satisfy the committed Christian, nothing less can be tolerated.

Within the community all men are accepted. There is no true concept of mere toleration within society. We know that there is an objective truth, one which is not susceptible to change with each generation. However, we must allow for freedom of consciences in the endeavor to reach this truth. We have the certainty within us that we possess it. Yet charity is the supreme commandment in our relations with those who do not share our faith.

The Christian must then pursue his supernatural objectives with the full knowledge that he lives in a society of differing beliefs, a pluralistic society. He will not be able to withdraw into an enclave all by himself, but must be prepared and ready for friendly discussion with those whose views of life and its meaning are different from his own.

It is in the spirit of friends and brothers that we must converse and live with those who are not in the fold of the Catholic Church. We are forbidden, by the very operation of conscience, to compromise in anything which touches upon the essence of faith. We extend equal respect to the consciences of those who find themselves in disagreement with us. Somehow the differences will become less acute, the climate someday will be more ready for friendly discussion. Then the personal relations of millions of Catholics with their friends will affect a difference in attitudes within which the spirit of God's truth may be able to work more effectively.

Since an enlightened citizenry is needful above all else for the Nation's welfare, we share a concern as loyal citizens in good educational facilities. We must show our interest then in all endeavors to improve the public schools for a better America. The public schools and their loyal administrators and teachers deserve well of the total com-

munity. This will be our conviction, even in those places where it may be that none of our Catholic children attend such schools. In point of fact, nearly half of our young people do attend the public schools and the percentage will in all likelihood increase in the years ahead.

I would be less than frank if I did not openly admit that, to me, one of the most disturbing factors in American life today is the series of attempts made by certain business enterprises to challenge or even to violate the laws regulating business on Sundays. It seems that an organized campaign is being waged to destroy the traditional American respect for the religious nature of the Lord's Day, out of a sordid desire for financial profit.

It is true that many sincere and religious people feel that the present laws do them an injustice. It is not against them that I direct my words, for I respect and honor them for their loyalty to their religious tradition. Rather it is against those who would make of the Sunday just another business day, that I beg you to be on your guard. "Business as usual" is not to be the slogan for Sunday, if America is to remain what it has been: a religiously God-fearing, and God-serving nation.

Should We Continue To Quarantine China?

EXTENSION OF REMARKS

OF

HON. CHARLES O. PORTER

OF OREGON

IN THE HOUSE OF REPRESENTATIVES

Monday, February 29, 1960

Mr. PORTER. Mr. Speaker, an issue which is receiving much attention in the United States, in the communities and increasingly in the Congress, is our China policy. If we are going to have world peace through world law and controlled disarmament, we have to communicate with China. Under unanimous consent I am including a thoughtful editorial by Paschal Wilson, editor of the Grants Pass Courier. It appeared February 20, 1960:

SHOULD WE CONTINUE TO QUARANTINE CHINA?

Recognition of China is one of the issues scheduled to be studied and discussed next week by an estimated 200 adults and 360 high school students in the current Josephine County "Great Decisions" series.

Mainland China, with a quarter of the world's people, has long been the most populous nation in the world. With its vast human and natural resources—and its relentless drive toward industrialization—China could conceivably become, in a generation or so, the most powerful nation in the communist bloc, if not in the world.

The rapid modernization of China may mean that, in less than 10 years and perhaps as soon as 3 years, China will produce its own nuclear weapons, thus joining the United States, Britain, France, and the Soviet Union as an atom-age military power.

Many Allied leaders claim that the U.S. diplomatic and economic boycott of Peiping government is out of date now that China is acquiring the status of a major world power.

Yet there is also widespread support for continuing present U.S. policies—withholding of U.S. diplomatic recognition, total embargo on U.S. trade with Red China, and U.S. blocking of all maneuvers to turn over China's U.N. seat to Peiping government.

Even the most conservative outside observers agree on two generalizations: mainland China's economy is growing at an unprecedented rate; and the cost in individual freedom has been enormous. The economy is undoubtedly growing more rapidly than the Soviet Union did in its first 10 years.

The implications of these rates of growth, if accurate, are fairly clear. In time, China can catch up not only with Britain, but also with the Soviet Union. It has the potential and, apparently, the drive.

Nor has this lesson been lost on the leaders of many underdeveloped nations. Even though many of these leaders deplore China's communes, mass purges and total social regimentation, people in underdeveloped lands cannot help but be fascinated with the material success of Communist economic planning. It still remains to be proved whether, in the 20th century, a backward economy can progress as rapidly under free enterprise or free political institutions. Democratic India's economic growth, for example, lags well behind China's.

Participants in the "Great Decisions" radio panel on KAGI at 8:30 p.m. Sunday will include Rev. Raymond Brandt, Mr. Frank Lavsky, and Mrs. John R. Boe, moderator. The discussion topic will be "Red China on the March. What U.S. Action?"

Loyalty Oaths Under the National Defense Education Act

EXTENSION OF REMARKS

OF

HON. ROBERT W. KASTENMEIER

OF WISCONSIN

IN THE HOUSE OF REPRESENTATIVES

Monday, March 7, 1960

Mr. KASTENMEIER. Mr. Speaker, last week I referred on this floor to widespread dismay inside the academic community, and especially at my district's world-famed University of Wisconsin, over the imposition of certain loyalty statements upon persons receiving loans or other aid under the National Defense Education Act. I have recently received from a committee of the faculty of the university a full statement of the faculty position. Before I put this statement into the RECORD at this point, I should like to add that the regents of the university have adopted precisely the same position as the faculty. I call my colleague's attention to this statement as one of the clearest, most excellent explanations of what is wrong with the disloyalty disclaimer that I have ever seen in so few words:

THE UNIVERSITY OF WISCONSIN

LAW SCHOOL,

Madison, Wis., February 17, 1960.

HON. ROBERT W. KASTENMEIER,
House of Representatives,
Washington, D.C.

DEAR MR. KASTENMEIER: The undersigned are a committee of the faculty of the University of Wisconsin, appointed to communicate to the Senators and Members of Congress from Wisconsin the views and hopes of that faculty on the disclaimer-of-belief affidavit under the National Defense Education Act.

As you know, that act requires that anyone (whether student or teacher or research worker) either receiving pay or borrowing money under any of the act's provisions execute two sworn statements: (1) an oath of allegiance in the form that all of us who have been in the military service know so

well, and (2) an affidavit that he does not believe in violent overthrow of the Government, etc. etc., nor support any organization that does so believe or teach.

Our faculty, after extended consideration and debate at two meetings a month apart voted on January 4 last to announce its unalterable opposition to the affidavit requirement of the NDEA, that is, to the second requirement above listed, the one that asks a man to swear that he does not believe in certain things. The faculty's reasons for this position are, as simply as possible, these:

(1) The conviction that belief is a private matter. Government, we say, has a legitimate interest in a man's actions, and sometimes in his words or his associations. But his beliefs are private: about them the government of a free country has no business asking questions.

(2) The difficulty of understanding the particular form of words that NDEA requires. Suppose a man believes, as we certainly do, that General Washington, although a revolutionary and no doubt a traitor by King George's law, was nevertheless a moral man and a great patriot. Or suppose he thinks, as many do, that the Government of the United States is in fact in danger of violent overthrow—namely by atomic attack from the Soviet Union. Can a man holding either of these beliefs honestly sign this affidavit?

(3) The conviction that the affidavit is useless. Its purpose, we suppose, is to exclude subversives from these programs. But who will be so quick as a subversive to sign anything whatever? A big lie in the cause is to them an act of duty.

(4) The feeling that the requirement discriminates against college people. No one else engaged in nonsecret work, if we understand the situation rightly, is asked by the Government to sign a document like this. (Labor union officers were asked to under the Taft-Hartley law, but the requirement was repealed in 1959). Are college people, faculty and students, really so much less reliable than all the other Americans who have dealings with the Government?

(5) The conviction, as President Eisenhower has put it, that the oath of allegiance ought to be enough. When a man has sworn to bear true faith and allegiance to his country and to defend its constitution against all enemies, foreign and domestic, it is merely insulting to ask him in the next breath whether he thinks that country and that constitution ought to be violently overthrown.

Whatever different men may think of the first four reasons stated, it seems to us that this last one ought to be conclusive. The oath of allegiance is an effective, comprehensive and clear statement of patriotic duty, hallowed by long use and by the lives of many men. No one can be asked to swear to it without an inner thrill. To follow it with complicated jargon about what a man believes cheapens the whole performance. The President is right: the oath of allegiance is enough.

A bill, S. 2929, to repeal the affidavit requirement (leaving the requirement for the oath of allegiance in the act) has been reported out by the Senate committee in charge. Similar House bills are in the hands of the Committee on Education and Labor. The matter, we believe, is strictly nonpartisan: at least leading members of both parties have supported the repeal. We hope that the repeal of the affidavit requirement may have your support and your vote.

Respectfully,

F. H. HARRINGTON.

J. O. HIRSCHFELDER.

R. K. HUITT.

F. I. OLSON.

EDWIN YOUNG,

CHARLES BUNN.

Chairman, Faculty Committee on the
Disclaimer Affidavit.

Pedalight—Safety for Our Youth

EXTENSION OF REMARKS OF

HON. VICTOR L. ANFUSO

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Tuesday, March 1, 1960

Mr. ANFUSO. Mr. Speaker, through data recently collected I have learned that for the past 20 years, safety campaigns have been conducted continuously throughout the 50 States to reduce the tragic toll in bicycle and automobile accidents. Not only do literally dozens upon dozens of organizations, clubs, and companies participate in these campaigns with no monetary motive in mind, but almost without exception the Governors of all 50 States have, and are lending a hand.

Unbelievable as it may seem, the tragic toll in 17 years in the United States alone has been 641,750 youths crippled and injured and 9,286 youths killed outright in bicycle-car accidents.

Parade magazine published:

Bike-car accidents are now the leading cause of death in our children between the ages 1 and 14.

It has come to my attention that right here in the Nation's Capital a Mr. Paul H. MacMahon—who one night some years ago had the harrowing experience of almost hitting a child who fell from a bicycle directly in the path of his car—has done something about the situation.

His research has disclosed that approximately 68 percent of all the bike-car accidents occur after dusk, or at such times when both cars and bicycles should have on their head and tail lights, and that therefore the mere observance of all safety rules for bicycling would do little toward cutting down this tragic toll. MacMahon concluded that the only answer was a light that would show the unique motion of the legs in pedaling a bicycle, plus a blinker action for instantaneous recognition that such a light was on a bicycle in motion. The result was his invention of "Pedalight."

When Pedalight was demonstrated to Mr. William F. Stoeffhaas, vice president of Arnold, Schwinn & Co., of Chicago, one of the largest bicycle manufacturers in the world, Mr. Stoeffhaas stated:

I am of the opinion that this Pedalight should add considerably to the safety of cyclists riding at night.

The appalling, tragic implications of the accident totals leave no doubt that the combined efforts of the various safety campaigns have not been sufficient to reduce the gruesome figures. Otherwise, the deadly trend would not have increased in 12 short years from 21,790 youths crippled and injured in bicycle-car accidents in 1947 to the shocking and terrifying figure in 1959 of 59,300 youths crippled and injured and 480 killed outright.

Almost daily in many of the larger cities there are newspaper articles dealing with suggestions for curbing this toll or simply reporting the local catastrophes in bike-car accidents. Finally, and at last, three newspapers have just

recently published items that give the answer everyone has been looking for.

I recommend including these items in the RECORD not only for the good that can be derived here at home, where the bicycle is a mere drop in the bucket as compared to the numbers in use in European and other countries of the world, but because I believe that these articles appearing in the CONGRESSIONAL RECORD would be a humanitarian contribution on our part so that other countries may learn and benefit with us.

The invention of "Pedalight" marks a milestone in progress toward the safety of our youth, and its use should be implemented by appropriate legislation on the Government and State levels.

Before appropriate legislation is introduced on the subject, I invite comments from all sources.

Mr. Speaker, I ask unanimous consent to have printed in the RECORD the text of these remarks, and articles from the Chicago Daily Tribune, February 22, 1960; Washington Daily News, February 9, 1960; and Cleveland Plain Dealer, February 23, 1960.

[From the Chicago Daily Tribune, Feb. 22, 1960]

NEAR TRAGEDY PUTS LIGHT ON BIKE CRASHES— INVENTOR BUILDS LAMP FOR PEDALS (By George Bilas)

Ten years ago, an electronics engineer from Washington, D.C., received the scare of his life while driving through Cincinnati. A 10-year-old boy riding on an unlighted bicycle suddenly fell in front of his moving automobile.

"It was dark and all I could see was the boy's shadow," said Paul H. MacMahon. "I jumped out of the car and stood amazed as the boy crawled out from under my car. He wasn't hurt, but it was close."

The memory of that incident began to occupy MacMahon's leisure time. His hobby over the years has been inventing things.

He consulted records he received from insurance companies and other sources and found that during a 17-year period there were 641,750 youths crippled or injured and 9,286 killed in bike-auto accidents. Each year there has been a tremendous increase in this type of accident.

Of more importance, MacMahon's study revealed that more than 68 percent of the bike-auto accidents occurred after dark. Most bicycles were not equipped with lights and those with lights generally were far from adequate, he said.

After trying several ideas, MacMahon developed a light which would fit into the pedals of the bike and which would operate like the lights of railroad crossings protected by a combination of oscillating and flashing red lights. The invention, he said, is also similar to the oscillating and flashing red tail lights on airplanes.

MacMahon said the battery powered lights throw beams in three different directions. A white beam of attention-attracting light flashes on when the pedal is in the forward direction and a beam of red light cuts in automatically when the pedal begins its revolution in the other direction.

MacMahon hopes to get legislation to require all bicycles to be equipped with the moving light.

[From the Washington Daily News, Feb. 9, 1960]

(By Gene Shumate)

The fruits of one inventor's labors could save thousands of lives at a minimum cost to the public.

District Traffic Director, George England, when he saw this at a preview, said he was "very impressed with the life-saving possibilities of this invention."

[From the Cleveland Plain Dealer, Feb. 23, 1960]

A BETTER LIGHT FOR BIKES

If you've ever had to swerve suddenly while driving along a dark street to miss a kid on a bicycle, you'll be interested in an invention described in the Chicago Tribune—a combination battery-powered, oscillating and flashing red-and-white light which is fitted into the pedals of bicycles, and which throws white and red beams in three different directions while the pedals are revolving.

The inventor, an electronics engineer from Washington, D.C., compiled records which showed that during a 17-year period 641,750 youngsters were crippled or injured, and 9,286 were killed in accidents involving bicycles and automobiles. He also learned that 68 percent of the bike-auto accidents occurred after dark.

In Cleveland last year 203 youngsters were involved in this type of accident, although they are required by law to have lights on their bikes if they ride after dusk. Three were killed.

However, there are lights and lights, and it is very difficult, when coming from behind in an automobile, to see a youngster who has just turned into the street on his bike, when the bike's headlight is about the same intensity as a birthday candle. In many instances better and brighter lights on bicycles would be a great safety factor—and flashing, oscillating red and white lights might be just the ticket.

Presidency Demands Trained Statecraft

EXTENSION OF REMARKS

OF

HON. SAMUEL L. DEVINE

OF OHIO

IN THE HOUSE OF REPRESENTATIVES

Monday, March 7, 1960

Mr. DEVINE. Mr. Speaker, I am very happy at this time to submit for inclusion in the CONGRESSIONAL RECORD an editorial appearing in the March 3 issue of the Columbus Dispatch. This, I believe, is the first major newspaper in the United States to endorse RICHARD M. NIXON for President of the United States.

The editorial follows:

PRESIDENCY DEMANDS TRAINED STATECRAFT

Now, of all times, the first requisite in choosing a President is that he be a man trained in statecraft. And America's statecraft today is both global and domestic in scope.

Statecraft calls for skill in the art of conducting the Nation's affairs, preferably the skill of experience and contact with contemporary problems. Possibly even more important is the skill of discerning the hard core of a problem as a preliminary to taking effective, well-considered, concrete action.

Speaking at Notre Dame University recently, Vice President RICHARD M. NIXON declared that the nonmilitary struggle between the United States and world communism poses a greater problem than any threat of armed attack, though he does not, of course, minimize the dangers of the latter.

He sees the present struggle between the West and the Communist East as determin-

ing the future of the "uncommitted one-third of the world" in Africa, Asia, and the Middle East where new nations are springing into being overnight or advancing in their ambitions and their stature. These are the nations of the future who could tip the balance of power on the earth. Most of these countries have been visited by the Vice President and their ferment noted.

Mr. Nixon enlists our confidence because we doubt if any American has greater firsthand knowledge of the Russians, much of it gained by personal contact.

Not only does Mr. Nixon have a vast understanding of the Russians, he has had some experience in dealing with them. He has forcefully demonstrated on numerous occasions that he can hold his own in verbal exchanges with Premier Khrushchev. He showed it in Moscow last summer and again in Washington when Mr. Khrushchev visited the United States. He was not afraid to stand up to communism's No. 1 man, yet he spoke diplomatically, smilingly, courteously.

On several occasions, Mr. Nixon has exhibited tough-mindedness in his dealings with various Communist leaders. He is able to meet with them without being taken in by their sweet talk of peace and good neighborliness. He can dispute them without yielding ground on the one hand or antagonizing them on the other. This is particularly important in an era when so much depends on personal diplomacy.

Mr. Nixon is fully aware of the insidious methods used by the Communists in their conspiracy to undermine democratic Governments. He knows the battle of ideologies is being fought on many fronts more subtle than the launching pads for satellites and missiles.

The Vice President's knowledge and understanding of world affairs is tremendous. He has traveled 55 countries as a personal representative of President Eisenhower. He has gained a personal acquaintanceship with the heads of most of the nations of the world, has entertained many of them as his guests and has been their guest.

In South America, without quailing, he and Mrs. Nixon stood up to the slings, slurs and spittle of naked Communist insults.

Vice President Nixon is almost as well informed and briefed as the President on our foreign policy and defense planning, since he regularly attends meetings of the National Security Council.

During the President's illnesses, Mr. Nixon has been called on to conduct cabinet meetings and to take part in the formulation of Government policy, both foreign and domestic, within the framework of the Constitution, but beyond all precedent, all the while maintaining the delicate niceties of the situation.

No vice president, indeed no man in all the history of the United States—has been so well prepared for any emergency which might arise pertaining to the Presidency. It would seem to follow, then, in the logic of things, that he is the best prepared man in the country to face the demands and assume the responsibility of the statecraft of our Nation in the time that lies immediately before us.

Let Them Pay 7 Cents

EXTENSION OF REMARKS

OF

HON. GLENN CUNNINGHAM

OF NEBRASKA

IN THE HOUSE OF REPRESENTATIVES

Monday, February 29, 1960

Mr. CUNNINGHAM. Mr. Speaker, early in this session I introduced H.R.

9488, a bill which would require that airmail postage rates be paid on mail sent by air. I am pleased to report to the many Members who have expressed an interest in this legislation or who have joined me in sponsoring similar legislation that Chairman MURRAY of the House Post Office and Civil Service Committee has asked the Postmaster General to expedite his report on this bill.

Mr. MURRAY has written me of his awareness of recent action by the House Appropriations Committee in recommending a legislative action in regard to the long-experimental program by the Post Office Department of airlifting first-class mail on which airmail postage has not been paid.

Under leave to extend my remarks in the Appendix of the RECORD, I include an editorial from the Omaha World-Herald of March 1, 1960:

AIRMAIL AT AIR RATES

If you put a 7-cent airmail stamp on a letter an airplane will carry it.

If you use a 4-cent stamp the letter will go by train or truck—or possibly by airplane.

Postmaster General Summerfield has been experimenting with airhauling of regular first-class mail for several years. Now he is trying to make the arrangement permanent, and a bill, S. 2402, would authorize him to transport all classes of mail by air regardless of the postage paid.

The railroads are up in arms about this bill, and they have a good case. They say diversion of regular mail would not only take the mail cars out of passenger trains but would take the railroads out of the passenger business because the mail is a major source of revenue.

They argue that the airlines would be given a huge cut of the mail revenue without assuming the responsibility for regular service, which the railroads have discharged capably for more than a century. The railroads carry mail around the clock every day in the year. The terms of S. 2402 would permit the airlines to handle mail virtually at their own convenience. The mail could be kept waiting at the airport not only on account of weather but because the planes had higher paying traffic.

One factor that neither the railroads, the airlines, nor the Postmaster General seem to take into account is that the American people themselves should have a choice in how they want their mail transported.

If they want to pay more, and be certain their mail will go by air, that should be their right. Premium service at a premium price is a reasonable arrangement.

But why should a letter bearing a 4-cent stamp get the same service? And—most inexcusable—why should junk mail get the same treatment as airmail?

Representative GLENN CUNNINGHAM, Republican of Nebraska, who has introduced a bill to prohibit the flying of any mail except at the full air rate, said:

"If people want their mail to go by air they can put a 7-cent stamp on it."

That is a reasonable view, and we hope it prevails.

The Menace of the Soviets

EXTENSION OF REMARKS

OF

HON. A. S. HERLONG, JR.

OF FLORIDA

IN THE HOUSE OF REPRESENTATIVES

Monday, March 7, 1960

Mr. HERLONG. Mr. Speaker, underlying all of our daily thoughts and ac-

tions is the sense of concern over the continuation of the cold war.

One of my constituents, Col. Robert M. Falkenau of Winter Park, Fla., recently made a speech before the Men's Club of the First Unitarian Church of Orlando, Fla., in which he discusses ably and thoughtfully "The Menace of the Soviets."

Col. Falkenau's address follows:

THE MENACE OF THE SOVIETS

(By Col. Robert M. Falkenau, U.S. Army, retired)

We are all more or less disturbed by the possibility of a thermo-nuclear war with Russia, but I believe that as long as we maintain a strong enough military position and continue with our missile development and allied activities there is little likelihood of such a war eventuating. What I propose to discuss is the "cold war" which should be regarded as just as important for us as a thermo-nuclear war would be.

I have used the title "The Menace of the Soviets" because it would naturally draw your interest, but perhaps a more suitable title would be "The Menace of Our Own Indifference." Robert Strausz-Hupe, who has spent several years in intensive study and research of the Communist conflict operations on a global scale, has said that the most formidable obstacle to purposeful action by the United States in the cold war has been the uncertainties of the American public mood. It would seem that these uncertainties are in a large measure due to a lack of knowledge and understanding by the great mass of our people of Communist methods and what the cold war really is.

Lenin once said that communism is a battle for men's minds. The cold war is that battle. In war it is essential for the commander to know as much as possible about the aims, the strategy, and the tactics of the enemy. While our time is too limited to discuss these at the length which they deserve let us see if we can briefly set down some facts regarding them as a basis for a better understanding of the problems which we face and the actions which we must take to combat communism and preserve our way of life.

The foundations of modern communism were laid by the socialism of Karl Marx and Friedrich Engels. Some of their main tenets were:

1. The class struggle.
2. The inevitability of capitalistic disintegration and socialistic triumph.
3. Collective ownership and management of the means of production.
4. The conquest of the state for the furtherance of socialism.
5. The dictatorship of the proletariat.
6. The final obliteration of the state caused by the communization of the economy.

Upon this foundation the Bolsheviks under Trotsky, Lenin, Stalin, and Khrushchev have built the structure of modern Communist Russia and its Communist Party, which controls the government and also leads and controls, or seeks to control, the Communist Parties throughout the world.

The official "History of the Communist Party in Soviet Russia" sets forth in its preamble the aim of the Party as "the great task of Lenin and Stalin, the victory of communism in the whole world."

Lenin wrote, "The replacement of the bourgeoisie by the proletarian state is impossible without a violent revolution and also without the destruction of the apparatus of state power which was created by the ruling class." He stressed the necessity of creating a homogeneous group of professional revolutionaries, among whom no factionalism or dissent would be tolerated. Thus the dictatorship of the proletariat became the dictatorship of the party, leading the proletariat, as Stalin himself wrote. He in turn

said that the established revolutionary regime—meaning the Union of Soviet Socialist Republics—must provide help to the rest of the world "acting when necessary even with military power against exploiting classes and their states."

It has taken four decades for the Communists to reach their present status but during that time they have never lost sight of their aims as set forth by Lenin and Stalin. They are conditioned for a protracted struggle in which the cold war is only a tactic of the larger strategy. We must bear in mind that the Communist ideology is atheistic and has no standard of moral values. Lenin and Stalin, whose writing may be said to constitute the Communist bible, taught that anything which contributed to the Communist aims was right. Lying, deceit, treachery and even wholesale murder have been exemplified in their teachings and their actions. Lenin wrote that in their struggle with the bourgeoisie they should zig and zag to confuse the enemy and take one step back in order to take two steps forward. Nor should we forget that of 52 agreements which the Communists have entered into with the Western nations they have unilaterally breached 50. When the U.S.S.R. believes that it can resort to military power with a probability of success and without too much loss to itself it will not hesitate to do so. Therefore it doubly behooves the Western Powers to win the cold war. So far we have been losing it, as we see the Communists expanding their power in Asia and the Middle East and they are at work in Africa and Latin America both openly and clandestinely.

The U.S.S.R. systematically trains the leaders for its apparatus, as it calls the party organization which in practically all Communist countries controls the established governments, and in the western countries leads the work of the Communist Parties.

Jan Valtin, one of the earliest officials of the apparatus to defect to the United States, wrote:

"Over 6,000 students attended the Communist University in the winter of 1925-26. The large majority were Russians who were trained for political and administrative work in the party machine, the economic councils, in the trade unions and cooperatives, in the Red army, the Red navy, and the G.P.U., and for functions in the great number of Communist auxiliary organizations.

"The foreign students were incorporated in the international division. * * * The courses of the international division dealt almost exclusively with the aspects of class war and the struggle for communism. They did not aim at educating academic scholars. Revolutionary theories were never treated apart from actual class war experiences. The battles of the past and present—armed uprisings, strikes, civil wars—were analyzed and dissected, the mistakes of strategy and methods were pointed out, and lessons were drawn to guide the students in the actions of the future. All courses led up to and culminated in the Leninist conception of the most important step on the road to a classless society—the seizure of power through revolution, and the establishment of the dictatorship of the proletariat under the leadership of the Communist Party. Every thought, every campaign, every action whatsoever had value only if it constituted a forward step in the seizure of power. Every omission, every scruple and laxity that could tend to retard the advance was an unpardonable crime. Revolution was not one way out—it was the only way out."

Today the Lenin Institute in Moscow is the top echelon for such training. In each of the other Communist countries there is a party academy at the top, and as in Russia, district and local party schools. Similar training schools are maintained in this country for leaders in the apparatus of the American Communist Party, which is actually controlled through this apparatus by the party

of the U.S.S.R. This control is not an assumption but a well-documented fact.

Angela Calomiris was for 7 years a "plant" of the FBI in the American Communist Party in New York City and became a minor official in the apparatus. She writes:

"There are leadership schools at all echelons, from the schools for New York county leaders which I attended on up to the Lenin school in Russia where national leaders are sent for further training.

National officers are watched more closely than the lower cadres because they are responsible to the authorities overseas or across, as the Communists refer to Russia. Visitors from abroad choose the national committee and the national board just as section and county officials designate the officers of branches under them. The national committee is the top governing body of the American Party. Its executive committee is the national board, which the Communists themselves nickname "the Politburo" after its Russian counterpart. * * * Although it is theoretically chosen by the national committee, it rules the national committee the way the executive board of a branch rules the branch, and everyone on the Politburo lives in deathly fear of the "C.I. reps" from abroad.

"C.I. reps" are usually Europeans Communists from the English, French, German, or Finnish parties. They often enter the United States illegally and take false, English-sounding names. They say very little, but they listen closely, attending meetings of the national committee, roam about headquarters at 12th Street, and travel all over the country to observe the party in action. Through the detailed personnel reports kept by the National Review Commission they are in a position to locate loyal comrades who can help Soviet espionage agents in search of specific information on industry or politics.

One of the important former officials of the American Communist Party was J. Peters, who wrote "The Communist Party: A Manual of Organization." I quote from it:

"The role and aim of the Communist Party.

"As the leader and organizer of the proletariat, the Communist Party of the United States of America leads the working class in the fight for the revolutionary overthrow of capitalism, for the establishment of a Socialist Soviet Republic in the United States, for the complete abolition of classes, for the establishment of socialism, the first stage of the classless Communist society."

Today the party is believed to have about 10,000 members, having declined from 70,000 or 80,000 some years ago. This decline is deceptive, for it represents the loss of the half-hearted membership which was of relatively little importance to the movement. What remains is the hard core of dedicated and disciplined Communists. William Z. Foster, for many years the leader of the party, wrote:

"The actual strength of the Communist movement in the United States is not something that can be accurately stated in just so many figures. * * * The influence of the party stretches far and wide beyond the limits of its actual membership."

How this influence is exercised through Communist fronts and the infiltration of other organizations may be interestingly shown by the description of a single instance. James A. Wechsler, the editor of the New York Post, was recruited into the Communist Party when a young student at Columbia University and remained a member for several years, until finally disillusioned.

He was a participant in the founding of the American Youth Congress which was subsequently described as "one of the major Communist coups of the decade, if not of

the century." The Congress was not originally inspired by the Communists but by a highly un-Marxian and idealistic young woman named Viola Ilma, with a yearning to do something constructive.

Wechsler writes: "Her Congress was a pushover for the Communists, who knew what they wanted to do and were organized to do it. The basis of selection of delegates to the assemblage wasn't too precise and, in advance of the 3-day session, the Communists had assured ample representation for themselves. All varieties of youth groups were invited to elect delegates: young men and women who displayed most eagerness about attending found it easy to get themselves elected and many of them conveniently turned out to be young Communists who had received advance notice of the conclave.

After the evening sessions * * * those of us who were Communists slipped off to a "fraction" meeting at which plans for the next day's developments were carefully rehearsed. All of the top brass of the Young Communist League was on hand for these left-wing skull sessions. By the time the Congress was formally opened Miss Ilma was no longer its leader. She and a number of her bewildered conservative adherents had fled the scene. From the tone of the convention, the machinery of the Youth Congress was securely in Communist hands, but that fact was disguised more skillfully than in many other front organizations.

A YMCA midwesterner was elected chairman for the first year. He was generally pictured as spokesman of the grassroots youth, as a moderate, and as a fitting spiritual leader for so true a cross-section of the younger generation. It was not generally announced, however, that he had been present at the Communist fraction meeting the night before at which it was decided that he would be spontaneously chosen chairman next day.

This indicates the importance, in our efforts to fight the cold war, of watching not only the open maneuvers of the Communists but also their insidious operations through other organizations with ostensibly other aims. John Strachey, War Minister in the Socialist Government of Great Britain, wrote:

"It is impossible to establish communism as the immediate successor to capitalism. It is, accordingly, proposed to establish socialism as something which we can put in place of our present decaying capitalism. Hence, Communists work for the establishment of socialism as a necessary transition stage on the road of communism."

Again, in "Bending the Twig," Col. Augustin G. Rudd writes:

"One of the greatest boaxes of history is the Communist myth that it was they who overthrew imperialist Russia. They did nothing of the kind. With German aid they treacherously seized the unseasoned Krensky regime months after it was established, and then set up their Communist despotism. Alexander Krensky tells us:

"The Bolsheviks took no part in that crucial event. Lenin and Zinoviev were in Switzerland. Trotsky was in New York. Stalin (at that time a minor figure) was in Siberian exile. * * * Lenin, Zinoviev, and others arrived 1 month after the downfall of the Romanoffs—in the notorious sealed train provided by the German Kaiser for their journey. * * * "Russia is now the freest country in Europe, where there is no oppression of the masses," Lenin declared on reaching Petrograd. * * * The myth that the Bolsheviks overthrew czarism has been purposely spread to conceal their crime of having strangled the first Russian democracy. The Communists everywhere are today trying to seize power by the same cynical device which Lenin used in 1917, namely by posing as a "defender of people's freedom and democracy."

"This historical incident affords a classical example of the incapability of Socialists or Social Democrats to maintain their regimes against a determined Communist element in their midst. Inevitably the Communists use and exploit them until a favorable opening for treachery occurs."

Ivor Thomas, a Member of the British Parliament, said:

"The Social Democrats (Mensheviks and Social Revolutionaries) were trying to stand on an avalanche which they themselves had helped to start. * * * The October revolution could not have taken place but for the February revolution (of Kerensky); the Communists could not have come to power if the Social Democrats had not first paved the way."

Under the New Deal and the Fair Deal we have adopted some of the plans and tenets of the Socialists and we must be watchful that we do not go far enough in that direction to make ourselves vulnerable to Communist machinations. About 5 years ago ex-President Herbert Hoover, in an address at West Branch, Iowa, said:

"I have little fear that these Communist agents can destroy the Republic if we continue to ferret them out. Our greater concern should be with the other varieties of the Karl Marx virus. Foremost among them are the Socialists, who advocate constitutional methods. By so doing they may allay many fears of some socialistic threats to our institutions. * * * The Socialists prowl on many fronts. They promote the centralized Federal Government, with its huge bureaucracy. They drive to absorb the income of the people by unnecessary Government spending and exorbitant taxes. They have pushed our Government deep into enterprises which compete with the rights of free men. * * * Every step of these programs somewhere, somehow, stultifies the freedom, the incentives, the courage and the creative impulses of our people.

"Beyond all this there is proof in the world that the end result of socialism can be bloody communism. In the Iron Curtain states it was the Socialist intellectuals who weakened the freedom of men by destroying free enterprise. Thus they furnished the boarding ladders by which the Communists captured the ship of state."

What are we, in the United States, doing to fight the cold war, both at home and elsewhere throughout the world? We instituted the Marshall plan and the point four program of economic aid to underdeveloped countries and we have the Voice of America and Radio Free Europe. In addition to these, various individuals and groups are making studies of Communist policies and methods, publishing papers and books on the subject, but all of these activities, both governmental and private, are uncoordinated.

We have almost entirely left the initiative in the cold war to the Communists, meeting their various moves with defenses extemporized on the spur of the moment. We have no national strategy of offensive approach to exploit the weaknesses of the Communist ideology, history and organization. It has even been said that there is insufficient coordination between the State Department and the Department of Defense and suggested that political ends have been shaped to meet military means, rather than vice versa.

One of the first governmental moves to meet this situation was the creation last July of a subcommittee of the Senate, headed by Senator HENRY M. JACKSON of Washington, with Senators HUBERT E. HUMPHREY of Minnesota and KARL E. MUNDT of South Dakota, to make a nonpartisan study of America's preparedness "to outthink, outplan and outperform the Soviets in the cold war." At the beginning of October this committee made a preliminary report outlining

the direction which its studies would take, which appears to be soundly conceived.

Our Representative from this district of Florida, Hon. A. S. HERLONG, JR. of Leesburg, has introduced in the House a bill to establish a Freedom Academy. This would provide a governmental institution in which an intensive study of the cold war would be carried on with a view to the development of national strategy and where American diplomats, military men, foreign aid personnel, businessmen serving overseas and others concerned with the combating of the cold war, including keymen from other free nations, could receive a training in strategy and tactics. At the same time it would serve as a central point for the voluntary coordination of the efforts of other organizations and individuals engaged in this field. In a sense it would be the counterpart of the Lenin Institute in Moscow. It could encourage the institution of suitable courses in our schools and colleges which would serve a purpose comparable to the local and district party schools of the Communists.

Also, in the growth of our young people they usually go through a phase at late high-school or college age, in which a large proportion of them, at least, develop a trend toward radicalism, which most lose as they mature. In this phase they are particularly susceptible to the advances and teachings of the Communists. Therefore the institution of suitable courses in all of our schools and colleges is very important, not only for the preliminary training for leadership in the cold war but also to combat the insidious approach of the Communists to our youth.

Unless some steps of this or similar character are taken to rouse the people of America from their lack of understanding and apparent indifference to the struggles of the cold war we shall continue to lose the battle, as we have done in the past. Anything which can be done to awaken them to the seriousness of this situation is well worth the effort and the cost.

The Non-Russian Nations in the U.S.S.R. and U.S. Policy

EXTENSION OF REMARKS

OF

HON. EDNA F. KELLY

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Monday, March 7, 1960

Mrs. KELLY. Mr. Speaker, one of the most formidable deterrents against Russian Communist aggression, whether political or military, is the reality of the captive non-Russian nations within the Soviet Union itself. Unfortunately, this fundamental truth has not sufficiently penetrated American thought and policy. Unfamiliar with the individual histories of these captive non-Russian nations, too many of us continue to equate the Soviet Union with Russia and thus distort our thinking with this basic fallacy. As a result, many opportunities in the cause of world freedom are blindly missed and Moscow-directed operations in our very midst are scarcely noticed.

The validity and striking pertinence of my remarks are well borne out by developments these past several months. The impact of the Captive Nations Week Resolution last summer, the visit of

Khrushchev to this country, and a recent advertisement in the New York Times sponsored by Communist-listed foreign language newspapers bear a significant relationship to the vital issue of the captive non-Russian nations in the U.S.S.R.

One of the chief proponents in this country for the development of this non-Russian issue is Dr. Lev E. Dobriansky, professor in Soviet economics at Georgetown University and national chairman of the Ukrainian Congress Committee of America. Dr. Dobriansky follows closely the relations between Russian Moscow and the captive non-Russian nations in the U.S.S.R. He sees in them tremendous opportunities in behalf of our own national security and for the advance of world freedom.

Some of his ideas are indicated in the following communications to the President: First, a letter dated December 17, 1959, urging the President to capitalize politically, vis-a-vis Moscow, on the Captive Nations Week Resolution; second, a letter dated September 12, 1959, suggesting poignant questions that should have been raised publicly during Khrushchev's visit here; and third, a telegram revealing the Communist-inspired advertisement printed by the New York Times on February 16, 1960. A similar telegram was sent to the editor of the New York Times.

The contents of these communications disclose how vitally important the issue of the non-Russian nations in the U.S.S.R. is to our own foreign policy. The aim of the advertisement which misrepresents American groups of Lithuanian, Ukrainian, Polish, and other east European backgrounds is to discredit these groups and lessen the influence of their thinking as concerns our policy in regard to all of the captive nations. Because of the prevailing importance of the captive nations issue, particularly in connection with the approaching summit, I request that all four communications sent by Dr. Dobriansky be printed in the RECORD.

The communications follow:

GROUP URGES PRESIDENT TO CAPITALIZE ON REVELATIONS OF CAPTIVE NATIONS WEEK RESOLUTION

In a communication sent to President Eisenhower in Paris and released today, the Ukrainian Congress Committee of America urged, through its chairman, Dr. Lev E. Dobriansky of Georgetown University, that the United States take the lead in developing the new policy dimension provided by the cause of freedom among the majority captive non-Russian nations in the Soviet Union. The full text follows:

"DECEMBER 17, 1959.

"DEAR MR. PRESIDENT: Along with countless other Americans the membership of this committee rejoices in the tremendous success of your mission for peace and friendship in freedom. We take this opportunity to heartily congratulate you on a vital job well done. The enthusiastic reception accorded you in the course of the entire trip attests to the faith that millions upon millions of people, perched in the very shadows of Russo-Chinese Communist imperialism, have in the leadership and power of our Nation. This deep human faith in us doubtlessly seeks enhanced sustenance and justification for the years ahead.

"With the convocation of the Western sum-

mit meeting, we earnestly hope that the moral and political principles, posture, and perspectives so eloquently enunciated by you will find their concrete translation in a position of strength and firmness among our allies for the world summit meeting next spring. Considering the political and psychological reverses we, as a Nation, have seriously suffered these past 2 years, it is imperative at this critical juncture to effect this translation of principle into concrete deeds in order to dynamically advance the cause of freedom. Quite realistically, this basic cause has been badly battered in these 2 years by the massive propaganda and psychological victories reaped by Moscow through its skillful employment of scientific, military, economic, and diplomatic means, much of it possessed of marginal rather than substantial strength and significance.

"In our considered judgment a positive translation of principle into deed toward the fixed end of advancing the cause of world freedom could only be realized on the following grounds of action in thought and practice:

"(1) Placing first things first, the logic of our thinking should be steadfastly girded to the theme 'Justice and Freedom for Peace and Friendship.' The position of the free world at the summit of summits should be heralded by this trademark of freemen and all that it implies;

"(2) Realistically facing the fact that, as a result of pressured developments these past 2 years, the eventuation of another general summit represents in itself a Russian diplomatic victory, we should not expose ourselves to the boggy prospect of a series of summits whose distractive value will only redound to Moscow's favor. With this leverage of diversion into endless baited talk, the Russian-directed world conspiracy against freedom would assume even greater relative proportions;

"(3) Recognizing forthrightly that the microissue of West Berlin is only a projection of the general issue of the captive nations, including those in the Soviet Union itself, it is sine qua non for the cause of world freedom to preserve our rights in West Berlin without fear of any threat of a hot global war. The multinational state of the U.S.S.R., not to mention other parts of the Russian Empire, is far from the reality of political cohesion to permit Moscow to risk any such war;

"(4) Capitalizing on Moscow's most fundamental weakness as so prominently revealed by the Captive Nations Week resolution last July, let us begin to develop and concentrate on the new dimension of policy provided by the cause of freedom among the captive non-Russian nations in the U.S.S.R. In the propaganda mirror, not to say in every other respect, the qualitative image of Russia's power, a nation of only about 196 million, would be properly cast in full relief, thus relieving many of the illusions of costurivalism. So deeply has this prospect struck Moscow that in addition to last July's outbursts against the resolution, Khrushchev's article in Foreign Affairs, in August, a puppet's speech in the U.N. in September, Khrushchev's report to the Supreme Soviet in October, and several Soviet commentaries in November have continued the blast;

"(5) while underwriting the cause of freedom for all the captive nations and precluding even the faintest possibility of an 'accommodation' of Moscow's empire, it is equally necessary to insure and deepen the solidarity of NATO which likewise has been weakened by Moscow's artful propaganda these past 2 years; and

"(6) admitting the superiority of Moscow's propaganda warfare, which is the spearhead of its cold war action, it is long overdue for us to understand the totalistic nature of the traditional Russian cold war and to build

with our allies an apparatus to cope with it in any quarter of the globe. The attempted triadic role of Khrushchev must first be understood: to hold his empire, like Czar Nicholas I in his dealings with the West; to extend the empire, like Lenin in exporting ideas to Africa and Asia; and to perpetuate his regime, like Stalin in exercising the reins of totalitarian power. In addition to the evidence furnished in "the Crimes of Khrushchev" series of the House Un-American Activities Committee, it is significant that only this past October 15, Khrushchev's agents assassinated in Munich the Ukrainian leader Stefan Bandera. Moreover, the Stalinist method of weakening a captive populace by mass deportation is being exercised at this very moment in Western Ukraine under the guise of economic mobilization. It is strikingly noteworthy, too, that by recently comparing his methods in Budapest with those of Nicholas I over a century ago, Khrushchev has openly confirmed the basic thesis maintained by this committee for years on traditional Russian imperialism and colonialism.

"In the hope that the outcome of the present summit will reflect these perspectival views for realism in the permanent cold war and always by the test of advancing the cause of world freedom, we wish you every measure of personal strength and success.

"Sincerely yours,

"LEV E. DOBRIANSKY."

UCCA CHAIRMAN'S LETTER TO PRESIDENT EISENHOWER

The following letter was sent to President Eisenhower on September 12, 1959, by Dr. Lev E. Dobriansky, national chairman of the Ukrainian Congress Committee of America:

"DEAR MR. PRESIDENT: Your address to the Nation last Thursday evening on the subject of Mr. Khrushchev's visit to this country was both reassuring and impressive. Although this committee regards the visit in itself as another Russian cold-war victory, it nevertheless expresses its complete support of your stand that no principles will be compromised and no deals will be made.

"Your quote from de Tocqueville was most appropriate. But, on this occasion, let us also not forget this passage from his *Democracy in America*: 'The American struggles against the natural obstacles which oppose him; the adversaries of the Russian are men; the former combats the wilderness and savage life, the latter, civilization with all its weapons and its arts; the conquests of the one are therefore gained by the plowshare, those of the other by the sword.' By deeds and thought, Mr. Khrushchev is the very epitome of what de Tocqueville had in mind.

"Because this visit is in every sense of the word another cold-war weapon for Khrushchev, we strongly feel that the misleading challenge he will offer must be met by our own challenge, if this moment is not to rebound to our complete disadvantage. We, therefore, offer for your consideration use the following questions which we feel should definitely be posed to Khrushchev:

"(1) In your article in *Foreign Affairs*, you mistakenly compare Texas, Arizona, and California with certain non-Russian nations in the U.S.S.R. Would you be willing to stage, under U.N. auspices and control, free voting conditions to determine whether the natives of Lithuania, Ukraine, and the Caucasian nations want to remain in the U.S.S.R. or be independent states and whether the residents of comparable Arizona, Texas, and California want to remain in the United States of America or be completely independent States? Let's compete in ideas and action.

"(2) Your constitution and people speak of 'freedom of religion' in the U.S.S.R. Every group can establish its own place of worship in the United States. Why is it that

the Ukrainian Catholic church and also the Ukrainian Orthodox Autocephalic church, which exist here, are not permitted to exist in Ukraine? Let's compete in ideas and peaceful action.

"(3) There is nothing more we want than a real and close understanding with all peoples and nations. The non-Russian peoples and nations in the Soviet Union are of interest to us just as your Russian people. Would you agree to the unrestricted circulation of our magazine *Amerika* in the languages of these non-Russians and to a marked expansion of cultural exchange with the non-Russian republics? Let's compete in ideas and peaceful action.

"(4) Ukraine and Byelorussia are original charter member nations of the U.N. How would you react to our proposing the exchange of diplomatic representatives with these two republics? This would be a step toward greater understanding between our people and theirs. Let's really begin to understand each other.

"(5) I know you were terribly upset by my Proclamation and Congress' Captive Nations Week Resolution. If we were wrong about the 20 captive nations mentioned in the resolution, let's put it to a test. You speak of slavery here; we speak of slavery from the Danube to the Pacific. Under U.N. auspices and control, would you be willing to stage free elections in every one of the mentioned nations as, indeed, we would be willing to go through another one here? With whom they want to be, whom they want to be represented by and so forth would be the questions asked. Let's compete in ideas and peaceful action.

"(6) You were allowed to tour whatever area you wished to in the United States. Our Vice President had only the opportunity to travel in parts of Russia within the U.S.S.R. When I return this visit, will I be able to travel in the non-Russian countries within the U.S.S.R.? Let's compete in ideas and peaceful action.

"Mr. President, I believe that if we ourselves are not afraid of challenging ideas and of the realities that face us, these questions are quite reasonable and worthy of being presented to one who poses as a great competitor.

"With God's many blessings upon you in this most delicate situation, I am,

"Sincerely yours,

"LEV E. DOBRIANSKY,

"Chairman, Georgetown University.

"The Honorable DWIGHT D. EISENHOWER, President of the United States of America, White House, Washington, D.C.

"Among signatories appealing to you in the New York Times ad of February 16 to ban testing of nuclear weapons and withhold nuclear warheads from our NATO allies is the Ukrainian News. As chairman of Ukrainian Congress Committee of America I wish to assure you that said newspaper does not in any way reflect opinion of Americans of Ukrainian descent who are all behind you in your disarmament and nuclear weapons policy. The Ukrainian Daily News was cited as Communist by House Committee on Un-American Activities in its report on May 14, 1951.

"Dr. LEV E. DOBRIANSKY,

"Chairman, Ukrainian Congress Committee of America.

"EDITOR OF THE NEW YORK TIMES,

"New York City:

"Your advertisement of February 16 calling on President Eisenhower to ban testing of atomic weapons and withhold them from our NATO allies includes the Ukrainian News among other signatories. As chairman of Ukrainian Congress Committee of America I wish to assure you that said newspaper does not in any way reflect or represent thinking of 1½ million American citizens of

Ukrainian descent organized in our committee. As a matter of fact the Ukrainian Daily News was cited as Communist by House Committee on Un-American Activities in its report on May 14, 1951, and as such is a mouthpiece of Moscow.

"Dr. LEV E. DOBRIANSKY,
"Chairman, Ukrainian Congress Committee of America."

Another Reason for Establishing a Youth Conservation Corps

EXTENSION OF REMARKS

OF

HON. GEORGE A. KASEM

OF CALIFORNIA

IN THE HOUSE OF REPRESENTATIVES

Monday, March 7, 1960

Mr. KASEM. Mr. Speaker, under unanimous consent, I would like to include in the RECORD the following article by Col. Richard L. Hayes that appeared in the March 1960, issue of *Trailer Life* magazine. The article effectively points out another valuable area where the proposed Youth Conservation Corps could serve. I would like to recommend the article as must reading for each of my colleagues:

CAN'T WE HAVE MORE CAMPGROUNDS?

(By Col. Richard L. Hayes)

If you are looking for an early increase in the number of campgrounds on our great public recreation areas, you are probably doomed to disappointment. If you believe, as I do, that vastly more trailer parking facilities are urgently needed around our most popular natural attractions—in order that trawling continue to expand and the trailer club movement to grow—you will be aghast at the dim prospects.

Our previously best hope, the highly publicized and most promising programs of the National Park Service and the National Forest Service, called, respectively, "Mission 66" and "Operation Outdoors," have bogged down. The National Park Service recently announced that a time extension is needed to fulfill the aims of Mission 66, originally a 10-year program to be completed by 1966, when the Service celebrates its 50th anniversary. Now, they say it will take many years beyond that date, and, unfortunately, new campgrounds come late in the planning.

I have learned from an official in the National Forest Service that current appropriations are barely sufficient to maintain and rehabilitate old campgrounds, with no funds available for building new facilities.

The reason given by the National Park Service for extending the completion date of Mission 66 so indefinitely, is that rising costs of labor and material have made appropriation estimates and requests completely inadequate. Ominously missing from the announcement was any reference to an exposed abuse in the employment of funds heretofore allotted. This alleged misuse of construction money came to light in 1959 during hearings before a Senate committee considering the current appropriation request, when it was discovered that mansion type residences were being built for park employees, far out of line with their civil service ratings. Angered by this damaging evidence of bureaucratic selfishness, it is small wonder that the Congress refused to appropriate sufficient funds to overcome rising costs. But, as happens too often, we trailerists are numbered among those who really suffer the penalty.

Admittedly, rehabilitating old and building new campgrounds is expensive. Rising

costs make these projects appear discouraging to an administration dedicated to the noble effort of balancing the national budget. So, to win the administration's favor, a way must be found to accomplish the desired objectives without greatly increasing the cost to taxpayers. I believe a way has been found.

The fact that we have any campgrounds today must be credited to the great Civilian Conservation Corps program of the 1930's. Most of our present-day recreation facilities were built by young men who came, in many instances, from underprivileged homes, who traded tenement living for the great outdoors, much to their advantage at that time, and for our benefit today. The CCC has been acclaimed the best, and certainly the least controversial, of the early New Deal ventures, and I have long hoped for the restoration of such a program.

I can speak with some authority on this subject. For more than 4 years I was Army inspector of CCC camps in New England. On my inspection trips, I lived in those camps, became well acquainted with the Army officers who administered them, with the civilian superintendents and their foremen who conducted the work programs. I watched those boys mature into men under an efficient but not too restrictive type of discipline, and I marveled at the beneficial change of attitude in those youths which could be accomplished within a few short weeks. I marveled as well at the high quality of the work accomplished under the strict, but benign, supervision of the Forestry personnel.

Now we have a chance to restore that program. A bill has been introduced into the House by Representative GEORGE A. KASEM of California (Baldwin Park), to establish a youth conservation corps patterned after the CCC. This bill is H.R. 9334, and is identical to a bill introduced by Senator HUBERT HUMPHREY which passed the Senate during the last session of Congress.

Let us take a look at this bill. Under the supervision of the Department of Labor, the corps would be composed of young men between the ages of 16 and 21. The program would start with an enrollment of 50,000 the first year, 100,000 the second year, and a maximum thereafter of 150,000 yearly. Enrollments would be for 6 months, with maximum service limited to 2 years.

The enrollees would be paid \$60 a month for the first enrollment, with an additional \$5 a month each time they reenroll. The bill also provides that "up to an additional \$10 per month" may be paid to those assigned leadership responsibilities and for special skills. The enrollee would also be allowed to allot part of his pay to his parent, dependent, guardian or any fund established for his benefit. In addition to his pay, the enrollee would be furnished quarters, subsistence, transportation, equipment, clothing, medical services, and hospital services as the Secretary of Labor deems necessary or appropriate for his needs.

Estimates place the cost of the corps to the Federal Government at \$125 million the first year, \$250 million for the second, and \$375 million annually thereafter. The States may participate in the program to develop their own parks and natural resources, but they would be required to match Federal funds. So you can see that relative cost is small indeed, when compared to the good that can result.

It should be emphasized here that the Youth Conservation Corps, though being stressed as a deterrent to juvenile delinquency, is not intended as a penal institution, any more than was the CCC. As stated in the bill, enrollees must be "citizens of the United States of good character and health." Fifty percent of the authorized enrollment would be allocated to the States on the basis of population, the other 50 percent would be allocated throughout the United States at

the discretion of the Secretary of Labor, "taking into account areas of substantial unemployment."

The purpose of the corps as stated in the bill, "to provide healthful outdoor training and employment for young men," is implemented by this allocation of the enrollees. It is important to note this basic purpose in view of the statement made earlier in this article that a way has been found to increase the number of our campgrounds, and still stay reasonably within the appropriations presently being made by the Congress to the Park and Forest Services. The work of these youths should reduce proportionately the present labor costs within our recreation areas and result in a much greater and faster expansion of facilities.

Where do we stand right now? The breakdown in the Mission 66 and Operation Outdoors programs is denying us the new campgrounds so badly needed. Unless this Youth Conservation Corps is established quickly, no new campgrounds can be anticipated in the foreseeable future. But there is no assurance that the House will pass this bill soon, if at all. This threatens to be a short session of Congress, due to the conventions in July. The fact that the Senate has passed a similar bill gives no certainty that the corps will be established. Representative KASEM writes that he does not know when his bill will be acted upon by the House, but he hopes it will be this year. And he fears that a veto by the President is very possible.

He requests the action we must all take: "Letters are always helpful, especially when written to one's own Congressman, so you might spread the word along this line." I am spreading the word, and I do not believe I have ever written a more important message to trailerists. We must have more campgrounds if we are to continue to enjoy our rigs in our popular recreation areas. So, every trailerist must write his Congressman, every trailer club must authorize its secretary to write a letter, and our trailer club associations must bring the weight of their numbers and their prestige to bear upon the Congress to pass this bill.

Apathy can be a dreadful thing. You have been turned away from overfilled campgrounds. You have already seen your privileges in our national parks and national forests greatly curtailed. It used to be that you could occupy a space in a public campground indefinitely. Then, because of increased demand and a shortage of spaces, you were limited to 30 days; soon this was reduced to 15 days, now to 10 days in many places. If no new campgrounds are built you may soon be permitted to stay only one night.

Don't let this happen. A Youth Conservation Corps is the only hope we have that it will not happen. So, make sure your club sends off a letter as soon as possible, and urge your trailer club association to take immediate action. But, above all, please send your own letter to your own Congressman. All you need write is a few lines asking him to vote for H.R. 9334, a bill to establish a Youth Conservation Corps. And—please—do it today. Time is fleeting.

Alvin Bentley: A Real Republican

EXTENSION OF REMARKS OF

HON. ELFORD A. CEDERBERG

OF MICHIGAN

IN THE HOUSE OF REPRESENTATIVES

Monday, March 7, 1960

Mr. CEDERBERG. Mr. Speaker, a fitting tribute was recently paid our col-

league, the gentleman from Michigan [Mr. BENTLEY] in a news-feature article by the well-known writer, Esther Van Wagoner Tufty. His activities on the Foreign Affairs Committee as well as his position on a number of major issues confronting the country today are clearly enunciated in the article. The feature appeared in the Owosso Argus-Press published in the gentleman's hometown.

Because it so ably describes the work of our colleague, under unanimous consent I insert it in the RECORD at this point:

[From the Owosso Argus-Press, Feb. 23, 1960]

ALVIN BENTLEY: A REAL REPUBLICAN (By Esther Van Wagoner Tufty)

WASHINGTON.—What manner of man is the only Michigan Republican to announce his candidacy for the U.S. Senate?

Politically, Congressman ALVIN M. BENTLEY is what's known as a "real Republican." Not exactly what's meant when the phrase "Old Guard" is used, and even more definitely not a liberal. Such catch phrases get fuzzy in meaning from too much use and misuse. Yet the application of one or the other helps to place a candidate for type and in a sharper relation to his opponent, who in this case is certain to be the incumbent senior Senator, FAY McNAMARA. No other label but out-and-out liberal would fit the towering Democrat who will have Labor, the "left," and even the "far left," as they have no other place to go.

The contrast is neat. When so many national presidential contests make it difficult for the average voter to say he "can't see the difference in the two major political parties," this Senate race defines the difference, assuming of course both men survive the primaries. The closing date for filing is June 17.

In a leisurely interview, the Owosso Republican talked about his philosophy, his record, and his forthcoming campaign to represent Michigan in the upper Chamber.

His political philosophy is twofold. Briefly and in oversimplified terms he believes in decentralized government, "letting the local government do the job if it can"; and in "careful" spending the taxpayers' money.

The word "careful" is a favorite of ALVIN BENTLEY especially when someone dubs him the richest man in the Congress.

He says "doesn't it follow that if a man is careful of his own money he will be careful of the taxpayers' money?"

A little sensitive about being called a multimillionaire, he's quick to rebut that wealth is not seen as a political handicap to Rockefeller, Kennedy, Williams, or Hart.

As so BENTLEY's record in the House, he describes it as a mixture of conservatism and liberalism.

As a Member of the House Foreign Affairs Committee—and the only Michigander in the delegation on it—he is best known for his opinions on things international.

In principle, he favors foreign aid but has been "a constant critic of the size and administration of our foreign aid program." For some years he has been trying to stop the annual heaping of amendment upon amendment to the original 1954 foreign aid bill by proposing a general overhaul to fit today's conditions.

He championed Michigan farmer Stanley Yankus, who moved to Australia in protest against the Government restriction which prevented him from growing all the wheat he could use on his land.

On civil rights issues, his opponent Senator McNAMARA will not be able to taunt him for not signing the discharge petition to blast the bill out of the Rules Committee. BENTLEY did add his name although he didn't

rush in to do so and probably will be accused of political expediency. However, he recently introduced legislation "to outlaw discrimination in all fields of Federal-financed housing." Also, he has a good voting record on civil rights legislation.

On Labor, BENTLEY said he expects the union leaders to be in McNAMARA's corner but hopes to attract the votes of many workers. This optimism is based largely on his opposition to right-to-work legislation on a national scale and equally strong opposition to compulsory arbitration procedure to settle strike disputes.

That word "careful" pops up again in considering his position on taxes. He stands for using at least half of any budget surplus to reduce the national debt and, if possible, the other half to relieve the tax burden on the individual, if possible.

He is 41. As a campaigner, he will be indefatigable. Into every corner of the 82 counties he will go to tell his story. One can expect his campaign to be well organized, well financed, and widespread. His dogged determination to win demands it. He'll not put on a vicious, name-calling campaign unless provoked. However he has collected some ammunition come the day.

For type, this is a very serious young man, not easily understood in the rough and tumble world of politics. One can't imagine him hilariously slapping a precinct chairman on the back or telling a bawdy campaign joke.

Many Republicans must like him and what he stands for judging by his securing 40 percent of the votes in a Michigan poll among four likely GOP candidates. That poll, incidentally, probably was a decisive factor in making him announce his candidacy. His hope is that if he does face a primary contest that it will not leave scars to hinder a Republican victory in November.

The Bentleys are friendly but not a part of Washington's society merry-go-round and don't want to be.

The Congressman has four children, three by a former marriage, Alvin M. has just entered the Coast Guard. Helen and Michael are attending school here. His son by his present marriage, Clark Henry, was born in the Capital shortly before the lawmaker was shot on the floor of the House by some Puerto Rican fanatics. Incidentally, he has visited Puerto Rico at the invitation of the Government and his efforts in behalf of Puerto Rico are well known.

He speaks Spanish fluently and that is always an asset. He also has some linguistic ability in French, and German and a word-vocabulary in Hungarian which he picked up when he was a foreign service officer. This will be a political asset in campaigning among the ethnic groups in Detroit, several of which have already honored him. Besides, he's kept currently informed on what's going on abroad. In 1957 he was the first Congressman to visit Poland after the 1956 revolutions.

A knowledgeable, educated man he will work hard to fulfill his ambition to seated in the U.S. Senate.

Harlem's Policy Racket: The Day the Heat Was On

EXTENSION OF REMARKS

HON. ADAM C. POWELL

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Monday, March 7, 1960

Mr. POWELL. Mr. Speaker, under leave to extend my remarks in the Rec-

ORD, I include the following article from the New York Post, March 4, 1960:

INSIDE HARLEM'S POLICY RACKET: THE DAY THE HEAT WAS ON

(By Ted Poston With Alfred Hendricks, Irving Lieberman, and Richard Montague)

What happens when somebody blows the whistle on a suspected numbers spot which just might be buying police protection under the multimillion dollar pad system?

Well, it depends.

If it is just an ordinary squawk lodged with the local precinct, or even at police headquarters, that's one thing.

But if the whistle is blown on the floor of Congress, that's another thing altogether.

So one Wednesday last month, the day for Representative ADAM CLAYTON POWELL's weekly discourse on "Gambling in the City of New York," a Post reporter investigating the alliance between the policy barons and certain members of the police vice squads decided to check on the results.

On that particular day, POWELL asserted that Harry Felt, a former Internal Revenue man, had "become the numbers boss of lower Harlem."

"His headquarters are various houses on 115th Street between Lenox and St. Nicholas Avenues," POWELL told Congress. "He uses two places for his telephone communications. One is a restaurant called the Asia Currie place at 100 West 115th Street. The other is the drugstore on the corner of 115th Street and Lenox Avenue, on the West Side."

The Post man dropped by the drugstore and the Asia Famous Currie Shop around the corner. Here is his report:

"I spent over an hour in the restaurant—before the news of POWELL's speech reached Harlem. I noticed on the way in that the block, which is between Lenox and St. Nicholas Avenues was jammed with people on stoops and idlers on the street corners. I saw a man walk up and pass money to another man in the group on the corner. I assumed that the recipient (he was in his 20's and wore a gray overcoat and hat) was a single action banker."

"In the restaurant there were only a few people sitting around eating, but their talk revolved around numbers—what figure was leading today, what number they had almost hit yesterday, and things like that."

"Presently, a woman entered. She was short, brown-skinned, and spoke with that accent peculiar to Puerto Ricans born and raised in East Harlem. She was complaining that her customers were doing business with some rival policy operator in a nearby bar."

"She sat at a table near the window and every now and then she got up and went out into the street, returning a few minutes later. I did not see her transact business in the restaurant."

"Shortly before 5 p.m., the chap in the gray overcoat entered the restaurant and yelled: 'Did you hear it on the radio? I just heard that POWELL named Harry as one of the policy bosses today.'

"Everybody in the place, including the proprietor, an East Indian called Jimmy, seemed to recognize the name and a heated discussion followed. There was a lot of talk about POWELL 'stirring up trouble.'

"Then the woman, who had just come back from completing another sidewalk transaction, asked:

"Did POWELL mention Charlie Freeman?"

GETTING THE WORD

"Gray Overcoat said no. (The brief radio reports at that point hadn't mentioned either the restaurant or the drugstore, so no one seemed upset.)

"About 5:30 I dropped in to check the drugstore. It was jammed but I did not witness any open numbers activities. I did

notice though that the stocks on the store's shelves seemed small for such a large volume of possible business."

Later that day, the newspapers carried two addresses among POWELL's growing list of policy targets, so the Post reporter went back in the morning:

"Around 9:30, I paid another visit to 115th Street. Two radio cars were parked in the block, just sitting near the two establishments. There wasn't a single customer in either the drugstore or the restaurant."

"Only a few people were standing on the stoops and no one was on the street corners."

"About an hour later, there were three radio cars, two white plainclothesmen strolling through the block, and a uniformed cop standing on the corner by the drugstore."

"I asked a passing citizen what was going on. He laughed and said the radio cops had told the people they weren't going to allow any loafing on the stoops today because there had been a couple of small fires started in some cellars on the block the day before."

"I noticed that the radio cops were going in and out of a couple of buildings. I asked why and they said they were investigating yesterday's fires."

"I went away and came back a half hour later and now there was another radio car parked at the curb in mid-block. An unmarked car with four plainclothesmen was parked directly in front of the Asia Famous Currie Shop. There seemed little chance for any gambling activity there that day."

The report concluded:

"No doubt, police headquarters will say that POWELL's charges were investigated and that police found no sign of policy activity. Which, of course, will be quite true."

"The cops had telegraphed their punches beforehand by riding in slowly cruising cars, in pairs or trios, circling the same block several times. The plainclothesmen's cars were unmarked but they might just as well have had 'Police Department' painted on them in foot-high letters."

"But as far as the cops and their superiors were concerned, they had done their job. They could report back to their commander—quite truthfully—that they had checked the block and found no sign of gambling activities."

[It is only fair, of course, to add that POWELL's floor speeches also have the effect of forewarning the intended victims. There is nothing to prevent agents of policy people from listening in themselves from the congressional gallery.]

In the same issue of the CONGRESSIONAL RECORD, POWELL inserted a copy of a letter which a retired schoolteacher had written Police Commissioner Stephen Kennedy about a chain restaurant on Broadway above 140th Street.

"I have discovered that gambling has invaded this particular restaurant in the form of numbers," the exteacher wrote Kennedy, "and its presence is much to the annoyance of decent clientele."

"They have a booming business among the colored and white patrons. The manager of the restaurant has knowledge of the existence of gambling here, as I have seen him making wagers on the numbers with a Mr. Jenkins. He is in rapport with all the gamblers, and he is an avid devotee of that phase of the numbers known as single action."

POWELL charged that "nothing has been done concerning this letter," but the policy operators with whom Post reporters talked disagreed.

"Oh, no," they all agreed. "They can't afford to ignore something in writing like that. But if the place is on the Pad (the vice squad list of police-protected policy locations) they'll just get into S.O.P. (standing operating procedure)."

And one controller who once operated a Harlem store as a front for one of the big East Harlem banks, cited his own personal experience to illustrate S.O.P.

"It all started with a loud-mouthed chick who had been putting a buck on 699 for more than a year," he said. "She always insisted on having a slip although we told her that she could keep it in without one since she played the same number every day.
